The United States sets forth that Kimball & Hadley were "engaged in manufacturing and marketing *awls*, *needles*, drivers, supplies, etc." (italics theirs) and states (p. 86) that Howard testified that "the United Company was engaged in manufacturing and putting out *awls and needles*, except curved needles for the Goodyear sewing machine, and that the United Company was making awls for the use of its own machines" (italics theirs).

This statement by the United States is inaccurate and misleading. Howard did not testify that the United Company was putting out needles. He explained that the awls that it was making were for its metallic machines and were "straight awls, which make a straight hole for a nail, and bear no resemblance to the curved awl used in a welter or stitcher" (R. Vol. 1, p. 64, lines 18–20).

The United States further alleges that Kimball & Hadley were forced to sell out by reason of the United Company's leasing system and that its lessees were obliged by the terms of their leases to take needles from the United Company. Neither of these statements is supported by the record and both are untrue.

(1) In the suit brought by the United Company to enforce the covenants made by Kimball & Hadley not to engage in similar business within fifteen years the Supreme Court of Massachusetts approved the finding of the lower court "that they made the sale voluntarily" (*United Shoe Machinery Co.* v. *Kimball et al.*, 193 Mass. 351, 354, 357).

(2) Lessees of the United Company's Goodyear machines are *not* required by the terms of their leases to take the needles from the United Company. Needles are not machine parts.

Hadley's testimony as to statements made to him by shoe manufacturers that they could not buy his needles because if they did the United Company would take out its machines was specifically denied by all the manufacturers or employees in the factories which Hadley named who had anything to do with buying needles, as is fully set forth in the Appendix to main brief (pp. 111–113).

In its statement that Kimball & Hadley again engaged in the awl and needle business and that "the United Company brought suit to enjoin them, upon the ground that they were violating their agreement of June 11, 1904," the United States neglects to state that the Supreme Court of Massachusetts held that the covenant was reasonable and valid and approved the granting of an injunction enforcing it (*United Shoe Machinery Co.* v. *Kimball et al.*, supra).

Leopold J. Courteau (Brief for the United States, pp. 88–89).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 56–57.)

On the face of it the statement by the United States (p. 88) that the United Company acquired from Courteau "all his inventions and devices, including letters patent, relating to machines and mechanisms for holding the linings of shoes during the process of pasting the outer leather to the lining" shows that that transaction is of no importance in this suit.

It should, however, be pointed out, first, that the statement is erroneous in saying that the United Company acquired "devices." The United Company did not acquire any devices; it acquired merely an invention. Second, the United States omits to refer to the testimony showing that the United Company had no machine for performing this operation.

Brockton Supply Company (Brief for the United States, p. 89).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 58–59.)

In its statement regarding the tack pulling machine which was acquired from this concern the United States says (p. 89) that "Howard testified that at the time of acquiring the business of the Brockton Supply Company the United Company was engaged in developing a machine for pulling lasting tacks, but that none had been put out."

The United States omits to refer to testimony showing that the United Company's experimental machine infringed a patent of the Brockton Supply Company and that the

217

Brockton Company's machine infringed the United Company's patent applications.

Zotique Beaudry (Brief for the United States, pp. 89–90).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 62–63.)

The United States sets forth (pp. 89–90) that the United Company acquired from Beaudry his inventions and improvements relating to machines for burnishing and finishing the heels of shoes and that Howard testified that at this time "the United Company *had* a heel burnishing machine" (italics theirs).

The United States omits to refer to testimony showing that Beaudry's business was not acquired and that all the United Company did acquire was his experimental heel burnishing machine and the patents on that machine; that the acquisition was made because it was believed that the Beaudry inventions, which embodied an entirely new idea, would greatly improve the United Company's machines; and that Beaudry's machine infringed many claims of one of the United Company's patents.

The statement by the United States (p. 89) that Beaudry made a covenant "that all inventions which he should thereafter make should be disclosed" is not supported by the record. That covenant was specifically limited to "heel finishing machinery, methods or devices," the subject-matter of the transaction (P.'s Ex. 120, R. Vol. 4, pp. 850, 853, 854).

Richardson Shoe Machinery Company (Brief for the United States, pp. 90–91).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 65–68.)

The United States sets forth that the Richardson Company was manufacturing and putting out McKay sewing machines and clicking machines and it says that Howard testified that the United Company was then manufacturing and putting out McKay sewing machines.

The United States omits to refer to testimony showing that a very important feature of the United Company's McKay sewing machine infringed one of the Richardson Company's patents; that the Richardson machine was a great deal better than the United Company's; that it was believed, and it eventually proved, that a better machine than either could be constructed by using inventions owned by both companies; and that improvements broadly claimed in two Richardson patents are embodied in the United Company's new Model M outsole stitcher.

The allegation of the United States that the Richardson Company was also manufacturing and putting out clicking machines is not supported by the record.

Harry L. Rice and Fred LaChapelle (Brief for the United States, pp. 91–92).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 71–72.)

The United States omits to refer to any testimony showing that the Rice and LaChapelle welting machine, embodying the inventions which were acquired, was only experi-

mental and far from being commercial, and that it was believed that these improvements would not only strengthen the inseam of a welt shoe, but would effect substantial economies.

In the statement by the United States of the covenant not to compete, which was made by Rice and LaChapelle, the United States omits to state that the covenant was limited to a period of ten years.

The Wentworth Company (Brief for the United States, pp. 92–93).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 73–75.)

The United States sets forth that by this transaction the United Company acquired a machine for beating heel seats and a shank sticking machine. It says (p. 93) that Howard testified "that the United Company at that time was manufacturing a machine for beating heel seats, and that the United was experimenting with the shank sticking machine."

The United States omits to refer to testimony showing that the United Company's machine for beating heel seats was similar only in name, that the two machines operated in entirely different ways; that the United Company's machine was discarded after this acquisition; that the patent on the Wentworth shank sticking machine prevented the United Company from developing a machine; and that the Wentworth shank sticking machine infringed one of the United Company's patents.

That the Wentworth heel seat beating machine could not possibly offer any competition is shown by the fact that it infringed many claims of two of the United Com-

pany's patents; that those claims had been held to be valid and infringed; and that they covered indispensable features of the Wentworth machine so that the Wentworth Company could no longer put out the machine.

Adam H. Prenzel (Brief for the United States, pp. 93–94).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 75–76.)

The United States sets forth (p. 93) that the United Company acquired from Prenzel his inventions and patents "relating to certain machines used in the manufacture of turn shoes."

Important facts to which the United States fails to refer are that Prenzel, who was a shoe manufacturer, had made valuable inventions relating to turn shoes and special machines for making them and that the United Company had no such machines.

M. V. Bresnahan & Company (Brief for the United States, pp. 94–95).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 77–78.)

The United States says that the testimony shows that by this purchase the United Company acquired an experimental lasting machine and a heel burnishing machine and that the United Company was then putting out lasting machines and heel burnishing machines.

The United States does not refer to testimony showing that the United Company's machines would not accomplish the same results as the Bresnahan machines and that there was a great amount of pending litigation, largely infringement suits, between Bresnahan and the United Company in

some of which Bresnahan was defendant and in others the United Company. The agreement for purchase specifically discharged the United Company from all claims and demands covered by the suits which had been brought against it (P.'s Ex. 144, R. Vol. 4, p. 1058).

With reference to the statement by the United States (p. 95) that the schedule attached to the agreement "gives a list of many different machines together with supplies acquired from the Bresnahan Company," it should be noted that the machines are nearly all machine-shop machines and that the few shoe machines named, one or two of a kind, are obviously second-hand machines such as dealers in shoe machinery usually have on hand.

Charles P. Stanbon & Company (Brief for the United States, p. 95).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 78–81.)

The United States says (p. 95) that Howard testified that the United Company acquired from Stanbon "a channel-cementing machine, a folding machine, perforating machine and a channel-opening machine, and that the United Company at that time *was* putting out an inferior channel-cementing machine and a perforating machine" (italics theirs).

The United States omits to refer to testimony showing that the United Company's channel cementing machine was inferior *because* the United Company had been obliged to take off improvements which infringed Stanbon's patents; that the United Company's perforating machine and the Stanbon machine are used in distinct and different fields, and that the Stanbon machine would do work which the United Company's machine could not do.

In the Supreme Court of the United States.

OCTOBER TERM, 1916.

UNITED STATES OF AMERICA, APPELLANT,
v.
UNITED SHOE MACHINERY COMPANY ET AL. } No. 545.

APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF MASSACHUSETTS.

MEMORANDUM.

A more thorough examination of appellee's supplemental brief, a document of 222 pages, discloses that substantially all the criticisms made therein fall under two heads: (*a*) our interpretation of the tying clauses of the leases, and (*b*) our construction of the testimony. Our brief is supported by detailed references to the record. It is almost impossible to aid the court further in that regard without disobeying its admonition to avoid any further argument.

For example: The defendants challenge the statement that the United Company will not permit a lessee to have a part of his machines on "independent leases" and part of them on "restricted leases." (Our brief, p. 176, Dfts. Supp. Brief, pp. 28, 29.) Our statement is predicated upon the direct testimony of Mr. Winslow (I, 443, line 2), and defendants,

though contending that Mr. Winslow did not mean what he said, point to no explanation or qualification of his testimony as it appears in the record. They attempt to support their contention by an intricate statement of what the defendants could do within the limits of their leasing system.

The question, however, is not what they could do, but what they actually do. As to that, Mr. Winslow's statement is perfectly clear. And the position taken by him appears to be in complete harmony with what the record shows as to the practice of defendants in this respect. (Record I, 180, 181, 217, 873.)

The validity of some of the specific criticisms of defendants may, however, be easily determined.

On page 126 of their brief they assert that we were wrong in saying that Plant told Winslow on the day prior to the purchase of his property that he expected the western manufacturers in Boston; and follow it with a statement that "there is not the slightest intimation, however, that Plant then told Winslow that any negotiations were pending for a sale to the western manufacturers." But in their quotation from Winslow's testimony on the same page the defendants replace with asterisks the words which show we were right and they are wrong; also that the trial judge, whose decision is quoted by the defendants on their page 127, was wrong. (See I, 488, lines 18–23.)

On pages 111–114 it is suggested that we have suppressed the fact that some of the machines acquired after the combination did not compete with machines of the defendants, and that we do not call attention

to certain claims as to patent infringements. We invite the Court's attention to page 96 of our brief where these matters are discussed.

On page 117 the defendants say, without referring to the record, that after the installation of the Plant machines, the Plant Shoe Company's profits were reduced one-half. They do not point out that the record (I, 778, lines 6–23) shows that this was said only of the year immediately following that installation, and that in that year $400,000 was paid for machinery, apparently out of earnings, as there was no surplus account to which the payment was charged. (I, 778, line 22.)

Defendants restate on page 150 certain figures as to McKay sewing machines. These are figures of 1909. It has been made clear that our statement (brief, pp. 124, 125) is that they acquired control of this machine in 1910. As to the alleged competition in 1911, we have elsewhere called attention to the testimony of Maloy (I, 301, lines 26–30), Bulmer (I, 908, line 28), Hall (I, 953, lines 21, 32–34), Spencer (I, 884, line 41) and others as to the facts with respect to this alleged competition by the concerns named in their list. See also our brief, pages 301, 302.

In this connection reference was made by us in passing to the effect of the defendants' leasing system in strengthening the defendants' control of this machine. (Our brief, p. 125.) This incidental reference is severely criticized by the defendants. The statement of what we believe to be its justification would require too elaborate an analysis of various

clauses of defendants' leases to be attempted here under the restrictions placed upon us by the court. But even if this criticism were valid, it would be immaterial so far as the merits of this case are concerned, in view of the demonstrated fact that the McKay machine is controlled by the United Company.

Defendants repeat (p. 179) the statement of their main brief that the additional machines clause had been abandoned as early as 1907. We call attention to Exhibit 34, which Donham testified (I, 11, lines 24–28) is the *current* form of lease for metallic machines. In paragraph 3 (III, p. 317) will be found the additional machines clause word for word as it appears in our brief at page 150.

It is obviously impossible to deal with all the criticisms of the defendants without expanding this statement nearly to the limits of our original brief and without disregarding the expressed desire of the court. But we venture to think that the table which we print below will be of assistance to the court in finding in the different leases therein referred to the tying clauses which are the subject of discussion, and that examination of these clauses will settle any questions which may arise as to the proper interpretation and effect of the challenged provisions of the defendants' leasing system.

Table giving paragraphs in which the tying clauses appear in the lease specimens referred to in Appendix C of our brief; also in Exhibit 170.

NOTE.—Exclusive use or additional machinery clause in all leases of *bottoming* machines except McKay sewing machines (Ex. 170).
Donham describes the character of the various leases and the differences between them (I, 5–15).
Leases without prohibitive clauses are the so-called "independent" leases.

Our general contention with respect to the leases is:

That the United Company, having, lawfully or unlawfully, it matters not, acquired by combination, development, and subsequent acquisition control of all clicking machines, all eyeleting machines, all pulling-over machines, and about 96 per cent of all bottoming machines, has adopted a system of leases which, whether entirely original with them or not, excludes other shoe machinery manufacturers from the trade by compelling, or inducing as defendants say, substantially all shoe manufacturers, as a condition of obtaining necessary machines of defendants, to agree—for such is the necessary effect and manifest purpose of the tying clauses, no matter what defendants contend—that they will not use the machinery of competitors of defendants.

The fact, if fact it be, that there are patents upon certain features of defendants' machines gives them no right to enter into a combination to destroy competition between their machines and other machines, patented or unpatented, and thereby to restrain trade. The owners of competing patented machines have no more right to form combinations in restraint of trade than the owners of unpatented machines.

Finally, the defendants and the shoe manufacturers have, through the leases, brought into existence a combination (in which the latter enter, we say, under coercion) which in effect is as much a boycott of independent shoe machinery dealers as was the

boycott of Loewe by the Danbury hatters. (See our brief, pp. 244 to 249.)

Respectfully submitted.

T. W. GREGORY,
Attorney General.
JOHN W. DAVIS,
Solicitor General.
G. CARROLL TODD,
Assistant to the Attorney General.

In the Supreme Court of the United States.

OCTOBER TERM, 1916.

No. 545.

THE UNITED STATES,
Appellant,

v.

UNITED SHOE MACHINERY COMPANY, OF NEW JERSEY, ET AL.,
Appellees.

REPLY TO MEMORANDUM FILED BY THE UNITED STATES AFTER ARGUMENT.

The petitioner's Reply Memorandum * purports to be a reply to our Supplemental Brief. It utterly fails to answer our criticisms or to show that we are in error in pointing out the respects in which the petitioner's brief has ignored important testimony and made statements and assumptions which are without foundation. It only attempts to answer a few of our criticisms, and most of the matters to which it refers have little bearing on the material issues of this case.

1. The Reply Memorandum first attempts to substantiate a statement made in the petitioner's main brief as

* NOTE.—The petitioner's Reply Memorandum was served on us Wednesday, March 28, 1917.

to the effect of the restricted leases. At pages 176–177 of its main brief the petitioner said that a shoe manufacturer "must take the independent lease as to every class of machines, in order to be relieved from the restrictions."

As an illustration the petitioner said that if a shoe manufacturer took restricted leases for lasting and metallic machines,—

> "his lasting machine and metallic fastening machine leases would prohibit the use of such machines in connection with a heeling machine not owned by the United Company" (p. 176).

Referring to the effect of the restricted leases upon a shoe manufacturer desiring to use a Pettingill heeler put out by a competing company the petitioner said (p. 177):—

> "This means that the shoe manufacturer would have first to find Pettingill heelers enough to satisfy his wants for heelers, and having done this he would then have to place *all his machines* 'in the other departments upon the independent forms of leases.'"

The foregoing statements, as we have shown in our supplemental brief (pp. 24–29), are absolutely without foundation.

There are no restrictions in any lease put out by the United Company restricting the use of the leased machines to use with the United Company's heeling machines, except the lease of the McKay & Copeland lasting machine, which machine is now practically obsolete (R. Vol. 1, p. 454, lines 8–9), the leases of the pulling-over machines, and the leases of the eyeletting machines.

The result is that a shoe manufacturer may take on any lease the United Company puts out and use in connection

with a competitor's heeling machine the United Company's welter and stitcher, its 43 Goodyear auxiliaries, its No. 5, hand-method welt, and hand-method McKay lasting machines, its McKay sewing machines, its metallic machines, its insole machines, its clicking machines, its 172 General Department machines, and any other machines it puts out, except the machines above mentioned, viz., the McKay & Copeland lasting machine (now practically obsolete), the pulling-over and eyeletting machines, which three kinds of machines, if they are to be used with a competitor's heeling machine, must be taken on the independent lease.

The petitioner's statement, therefore, in its main brief (p. 177) that a lessee must place "*all his machines*" in other departments on unrestricted leases in order to use them with a competitor's heeling machine, is without foundation. (See our supplemental brief, pp. 24–29.)

The petitioner in its Reply Memorandum (pp. 1–2) undertakes to substantiate the above statement made in its main brief by a reference to Mr. Winslow's testimony quoted in its main brief (p. 176) to the effect that a shoe manufacturer desiring to use a Pettingill heeler,—

> "could return our heeling machines, place his machines in the other departments upon the independent forms of leases, and continue to use the heeling machines of others" (R. Vol. 1, p. 443, lines 5–8).

As pointed out in our supplemental brief (pp. 28–29) Mr. Winslow obviously meant that if the shoe manufacturer had any machines under restricted leases which prevented their use with the Pettingill heeler he could place such machines on independent leases. He obviously did not mean and could not have meant, in view of the leases which speak

for themselves, that the shoe manufacturer must place all his machines on independent leases, even though there was no restriction in the leases of such machines, preventing their use with the Pettingill heeler.

The petitioner's Reply Memorandum (p. 2) says that the question is not what lessees could do, but what they actually do. In other words, it implies that lessees do take independent leases of all machines if they wish to use a competitor's heeling machine, even though they are not required to do so. There is no foundation for this statement and no evidence that the United Company imposes any restrictions other than those set forth in its leases.

2. On page 111 of its main brief petitioner said:—

> "Winslow states that on the evening of September 20th, the day *prior* to the meeting when Winslow practically agreed to buy the Plant property, Plant advised him that he was expecting the 'western people,' and that if he traded with Winslow, he would have to put up a proposition to the western people that they could not accept, or words to that effect."

We pointed out in our supplemental brief (p. 126) that the evening of the 20th, when Plant told Winslow that he was expecting the western people, was not "the day *prior* to the meeting when Winslow practically agreed to buy the Plant property," but that it was on that very evening of September 20 that Winslow practically agreed to make the purchase.

Petitioner's discussion of this issue on page 2 of its Reply Memorandum is somewhat confused, but apparently it takes the position that the statement in our supplemental brief was wrong. The issue, accordingly, is what the record

shows. (See R. Vol. 1, p. 487, lines 1–44; p. 581, lines 38–45; p. 605, lines 34–44; p. 606, lines 1–33.)

Petitioner also takes issue (p. 2) with the statement in our supplemental brief (p. 126):—

> "There is not the slightest intimation, however, that Plant then told Winslow that any negotiations were pending for a sale to the Western manufacturers."

The petitioner states that in our quotation of Mr. Winslow's testimony (p. 126 of our supplemental brief) we replaced with asterisks words which showed that the petitioner was right and that we and the court below were wrong. These omitted words were correctly paraphrased by the petitioner at page 111 of its main brief in the sentence which we were answering and which naturally was to be read in connection with our criticism. The petitioner's paraphrase was as follows:—

> "and that if he traded with Winslow, he would have to put up a proposition to the western people that they could not accept, or words to that effect."

But in that statement there is no proof that any negotiations were pending for a sale to the western manufacturers, or that Plant had made any offer to them (see also our main brief, p. 535).

The testimony reviewed on page 535 of our main brief and on pages 125–126 of our supplemental brief supports completely the finding of the District Court as to the facts regarding the western manufacturers (R. Vol. 1, p. 1144).

3. To our criticisms (supplemental brief, pp. 111–114, 180–222) of the inadequate and unfair statements regard-

ing the acquisitions which are contained in petitioner's main brief (pp. 60–95), the only reply which the petitioner makes is the following (pp. 2–3):—

> "On pages 111–114 it is suggested that we have suppressed the fact that *some* of the machines acquired after the combination did not compete with machines of the defendants, and that we do not call attention to certain claims as to patent infringements. We invite the Court's attention to page 96 of our brief where these matters are discussed" (italics ours).

It should first be noted that this statement contains an unfair implication that only a small proportion of the acquired machines "did not compete with machines of the defendants."

This statement is evidently made with reference to one sentence only on page 113 of our supplemental brief, which is as follows:—

> "Particularly in cases where the United Company had a machine of the same name as an acquired machine the United States fails to make any reference to testimony showing that the acquired machine was adapted to do a kind of work which no machine of the United Company could do, or that the United Company's machine was only experimental and needed the acquired inventions in order to make it commercially successful, or that the acquired concern had patents which the United Company infringed or which barred the way to needed improvements in its machines."

These criticisms were plainly directed specifically to the few transactions "where the United Company had a machine of the same name as an acquired machine." We

suggest that in order to determine whether our criticisms were justified the Court examine our comparison of the statements in petitioner's main brief with the facts shown by the record in respect to the following transactions (references are to pages in our supplemental brief): Winkley and Phillips (p. 187); Carver Cotton Gin Company (p. 189); Seaver Process Lasting Company (p. 191); Albert G. Brewer (p. 197); American Sole Laying Machine Company (p. 197); Boot & Shoe Sole Laying Company (p. 199); Booth Brothers (p. 204); Brockton Supply Company (p. 217); Richardson Shoe Machinery Company (p. 219); The Wentworth Company (p. 220); Charles P. Stanbon & Company (p. 222).

It is submitted that there is nothing on page 96 of petitioner's main brief which answers our criticisms or which justifies or mitigates petitioner's inadequate and unfair statements of the facts regarding the transactions above named or, indeed, any of the other transactions.

In this connection we ask permission to refer briefly to the discussion of the infringements by the acquired concerns, including the Eppler Company and Plant, which is contained on pages 280–286 and is referred to on page 96 of petitioner's main brief. Petitioner said with reference to the appellees' testimony regarding such infringements:—

> "The defendants have attempted to prove such infringements. We deny that this may be done in an action under the Anti-Trust Act, because it would constitute a collateral attack upon the novelty and utility of the patent. Every patent issued is *prima facie* valid" (petitioner's brief, p. 280).

In these statements and in the discussion which follows petitioner has confused the question of the *validity* of the

patents owned by the vendors and the question of *infringement* of the United Company's patents *by* the vendors' machines. This confusion and the irrelevancy of petitioner's discussion seemed so obvious that we did not refer to that section of petitioner's brief in our supplemental brief. Since, however, petitioner's counsel repeated these statements in oral argument we desire to point out that appellees, in proving that the United Company's patents were infringed, were in no way attacking the validity of the vendors' patents. On the contrary, the United Company admitted that the vendors' patents were valid and wanted those patents because they were valuable.

Of course it is unnecessary to explain to this Court that the validity of the patents owned by the vendors and the infringement of the United Company's patents by the vendors' machines are two distinct and unrelated issues and that the validity of the vendors' patents is in no way involved in or inconsistent with claims that the vendors' machines infringed. Accordingly, it is submitted that the entire discussion on pages 280–286 of petitioner's main brief is irrelevant.

4. Petitioner undertakes to criticise (p. 3) one statement only in our summary of the testimony showing that the statement in petitioner's main brief (p. 97) that Plant "was successfully operating his machines in the factory of Thomas G. Plant Company," was entirely unsupported by the record (supplemental brief, p. 117). This is the statement

> "that the profits of the Plant shoe business after the Plant machines were installed were one-half less than they had been when the United Company machines were used."

Petitioner asserts (p. 3) that the record shows that

> "this was said only of the year immediately following that installation, and that in that year $400,000 was paid for machinery, apparently out of earnings, as there was no surplus account to which the payment was charged."

Petitioner's implication is answered by Mr. McGaffee, general manager of the Plant Shoe Company, who, after testifying that the profits for the first year after the Plant machines were installed were reduced one-half, said:—

> "*That was not due to the purchase of the Plant machines;* it was due to the great amount of bother and trouble we had with the Wonder Worker [Plant] machines" (italics ours) (R. Vol. 1, p. 778, lines 10–12).

See also Mr. McGaffee's comparison of the cost of making shoes on the Plant machines during the last year of their use with the cost of making shoes on the United Company's machines which were substituted for them (R. Vol. 1, p. 775, lines 7–16; p. 776, lines 17–22; p. 778, lines 38–41).

5. At page 142 of its main brief the petitioner gives a table purporting to show the number of machines of certain classes "which the United Company had out March 1, 1911, and the number which all other concerns had out at that time" (petitioner's brief, p. 141).

We pointed out in our supplemental brief that this table was not a correct representation of the facts, as the record contained no evidence showing all the machines which were outstanding in the hands of shoe manufacturers on that date. (See our supplemental brief, pp. 146–147.)

To illustrate the inaccuracy of the table we pointed out (see our supplemental brief, p. 150) that the record showed that in 1909 there were outstanding in the principal shoe manufacturing districts 1,488 McKay sewing machines, of which the United Company had supplied only 308, and that in spite of this evidence (which was the only evidence showing the number of McKay machines outstanding) the petitioner's table showed only 8 McKay sewing machines which other manufacturers had out.

In its Reply Memorandum (p. 3) the petitioner in answer to our criticism does not deny the facts stated in our supplemental brief, but merely says that it has made clear in another portion of its brief that the United Company acquired control of the McKay sewing machine in 1910.

Even if it were true that all machines sold or leased after 1910 came from the United Company, this would not justify the inaccurate statement in the table as to the number of machines outstanding on March 1, 1911, but furthermore, the record abundantly shows that the United Company does not control the McKay sewing machine. There are always plenty of these machines in the market and any one can manufacture them (Winslow, R. Vol. 1, pp. 858–859, lines 39–21; pp. 564–565, lines 25–15; Howe, R. Vol. 1, p. 680, lines 21–35; Brown, R. Vol. 1, p. 757, lines 17–29; Bulmer, R. Vol. 1, p. 908, lines 38–41).

6. The petitioner's main brief at page 125, after stating (erroneously, as we have shown above) that the United Company acquired "complete control" of the McKay sewing machine, attempted to show that on account of the United Company's leases no competitor can sell or lease McKay machines to shoe manufacturers. The brief said (p. 125) erroneously (see our supplemental brief, p. 157)

that the United Company virtually, if not absolutely, controls the lasting machine, and said:—

> "No one may use a United lasting machine upon any shoe which has been operated upon by a machine not procured from the United Company, therefore not upon a shoe operated on by a McKay machine procured outside of the United Company."

At pages 15–21 of our supplemental brief we showed that this statement is absolutely without foundation since (*a*) any shoe manufacturer may take an unrestricted lease of lasting machines; (*b*) not a single one of the United Company's leases of lasting machines restricts their use to use with all other machines put out by the United Company; and (*c*) no lease of lasting machines restricts their use to use with the McKay sewing machine, nor is any other machine put out by the United Company restricted to use with the McKay sewing machine.

In other words, the petitioner's argument that our leases of other machines compel a use of the McKay machine is based on a statement which has no foundation whatever.

In its Reply Memorandum the petitioner says (pp. 3–4) (1) that it would take an elaborate analysis to substantiate its statement; and (2) that the statement is immaterial anyway since the United Company controls the McKay machine.

If any lease of the United Company restricts its lasting machine or any other machine to use with its McKay sewing machine this fact can be shown by a simple reference to the lease. But there is no such lease. Furthermore, as shown (*supra*, p. 10), the United Company does not control the McKay machine.

In passing, we should like to correct a statement made in the course of argument. In answer to a question of the Court, petitioner's counsel said that all of the United Company's machines were patented except the McKay sewing machine. While most of the McKay machines in use are not patented, the United Company puts out a patented type (R. Vol. 1, p. 83, lines 9–15; P.'s Ex. 170, Vol. 4, p. 1161). The United Company sells its McKay machines outright if the shoe manufacturer prefers to purchase them (R. Vol. 1, p. 29, lines 25–35).

7. The petitioner's Reply Memorandum (p. 4) again asserts that the "additional machines clause" is still in use in one lease. This is a question of what is meant by the "additional machines clause."

A number of the leases of the constituent companies (prior to the formation of the United Company) contained a clause obligating the lessee to take and use additional machines (see our main brief, pp. 323–324). This is the clause referred to in our main brief as the "Additional Machinery Clause." As pointed out in our supplemental brief (pp. 13–14) and in our main brief (pp. 323–326) the United Company continued this clause so used by the constituent companies only to a limited extent and eliminated it from its leases entirely in 1907. In order to avoid misunderstanding we pointed out in our supplemental brief (pp. 13–14) that the clause referred to in the petitioner's main brief (pp. 150–151) as the "Additional Machines Clause," and which, as stated in the petitioner's Reply Memorandum, is still contained in *one form of lease of metallic machines*, does not obligate the lessee to take additional machines but merely provides that if he does not take them the United Company may cancel its leases

of machines of that particular kind or department. In other words, it imposes no binding obligation on the lessee to take additional machines, as did the "Additional Machinery Clause" used by the constituent companies and eliminated in 1907.

8. The table on pages 5–6 of the petitioner's Reply Memorandum merely refers to certain paragraphs of certain leases. To understand the clauses and their effect the leases themselves must be examined.

We merely wish to point out here that this table includes reference to a number of leases which have been superseded, and furthermore that unless the leases themselves are referred to the table may be misleading. For instance, the lease of the Goodyear auxiliaries (Exhibit No. 25) is referred to as containing the Exclusive Use Clause. This clause, however, permits cancellation of the lease of the Goodyear auxiliaries only if the United Company's welter and stitcher are not used exclusively. It does not permit such cancellation if auxiliary machines obtained from others are used.

9. The record shows that in 1911 the United Company did business with 1,033 shoe manufacturers operating 1,150 different factories (R. Vol. 1, p. 454, lines 45–46; p. 455; p. 26, lines 38–40). The only evidence as to the total number of shoe manufacturers in the country in 1911, or at any other time, was Mr. Donham's testimony that he should say there were in 1911 between 1,300 and 1,500 and that the Census for 1910 showed in the neighborhood of 1,300 as he recalled it (R. Vol. 1, pp. 26–27, lines 41–2).

In its main brief the petitioner stated (p. 132) that the Census for 1914 showed a total of 1,090 shoe manufacturers and the petitioner used this figure to prove that the United

Company did business with 1,033 out of 1,090 shoe manufacturers in the country.

In our supplemental brief we pointed out that the Census for 1914 was not in evidence; that the number of shoe manufacturers in 1914 could not properly be compared with the number of shoe manufacturers with whom the United Company did business in 1911; and further that the petitioner had misquoted the Census for 1914, which showed 1,355 shoe manufacturing establishments which reported to the Census Bureau, and not 1,090 shoe manufacturers. (See our supplemental brief, pp. 143–146; see also Census of Manufactures for 1914, p. 8, and also Census Bureau Publication entitled "Manufacture of Footwear. Census Bureau's Summary Concerning the Industry for 1914.")

At the argument before the Court the petitioner produced a mimeographed (not printed) sheet issued by the Census Bureau entitled "Census of Manufactures, 1914. Preliminary Statement on the Manufacture of Boots and Shoes, including Cut Stock and Findings." This statement read in part as follows:—

	Boots and Shoes
Number of establishments	1,355
Persons engaged in the manufacture . .	210,348
Proprietors and firm members	1,090
Salaried employees	17,703
Wage-earners (average number)	191,555

The petitioner contended that the title "Proprietors and Firm Members," the number of which was given as 1,090, meant the total number of concerns engaged in shoe manufacture in 1914.

In case the Court should deem this question material, we wish to point out that counsel for the petitioner were incorrect in their contention.

On its face the phrase "Proprietors and Firm Members" means only the number of individual proprietors or owners and members of unincorporated firms who were engaged in the industry. It does not include corporations or the officers of corporations, the latter being included under the next title, viz., "Salaried Employees."

Inquiry at the Census Office confirms this interpretation and shows that the expression "Proprietors and Firm Members" does not include or refer to 686 establishments operated by corporations or their employees.

As a rule the term "establishment" as used in the Census Reports means a separate factory, but where two or more factories operated under a common ownership are situated in one city they are counted as a single establishment. (See Census of Manufactures. General Totals for the United States by Geographic Divisions, States and Industries, p. 2.) Thus the Census Report shows that there were more than 1,355 separate shoe factories doing business in 1914. It does not show the exact number of different concerns which owned these factories.

Thus it appears that more than 1,355 factories were doing business in 1914, while the United Company at the last available date, viz., 1911, did business with only 1,150 factories operated by 1,033 lessees. The record further shows that it did not furnish a complete line even of its principal machines to all of the lessees with whom it did do business. For example, see the testimony of Webster, a witness for petitioner (R. Vol. 1, p. 299, lines 4–45).

10. The petitioner's argument, at page 7 of its Reply Memorandum, that the United Company's leases compel or induce substantially all shoe manufacturers, as a condition of obtaining necessary machines, to agree that they will not use the machinery of competitors, is fully answered by the facts found in respect to the leases by the District Court (see our main brief, pp. 62–65, 77–80) and by the statement in our main brief in respect to the leases and their effect (see our main brief, pp. 298–422).

11. The petitioner's misconception of the United Company's lease system is shown by its comparison (p. 7) of this lease system with the conspiracy held unlawful in *Lawlor* v. *Loewe*, 187 Fed. 522; 235 U. S. 522.

In *Lawlor* v. *Loewe* there was a conspiracy or agreement for the direct purpose of intimidating Loewe's customers by threats of boycott and forcing them to cease dealing with Loewe. In the case at bar we find leases voluntarily entered into by shoe manufacturers containing provisions which, as the District Court found as a fact (R. Vol. 1, pp. 1159–1160) were not designed to exclude competitors, but which were designed to enable the lessor to offer remarkably favorable terms to lessees and at the same time afford the lessor reasonable protection in respect to the compensation for and care of the leased machines.

12. The petitioner's Reply Memorandum ignores most of the statements made in our supplemental brief as to the erroneous statements and assumptions contained in the petitioner's main brief, and, as we have shown above, fails to answer the few to which it does refer.

We desire to call the Court's attention especially to the erroneous statements or assumptions in the petitioner's main brief which are referred to in the following portions of our supplemental brief:—

(1) Misstatements in petitioner's brief as to the scope and effect of the Restricted Use Clause. (See our supplemental brief, pp. 15–21.)

(2) Petitioner's erroneous statements as to the unrestricted or independent leases and their effect. (See our supplemental brief, pp. 22–38.)

(3) Petitioner's misconstruction of the Exclusive Use Clause. (See our supplemental brief, pp. 38–43.)

(4) Petitioner's argument based upon its misconstruction of the lease clauses. (See our supplemental brief, pp. 48–55.)

(5) Petitioner's contentions as to monopoly. (See our supplemental brief, pp. 140–158.)

We also call the Court's attention to the misconception of the leases shown by the relief asked for by the petitioner. (See our supplemental brief, pp. 65–69.)

Respectfully submitted,

FREDERICK P. FISH,
CHARLES F. CHOATE, JR.,
MALCOLM DONALD,
Counsel for Appellees.

THE LAW OF THE CASE..... 214

I. The United Company Is a Combination in Violation of the Federal Anti-Trust Law..... 214–231

A. *Restraint of Trade by a Combination of Actually or Potentially Competitive Units is Illegal No Matter What Form it Assumes*..... 214

B. *No Specific Intent is Required where the Necessary Result is Materially to Restrain Trade*..... 221

C. *Even if it were Necessary to Prove Intent, the Comprehensiveness and Conduct of the Combination Would do it*..... 224

D. *The Combination being a Union of able Competitors together Occupying a Preponderating Position Violates the Law*..... 227

E. *The Fact, if it be a Fact, that Prices Were not Raised or that Service and Machines Have Been Made More Efficient, is no Justification for the Combination*..... 228

II. The Plant Purchase Was Illegal Even Though Plant had not yet Installed His Machines in any Factory Other than that of the Plant Company..... 231

III. The Restraining Agreements made with Vendors at the Time their Properties were Acquired are Illegal..... 234

IV. The Claim that the Plant and Other Purchases were made to Settle Litigation Is Immaterial.. 242

V. The Obnoxious Clauses of the Leases Illegally Restrain Trade..... 244–259

A. *They Suppress Competition and Maintain a Monopoly*..... 244

B. *They Unlawfully Coerce Shoe Manufacturers and Force a Boycott of Defendants' Competitors*... 247

C. *They are Condemned by the Law Irrespective of Whether the United Company is a Lawful or Unlawful Combination*..... 253

D. *Even If All the Shoe Manufacturers Were Satisfied with the Obnoxious Clauses They still would be Illegal*..... 257

VI. The Lessees are not Necessary Parties to this Litigation..... 259

VII. Statements By Shoe Manufacturers of the Reasons Why they did not Buy Independent Machines, were Admissible..... 262

VIII. Letters Patent do not Justify Acts Otherwise Illegal Under the Sherman Act..... 263–280

A. *Certain Rights Not Conferred by the Patent Laws*. 263

B. *Patents Confer No Right on Patentees or Assignees Engaged in Interstate Trade and Commerce to Combine to Restrain or Monopolize such Trade and Commerce*..... 268

THE LAW OF THE CASE—Continued. Page.

IX. The Alleged Patent Infringements do not Remove the Illegality of the Defendants' Acquisitions 280–286

A. *The Challenged Patents were Presumtively Valid* .. 280

B. *Their Validity May Be Challenged Only in an Action for Infringement* 281

C. *Whether the Patented Machines which were Acquired Infringed Patented Machines Owned by the United Company is Immaterial for Another Reason* 285

CONCLUSION 286

In the Supreme Court of the United States.

OCTOBER TERM, 1916.

No. 545.

UNITED STATES OF AMERICA, APPELLANT,

v.

UNITED SHOE MACHINERY COMPANY ET AL.

APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF MASSACHUSETTS.

BRIEF FOR THE UNITED STATES.

INTRODUCTORY STATEMENT.

This is an appeal from a decree of the District Court for the District of Massachusetts, dismissing a suit brought by the United States under the Sherman Act against the United Shoe Machinery Company of New Jersey, certain affiliated or subsidiary corporations and certain individuals who were officers or directors of the corporate defendants.

The petitioner protested against an order providing for a private hearing before an examiner.

(R. I, 1062.) The Court overruled the protest and directed that—

> The examiner will not, without the consent of both parties, allow the attendance of persons other than those mentioned in Rule 67. (R. I, 1070.)

Later, the Attorney General having previously filed an expediting certificate under the statute (32 Stat., 823; 36 Stat., 854), the order was vacated and the case set down for trial before two circuit judges and a district judge.

THE PLEADINGS AND THE SUBJECT MATTER.

I. THE NATURE OF THE PROCEEDING.

The object of the suit is to forbid and prevent the defendants further making, maintaining or engaging in certain unlawful combinations, contracts and agreements hereafter described, and from continuing to monopolize a part of the interstate and foreign commerce of the United States in machines used for the manufacture of shoes, as hereafter defined.

The relief sought is a decree adjudging the corporate defendants to be combinations in restraint of trade and to have acquired and to be maintaining and extending a monopoly of the commerce in question and enjoining the further continuance of such illegal combinations and such monopolization; and, especially, forbidding the continued making or enforcement of certain provisions of certain leases or contracts under which the defendants have put out and are putting out machines.

The defendants, other than certain corporations as to whom at the opening (R. I, 1061) a discontinuance was entered, are—

United Shoe Machinery Company of New Jersey.
United Shoe Machinery Corporation.
United Shoe Machinery Company of Maine.
United Xpedite Finishing Company.
O. A. Miller Treeing Machine Company.
W. W. Cross & Company.
Ross-Moyer Manufacturing Company.
J. K. Krieg & Company.
Booth Brothers Company.
Ellis Lacer Company.
United Shoe Repairing Company.
Sidney W. Winslow, and twenty-one other individuals all of whom were officers or directors of the corporate defendants above named or of some of them.

The answers of the various defendants are not identical, but the answer of the United Shoe Machinery Company of New Jersey embraces substantially all the defenses set up by them. A brief outline of it is, therefore, sufficient.

It denies every allegation of the petition not specifically admitted; admits that it acquired the business, assets, and letters patent of the companies named in the petition (R. I, 1043); claims that those companies were non-competing at the time of their acquisition; that the machinery owned by each was covered by letters patent of the United States; and that the acquisitions were made with the

expectation of economies in administration and cessation of patent litigation between the companies purchased. It also alleges that the greater part of its business consists in the manufacture under letters patent of shoe machines and in the leasing of those machines to shoe manufacturers under the letters patent. It denies that it restrains or monopolizes interstate or foreign trade and commerce or ever attempted so to do, but alleges that if it has any such monopoly it is valid and legal as derived under the letters patent owned by it. It also sets up the statute of limitations. (R. I, 1042–1046.)

Replications were filed to the answers. (R. I, 1058).

II. DESCRIPTION OF THE DEFENDANTS.

The United Shoe Machinery Company of New Jersey is a corporation of that State. It was organized February 7, 1899, (R. I, 1, l. 32; 633, l. 4)[1] and was a consolidation of the business and properties of the following competing companies which were taken over as going concerns:

Goodyear Shoe Machinery Company.
International Goodyear Shoe Machinery Company.
Consolidated & McKay Lasting Machine Company.
McKay Shoe Machinery Company.
Davey Pegging Machine Company.
Eppler Welt Machine Company.

[1] References to the record are by volume, page, and line. Thus the reference (R. I, l. 32; 633, l. 4) is to the Record, volume I, page 1, line 32, and page 633, line 4.

International Eppler Welt Machine Company.

(Answer, R. I, 1043.)

Many of the principal owners and managers of these companies became officers and directors of the new company. Its main factory is in Beverly, Massachusetts. (R. I, 35, 423, l. 41.) In addition it maintains stations "throughout the country covering all the principal shoe manufacturing centers." (R. I, 553, l. 34.) It has been engaged, ever since its formation, in manufacturing at its Beverly plant, and in selling, leasing, and shipping to shoe manufacturers all over the United States shoe machines, supplies, and related things. (R. I, 35; l. 32; 423.)

The authorized capital of the United Shoe Machinery Company of New Jersey is $25,000,000.

United Shoe Machinery *Corporation* was organized in 1905. It also is a corporation of New Jersey. Its business appears merely to be that of a holding company. (Plff's Exs. 164–7, R. IV, 1126–37.) Upon its organization, it acquired "substantially all of the capital stock of the United Shoe Machinery Company of New Jersey." (Morton, R. I, 358, l. 28.)

Assuming that the stock issued at the organization of the United Shoe Machinery Company represented no more than the fair value of the properties acquired, the defendants in twelve years, as shown by dividends and surplus, have earned in excess of $50,000,000 upon a total investment in cash or its equivalent of about $20,000,000. (Morton R. I, 358–360.)

The United Shoe Machinery Company of Maine is, since a change in 1902, the present name of the old Goodyear Shoe Machinery Company. All its stock—$3,000,000—is owned by the United Company which acquired it when that company was organized. Its present business is the leasing of machines manufactured by the United Company of which it is merely a department. (Donham, R. I, 34, l. 40.)

The other corporate defendants do not require particular description.

The combined activities of the various corporate and individual defendants so far as they relate to the subject matter of the present action are commonly referred to in the record and are here referred to as those of the "United Company" except where clearness requires a more specific designation.

Of the individual defendants, Sidney W. Winslow is the president of all the corporate defendants and is their chief executive officer. He was the principal witness for the defence. The other individual defendants are, or were at the time when the bill was filed, directors or officers of the United Shoe Machinery Company or of the United Shoe Machinery Corporation. In most cases they were connected with both these companies as well as with others of the corporate defendants. (Plff's Exs. 186, 167, R. IV, 1231, 1137.)

III. DESCRIPTION OF THE SUBJECT MATTER OF THE ACTION.

A. IN GENERAL.

The end which avowedly was sought by the organizers of the United Company was "the control in one corporation, both in the United States and in foreign countries of the efficient types of shoe machinery." (Statement to the Stockholders of the Goodyear Shoe Machinery Company, February 8, 1899. Plff's Ex. 152, R. I, 140.) The business in which the defendants are engaged is that of supplying machines used in the manufacture of shoes. The interstate and foreign trade in certain, though not all, of such machines (*infra*, p. 13) is that which defendants are charged with having restrained and monopolized. The subject matter of the action, therefore, is the effect of the things done by the defendants upon the trade between manufacturers of machines used in the manufacture of shoes and the manufacturers of shoes.

B. THE BUSINESS OF SHOE MANUFACTURING.

To understand, therefore, the nature and importance of the questions presented by this case, it is necessary to have in mind certain facts regarding the manufacture of shoes and the relations thereto of the use of machinery and its supply.

According to the Census of Manufactures, issued by the Department of Commerce, 1090 American firms, individuals and corporations were engaged in 1914 in manufacturing shoes. In 1909, the latest year

for which figures are available, 285,000,000 pairs of shoes, in round numbers, were made in this country, as against 175,000,000 in 1899. (Winslow, R. 414, l. 38.) Shoes are made in practically every State in the Union. It is obvious that supplying machines for an industry of this size and geographical distribution must be an exceedingly important part of the interstate trade and commerce of the United States.

C. EXTENT OF THE USE OF MACHINES IN THE MANUFACTURE OF SHOES.

The making of shoes was almost wholly a handicraft until about 1860. At about that time the first practical machine for performing an important shoe making operation began to attain wide use. Other machines followed.

When this suit was brought, and indeed at the formation of the United Company in 1899, the industry had become almost wholly a machine industry. Of the 175,000,000 pairs of shoes produced in this country in that year, according to defendants' figures, (Dfs.' Ex. 215, R. I, 424) only 197,000 are described as hand made, and Mr. Winslow testified, (R. 869, l. 37–39) that 110,000,000 were of kinds which never had been made by hand and could not be so made. The record shows that to-day hand work has been superseded by machine work even as to the simplest and least expensive operations. (R. I, 91, ls. 26–30.) For the most part it persists only for incidental work in connection with the use of machines. (e. g. R. I, 497.) No shoe manufacturer attempting to do business on any considerable scale can to-day exist in

competition with other manufacturers without having in his factory a substantially complete line of machines. In order to compete with any hope of success he must obtain his machinery upon a basis of cost not substantially above that upon which his competitors obtain their equipment.

D. THE MANUFACTURE OF SHOES BY MACHINERY, METHODS AND MACHINES.

The mysteries of the shoemaker's art and the variations between different methods of making shoes are not within the knowledge of the ordinary purchaser nor do they enlist his interest. To him shoes are shoes, except as they differ in appearance, comfort, wearing qualities and price. For his approval all shoes which approximate his size may be said to compete and the factors which govern that competition are those noted rather than the details of their manufacture.

In the industry, however, shoes are classified according to the manner in which the outsole, what we call the sole, is attached to the upper, and this classification is helpful in understanding the application and importance of various facts which will be brought to the attention of the Court.

Shoes, then, are divided into welt shoes, turn shoes, stitch-downs, McKay sewed shoes, McKay welts, fairstitched shoes, pegged shoes, standard screw shoes, loose nailed shoes. (Dfts. Ex. 215, R. I, 424.) In all but the last three varieties the bottom is attached to the upper by a seam of thread. Pegged

shoes are shoes in which the sole is attached to the upper by means of wooden pegs. In standard screw and loose nailed shoes the sole is attached by wire slugs or nails. Such shoes are therefore sometimes called "metallic fastened" and the machines which insert the fastenings are among those classified in the trade and by the defendants as "metallic machines." (R. I, 5, l. 5.)

Welt shoes derive their name from a narrow strip of leather known as the "welt" which is first sewed to the upper and insole by a machine called a "welt sewing machine" or "welter" and is then sewed to the outsole by a machine known as an "outsole stitcher" thus attaching the upper and bottom together, the welt serving as a kind of link. Welt sewing, outsole stitching, and certain other machines used in making welt shoes are hereinafter sometimes called welt method machines.

The sole of the turn shoe is sewed to the upper by the welt sewing machine, adapted for the purpose by the removal of an attachment. Turn shoes are lighter, as a rule, than those made in other ways. They derive their name from the fact that the upper is turned inside out during the process of attaching the sole.

The bottom of the "McKay sewed" shoe is attached to the upper by a seam passing directly through the outsole, insole, and upper. A "McKay sewing machine" is used for this operation.

As was said, the pegged shoe is a shoe in which the sole is attached by wooden pegs. These are inserted by a "pegging machine."

The sole of the "standard screw" shoe is attached by slugs of wire. These are inserted by a "standard screw machine."

The sole of the nailed shoe is attached to the upper by nails made for the purpose. A "loose nailing machine" is used. This machine also is used in the manufacture of substantially all kinds of shoes for attaching to the upper that part of the shoe to which the heel is in turn attached. That is to say, in shoes which are sewed, as distinguished from shoes in which the sole is "metallic fastened," only the part of the sole forward of the shank is attached by the seam of thread. The heel part of the sole, the "heel seat," is nailed on by the loose nailing machine.

McKay welts, fairstitched and stitch-down shoes, mentioned above, are all produced in such relatively small numbers as to be unimportant in comparison with the great classes of welt, turn, McKay sewed and metallic fastened shoes which have just been described. (Dfts. Ex. 215, R. I, 424.)

Despite these radical differences as to the particular manner in which the bottoms of various kinds of shoes are attached, the general process of manufacture of all shoes is substantially the same. In every case, the parts of the uppers must be cut out and assembled, the linings fitted, the upper, counter and insole assembled, the shoe "lasted," i. e., the upper stretched and shaped over the last, the out-

sole shaped and attached, the sole "leveled" or made to conform to the bottom of the last, the heel prepared and attached and the shoe "finished" by polishing, smoothing, and burnishing the edges and bottom of the sole and heel. It follows that "according to general usage, certain names are given by shoe manufacturers to certain parts of their factories in which certain work is done." These are the cutting room where the uppers and linings are cut out, the stitching or fitting room where the uppers, linings and trimmings are assembled and stitched together, the lasting room, the bottoming room, the finishing room, and the sole leather room. (Winslow, R. I, 859, l. 39 et seq.)

In all the foregoing rooms in every factory machines are used. Besides the machines used for the major operations of attaching the sole to the upper, there are used in the bottoming of McKay shoes thirty-two different types of machines. (Dfts. Ex. 236, R. V, 671.) A shoe manufacturer possessing only a McKay sewing machine would therefore be a long way from the necessary equipment for that one department of his factory. For bottoming welt shoes, a larger number of different types of machines is required. (Plffs. Ex. 279, R. IV, 1557.)

E. THE PART OF THE INTERSTATE AND FOREIGN COMMERCE OF THE UNITED STATES IN MACHINES USED IN THE MANUFACTURE OF SHOES WHICH DEFENDANTS HAVE RESTRAINED AND MONOPOLIZED.

When the petition was filed, the defendants did not manufacture machines used in the fitting room, above mentioned, in which the previously cut and prepared

parts of the uppers and linings are assembled. As to certain other machines necessary to the manufacture of shoes, the defendants had not at that time acquired a monopoly. At the trial, therefore, the claim of the United States as to the part of the trade in machines used in the manufacture of shoes which the defendants *actually* had restrained and monopolized was defined as the business of supplying—

> all the [principal and auxiliary] machines used for preparing and attaching the bottoms of shoes to the uppers, and clicking and eyeletting machines. (R. I, 837–839, *passim*. R. I, 192, l. 15–19, R. I, 414, l. 21.)

"Principal machines" and "auxiliary machines" are phrases taken from the practice of the defendants in leasing machines. The defendants class as "principal" the welting, lasting, pulling over, slugging, heeling, standard screw and loose nailing machines. (Winslow, R. I, 537, l. 12 et seq.) A number of other machines are called "auxiliary" machines. This is justified in a measure because in one sense some of the auxiliary machines "prepare the work" for the operation of some of the machines called "principal." (R. I, 537, l. 12 et seq.) In the main, however, the reason for the distinction is rather arbitrary. Mr. Winslow says:

> We call [them] principal machines because they perform operations which are treated as measuring operations for the entire set of machines and because their operations preceded in most cases the development of the auxiliary machines. The auxiliary machines in many

> instances did work that had been done by hand and their development succeeded the development of what have been termed the principal machines. (R. I, 537, l. 14 et seq.)

A list of auxiliary machines, including only the machines classed by the defendants as "Goodyear auxiliaries," i. e., auxiliaries used in the manufacture of welt shoes is to be found in Plffs. Ex. 270 (R. IV, 1446). Inspection of it will show something of the number and variety of the "auxiliary" machines. *These machines are, however, in no sense mere attachments to the principal machines. The operations performed by them are wholly independent.* "That is true with reference to every one of the auxiliary machines. There are no two that operate on the same shoe at the same time. The operations are as separate and distinct as the lasting operation and the welting operation, only they are not so far removed from each other." (Winslow, R. I, 537, l. 7 et seq.)

The uses of some of these "principal" machines, namely, the welting, standard screw machines, and loose nailing machines have already been noted. (*Supra*, pp. 10, 11.) Pulling over machines stretch the upper over the last, preliminary to the process of shaping it or lasting it. Lasting machines shape the upper over the last and secure it there temporarily or permanently according to the process of manufacture which is to follow. Heeling machines attach the heel to the shoe. Slugging machines which are included in the foregoing list of principal machines are used for inserting slugs or nails around the perimeter

of the heel. Clicking machines are used for cutting out the parts of the upper. Eyeletting machines insert eyelets in the uppers.

In the record (I, 495–502) is an enumeration of some of the machines used in the bottoming of welt shoes, with a description of their functions. The nature of the relations between "principal" and "auxiliary" machines, *supra*, appears from what is there said. The distinction, while convenient for the understanding of certain leases of the defendants, *infra*, pp. 145–213, is of no real importance in the Government's view of this case.

F. THE IMPORTANCE, AS A MATTER OF SHOE MANUFACTURING, OF THE MACHINES, THE TRADE IN WHICH DEFENDANTS HAVE RESTRAINED AND MONOPOLIZED.

The processes of lasting, of preparing the bottom and the heel, of attaching them to the upper are necessary processes in the making of every shoe and constitute the "bottoming" of the shoe. The use of machines in these processes is universal. Shoes can not as a commercial proposition be made without them. This is, perhaps, sufficiently established by what has already been said. It may, however, be added that nearly two score shoe manufacturers testified in the case as witnesses either for the Government or for the defendants. These manufacturers represented concerns whose output ranged from 500 pairs daily (Burt, R. I, 739, l. 4) to well over forty thousand pairs (Johnson, R. I, 170, l. 33, Endicott, R. I, 575, l. 31). Their product comprised all varieties of shoes. Every one

of them used machines for the processes named. In substantially every case, for reasons which will be noted, they used the machines of the defendants exclusively.

The process of cutting out uppers, for which the clicking machine was designed, was at the time of filing the petition still performed by hand in a considerable but decreasing number of factories. The clicking machine had been on the market only since 1908, and therefore had only been out about three years at the time when the petition was filed—the time to which testimony was limited by the Court (R. I, 201, l. 42). The importance of this machine and its practical necessity to shoe manufacturers is indicated by Mr. Winslow's appreciative remarks about it. In his opinion (R. I, 426, l. 19), according to his experience in the shoe art, "no machine has accomplished so much for the art as the clicking machine." The saving by its use is estimated at as much as three cents a pair *in leather alone* (R. I, 431, l. 22), aside from the advantages of machine over hand operation with respect to the cost of labor, speed, etc. The familiar effect of the introduction of such machinery upon the supply of hand operators also is to be considered. The importance to a shoe manufacturer of possessing such a machine is obvious. The manner in which the defendants use their control of it to extend their monopoly of other machines is noted. (*Infra*, pp. 158, 165.)

THE FACTS IN THE CASE STATED AND ARGUED.

I. CONDITIONS IN THE SHOE MACHINERY INDUSTRY AT THE FORMATION OF THE UNITED COMPANY.

The principal companies which were combined in the organization of the United Company were, as heretofore observed, the Goodyear Shoe Machinery Company, Consolidated & McKay Lasting Machine Company, McKay Shoe Machinery Company, and Eppler Welt Machine Company. (*Supra*, p. 4.)

A. THERE WAS EXISTING AND POTENTIAL COMPETITION BETWEEN THE GOODYEAR AND THE CONSOLIDATED & McKAY COMPANIES IN LASTING MACHINES.

Before the organization of the United Company, lasting machines of the following types had been at some time in use, namely, the McKay and Copeland, Chase, Copeland-Rapid, Consolidated Hand Method, Seaver, Sinning, and Ideal lasting machines. There may have been others. (Jones, R. I, 106, ls. 23–30; Selz, R. I, 141, l. 43.) In addition there were the Continental and Boston machines which, however, are described by Mr. Winslow as "tacking machines" rather than lasting machines. (R. I, 521, l. 32.) Some of these machines had apparently disappeared prior to the organization of the United Company.

There is no dispute with reference to the various kinds of lasting machines which were being produced at the time the United Company was formed.

At that time there were on the market, according to Winslow, the following:

McKay & Copeland, Chase, Consolidated hand method	Owned by Consolidated & McKay Co.
Ideal, Copeland-Rapid	Owned by Goodyear Co. (R. I, 399, l. 13.)

The Ideal lasting machine was a development of the Copeland-Rapid laster. (R. I, 107, l. 38; 526, l. 45; 914, l. 3.) The only substantial difference between these two machines was that the latter was operated by the foot of the workman while the former was operated by power. (R. I, 914, l. 3; l. 918, l. 3.)

Mr. Winslow testified (R. I, 526, l. 36) that at the time of the formation of the United Company the Consolidated & McKay Company and the Goodyear Company were the only companies putting out lasting machines except the Seaver Company, as to which he stated that it was putting out some machines but was not doing a successful business. (R. I, 526, ls. 28–34.) It was acquired by the United Company less than a year after the formation of that company in 1899. (R. I, 526, l. 33.) It had no plant, and only one witness testified to any use of the Seaver machine. (R. I, 289, l. 25.)

There is no dispute that the McKay & Copeland laster was used chiefly upon heavy shoes. The Chase machine, according to Mr. Winslow, was used chiefly for lasting men's welt shoes but it was offered by its makers as a machine for lasting women's shoes as well. (R. I, 960, ls. 29–30.)

The Consolidated hand method machine as originally designed was adapted principally for lasting McKay sewed, pegged, and metallic fastened shoes. These types of shoes are lasted in the same manner. At first it could not be used successfully for lasting welt shoes, but the problem of adapting it for such use was in the way of solution in the fall of 1898. In December, 1898, the Consolidated & McKay Lasting Machine Company was offering to the trade the hand method machine as a satisfactory machine for the lasting of welt shoes. (R. I, 960, l. 27.)

Mr. Winslow was not willing to testify that the machine was completely successful for that purpose, despite the fact of his company's offering the machine to the trade, but admitted that some machines were already in shoe factories. (R. I, 524, l. 7, 8.) He also admitted that it was the intention of the Consolidated & McKay Company to perfect the machine so as to make it an efficient welt lasting machine, and that in 1900, about a year after the formation of the United Company, it had become, even in his present opinion, a commercially successful machine. (R. I, 524, l. 28.) He added (R. I, 526, l. 11) that women's welt shoes are now lasted very largely upon this hand method machine.

It appears, then, upon Mr. Winslow's testimony, that the Consolidated & McKay Company was putting out lasting machines which covered the entire ground. Taking at face value his statements as to the kind of work for which the various machines were peculiarly fit, the McKay-Copeland covered the heavy

field, the Chase, men's welt shoes, and the hand-method machine, all McKay shoes, and in its improved form, women's welt shoes.

The Goodyear Company's lasting machine was, as has been said, the Ideal machine, which was a development of its Copeland-Rapid machine. It was said by Mr. Winslow (R. I, 527, l. 3) that it was used practically altogether on women's welt shoes, that is to say, in the field in which the hand-method machine owned by the Consolidated & McKay Company before the organization of the United Company has now been so successful. Mr. Winslow declined to attempt to state any reasons why the Ideal machine could not last men's welt shoes as well as women's welt shoes, thus bringing it into direct competition with the Chase lasting machine, put out by the Consolidated & McKay Company. In response to the question whether the Ideal could have easily been developed into a machine which would have lasted men's welts, successfully, he stated that he did not know anything about it. (R. I, 527, l. 24.)

Mr. Howe, testified (R. I, 627, l. 29) that while each machine had a fairly well defined field, it would frequently happen that McKay shoes would be lasted upon the Ideal machine.

Even if the work of the Ideal machine had been confined to women's welt shoes, that was the field which the Consolidated and McKay Company was entering with its adapted hand-method machine.

In addition, however, to the testimony of Mr. Howe as to the use of the Ideal machine for lasting McKay *lasted* shoes (which include standard screw and loose-nailed shoes as well as McKay *sewed* shoes) there is abundant testimony as to the possibility of the use, and as to the actual use of the Ideal machine owned by the Goodyear Company, for lasting men's shoes in direct competition with the Chase machine owned by the Consolidated & McKay Company. The testimony shows also that the Ideal was in direct competition with the latter company's hand-method machine.

Milton J. Florsheim testified that his company was engaged at the time of the formation of the United Company in the manufacture of men's welt shoes, and at the time they were using three Copeland-Rapid lasters (the same machine as the Ideal machine except that it was operated by the foot of the workman rather than by power, *supra*) and several Chase machines; that the Chase and Rapid (Copeland-Rapid) machines did the same class of work, and that "when the shoe was done, you could not tell on which machine it was lasted;" that there was no difference in the quality of the work, and if there was any difference in the rapidity, the advantage was with the Rapid. (R. I, 158, 159, l. 32.)

Warren F. McElroy also testified that the Hamilton-Brown Company, of St. Louis, made men's shoes on the Rapid machine in 1899, and continued to use them until they were exchanged for the new machine brought out by the United Company after its formation. (R. I, 187, l. 15, 189 l. 26 et seq.)

Stephen Snow testified that he was employed by the William L. Douglas Company which made about ten thousand pairs of shoes a day, and that company, which made only men's shoes, both McKays and welts, used only the Consolidated Hand Method and Ideal lasting machines; that he, the witness, had charge of the Ideal machines, of which there were more than a dozen, and the company had no other types of lasters than those mentioned, and did its work upon them; (R. I, 895, 896) that he had previously worked for George E. Keith Company, which also made men's McKay and welt shoes, with an output of about ten thousand pairs daily, and that company had no lasting machines except the Ideal machines, and that there were "about a dozen of them." (R. I, 896, l. 11.) Mr. Snow spoke of difficulty in using the Ideal machine on men's *heavy* boots, meaning long-legged boots, brogans, and miners' shoes (R. I, 900, l. 15) but stated that he had invented an attachment which held the last down, and that with that attachment added it was successful, even for men's *heavy* boots, (R. I, 899 l. 7) but that the Ideal machines were used *without* the attachment for making the shoes made by the Douglas and Keith Companies which was "about a four dollar shoe which was as heavy as they generally make in those factories." (R. I, 896, l. 16.)

Thomas Worsencroft testified that in 1890 he was employed to instruct men to operate the Rapid lasting machine; (I., 913) that the only difference between the Rapid and the Ideal was that the Rapid worked

by foot power and the Ideal by steam power; (R. I, 914, l. 3) that he was employed from 1897 to 1901 by the Duquesne Shoe Company, of Pittsburgh, Pa., which made men's welt shoes; that that company used five Ideal lasting machines for lasting those shoes, and no other lasting machines; that, previously, he had worked for S. A. Crooks Company of Hopkinton, Mass., where the Rapid machine was used on men's McKay shoes, and, in 1891 and 1892, in the factory of John Hanan & Sons of New York City where high priced welt shoes were lasted on the Rapid machines, and at George Snow's factory at Brockton in 1893 where welt shoes were made both on the Rapid and the Chase machines. (R. I, 914, l. 33.) He thought that the Ideal machine did better work on men's welt than the Chase machine and was equally rapid. (R. I, 914, l. 23.)

William P. Whitman testified that he had been manufacturing shoes since 1883, and that he had obtained Ideal machines from the Goodyear Company, and was still using six or seven of them at the time of his testimony; that he made men's welt shoes and never had made any other kind. (R. I, 915, 916.) That he has also now some Number 5 lasting machines [the latest development by the United Company, R. I, 397, l. 38, now offered as the successor of the Chase machine, R. I, 453, l. 25] but he sees very little difference in quality or rapidity between the work of the Number 5 machine and that of the Ideal. (R. I, 916, ls. 4–10.) Referring to the necessity of the hold-down attachment for the Ideal machine he said it

became necessary when the high toed shoe began to come in "which was about ten or twelve years ago." (R. I, 916, l. 38.) He was testifying in 1914 and therefore the date referred to was two or three years after the formation of the United Company.

Edward F. Heffernan testified that he had been employed in the factory of the witness just mentioned for seventeen or eighteen years, and for six years had had charge of the lasting department (R. I, 917, ls. 38–43) and he had operated an Ideal machine for twelve or fourteen years; that there was no substantial difference between it and the Rapid machine; (R. I, 918, l. 3) that he lasted men's welt shoes for twelve years upon Ideal machines without any hold-down appliance; that he had invented such an appliance which improves the operation of the Ideal, and that anything which is lasted on a Number Five [the United Company's successor to the Chase machine, (R. I, 453, l. 25)] can be lasted on an Ideal; (R. I, 918, ls. 30, 31). That the Whitman firm is still using seven Ideal machines; that they have also been using the Number 5 lasting machine for three years and he has observed its operation; that the same operator will get as much work off the Ideal as he can off the Number 5 and, in his opinion, probably a little more; that he can run both machines himself, and considers the Ideal is a little faster; that the character of the work depends on the operator, a good operator being able to do equally as good work on one machine as on the other; and as to whether or not heavy

welt shoes can be successfully lasted on the Ideal machine, everything that can be lasted on the Number 5 can be lasted on the Ideal just the same—they make no distinction; that while the Number 5 is a heavier, stronger machine, yet there is no reason why the Ideal could not be made just as strong, and that by a stronger construction it could last any kind of shoes. (R. I, 918, ls. 1–33.) He said that about four years ago he was given his choice between the Number 5 and the Ideal and took two Ideals. (R. I, 919, l. 41.)

It will be remembered that Whitman & Keith were manufacturers of *men's* welt shoes. Therefore, it is demonstrated in practice that the Ideal without the Snow attachment or any other attachment but as it was in 1899 was capable of lasting men's welts as well as women's, and therefore was a competitor of the Chase machine.

John Jordan testified (R. I, 932, l. 31) that he had been a laster for 25 years and he had lasted *men's* high-grade welt shoes on the Chase machine for two years, on the Rapid for three or four years, and on the Ideal for about ten years; that in his opinion the Ideal did better work than the Chase; that the Ideals at the time he worked on them did not have the hold-down attachment referred to by the other witnesses (R. I, 933, l. 18, 19); that the Ideal was used at the W. E. Douglas factory for lasting *men's* shoes without any hold-down attachment (R. I, 933, l. 30); that such an attach-

ment was put on but was taken off after a short time.

John N. Murphy testified that he had been an operator on lasting machines for about twenty-three years; he testified further that he also operated an Ideal machine both at Whitman & Keith's factory and at Douglas's factory upon *men's* high-grade welt shoes. (R. I, 933, l. 43, 934, l. 5.)

He said he had also operated the Number 5; that the quality of the work of the Ideal was about the same and that the Ideal was a little faster. (R. I, 933, l. 13, 15.)

Francis O'Keefe testified that he was now foreman of the lasting room of Stacy-Adams Company and had been engaged in lasting shoes for about eighteen years. He testified further (R. I. 934, l. 20 et seq.) that James A. Banister & Company, makers of *men's* fine welt shoes, were lasting such shoes on six Ideal machines, and that the Chase and Ideals did about the same amount of work. He also testified that that company was at the same time using Chase machines for work of like character. On cross-examination he testified that L. Boyden & Company by whom he was first employed in 1896 successfully used the Chase machine for lasting women's shoes. (R. I, 935, l. 20.) He added that the Chase could last successfully *any kind* of shoes except the high toed models which had come into vogue the last three or four years.

The Chase owned by the Consolidated & McKay Company and the Ideal owned by the Goodyear

Company were, therefore, competitive machines when the United Company was formed.

Ira Fletcher testified that he was superintendent of F. M. Hoyt Shoe Company of Manchester, New Hampshire, that he was employed by W. L. Douglas from 1902 to 1910, and that during that period the Douglas Company which was making *men's* welt shoes only was lasting them on Ideal lasting machines, of which, in 1902, 54 were in use. (R. I. 938, l. 11); that Douglas preferred the Ideal to the Chase (ibid, l. 36). He further testified that he had been previously employed between 1894 and 1901 by Cushman & Company of Auburn, Maine; that that company made *men's* welt shoes and lasted them upon Ideals, of which they had twelve; that they had no other kinds of lasting machines in the room in which he was working.

Joshua LeMay testified that he is foreman of Rice & Hutchins' lasting department, and that in that factory the Chase machine was used on both welt and McKay work, indiscriminately, and that in 1897 or 1898 women's McKay shoes were lasted upon the Chase machine. He stated that he had worked on the Chase machine for eight years and that he knew of no reason why the Chase machine could not be used on women's welt shoes, the same as men's. (R. I, 947, ls. 23–37.)

Walter C. Springer (R. I, 947, l. 43) testified that he has worked for Rice & Hutchins about twenty-one years, and was, when his evidence was given, assistant superintendent of the Curtis factory, and at times

had partial charge of the lasting room. Before the "No. 5" came out they used the Chase machine, on men's, boys', and youths' McKay and welt shoes. They also used it successfully on *women's* shoes, and he knows of no reason why it can not be used on women's welt shoes, the same as on men's. He had never heard of anything wrong with the lasting of the women's shoes done on the Chase machine. (R. I, 949, l. 29.)

Emanuel F. Selz, general manager of the manufacturing department of Selz, Schwab & Company for more than twenty years, testified that his company's factories had a capacity of fifteen thousand pairs of shoes per day (R. I, 141, l. 16); that just before the establishment of the United Company the Rapid, the Chase, the Consolidated hand-method, Ideal and Boston machines were in use. They could *all* last *men's* and *women's* shoes (R. I, 142, ls. 14–19); that he got the Chase in 1891 and used it up to a few years ago and that his company still has the Boston and some of the Consolidated hand method machines (R. I, 148, ls. 22, 32); that they have lasted both men's and women's shoes on the Chase and on the Consolidated (R. I, 148, l. 40); that they now use the Consolidated laster principally for *women's* shoes and men's McKay shoes (R. I, 149, l. 5).

Martin E. Welch, a man of forty-seven years experience as a shoe manufacturer, twenty-five of which were spent in business for himself, testified that "when we started the welts we began with the Consolidated hand method machines and we are still

lasting all our welt shoes on that machine. We make women's shoes altogether and have never made any men's welt shoes." (R. I, 712, ls. 2–7.)

The foregoing testimony shows that the Consolidated hand method machine, owned by the Consolidated & McKay Company, was in competition with the Ideal, owned by the Goodyear Company, in the lasting of women's shoes at the time the combination was formed.

John Strootman (R. I, 742, l. 41) testified that he was engaged in manufacturing *women's* shoes, one half of which were McKays and the other half turns and welts. He said, "We lasted by hand until we got the Consolidated hand method machine and we are still using improved machines of that type. Formerly we lasted our shoes *entirely* on that machine, but now we last the toes on the Number 5 machine and the sides on the Consolidated hand method." (R. I, 744, l. 28.)

Charles A. Eaton, (R. I, 751, l. 18) engaged exclusively in the manufacture of men's welt shoes, except a few ladies' and boys' shoes, testified that he had been in the manufacturing business since 1879; that between 1892 and 1899 he was making men's welt shoes exclusively (R. I, 755, l. 6) that he used the Consolidated hand method, the Chase and the Seaver machines, replacing the Chase by the Seaver on the better grade of work, and doing the cheaper work on the hand-method machine (R. I, 755, ls. 2–7); that the Seaver was put out by the Seaver Lasting Machine Company acquired by the United Company soon after

its organization. (*Supra*, p. 18.) The Seaver, owned by one company, and the Chase, and Consolidated Hand Method machines, owned by another, were therefore in competition at the time the United was formed.

The defendants made no effort to meet the foregoing testimony directly, but while contending that each type of lasting machine was better on some kinds of work than others, conceded that there was "some overlapping." (Winslow, R. I, 527, ls. 1–27, Howe, 627, ls. 18, 19.)

Mr. Howard, the patent attorney for the Company, gave certain technical testimony (R. I, 966–973) which is intended to show by reference to patent drawings the unsatisfactory character of the Ideal lasting machine for men's work. *He admitted that he had never lasted a pair of shoes* and does not pretend to any knowledge qualifying him to contradict the direct statements of the witnesses as to the actual use of these machines.

He stated that his testimony must be taken "as technical information" only (R. I, 971, l. 32). He admitted that "it is pretty hard to identify the Ideal machines used before 1899 because the records of the Goodyear Company (the owner of the Ideal) were not nearly as complete as those of the Lasting Machine Company owner of the Chase and other machines. (R. I, 973, l. 35.) His testimony is therefore of little value when confronted with the foregoing testimony of practical and disinterested witnesses.

The same may be said of the testimony of Mr. Winslow (R. I, 975, l. 42) relative to the number of Ideal machines out January 1, 1899, and the work done upon them. This, too, can be based only upon the records, which Mr. Howard tells us "were not nearly as complete as those of the Lasting Machine Company." Besides, the relative number of machines in use would have little if any tendency to prove whether or not they were competitive. The greater number in use of the one might be due to better management, more capital, or any one of a number of causes having nothing to do with the competitive character of the machines.

It appears also from the testimony of Mr. Winslow that prior to 1898 the Goodyear Company was accustomed to put out the Ideal machines "on a large initial payment and no royalty." (R. I, 978, l. 24.) This being so, the company would have no record of the number of shoes operated upon by the Ideal.

In addition to the foregoing facts, as to the active competition existing between the lasting machines put out by the Goodyear Company on the one hand and those controlled by the Consolidated & McKay Company on the other and as to the prospect of increasingly sharp competition between those machines, some one of which was necessary to the making of every shoe, it is further to be noted that the Goodyear Company, though possessing only a single type of lasting machine, had the great advantage of being able to offer also welt sewing and outsole

stitching machines and auxiliaries to those machines. It was able therefore to make its lasting machine help its welt machine, and *vice versa*. At the same time, the Consolidated Company was retaliating by requiring the use of its lasting machines to full capacity and insisting upon the requirement that if the lessor should have work for lasting machines requiring additional machines, such machines should be taken from the Consolidated & McKay Company. (Plffs. Exs. 6–10, R. III, 45–82.)

This is in effect an admission that Mr. Winslow's Company, the Consolidated & McKay Company, believed that its own laster was capable of lasting men's and women's shoes, and was, therefore, in direct competition with the Ideal machine as to both classes of shoes.

The Government's testimony on this point is strongly sustained by certain advertisements which appeared in the Hide & Leather Reporter, a trade paper. On December 3, 17, and 31, 1898, about two months before the combination was formed, the Consolidated & McKay Lasting Machine Company published an advertisement stating that the Consolidated hand method lasting machine was adapted to the lasting of "welt shoes" and offered it to the trade for that purpose. The advertisements made no distinction between men's and women's welt shoes but claimed the machine would last welt shoes without distinction. (R. I, 960, l. 24.)

On December 22, 1897,[1] about a year and two months before the consolidation, the Chase laster, also put out by the Consolidated & McKay Company, of which Mr. Winslow was the chief managing officer (R. I, 522, l. 21, et seq.), was advertised in the same paper as a machine "for lasting women's shoes." (R. I, 960, ls. 29–30.)

The evidence afforded by these contemporaneous advertisements should overcome anything which Mr. Winslow and his witnesses said in this law suit, twelve years afterwards. If the advertisements were warranted, and of course they were, the Consolidated hand method and the Chase, both owned by the Consolidated & McKay Company prior to the organization of the United Company in 1899, were adapted to the lasting of *women's* welt shoes, as well as men's, and therefore as to these shoes also were competitors of the Ideal laster, owned by the Goodyear Company, which is conceded by all hands to have been thoroughly fitted for the lasting of *women's* welt shoes.

The foregoing testimony clearly shows that the purchase of the Consolidated & McKay Company and of the Goodyear Company by the United Company, February 7, 1899, destroyed an existing and vigorous competition between lasting machines.

That with the development of the industry this existing competition between powerful corporations must have become increasingly sharp is, it is respectfully submitted, not open to doubt.

---

[1] The date is stated in the record as 1907, an obvious misprint.

B. THERE WAS EXISTING AND POTENTIAL COMPETITION BETWEEN THE GOODYEAR AND EPPLER COMPANIES IN WELT SEWING AND OUTSOLE STITCHING MACHINES AND AUXILIARIES.

The characteristic feature of the welt method of making shoes is, as has already been said (*supra*, p. 10) the use of a strip of leather called the welt which is employed as a connective between the upper and the outsole, both of which are sewed to it. Before the consolidation the Eppler Welt Machine Company and the Goodyear Shoe Machinery Company were each putting out machines for performing the operations involved. They laid the stitch of the seam which attached the welt to the upper in different ways. Each also put out outsole stitchers and the two companies were therefore in competition as to these machines also. (Howe, R. I, 469, l. 36.) Undoubtedly many more machines had been put out by the Goodyear Company which had twenty years priority in the field. The statement made in the lower court that the Eppler machines could not produce "Goodyear welt" shoes is, however, only warranted when understood literally, and when so understood is of absolutely no significance. Eppler machines could not produce "Goodyear welt" shoes because "Goodyear welt" was a trade-mark name for shoes produced on Goodyear machines. (R. I, 22, l. 3, 625, l. 44.) But Eppler machines could and did produce merchantable shoes made by the welt method and the shoes so produced possessed the advantages of that process. (*Infra*, pp. 35–40.) That there was open to the Eppler Company a wide field of possible competition, that it was successfully entering that field

and that in all human probability it must have become at least a dangerous and annoying competitor of the Goodyear Company are circumstances which, if true, are not lessened in significance by the contention of the defendants that the competition when ended by the illegal combination had not yet threatened the dominance of the Goodyear Company. Neither are they affected by the *belief* on the part of some, even if such a belief were warranted, that after all was over, the Goodyear machines would have demonstrated a superiority which the Eppler interests could not have offset either by improvement of their machine or by concessions of price. That the Eppler Company was in fact an able and a prospectively very dangerous competitor is shown by the following evidence:

C. H. Jones testified (R. I, 108, l. 42) that when the United Company was formed the Goodyear Company and the Eppler Company were both putting out welting, sewing, and outsole stitching machines, and he knows of his own personal knowledge that the welters and outsole stitchers produced by the Goodyear and Eppler companies were used for the same grade of work (R. I, 111, l. 16).

E. F. Selz testified that immediately before the United Company was organized there were on the market the Goodyear and the Eppler stitchers and inseam sewing machines (inseam machine is the same as welting machine) and that they were doing exactly the same work, the only difference between the Eppler and the Goodyear being in the formation

of the stitch, but so far as he knew, and he had used both machines, there was no difference in the rapidity with which the work was done. (R. I, 143, l. 22 et seq.)

Warren F. McElroy, an expert of wide experience, (*infra*, pp. 104, 136) testified that in 1897 or 1898 the company with which he was working was solicited by an agent of the Eppler Machine Company, and that the witness went to a factory and looked at the machines and the class of work they were doing. They were working on men's medium and fine grade welt shoes, and from his observation it appeared that the work of the Eppler was equally as good as the work done by the Goodyear machine and that it could have been used on women's shoes. (R. I, 187, l. 32 et seq.)

Charles S. Smith testified that the Eppler Company began business in 1893, and put out the welting machine, and began putting out the outsole stitching machine in 1893 or 1895. The witness had sewed shoes on the Eppler machines as an expert (R. I, 352, l. 43) and they could be and were used for the same purposes as the Goodyear welt sewing machine (R. I, 352, l. 20).

William P. Whitman testified that he installed an Eppler welt machine before the formation of the United Company and operated it for several years. The work done by the machine was satisfactory. (R. I, 916, l. 11.)

Fred F. Field testified that he was President of the Fred F. Field Company, of Brockton, and vice pres-

ident of Field Brothers & Gross, of Auburn, Maine. The Fred F. Field Company, of which he has immediate charge, manufactures men's welt shoes, and they at one time had in their Brockton factory as many as *eight* Eppler welt machines. At the same time they had *two* Goodyear welters. He thinks they obtained the first Epplers probably in 1902 or 1903, and kept five or six of the machines until about a year ago (This witness testified February 5, 1914). During that entire time he was using both Eppler and Goodyear welters, and it was the witness' judgment that the Eppler machine sewed a flatter seam than the old Goodyear, hence the shoe did not require so much filling in the bottom, which he regarded as some advantage, and he does not think there was much difference between the old Goodyear and the Eppler as to the amount of work which could be done. They put in the Eppler machines because they regarded them as the better of the two, and kept them until the United put out its Model K. (R. I, 930, l. 15, 24 et seq.)

George Strong testified (R. I, 931, l. 42) that he has been making men's welt shoes for thirty years; that he began the use of the Eppler outsole stitcher about 1892, when they were then sewing the inner seam by hand, and they got along with the stitcher very well. About 1895, they took two Eppler welt machines and used them until about 1900, when they made a trade with the United Company and took Goodyear machines. They did this because their Eppler machines were "practically gone" and they

had a chance to turn them in to the United Company for the new rapid stitchers and welters, and he thinks that the Goodyear welter is a little better than the Eppler welter was. (R. I, 932, l. 23.) It may be added that the *new* machines for which the exchange was made were developed after the formation of the United Company.

Milton S. Florsheim testified that when the United Company was formed, he had Goodyear welters and stitchers, and had installed one line of Eppler welters, stitchers and rounders (R. I, 159, l. 7); that the Epplers were being used by others and he wanted to find out whether he could not use them and thus save one cent per pair royalty, the Eppler people charging that much less than the Goodyear (Ibid., 169, l. 22). And he said that in his opinion the work performed by the Eppler welters, stitchers and auxiliaries was as well done as that performed by the Goodyear machines, and that the best shoes made at that time, or as good as any made, were made on the Eppler machines. His company then made a high-grade shoe, but they were not as high priced as the shoes it is now making, which retail from $4 to $6 per pair. (R. I, 935, l. 30 et seq.)

George E. Keith, formerly president of the Eppler Company, and now a director of the United Company (R. 385, l. 21) admits that the Eppler Company had put out about thirty or forty welters, but not so many stitchers; that they had been attempting to install welters after 1892, and stitchers after 1894 or 1895, and that they had a line of machines for making welt

shoes, except a rough rounder, and were trying to perfect that, and had put five agents in the field (R. I, 389, l. 6 and 26).

R. H. Long (R. I, 224, l. 31) testified that he engaged in shoe manufacturing for himself in 1886 and was so employed at the time the United Company was formed; that his factory had a capacity of six thousand pairs a day; that at the time the United Company was formed he was engaged exclusively in the manufacturing of welt shoes, and was using the Eppler welt machine principally (R. I, 225, l. 10) and that he continued to use that machine long after the formation of the United Company; (R. I, 226, l. 3) that finally he surrendered the Eppler and took the Goodyear, which performs exactly the same class of work (R. I, 227, l. 41). There is considerable testimony as to why he made the surrender, but that is immaterial. We are only concerned with the fact that he had successfully used the Eppler for many years.

James H. Cunningham (R. I., 288, l. 31) testified that he had been superintendent of Stacy Adams Company for 30 years, which company has a daily capacity of about 1,200 pairs, welt shoes, exclusively; that his company commenced the use of the Eppler welter about 1892 and continued it until two or three years after the United Company was formed; that it was used for performing the same kind of work as the Goodyear machine; and that the *welter* was satisfactory, but the outsole stitcher did not do as good work as the Goodyear (R. I, 290, l. 3).

Ira E. Fletcher (R. I, 937, l. 36 et seq.) superintendent of F. M. Hoyt Shoe Company, said that he worked for W. L. Douglas from 1902 to 1910; that Mr. Douglas used the Eppler and Goodyear welt machines, had about *twelve* of the former and *eight* of the latter; *that the two classes of machines ran side by side in the same factory.* The shoes made on the Eppler and Goodyear machines were both put on the market *as welted shoes.* Douglas was using the Eppler stitcher as well as the welter, he said. The witness considered the Goodyear *stitcher* better than the Eppler, but he made no comparison between the Eppler and Goodyear *welter* further than to say that they ran side by side in the same factory.

Mr. Keith, just mentioned, testified that the Eppler welter was put out in 1892 and the stitcher in 1894 or 1895; (R. I, 389, l. 11). The Eppler company, then, was in business some seven years before the consolidation. This proves that it was a successful competitor or else it could not have lived that length of time.

It was shown that the Eppler Company was pressing its business and was advertising its product up to the moment of its acquisition by the United Company. (R. I, 361, l. 37.) It was a valuable property. In the Court below, the Government sought to prove its value by reports of the Company made as required by statute to the Commissioner of Corporations for Massachusetts covering the years 1896, 1897, and 1898. Copies of these reports, duly certi-

fied by the Secretary of the Commonwealth, were rejected by the Court on the ground of incompetence. (R. I, 362, l. 5, 388, l. 45.) Mr. Keith, president of the Eppler Company at the time it was absorbed, and a director of the United Company when he testified swore to the originals of the reports, in one case before a notary who duly attested the fact under his seal according to the certified copies. Asked whether he knew of the reports at the time they were made, Keith said, "I suppose I must have had knowledge of that." And further answered, when asked if the reports contained a correct copy of the assets owned by the company at the times covered by them, "I suppose it must have been. It must have been reported that way," but insisted that he had no present recollection of it. (R. I, 386, l. 42, 387, l. 41.)

The reports were sworn to and filed in pursuance of law. Hence properly certified copies of them were, under the circumstances, at least *prima facie* evidence of what they purported to disclose, and should have been admitted.

The report made March 30, 1898, less than a year before the United Company was formed, shows:

Machinery	$19,977.03
Cash and debts receivable	10,421.09
Patent rights	245,853.61
Machines in factories	287,010.09
Miscellaneous	17,713.16

and the admitted testimony shows, despite an extraordinary and unexplained reticence, ignorance, and forgetfulness upon the part of the former officers

of the Eppler Company and upon the part of the officers of the United Company (Winslow, R. I, 531, l. 37, 842, l. 20 et seq., Keith, R. I, 385–7, Howe, 675, l. 42, 676, l. 1–39), that there was paid for the stock of the Eppler Company some $6.00 (Arnold, R. I, 952, l. 24) or $6.50 (Brackett, R. I, 949, l. 40) a share. The par of the stock was $10.00 and its issued capital stock was $600,000. At this rate there was paid in the interests of the United Company from $360,000 to $390,000 for the business of this Company which, according to the defendants' evidence then had only thirty or forty machines out in shoe factories, and these largely in the factory of its president. (*Supra*, p. 38.) Mr. Howe was certain that the Eppler people would not take $100,000, but as to whether they got as much as $500,000 he did not know. (R. I, 676, l. 27.) Although the officers of the United Company, when asked to do so by the United States, could find no records showing what was paid for the Eppler Company they were able to find without any apparent difficulty a letter which passed between R. H. Long and the Eppler Company and a lease executed by that company and him before the consolidation. (R. I, 32, l. 33; 251, l. 6.)

The value placed upon the Eppler Company by the purchase shows that in the opinion of the defendants, the Eppler Company was a real and dangerous competitor.

The testimony above quoted as to the actual use of the Eppler machines and their possibilities of competition with the Goodyear machines is substan-

tially corroborated by Mr. Winslow himself. He said that both machines were being used in the manufacture of welt shoes, and that the machines were intended to perform the same operation but they did it in distinct and different ways. (R. I, 530, l. 37, et seq.; 531, l. 14.) And he added,

> It is true that in obtaining the Eppler Company we did not broaden our field, because it was embraced in the Goodyear Company's machines.
>
> Q. I believe you claim the Eppler machine was not hardly as good as the Goodyear welting machine?
>
> A. It wouldn't make as good a shoe; no.
>
> Q. But it was being put on the market?
>
> A. It was in use.
>
> Q. At that time, in the same territory in which the Goodyear machine was being put on the market?
>
> A. It was in use at that time and they were manufacturing Eppler welt shoes with it. (R. I, 531, l. 22–33.)

There should here be noticed the reason given for this acquisition made secretly through Henry B. Endicott, (who will again appear in connection with an even more important acquisition) at a cost of over $350,000. (Winslow, R. I, 530, l. 4.) The reason according to Mr. Winslow was to get rid of existing litigation. He insists there was no other purpose. (R. I, 531, l. 34.) This litigation the Goodyear Company which was going into the United Company was confident of winning (Howe, R. I, 470, l. 21) and it

was all litigation brought *by* the Goodyear Company, not against it. It was, moreover, litigation in which the plaintiff was apparently not very keenly interested. Of the group of cases brought, only one (Case 248, *Goodyear Shoe Machinery Company* v. *Eppler Welt Machine Company*) involved a principal machine. (Howe, R. I, 471, l. 27, 673, l. 34.) Mr. Howe says, "Excepting the suit under the Briggs patent on the *welting* machine and three suits on the *outsole stitcher* on the improvement in *shuttles*, all these suits related to auxiliary machines." (R. I, 674, l. 33.) He further said that if the Goodyear Company had succeeded in the pending patent litigation it would have compelled alterations in the Eppler machines "*except the welt* sewing machine." (R. I, 623, l. 29.) Even the Eppler welter, therefore, was not seriously involved.

Case 248 was brought in April, 1892. When the United Company was formed in 1899, the evidence, if any had been taken, had never been turned into court and no hearing had been had. (R. I, 470, l. 16, 472, l. 1.) The other cases related to patent infringements in auxiliary machines. (Howe, R. I, 471.) All were pending when the United Company was formed. Had the litigation been wholly successful its result might have affected temporarily the Eppler Company's position as a competitor of the Goodyear Company (Howe, R. I, 623, l. 29–38) although this is admitted to have been speculative (Howe, ibid), and as pointed out above, the chief machine, the

welter, of the Eppler Company was not seriously involved. Nor did the litigation, according to Howe (R. I, 679, l. 15) relate to the fundamental patents.

The only advantage which defendants suggest that the United Company could obtain by "getting rid" of this inactive litigation brought by one of its constituent companies against a competitor was that it escaped controversy with customers of the Eppler Company who were customers also of constituent companies of the United Company other than the Goodyear Company. Brief consideration will suggest the number of ways in which this might have been accomplished other than by the purchase of the competitor, without spending in the neighborhood of $600,000.

The question whether the purchase was legal even if it were assumed that the real purpose was merely to end this litigation is later discussed. (*Infra* p. 242.)

Other facts of importance in their bearing upon the position of the Eppler Company as an actual and prospective competitor and the purpose behind its acquisition are these:

The Goodyear Company asked and received a royalty of four cents a pair for each pair of men's shoes made on its machine. Its competitor, the Eppler Company, charged only three cents (Florsheim, R. I, 159, l. 24–27, Long, 249, l. 43, Advertisement, Eppler Welt Machine Company, R. I, 960, l. 31–35.) This very usual competitive situation is

to be borne in mind when one is asked to consider the competitive disadvantages of the Eppler machines with respect to the number of auxiliary machines, etc.

The United Company after the consolidation raised the royalty on the Eppler machines to four cents. (Winslow, R. I, 417, l. 36–45.) It refused to give Eppler machines at three cents to Florsheim who testified that some time after the United was formed, "I desired to trade in my Goodyear machines on which I was paying four cents a pair royalty for Eppler machines, for which, under my understanding with the Eppler Company, I would have had to pay only three cents a pair. Mr. Wilson [an officer of the United Company] would not make the trade." (R. I, 159, l. 24–28.) None the less, a demand for the Eppler machine continued, even after the consolidation.

Frederick G. King (R. I, 696, l. 30) called by the defendants testified that he was manager of the Goodyear Department of the United Company; that since the United Company was formed it had put out more than *forty* Eppler welters and more than *twenty* Eppler stitchers, but that he did not recollect that any auxiliary machines were put out; also that the last Eppler machines were received back by the United Company about December, *1912*. (Ibid. 702, ls. 9–15.)

After all the preponderant cause is found in the following:

There was a circular letter sent by the directors of the Goodyear Company to the stockholders of that

company announcing the organization of the United Company and inviting their participation. That statement (Plff's Ex. 152, R. I, 140) was drawn by defendant witness Howe (R. I, 630, l. 18). It contained the following:

> The great advantages to be secured by the control in one corporation, both in the United States and foreign countries, of the most efficient types of shoe machinery have been for several years recognized by the officers of the principal shoe machinery companies. For more than a year your directors and large stockholders have been in negotiations to accomplish this end.
>
> The United Company will also from time to time acquire other shoe machinery properties, either by direct ownership or by purchase of shares of their stock.

When asked about the meaning of the paragraph first quoted above, Howe said (R. I, 630, l. 18 et seq.):

> I drew the circular letter to the stockholders of the Goodyear Company, which is Plaintiff's Exhibit 152. As to what I had in mind in making the statement in the first sentence in that circular, when this circular was issued, we had acquired the Eppler Welt Machine Company. * * * Therefore we had then the most efficient types of shoe machinery—perhaps I should have said protected by patents—in that we had the Goodyear welt and turn sewing machines and a long line of auxiliaries, which were the only system or set of machines which would make the Goodyear

> welts. * * * If any manufacturer wanted to make Eppler welts, we had the only system that would make them. Therefore, that seemed to my mind at that time—the United Shoe Machinery Company did—to represent the control in one corporation of the most efficient types of shoe machinery.

and he added:

> We didn't know whether the manufacturers would prefer, if there were no litigation at all between the two companies, whether the trade would prefer Eppler welts or whether they would prefer Goodyear welts. (R. I, 630, l. 43, 631, l. 1–3.)

This statement of the chief managing officer of the Goodyear Company (R. I. 466, l. 34 et seq.) that those concerned in the organization of the United Company did not know "whether or not the trade" eventually "would prefer the Eppler" machines to the Goodyear machines demonstrates that the Eppler Company was an important actual and even more important potential competitor of the Goodyear Company with which it was combined in the organization of the United Company. Taking this fact in conjunction with his explanation that the purpose of himself and associates was to place in the control of one corporation "the most efficient types of shoe machinery," there can be no doubt as to the real reason why the Eppler Company was absorbed. It was for the purpose of monopolization.

C. THE CONSOLIDATED & McKAY COMPANY HAD A MONOPOLY IN PEGGING MACHINES.

Formerly at least three types of pegging machines had been in use. (R. I, 534, l. 34–39.) At the time of the organization of the United Company, however, only the Davey Pegging Machine Company then owned by the Consolidated & McKay Company was putting out such machines. Pegged shoes had become an increasingly negligible factor in the industry. Of the 173,000 pairs of shoes made in 1899, only 7,475,000 were pegged. Of the 279,000,000 pairs made in 1910, only 3,000,000 were pegged. (Dfts. Ex. 215, R. I, 424.)

D. THE McKAY SHOE MACHINERY COMPANY HAD A SUBSTANTIAL MONOPOLY IN METALLIC AND HEELING MACHINES.

At the time of the formation of the United Company in 1899, the McKay Shoe Machinery Company was not a competitor of either the Eppler, the Goodyear, or the Consolidated & McKay Company. It did not produce either a welter, laster, or outsole stitcher. But it had a substantial monopoly of the more important metallic machines.

Mr. Winslow said, referring to metallic machines,

> As regards different kinds or makes of machines there were not a great many in 1899 and practically all were being made by the McKay Company which was putting out a large number of those machines. My best information is that the McKay Company was putting out all the heel attaching machines that were being put out in 1899, and that no

> other company had put out any heel attaching machines for quite a number of years prior to 1899. When I speak of a heeling machine, I mean a heel attaching machine always. (R. I, 851, l. 23, et seq.)

As to metallic fastening machines other than heeling machines, Mr. Winslow said,

> I think the Metallic Association * * * the stock of which was owned by the McKay Company were putting out nearly all the metallic fastening machines that were being made in the United States. (R. I, 532, l. 6, et seq.)

The acquisition of this company by the United Company did not, in itself, destroy existing competition. It did, however, remove the possibility that this powerful corporation engaged in a cognate line of business might some day become a competitor of the United Company. The acquisition, moreover, had a much more important result. As will appear, it completed the defendants' fabric of monopoly in important bottoming machinery and made fully effective the system of leasing which will be set out. (*Infra*, pp. 145–213.)

II. THE ORGANIZATION OF THE UNITED SHOE MACHINERY COMPANY IN 1899.

It has already been stated that the United Shoe Machinery Company of New Jersey was incorporated February 7, 1899. The circumstances which led up to its formation were related in considerable detail both by Mr. Winslow and Mr. Howe who appear to

have been the prime movers of the project. (Winslow, R. I, 406, l. 35, Howe, R. I, 627, l. 44, 8, l. 1, 2.)

Mr. Winslow was the principal man in the Consolidated & McKay Company. (R. I, 406, l. 25, 522, l. 20.) That company, as has been noted, put out a line of lasting machines which substantially covered the field, and it owned the Davey Company, which was the only company then putting out pegging machines. Mr. Howe was the principal executive officer of the Goodyear Company (R. I, 466, l. 34) which had a large business in welt method machines, and a considerable business in lasting machines. The competition betweea these two companies has been noted above. (*Supra*, pp. 17–34.)

The discussions between Mr. Winslow and Mr. Howe covered several months. The date was 1898. Mr. Howe was a lawyer of wide experience in patent and corporation law, having come to the bar in 1878. (R. I, 466, l. 28.) Mr. Winslow was not a lawyer. Mr. Howe was "opposed to the plan of having a harmonious agreement, a sort of working agreement between the Lasting Machine Company [the Consolidated & McKay Co.] and the Goodyear Company because (he) had a sort of indefinite idea that it might be deemed a combination in restraint of trade." (R. I, 629, l. 20.) He evidently thought, however, as did a good many other lawyers at that chronological stage of the interpretation of the Sherman Law, that it was enough to escape the penalties of the statute to give the combination a corporate form. He insisted, therefore, "that there should be a complete

merger and consolidation." (R. I, 630, l. 7.) This idea "led to the formation of the United Company instead of carrying out the matter in the other way." (Howe, R. I, 675, l. 13.) Mr. Howe added, "I think it was under my advice." (Ibid.) Mr. Winslow says he was in accord with the general policy outlined by Mr. Howe upon this point. (R. I, 535, l. 14.)

In addition to being a lawyer, Mr. Howe was a practical business man, for he says that the management of the Goodyear Company "fell very largely upon" him. (R. I, 466, l. 34.) He knew whether or not the welter, stitcher and auxiliaries which his company was putting out competed with the welter, stitcher and auxiliaries of the Eppler company and he knew whether the lasting machines put out by the Consolidated & McKay Company were competitors of the lasting machine put out by his company. Because of what he knew, he also knew that the *combination of the companies would suppress competition* and restrain trade. His error, not then uncommon, in supposing that a *combination in corporate form* could suppress competition and escape the penalties of the Sherman law, is discussed *infra*, pp. 214–221.

The plan was thereafter expanded to include the McKay Shoe Machinery Company which had a monopoly of its particular field, and had not yet extended its activities to the point of competition with the Consolidated & McKay or the Goodyear Companies, *supra*. The only reason given by Mr. Howe for the inclusion of the McKay Shoe Machinery Company was the opportunity to consolidate its agencies with

those of the Goodyear Company. (R. I, 633, l. 27.) Mr. Winslow, however (R. I, 409, l. 29), apparently did not think very highly of the agencies of the McKay Company. He suggests as a reason for the inclusion of the McKay Company that its managing director, Mr. Brooks, was an old man, and wanted to retire, (R. I, 406, l. 41) and his final statement was that he believed that by adding the metallic and heeling machines to the lasting and welt method machines they could give better service, get a better product from the machines, and get better results to the manufacturers and themselves. (Winslow, R. I, 529, l. 27 et seq.) This is the customary justification for monopoly. And he must have had a belief approaching certainty that a far reaching monopoly would result. Whatever the reason, the fact was that the McKay Company was acquired at a price of eleven dollars a share for stock which was selling on the market at eight or nine dollars (R. I, 533, l. 40) and the original offer was raised from nine to eleven dollars in order to get it. (Howe, R. I, 633, l. 41.) There is no ambiguity about the monopolistic result. (*Infra*, p. 54.)

It was decided also to acquire the business of the Eppler Welt Machine Company. The business of that company in welt machinery has been described. (*Supra*, pp. 34–49.) It is insisted that this company was taken in only to avoid the litigation above described. (Winslow, 531, l. 34.) The facts as to this litigation have been noticed. (*Supra*, pp. 43–45.) For some reason best known to the parties concerned, this

stock was treated differently from that of the other companies. Instead of an offer to exchange the stock of the United Company for the stock of the Eppler Company, the stock of the latter company was purchased quietly by Mr. Endicott and later turned over to a syndicate which took it for the United Company and turned it over to that company. (Winslow, R. I, 528, l. 42; 529, l. 1–3; 530, l. 1 et seq.)

III. CONSEQUENCES OF THE FORMATION OF THE UNITED COMPANY AND THE SUPPRESSION OF PRESENT AND POTENTIAL COMPETITION.

The formation of the United Company brought under a single control every company actively putting out or planning to put out lasting, pegging, welt sewing and outsole stitching, heeling and the more important metallic fastening machines in the United States. (Jones, I, 112, l. 22; Selz, I, 142–145; Winslow, I, 537, l. 32, 851, l. 19 et seq.; Howe, I, 630, l. 24 et seq.)

The immediate results were:

(1) The suppression of the actual and of the potential competition in lasting machines theretofore existing between the Consolidated & McKay Company and the Goodyear Shoe Machinery Company. (*Supra*, pp. 17–34.) It created a monopoly in lasting machines.

(2) The suppression of the actual and of the potential competition between the Goodyear Shoe Machinery Company and the Eppler Welt Machine Company. (*Supra*, pp. 34–49.) It created a monopoly of welting and outsole stitching machinery.

(3) The absolute prevention of future competition between the McKay Shoe Machinery Company, the Goodyear Shoe Machinery Company, the Eppler Welt Machine Company, and the Consolidated & McKay Company.

(4) The creation of an absolute and complete monopoly in lasting, pegging, welting, outsole stitching, heeling and metallic fastening machines.

(5) The creation of an organization with vast resources whose control of many different types of machines necessary to the shoe manufacturing industry gave it a power to extend and intrench its monopoly which none of its constituent companies, however successful, could approach.

A simple illustration makes this clear. Before the consolidation, the McKay Company had a monopoly of metallic machines. (*Supra*, p. 49.) But a shoe manufacturer, though obliged to go to it for such machines, was free to choose welt machinery where he could find it. The leases of each of the constituent companies dealt only with the machines made by it. In the case put, therefore, a competitor of the Goodyear Company would not be affected by the McKay Company's monopoly. After the consolidation, however, it became possible for the United Company to say to a manufacturer seeking metallic machines that he could have them on acceptable terms only if he used also United Company's welt machinery, lasting machinery, and so on through the list.

From the formation of the United Company, therefore, it became possible to that company to destroy any competitor who had only one or two types of machines to offer, no matter what the excellence of those machines. It acquired the power, by using an appropriate leasing system, to eliminate and forever exclude all competitors and to maintain a monopoly of all the lines of machines made by it.

The manner in which exactly this was accomplished under the system of leases devised and enforced by the United Company to transform into fact the possibilities of monopoly afforded by the circumstances of its organization appears *infra*, pp. 145–213.

The effect of the consolidation of those companies was precisely the same as if they had remained *separate* but had entered into a written agreement vesting in Winslow and the other persons who became officers of the United Company the power to refuse the machines of one company to any shoe manufacturer who would not agree to operate them only in connection with the machines of the other companies.

Even Mr. Howe recognized the illegality of such a plan. The device of corporate organization was accordingly resorted to. (*Supra*, p. 51.) Such an artifice is not a way of escape from the prohibition of the Sherman Law. (*Infra*, pp. 214–221.)

Control of the McKay Shoe Machinery Company was necessary to the success of a design to exclude competition in the manner just outlined. That is,

as was suggested, a sufficient and, it is submitted, the true reason for taking in that company.

(6) The creation of a corporation so powerful that it could raise royalties, e. g. by increasing the royalty on welt machines established by the Eppler Company at three cents to four cents (*supra*, p. 46); bring about a manufacturer's giving up machines to which he had title, and substituting machines for whose mere use he must pay royalties by refusing to supply repair parts (McElroy, R. I, 189, l. 39); compel an association of manufacturers to accept leases to whose terms they made earnest objection (*infra*, p. 198); and generally to become an overlord of the industry.

IV. THE EXPRESSED PURPOSE OF THE CONSOLIDATION.

The evidence establishes that it was the purpose of the combiners to create and perpetuate a monoply in the lines of shoe machinery then put out by the companies entering the combination and to extend it to other lines.

This purpose was expressed. When the organization of the United Company had been determined upon the directors of each of the constituent companies sent out as we have shown an address to its stockholders; and in the first paragraph of the address to the stockholders of the Goodyear Shoe Machinery Company, dated February 8, 1899, it was said:

> The great advantages to be secured by the control in one corporation, both in the United States and in foreign countries, of the most

> efficient types of shoe machinery have been for several years recognized by the officers of the principal shoe machinery companies. For more than a year your directors and large shareholders have been in negotiation to accomplish this end. * * *
>
> The United Company will also from time to time acquire other shoe machinery properties, either by direct ownership or by purchase of shares of their stock. (Plff's Ex. 152, R. I, 140.)

Mr. Winslow was confronted (R. I, 535, l. 22) with this statement of which Mr. Howe admitted authorship (R. I, 630, l. 18). He did not deny that the original purpose of the United Company was that set forth in the above quotation. And it is very significant with respect to the purpose actuating the combination that 20 days after its organization, the United Company bought out the Goddu Company, a competitor. (*Infra*, pp. 62–64.)

Speaking of that acquisition, Mrs. Converse, formerly Miss Van Wagennen, daughter of the treasurer of that company, testified to a conversation with Mr. Winslow on February 3, 1900, about the purchase of the stock of that company in which he said, "Miss Van Wagennen, I bought them out to get rid of them, to have no more trouble or *competition* with them." (R. I, 311, l. 32; also 312, l. 11.)

Mr. Winslow at first denied this, although he admitted the conversation with her, and then said, "I do not remember any talk about competition." (R. I, 437, l. 17.) But Mrs. Converse supported her

statement by producing a copy of a memorandum of the conversation made at the time. (R. I, 313, l. 13.)

Other instances showing that it was Winslow's purpose to suppress competition by the purchase of competing companies appear later on. (*Infra*, pp. 60–126.)

A contract entered into on September 11, 1899, between the United Company and Henry W. Peabody & Company wherein Peabody & Company were made agents of the United Company in Australia, contains the following:

> Whereas the United Company have acquired control of the boot and shoe and leather working machinery made by the following named corporations doing business in said Boston, namely:
>
> Goodyear Shoe Machinery Company,
> Consolidated & McKay Lasting Machine Company,
> McKay Shoe Machine Company,
> Eppler Welt Machine Company,
> Goddu Metal Fastening Company,
> Gordon Staple Lasting and Tacking Co.,
> Davey Pegging Machine Company,
> Gem Flexible Insole Company,
> Boot & Shoe Sole Laying Company,
>
> and contemplates acquiring the control of other lines of boot and shoe and leather working machinery and boot and shoe findings, except leather, linings, lasts, and finished boots and shoes. (Plff's Ex. 189, R. IV, 1250.)

That contract was signed by George W. Brown, Treasurer of the United Company. And after Winslow had stated that he was in constant communica-

tion with Brown about the various matters affecting the company and its policy, he was asked whether Mr. Brown was correct in the recitals just quoted. He answered with a significant evasion. (R. I, 536, l. 3.)

There is no doubt that the organization of the United Company accomplished exactly the purpose of combining "in one corporation the most efficient types of shoe machinery" most of which before the combination were competitive. (Plff's Ex. 152, *supra*.) The recitals of the contract quoted above show that the United Company contemplated exactly the expansion of that company which in fact took place. The inevitable results upon interstate commerce have been noted and will be the subject of further comment. In the face of these facts, literal denials of specific intent to restrain trade are of no significance.

V. SUBSEQUENT ACQUISITIONS MADE BY UNITED COMPANY FOR PURPOSE OF DESTROYING COMPETITION AND EXTENDING ITS MONOPOLY.

A. ACQUISITIONS OTHER THAN THE PLANT PURCHASE.

In the record (pp. 37–105) are set out contracts of purchase and bills of sale under which the United Company acquired the shoe machinery business and assets of fifty-six individuals, partnerships, and corporations, not including the properties of Thomas G. Plant, which are dealt with separately hereafter. The result of these acquisitions was to remove certain remains of competition, to give the United Company control of a number of machines used in the manu-

facture of shoes previously freely obtainable in the open market, and so to intensify the possibilities of domination already noted as an effect of the original consolidation. They emphasize and make clear the intent to monopolize which underlay defendants' course of action. In many instances covenants were exacted from the vendors designed to prevent future competition with the United Company where the vendors were inventors. These covenants required assignment to the United Company of all inventions made during a period of years.

The general attitude of the defendants with respect to these acquisitions is vividly exemplified by the testimony of C. H. Krippendorf. The witness was a director of the National Boot & Shoe Manufacturers' Association. Testifying with regard to Mr. Winslow's statements at a conference with a committee of that body, Krippendorf said:

> After discussion, he said, in substance, "We in order to prevent competition, have to buy out competing machines, and we have endeavored to create a condition under which we don't have to pay more money for those machines than they are worth." (R. I, 214, ls. 35–39.)

It is also a fact that in some cases what was purchased was patent rights and inventions and not machines. This difference would seem to be of no importance. A prospective competitor is none the less such because he has only proceeded to the point of acquiring a valid patent under which to pursue

competition at the time he is removed from the field by acquisition.

For example, the first of the acquisitions proved was that of the Goddu Company. This was consummated less than a month after the organization of the United Company and was deemed by defendants of sufficient importance to warrant inclusion in the recitals of the Henry W. Peabody contract. (*Supra*, p. 59.) The Goddu Company was engaged in perfecting and manufacturing nailing machines, slugging machines, tacking machines and standard screw machines—all important metallic fastening machines. No other concern except the United Company was engaged in this field. The United Company, as successor to the McKay Company was putting out machines for doing the work for which the Goddu machines were adapted. (R. I, 42, l. 1.) The Goddu machines, according to Winslow, were not yet in a condition to be placed in the hands of manufacturers for continuous operation "but they were in a state of development where some of them could have been, without extensive changes, made operative." (R. I, 436, l. 28.)

In view of this testimony there would seem to be no warrant for the contention of one of the judges below that "the evidence is not sufficient for a belief that without reconstruction, radical in character, anyone could have used them as competing machines." In any event, it appeared that the very thing the Goddus

were doing was the perfection by all necessary reconstruction of their machines. The contention referred to is made as a basis for the proposition that, if a competitor is likely to become so important that his removal after his competition had become actual would be illegal, illegality is escaped by removing him before he develops to that point. This is ingenious, but it is not the law. (*Infra*, p. 231–234.)

In the particular case the reason given by Mr. Winslow for the acquisition, at a cost of about $150,000 (Plff's Ex. 60, R. III, 514), was the disposal of patent litigation to which the United Company had succeeded as *plaintiffs*. Howard testified that all the alleged infringements were on the part of the Goddus. (R. I, 849, l. 4.) The disposal of such litigation could hardly be worth $150,000 to the defendants. The removal of an able competitor might well have been worth that amount. The testimony of Mrs. Converse, previously referred to, shows this reason to be the true one. Her father had been a stockholder and was treasurer of the Goddu Company from its organization in 1897. (It had been in existence less than two years when acquired.) The actual purchase by the defendants was of the stock belonging to the Goddus, who possessed inventive ability (R. I, 436, l. 42) as the witness's father apparently did not. When the Goddus sold out they left her father and others in (R. I, 312, l. 25). Mrs. Converse testified to a subsequent conversation with Mr. Winslow to which reference has previously been made

and which was supported by a copy of a contemporaneous memorandum. She said:

> We had discussed a long while. I said to Mr. Winslow, "If you say what is true, that they had no business and no machines and no money in the treasury and no money—they couldn't raise money to go on with the business, and no manufacturers to take them—they couldn't put them on the market then," I said, "Mr. Winslow, why did you buy them out—because they would have gone to the wall—they would have had to if you say what is true—they could never have competed with you, a rich, powerful trust; why didn't you leave them alone and let them die a natural death, which they would have done? Why did you buy them out?" And he said: "Miss Van Waggenen, I bought them out to get rid of them, to have no more trouble or competition with them." (R. I, 312, l. 1.)

The Goddu Company ceased to do business. The Goddus under the contract agreed to assign any and all inventions which they should thereafter make within a period of ten years and agreed that thereafter they would not during a period of ten years engage directly or indirectly in the business of making or selling any invention relating in *any* way to machinery useful in the manufacture of boots and shoes. (Plff's Ex. 60, R. III, 518, par. 1.)

Thus, by this initial acquisition the prospective opportunity of shoe manufacturers to obtain metallic machines elsewhere than from the defendants was removed, and the defendants were enabled to say to

a shoe manufacturer in need of such machines, "You may have metallic machines on acceptable terms only if you are willing to use them upon shoes upon which other operations are performed by our lasting and other machines."

It is unnecessary to review in detail all of the fifty-six acquisitions set out in the testimony. Some may, however, be noted as having special significance in the aspects already shown.

Among these are the following transactions:

1. WINKLEY AND PHILLIPS.

On March 16, 1900, the United Company acquired from Erastus E. Winkley and Benjamin Phillips their inventions and improvements relating to "sole leveling machines," agreeing to pay to Winkley and Phillips a royalty of $20 for each made or sold, leased or otherwise disposed of. (Plff's Ex. 77, R. III, 615, par. 3.)

It took covenants from Winkley and Phillips that all inventions or improvements in sole-leveling machines or sole-pressing machines which they should *thereafter* make or acquire should be conveyed to the United Company. (Plff's Ex. 77, R. III, 615, par. 7.)

Howard, defendant's patent attorney and expert (R. I, 41, l. 27), testified that at the time of acquiring the above inventions or improvements the United Company was engaged in putting out sole-leveling machines, but that they were not of the same type as those covered by the inventions and improvements acquired (R. I, 48, l. 11).

2. SWAIN-FULLER MANUFACTURING COMPANY.

On February 2, 1911, United Company acquired the business and assets, including the letters patent, of Swain-Fuller Manufacturing Company, Boston, Mass., a Maine corporation engaged in manufacturing shoe machines, paying therefor $13,201.98, part in cash and part in preferred stock of the United Company. (Plff's Ex. 88, III, 660, par. 1; Dft's Ex. 231, V, 454.)

Howard testified that the Swain-Fuller Company was manufacturing and putting out, among others, a machine known as the "Star leveling machine," used practically exclusively on turn shoes, and that the United Company was manufacturing and putting out a leveling machine, but he claimed that the United Company's machine was not adapted for leveling turn shoes. (Howard R. I, 53, l. 20.)

Winslow testified that by this purchase they also acquired a "Single sole-molding" machine. (R. I, 459, l. 28. Dft's Ex. 231, V, 455.)

3. CARVER COTTON GIN COMPANY.

On April 30, 1908, the United Company acquired for $16,883, cash, the shoe machinery business of the Carver Cotton Gin Company, a corporation engaged in the business of manufacturing and putting out machines and devices used in the manufacture of shoes. (Plff's Ex. 127, IV, 893.)

The United Company took from the vendors covenants that they would not within 15 years directly or indirectly enter into or assist any other

concern in entering into or carrying on any business relating to manufacturing or dealing in any machinery or devices used in the manufacture of shoes, or any other business which would *in any way interfere* or *compete* with the business of the United Company with respect to such machines or devices. (Plff's Ex. 127, IV, 895.)

Howard testified that among the machines obtained from the Carver Cotton Gin Company were the Acme leveling machine, a vamp skiving machine, and a machine known as the Davis leather-board skiver. (R. I, 71, l. 1.)

He further testified that at the time of this agreement, the United Company was putting out the Goodyear automatic leveler and the Emerson skiving machines, but that the acquired machine did not do the work in the same way. (R. I, 70, l. 37.) Even though this be admitted the result accomplished was the same.

Since the acquisition of its shoe machinery business, the Carver Cotton Gin Company has continued with its cotton gin business.

By these three acquisitions, the defendants acquired control of a machine needed in manufacturing all kinds of shoes. The leveling machine used in welt shoes is now put out only as an auxiliary machine. (Dft's Ex. 231, V, 457.) It can not be obtained for use with welt machinery supplied by any competitor of the defendants. (R. I, 468, l. 34; 544, l. 10.)

4. THE SEAVER PROCESS LASTING COMPANY.

On January 30, 1900, the United Company acquired for $38,000 (Capital stock $600,000) the business and assets, including all letters patent of the Seaver Process Lasting Company, a corporation engaged in manufacturing *lasting* machines and *pulling-over* machines used in the manufacture of shoes. (Plff's Ex. 75, R. III, 591.) The Seaver Company was then insolvent. (R. I, Winslow, 456, l. 30.)

Suits had been brought by the Consolidated & McKay Company against the Seaver Company. The record does not show that the suits were ever prosecuted to a final determination.

The Seaver Company was the only company putting out lasting machines in 1899, except the Goodyear and Consolidated Companies. (*Supra*, p. 18.) It had also a pulling over machine; as had the United Company. (Howard, R. I, 47, l. 8.) The development of the latter machine was continued. It is now put out by the United Company and is a successful machine. No other pulling over machine is now offered by any American manufacturer of shoe machinery. (Dft's Ex. 235, V, 585 [72].)

The result of this acquisition, then, was to remove the final vestige of competition in lasting machines, and to shake off the possibility of competition in pulling over machines.

5. CORRUGATED WIRE FASTENING COMPANY.

On June 30, 1899, defendant Hurd, in behalf of the United Company acquired for $12,750 from Silas

Pierce and John M. Kingsbury, a majority of the capital stock of the Corrugated Wire Fastening Company, Boston, a corporation, engaged in the manufacture and sale of a tacking machine and corrugated wire used in the manufacture of boots and shoes. (Plff's Ex. 62, R. III, 530–531; Donham, I, 37, l. 43; 38, l. 1; Dfts. Ex. 231, V, 474.)

Howard testified that the United Company had a machine for performing the *same* character of work as the one obtained from the Corrugated Company. (R. I, 42, l. 17.) He says, the machine was "out of date," (R. I, 42, l. 16) but this is discredited by the further statement which he makes, viz: "The United Company continued to supply wire and parts for those machines. They have parts in stock today." (R. I, 42, l. 34.)

The Corrugated Company was discontinued as a going concern and its business transferred to the factory of the United Company. (Dft's Ex. 231, R. V, 475.)

6. GLOBE SEWING MACHINE COMPANY.

On February 15, 1901, the United Company acquired control of the stock of the Globe Sewing Machine Company, Boston, a corporation engaged in putting out sewing machines used in the manufacture of shoes, paying therefor $20,000. (Plff's Ex. 89, R. III, 662.)

Howard testified that at the time of acquiring stock control of the Globe Company that company was engaged in manufacturing a *welting* machine, an *outsole stitching machine*, and an experimental *rough*

rounding machine. The business of the Globe Sewing Machine Company was discontinued. (Howard, R. I, 53, l. 36.)

By this acquisition a possible competitor in welt method machines was removed. It is noteworthy that the Globe Company had an experimental rough rounder. The absence of such a machine is said by defendants' witnesses to have been a weakness in Mr. Plant's effort to produce a complete line of independent shoe machinery. (R. I, 776, l. 29.)

7. ROSS-MOYER MANUFACTURING COMPANY.

On September 20, 1900, the United Company acquired for $86,580 all the business of the Ross-Moyer Manufacturing Company, Cincinnati, engaged in manufacturing and putting out *edge setters, edge trimmers,* heel scourers, buffing machines, rolling machines, etc., used in the manufacture of shoes. (Dft's Ex. 231, R. V, 451, 454.)

On the same day an employment agreement was made by the United Company with Simon Ross, under the terms of which he contracted that in consideration of the purchase of the Ross-Moyer Company, and the agreement to employ him, he would not during a period of *ten* years engage in the manufacture of, or deal in, machines, tools, or appliances in *competition* with said United Company and would convey to the United Company any invention relating to shoe machinery which he then owned, or which he should thereafter, during the period of ten years, invent. (Plff's Ex. 87, R. III, 658.)

Howard testified that at the time of the acquisition of the Ross-Moyer Company, the United Company was engaged in putting out *edge-setters* and *edge-trimmers*. (R. I, 52, l. 44.)

The Ross-Moyer Company (issued capital stock $197,400—all owned by the United Company) now acts as agent for the United Company. (Plff's Ex. 187, R. IV, 1235.)

Defendant Winslow is also president of the Ross-Moyer Company (Plff's Ex. 188, R. IV, 1242) and he and Howe are on its board of directors (Plff's Ex. 188, R. IV, 1247).

8. EDWIN THEOPHILUS FREEMAN.

On October 9, 1899, the United Company acquired from Edwin Theophilus Freeman, Boston, all of his business, including machinery and letters patent of the United States, relating to nailing machines used in the manufacture of shoes, for $11,000, $500 in cash and $10,500 in preferred stock of the United Company, and in addition thereto $500 per year as royalties for a period of eight years. (Plff's Ex. 68, R. III, 568.)

The United Company took from Freeman, for the same consideration, covenants that he would not *thereafter* engage in the manufacture of, or deal in, or directly or indirectly aid, assist, or encourage anyone to engage in the manufacture of, or to deal in boot and shoe or leather-working machinery, in *competition* with said United Company, or the corporations owned or controlled by it and an additional covenant from

Freeman that he would "convey to said United Company any and all improvements or inventions in or relating to shoe machinery, which he has made, nor which he shall hereafter make." (Plff's Ex. 68, R. III, 570, par. 3.)

Howard testified that when the above agreement was entered into with Freeman the United Company already had a nailing machine for performing operations *similar* to the operations performed by the Freeman machine. (R. I, 44, l. 37.)

It is claimed by the defendants that there were cross infringements of the United's machines by Freeman and of the Freeman patents by a machine that the United Company was developing, although no infringement suits had been brought (Dfts. Ex. 275, V, 757.)

9. ALBERT G. BREWER.

On October 11, 1899, the United Company acquired from Albert G. Brewer, Hopkinton, all of his inventions and improvements in machines used in the manufacture of boots and shoes known to the trade as "heel-breasting machines" for $250 in cash and $5 royalty on each machine thereafter marketed by the United Company. (Plff's Ex. 70, R. III, 576.)

It took also from Brewer an assignment of "all inventions which he may hereafter make relating to machines for breasting heels on the last."

Howard testified that Brewer had built an experimental heel-breasting machine, and that the United Company, prior to the acquisition of Brewer's machines, had been experimenting with a machine for

performing *similar* operations, but that it was not upon the market as a commercial machine; that Brewer's inventions were subsequently embodied in the United's machines. (R. I, 45 l. 14.)

The defendants claimed that Brewer's machine infringed one of the United's patents, but there is no evidence that the United's machine infringed Brewer's patents.

Six hundred and ninety-eight power heel-breasting machines alleged to have embodied the Brewer inventions, were subsequently made and put out by the United Company. (Dft's Ex. 275, R. V, 759.)

10. AMERICAN SOLE LAYING MACHINE COMPANY.

On September 25, 1902, the United Company acquired for $5,200 from Arthur Fuller, all the property and assets, including letters patent of the American Sole Laying Machine Company, Boston, a corporation, engaged in manufacturing and putting out machines designed and used for laying or leveling shoes. (Plff's Ex. 98, R. IV, 705.)

The United Company took from Fuller covenants that he would not become interested, directly or indirectly, for a period of ten years in the business of manufacturing machines adapted for use in the operation of laying or leveling the soles of boots and shoes. (Plff's Ex. 98, IV, 708, par. 9.)

Howard testified that at the time of the acquisition of the business of the American Sole Laying Machine Company, the United Company was engaged in manufacturing and putting out machines for laying

the soles of boots and shoes, although he claims that the United Company's machines were inferior to those of the American Sole Laying Company. (R. I, 56, l. 19.)

11. BOOT AND SHOE SOLE LAYING COMPANY.

On May 25, 1901, the United Company acquired for $45,000 cash, the property and business of the Boot & Shoe Sole Laying Company, Boston, a corporation, engaged in manufacturing and putting out machines designed and used for laying the soles of boots and shoes. (Plff's Ex. 90, R. III, 666.)

Howard testified that, at the time, this Company was engaged in manufacturing and putting out a sole-laying machine known as the "Boston sole layer," and that the United Company was then engaged in putting out a machine for doing *similar* work, although he claims that the United's machine was inferior to the machine acquired. The acquired company was discontinued as a going concern and its business taken over by the United Company. (R. I, 54, l. 20 et seq.)

12. J. K. KRIEG & COMPANY.

On May 6, 1903, the United Company acquired for $97,056.52 the property and assets of J. K. Krieg & Company, New York, engaged in manufacturing and dealing in shoe machinery, etc. (Plff's Ex. 104, R. IV, p. 746, also Ex. 105, R. IV, 752.) The United Company took from the vendors covenants that they would not engage for a period of 15 years except as employees of said United Company or some one of its controlled corporations, in any business relating

in any way to the manufacture of or dealing in shoe machinery, or in any business which would in any way interfere with or *compete* with said United Company. (Plff's Ex. 104, R. IV, 750, par. 8.)

Howard testified that the Krieg Company was engaged in putting out a heel-seat rounding machine, a Louis heel-scarfing machine, and two or three types of embossing machines; that the United Company at that time was putting out a heel-seat rounder and a scarfing machine of different types; that the United Company was also engaged in putting out embossing machines. (R. I, 60, l. 28.)

Winslow testified that the Krieg Company had also been agent for some of the old companies that became a part of the United. (R. I, 419, l. 31.)

13. JOSEPH P. CURTIS.

On October 20, 1903, the United Company acquired from Joseph P. Curtis, Everett, Mass., all of his business, including letters patent and applications relating to cementing machines for $500 in cash and the balance in royalties until the total should amount to $5,000. (Plff's Ex. 106, R. IV, 756.)

The United Company took from Curtis conveyances of all inventions and improvements which he should *at any time thereafter* make relating to cementing machines, and all letters patent and interest therein. (Plff's Ex. 106, R. IV, 755.)

Howard testified that at the time of entering into the above agreement with Curtis, the United Company was engaged in putting out a cementing ma-

chine, but for performing an entirely different operation from that performed by the Curtis machine. (Howard, R. I., 61, l. 12.)

14. GEORGE A. SMITH MACHINERY COMPANY.

On November 20, 1902, the United Company acquired for $38,790.79 from George A. Smith all the assets and business of the George A. Smith Machinery Company, a corporation "engaged in the business of manufacturing devices and supplies used by manufacturers and dealers in boots and shoes, and by others." (Plff's Ex. 100, R. IV, p. 721, 2nd par.)

The United Company took from the vendor covenants that he would not at any time within 10 years enter into or be engaged in or assist any other person in entering or carrying on any business relating to the manufacture or sale of any machinery intended or adapted for use in the manufacture of boots or shoes, or *compete* or interfere with any business carried on by said United Company, or by any company of which it is the owner of the majority of the capital stock. (Plff's Ex. 100, IV, 723, par. 4.)

Howard testified that the Smith Company at the time of its acquisition was putting out a spring-heel scarfing machine, and that at the time the United Company was not putting out a machine for doing similar work. (R. I, 58, l. 3.) He further testified that the Smith Company had also been acting as agent prior to 1899, for certain of the companies that made up the United Company. (R. I, 57, l. 42.)

15. ARNOLD MACHINE & SUPPLY COMPANY (WILLIAM B. ARNOLD).

On June 28, 1904, the United Company acquired all the business and assets of the Arnold Machine and Supply Company, Boston, a corporation engaged in manufacturing and putting out cementing machines used in the manufacture of boots and shoes, for $500 cash, and the royalties to be paid on each machine thereafter manufactured by the United Company during the life of the patents transferred. (Plff's Ex. 113, R. IV, 820.)

The United Company for the same consideration required and took from Arnold restrictive covenants similar to the others already noted providing that he would not engage in a like business within 15 years, and would convey to it any inventions relating to show machinery he might make. (Plff's Ex. 113, R. IV, 818.)

Howard testified that at the time of entering into the above agreement the United Company was engaging in putting out *cementing* machines, but he claimed that they were not adapted for work similar to that of the Arnold machine. (R. I, 64, l. 39 et seq.)

16. BOOTH BROTHERS.

On October 25, 1904, the United Company acquired from Booth Brothers, Rochester, N. Y., an assignment of their business in the United States and Canada relating to *perforating* machines, for $24,000 and a royalty of $15 to be paid for each machine thereafter sold by the United Company in the United States and $10 for each machine sold by it in Canada;

the said royalties to be continued until they should aggregate $7,600, whereupon all interest of said Booth Brothers in the said inventions should cease. (Plff's Ex. 114, R. IV, 823, par. 2.)

The United Company took covenants from the vendors that neither of them would engage in the manufacture or sale of any perforating machines, or become interested in any manner whatsoever in any such machines during the terms of the patents assigned to the United Company. (Plff's Ex. 114, R. IV, 825, par. 8.)

Howard testified that the United Company was engaged in putting out a *perforating* machine which could be used for the same operation as the Booth machines, although he claimed that it was not *intended* for the same operation. (R. I., 65, l. 28.)

On November 1, 1907, the United Company acquired for $71,284 the entire remaining business of Booth Brothers of manufacturing and putting out machinery, tools, mechanisms, devices, findings, materials, and supplies used in the manufacture of boots and shoes. (Plff's Exs. 121–124, R. IV, 856–871.) The United Company took from the vendors elaborate restrictive covenants, excluding the vendors from having any interest in any shoe machinery business or any business or patents relating to the manufacture of shoes for a term of 15 years. (Plff's Ex. 121, R. IV, 859.)

Howard testified that the United Company through the above agreement acquired from Booth Brothers a fudge edge-making machine, a *wheeling* machine,

a stitch burnishing machine, an upper-shaping machine and a *beating* machine. He further testified that the United Company at that time had a *wheeling* machine and an upper-*beating* machine. (R. I, 69, l. 9.)

Having acquired Booth Brothers' business, a corporation was formed under the laws of New York, with a capital of $25,000 all of which is issued and owned by the United Company. It operates a manufacturing plant at Rochester, N. Y. Winslow is president of the Company and is also a director, as well as defendants Hurd, Howe, and Coolidge. (Plff's Exs. 187, R. IV, 1232, 188, R. IV, 1240, 1246.)

17. FRED H. PERRY.

On January 1, 1904, Fred H. Perry entered into an agreement with the United Company wherein he agreed to convey to that company all inventions which he should make relating to shoe machinery for a period of five years from the termination of his employment by the United Company. (R. I, 61, l. 19, et seq.)

18. BOSTON SHOE TOOL COMPANY.

On August 16, 1899, the United Company acquired the business of Timothy A. Bresnahan, Boston, engaged in manufacturing and putting out machines, tools, and appliances used in the manufacture of shoes, together with the entire capital stock of the Boston Shoe Tool Company for approximately $72,000, paid in cash and preferred stock of the United Company. (R. I, 38, l. 33; Plff's Ex. 67, R. III, 563 et seq.; Dft's Ex. 231, R. V, 460.)

The business of the Boston Shoe Tool Company as a going concern was discontinued and the business transferred to the Beverly factory of the United Company. (Dft's Ex. 231, R. V, 460.)

Bresnahan agreed to enter the employ of the Boston Shoe Tool Company, as manager, for a period of two years. United Company took from him covenants that he would not *thereafter* engage in nor directly or indirectly aid, assist, or encourage any other person to engage in the manufacture of heel-trimming, edge-trimming, or edge-cutting machines and tools, cutters or irons for heel or edge trimming, for edge setting, or of any of the machines, tools, and products formerly made by the Boston Shoe Tool Company. (Plff's Ex. 67, R. III, 565.)

D. GLOBE SHOE TOOL COMPANY.

On October 24, 1899, the United Company, acquired the business of James H. Reed, and others, copartners, trading under the name of Globe Shoe Tool Company, Boston, engaged in manufacturing and putting out edge cutters and irons used in the manufacture of shoes. The purchase price was $30,000, which was paid part in cash and part in preferred stock of the United Company. (Plff's Ex. 71, R. III, 577.)

Loomer and Perkins, part owners of the Globe Shoe Tool Company, each agreed to enter the employ of the United Company at a compensation of $25 per week, for a period of one year, and furthermore agreed that they would not *thereafter* engage, either

directly or indirectly, or assist or encourage any other person so to do, in the manufacture of shoe machinery in competition with the United Company; and for the same consideration, each of them further agreed that they would convey to the United Company all improvements or inventions relating to shoe machinery, which they should *thereafter* make. (Plff's Ex. 72–73, R. III, 581, 582, 583, 584.)

The machines and business of the Globe Shoe Tool Company was along the *same* line as that of the Boston Shoe Tool Company *previously* acquired by the United Company. (R. I, 46, l. 1; Dfts. Ex. 231, V, 460.)

20. JOHN RITCHIE, AND JOHN RITCHIE COMPANY.

On November 18, 1899, the United Company acquired all the business of John Ritchie, and John Ritchie Company, a corporation, relating to the manufacture of standard screw machines, slugging machines, tacking machines, and machines, mechanisms, and appliances for manufacturing and inserting metallic fastenings, including standard screw wire, slugger wire, and tacker wire, used in the manufacture of boots and shoes. The purchase price was not to exceed $15,000 (R. I, 40, l. 11; Plff's Ex. 74, R. III, 585, 588.)

The vendors agreed that they would not *thereafter* manufacture, or sell, or become, directly or indirectly, interested in any wire-fastening shoe machinery like that which they had sold.

The purpose of defendants to force shoe manufacturers to deal exclusively with the United Company

is well illustrated in Dfts. Ex. 231, R. V, 444. It is there stated, with respect to the contract with John Ritchie, and the John Ritchie Company—"the reason for this contract and purchase was to prevent manufacturers who held metallic machinery under lease from the United Company (and who had agreed to purchase their metallic fastening material from the United Company) violating their leases and contracts by purchasing material from Ritchie." (R. I, 46, l. 31 et seq.)

21. STANLEY MANUFACTURING COMPANY.

On March 19, 1900, the United Company acquired the stock of machines, parts, and supplies, on hand at Frankfurt, Germany, of the Stanley Manufacturing Company, a Maine corporation, with its principal place of business at Lawrence, Mass., engaged in the manufacture of McKay sewing machines and other machines, paying therefor $86,500 in preferred stock of the United Company. (R. I, 40, l. 35; Plff's Ex. 78, R. III, 620.)

The United Company took from the Stanley Company a covenant that "the said Stanley Company will at once give up its branch office in Germany, so far as relates to the sale or disposal of shoe machinery or shoe manufacturers' supplies, and that the Stanley Company will not in the future establish an office, or maintain an agent or representative of any kind to solicit orders for the sale of such machinery and supplies, outside of the United States of America, and will not *export* or sell, or dispose of to others for export, any boot or shoe machinery or

supplies therefor, outside of the United States, except through the United Company." (Plff's Ex. 78, R. III, 621.)

A somewhat similar transaction in respect of a shoe machinery company engaged in foreign commerce is that with W. J. Young. (Plff's Ex. 99, R. IV, 713.)

22. BAY STATE INTERNATIONAL SHOE MACHINERY COMPANY.

On January 30, 1901, United Company, acquired for the United Shoe Machinery Company de France and for Deutsche Vereinigte Schuhmaschinen Gesellschaft G. m. b. H. the property and good will for the Continent of Europe of the Bay State International Shoe Machinery Company, Boston, Mass., paying therefor approximately $25,000 in preferred stock of the United Company. (Plff's Ex. 86, R. III, 655; Dfts. Ex. 231, R. V, 448.)

Howard said that the acquired company "had a welter and stitcher and I think *a rough rounder*" but that he did not know whether it "was shipping machinery from the United States to foreign countries. (R. I, 52, l. 20.) It was free to do so if it saw fit, and therefore it was a potential if not an actual competitor.

23. GEORGE W. EMERSON & COMPANY.

On December 18, 1902, the United Company acquired for $41,500 the business of George W. Emerson and William R. Sampson, copartners, trading under the name of George W. Emerson & Company, Lynn, Mass., engaged in manufacturing and putting out machinery, appliances, devices, and

supplies used in the manufacture of boots and shoes. (Plff's Ex. 101, R. IV, 725.)

The United Company, for the same consideration, took from the vendors covenants that they would not engage in competition with the United Company for a period of 15 years, and that all inventions which they should make relating to machinery for use in the manufacture of shoes at any time within said period should be forthwith disclosed to the United Company. (Plff's Ex. 101, R. IV, 729, 730, 731; pars. 5, 6, and 7.)

Howard testified that the Emerson Company at the time of its acquisition was engaged in manufacturing a power-spring heel scarfer, and a heel-burnishing machine, and that the United Company was at that time putting out a heel-burnishing machine but of a different type from that put out by the Emerson Company, and that the United Company was also putting out a spring heel-scarfing machine to be operated by hand. (R. I, 58, l. 21, 39; 59, l. 5.)

The business of the Emerson Company as a going concern was discontinued and its business transferred to the United Company. (R. I, 59, l. 11.)

Sampson has remained in the employ of the United Company. (R. I, 95, l. 12.)

34. JOSEPH W. LEARY.

On January 1, 1904, the United Company acquired, for $3,052, from Joseph W. Leary, Lynn, Mass., his business of manufacturing and dealing in shoe machinery. (Plff's Ex. 108, R. IV, 765.)

The vendor agreed to enter the employ of the United Company for a period of 5 years at a compensation of $40 per week, and for the same consideration, agreed to convey to the United Company all improvements which he should make within 10 years from the date of the termination of his employment with the United Company, and that within the same period he would not engage, directly or indirectly, in any business which *competed* or interfered with the United Company. (Plff's Ex. 108, R. IV, 767, par. 3.)

25. ZACHARY TAYLOR FRENCH.

On January 1, 1904, the United Company and United Shoe Machinery Company, of Maine, acquired the business of Zachary Taylor French, Boston, Mass., engaged in the development of machines designed and used in the manufacture of boots and shoes, agreeing to pay therefor $15,000 in annual installments of $1,500 each. (R. I, 63, l. 22; Plff's Ex. 111, R. IV, 803.)

The United Company took from the vendor, for the same consideration, covenants that he would assign all inventions which he should make or acquire within 10 years relating to machines useful in the manufacture of boots and shoes, and that he would not engage in competition with the United Company, for the same period, in the United States or in any foreign country. (Plff's Ex. 111, R. IV, 807, pars. 5 and 6.)

Howard testified that French had been in the employ of the United Company and previously in the

employ of the Goodyear Company, as an inventor, and was later superintendent of the Goodyear factory at Boston; that the above agreement was entered into as a settlement of the royalties that would become due under various existing contracts, as French desired to leave the employ of the United Company. (R. I, 63, l. 30.)

26. KIMBALL & HADLEY.

On June 11, 1904, the United Company acquired, for $4,750 cash, the business of Herbert L. Kimball and Irving A. Hadley, copartners, doing business under the firm name of Kimball & Hadley, Lynn, Mass., engaged in manufacturing and marketing *awls, needles,* drivers, supplies, etc., used in the manufacture of boots and shoes. (Plff's Ex. 112, R. IV, 814.)

The United Company, for the same consideration, took from the vendors *covenants* that neither of them would, within a period of 15 years, become interested in, developing, or carrying on any business which related to manufacturing or dealing in awls, needles, or drivers. (Plff's Ex. 112, R. IV, 815, par. 2.)

Howard testified that at the time of acquiring the business of Kimball & Hadley the United Company was engaged in manufacturing and putting out *awls, and needles,* except curved needles for the Goodyear sewing machine, and that the United Company was making awls for the use of its own machines; that the United Company purchased Goodyear needles from others, including Kimball & Hadley. (R. I, 64, l. 16.)

Howard's testimony that the United Company bought Goodyear needles from Kimball & Hadley is specifically denied by Hadley, who testified as follows:

> Q. Now, do you know whether the United Company, before it obtained your needles, manufactured any needles for its Goodyear machines?
>
> A. It did not, to my knowledge.
>
> Q. Did it buy Goodyear needles of you?
>
> A. Never.
>
> Q. Did you supply Goodyear needles for its machines?
>
> A. Not to the United Shoe Machinery Company. (R. I, 310, l. 20.)

The fact is that Kimball and Hadley were forced to sell out their business to the United Company by reason of the latter's leasing system, discussed *infra*, pp. 145–213. That company was buying its awls and needles from persons other than Kimball & Hadley and supplying them to its lessees, who were obliged by the terms of their leases to take the needles from the United Company. Consequently when Kimball & Hadley approached the lessees for the purpose of selling their needles, "They stated orally that the using of our needles and awls was in violation of the terms and conditions of the leases and if the manufacturer continued to use our awls and needles the United Company would take their machines out of the factories." (R. I, 308, l. 31.) Finding it difficult to place the output of their factory, Hadley had a conversation with Mr. Bailey, one of the managing

officers of the United Company, with respect to the sale of the Kimball & Hadley Company. They were not able to agree upon a price. He said to Mr. Bailey, "We can manufacture needles and sell them as cheap as the United Shoe Machinery Company," to which the latter replied, "Oh, no, you can't; we can give them away if necessary. You know Mr. Winslow is a man that once having made up his mind to get something, he will get it." (R. I, 309, l. 16 et seq.) Realizing the impossibility of competing with the United Company and impressed by the truth of what Mr. Bailey said with respect to Mr. Winslow's disposition, Kimball & Hadley sold out; but the sale was not voluntary; it was coerced.

Kimball & Hadley, several years after they had sold out their partnership business to the United Company again engaged in the awl and needle business and the United Company brought suit to enjoin them, upon the ground that they were violating their agreement of June 11, 1904. (R. I, 311, l. 15.)

27. LEOPOLD J. COURTEAU.

On October 1, 1904, the United Company acquired from Leopold J. Courteau, Brockton, an assignment of all his inventions and devices, including letters patent, relating to machines and mechanisms for holding the linings of shoes during the process of pasting the outer leather to the lining. (Plff's Ex. 115, R. IV, 826–831.)

The United Company, for the same consideration, took from Courteau covenants that he would convey

to it all inventions which he should at any time thereafter, within 15 years, own or possess or in which he should have any interest whatsoever, relating to mechanisms or devices for handling or holding linings. (Plff's Ex. 115, R. IV, 830, 1st par.)

28. BROCKTON SUPPLY COMPANY.

On November 1, 1905, United Shoe Machinery Company of New Jersey, acquired, for $21,724, the business of Oscar A. Campbell and Samuel H. Nichols, copartners, trading under the name of Brockton Supply Company, Brockton, Mass., engaged in manufacturing and putting out machines for pulling lasting tacks. (Plff's Ex. 116, R. IV, 831–834.)

Howard testified that at the time of acquiring the business of the Brockton Supply Company the United Company was engaged in developing a machine for pulling lasting tacks, but that none had been put out. (R. I, 66, l. 24.)

29. ZOTIQUE BEAUDRY.

On September 4, 1906, the United Xpedite Finishing Company, a corporation controlled by the United Company acquired for $12,500 cash, from Zotique Beaudry, Lynn, his inventions and improvements relating to machines, and parts thereof, for burnishing and finishing the heels of shoes. The United Xpedite Finishing Company for the same consideration took from vendor covenants that all inventions which he should thereafter make should be disclosed to the United Xpedite Finishing Company, and that the vendor would not within a period

of 15 years engage in making, developing, or exploiting any improvements in heel burnishing machinery or carrying on any business of manufacturing mechanisms for finishing or burnishing the heels of shoes without the consent in writing of said United Xpedite Finishing Company. (Plff's Ex. 120, R. IV, 850–855.)

Howard testified that at the time of entering into the agreement wiith Beaudry, the United Company *had* a heel burnishing machine. (R. I, 68, l. 9.)

30. RICHARDSON SHOE MACHINERY COMPANY.

On December 1, 1908, the United Shoe Machinery Company acquired, for $80,000, from William B. Rice and others, all the property and business of Richardson Shoe Machinery Company, Lynn, Mass., engaged in manufacturing and putting out *McKay* sewing machines and machines designed and used for cutting or dieing out leather and other materials used in the manufacture of boots and shoes, including machines known to the trade as "*clicking* machines." (Plff's Exs. 125–126, R. IV, 871–893.)

United Company took from the vendors, and each of them, covenants that they would not for a period of 10 years engage in the manufacture of any machinery which should compete with the business of said Richardson Company in such machinery. (Plff's Ex. 125, R. IV, 875, par. 6; also Plff's Ex. 126, R. IV, 889, par. 3.)

Howard testified that at the time of the acquisition of the Richardson Company, United Company

was also engaged in manufacturing and putting out *McKay* sewing machines. (R. I, 70, l. 10 et seq.)

31. HARRY L. RICE—FRED LA CHAPELLE.

On January 20, 1909, the United Company acquired for $11,500 cash from Harry L. Rice and Fred La Chapelle, of Lynn, their inventions and improvements relating to machinery for forming chain stitches and chain-stitch seams, and machines used for attaching the welts of boots and shoes. (Plff's Ex. 128, R. IV, 898–904.)

The vendors for the consideration aforesaid in effect agreed to sell to the United Company all inventions which they owned relating to methods for the formation of chain stitches adapted to use in attaching the welts to shoes, etc., and likewise to transfer to the United Company all inventions which either of them within 10 years thereafter might make or acquire relating to any shoe machinery intended for the purposes described in the agreement.

They further agreed that they would not, without the consent in writing of the United Company enter into or become interested financially or otherwise or assist any person in carrying on the manufacturing of or dealing in the machinery described in the agreement in any manner which would directly or indirectly *compete* with the business of the United Company therein. (Plff's Ex. 128, R. IV, 899, 901, pars. 1 & 4.)

Howard testified that the United Company acquired by this purchase a welting machine which was

equipped "to put an extra thread on to the single thread side of the chain stitch formed by the machine" and that the United Company was then engaged in manufacturing and putting out welting machines, minus the improvement on the Rice and La Chapelle machine. (R. I, 71, l. 32.)

Howard further testified that the United Company has not yet put out the machine acquired from Rice and La Chapelle, but "we are still experimenting with it." (R. I, 72, l. 1.)

32. THE WENTWORTH COMPANY.

On February 3, 1910, the United Company acquired for $60,000 cash all of the capital stock and business of the Wentworth Company of Cincinnati, a corporation engaged in manufacturing and putting out machines used in the manufacture of boots and shoes. (Plff's Ex. 130, R. IV, 913.)

The United Company took from each of the vendors (seven individuals) covenants which in effect provided that none of them would at any time within a period of 10 years without the consent in writing of the United Company engage in manufacturing, developing or dealing in certain shoe machinery described therein and would not compete or interfere with the business of the United Company in the aforementioned machinery. (Plff's Ex. 130, R. IV, 918, par. 5.)

Howard testified that through this acquisition they acquired a "machine for beating heel seats; * * * This operation was to prepare the heel end of the shoe for the sole." That they also acquired "a shank

sticking machine." He further testified that the United Company at that time was manufacturing a machine for beating heel seats, and that the United was experimenting with the shank sticking machine. (R. I, 73, ls. 6, 18, 29.)

Winslow testified that the Wentworth Company was acquired for the purpose of settling infringement litigation.

33. ADAM H. PRENZEL.

On November 22, 1910, the United Company acquired from Adam H. Prenzel, of Halifax, Pa., all his inventions and letters patent of the United States and of other countries, relating to certain machines used in the manufacture of turn shoes, for $8,000 cash and 25 per cent of all royalties on machines thereafter manufactured by the United Company under the letters patent acquired until they shall have aggregated $75,000. (Plff's Ex. 143, R. IV, 1046.)

The United Company for the same consideration took from the vendor covenants which in effect provided that he would convey to the United Company all inventions, etc., adapted for use in connection with footwear or for use in connection with machinery adapted for use in the manufacture of footwear which the vendor should make or acquire at any time prior to the expiration of certain letters patent. (Plff's Ex. 143, R. IV, 1048.)

This like other similar covenants, tends to show suppression of competition so far as it puts restrictions upon the use of any inventions which the

vendor might make respecting the art of shoe machinery.

M. V. BRESNAHAN & COMPANY.

On December 19, 1910, the United Company acquired for $25,000 cash the business of Maurice V. Bresnahan, William H. Bresnahan, and John J. Dolan, trading under the name of M. V. Bresnahan & Company, of Lynn, engaged in manufacturing and putting out machines used in the manufacture of boots and shoes. The vendors each agreed to enter the employ of the United Company. (Plff's Ex. 144, R. IV, 1054, 1057.)

The United Company took from the vendors covenants that neither of them should, directly or indirectly, within 10 years *after* the termination of their employment by the United Company engage in any business relating to manufacturing machinery adapted for use in the manufacture of boots and shoes, or in any business which would in any way compete with the business of said United Company; and each of them further agreed to convey to the United Company for the same consideration all inventions which they should make or acquire at any time within 10 years after the termination of said employment agreement relating to shoe machinery. (Plff's Ex. 144, R. IV, 1055, 1058, pars. 2 & 5.)

Howard testified that by this purchase they acquired an experimental *lasting* machine and a *heel burnishing* machine and that the United Company at that time was manufacturing and putting out *lasting* machines and *heel-burnishing* machines. (R. I, 77, l. 1, 18.)

"Schedule A" attached to Plaintiff's Exhibit 144 gives a list of many different machines together with supplies acquired from the Bresnahan Company.

33. CHARLES P. STANBON & COMPANY.

On April 2, 1911, the United Company acquired for approxiamtely $122,735 cash the business of Charles P. Stanbon, doing business under the name of Charles P. Stanbon & Company of Lynn, engaged in manufacturing and putting out machines, tools, mechanisms and devices used in the manufacture of shoes. The vendor agreed to enter the employ of the United Company. (Plff's Ex. 145, R. IV, 1064.)

Howard testified that the United Company acquired from the Stanbon Company a channel-cementing machine, a folding machine, perforating machine, and a channel-opening machine, and that the United Company at that time *was* putting out an inferior channel-cementing machine and a perforating machine. (R. I, 78, l. 15.)

The foregoing evidence shows a series of restrictive covenants imposed upon the vendors which greatly restrained trade. They were forbidden to engage in *competition* with the United Company for a stated period of years and were required during a like period, where they were inventors, and most of them were, to assign to the United Company all discoveries made by them. This had the effect of chilling the genius of invention and of removing all incentives to serious work in that field of discovery. Not

only that, but it withheld any inventions the vendor should make from the hands of men who might become competitors of the United Company.

The claim that any or all of these acquisitions were made for the purpose of avoiding litigation relative to patent infringements will not do, because the purpose real or fancied is immaterial when the natural and necessary effect, as here, is undue restraint of trade. (*Infra*, pp. 242–244, 280.) This end never justifies the means, defendants to the contrary notwithstanding.

Moreover, if the machines acquired were infringing any machines owned by the United Company, the parties owning them could have been prevented by injunction from manufacturing or operating them, but suits for infringement would not prevent the defendants therein from inventing or acquiring other constructions which would accomplish the same purpose and avoid infringement. Hence to bring about the desired result, namely, the destruction of competition, it became necessary not only to buy out the inventors but to tie them by covenants which would prevent future competition. Accordingly there are here constantly recurring stipulations binding competitors and inventors who might become competitors not to compete in the future. Whether such covenants isolately viewed are illegal need not be discussed. Such a series of such covenants is forbidden by the Anti-Trust Law. (*Infra*, p. 234.)

The fact that some of the machines obtained by the defendants in the foregoing acquisitions were not at the time actually competing with machines put

out by the United Company does not alter the illegal character of the transaction. It must always be remembered that these machines were taken over by a great corporation which had a monopoly of certain machines which no shoe manufacturer could be without (*supra*, p. 15), and therefore could compel every shoe manufacturer to come to it for those machines. Every acquisition which gave to the defendants control of a machine formerly freely obtainable in the open market increased the power of the defendants to exclude competition as to other machines by refusing to let shoe manufacturers have on acceptable terms machines of which defendants were the only source of supply unless such manufacturers took also from the defendants machines in which competition existed or threatened. How the defendants availed themselves of this power is shown. (*Infra*, pp. 145–213.)

B. THE PLANT ACQUISITION.

1. INTRODUCTORY.

During several years prior to September, 1910, Thomas G. Plant had, at great trouble and expense, developed a complete line of shoe machinery for manufacturing welt, turn, and McKay shoes. (R. I, 189, l. 19.) Plant also had contracts with factories where such machines could be made in large quantities, and had equipped and was successfully operating his machines in the factory of Thomas G. Plant Company, a corporation, engaged in the shoe manufacturing business at Boston, Mass. (daily capacity approxi-

mately 17,000 pairs). He had thus demonstrated his ability to become immediately an active and effective competitor of the United Company, when that company, after extended negotiations, purchased all his assets, including machines and patents relating to shoe machinery, together with a majority of the capital stock of the Thomas G. Plant Company. Clearness requires the statement that this latter company is a *shoe manufacturing* corporation of whose stock Plant owned 60 per cent. It must not be confounded with the *shoe machinery* interest of Thomas G. Plant of which he was the sole owner.

On September 23, 1910, at four o'clock in the morning, the purchase was consummated. (R. I, 590, l. 1.)

2. WHAT PLANT HAD.

The properties and contracts acquired from Plant were as follows:

(a) Two hundred and six United States patents.

(b) Twenty-eight applications for United States patents.

(c) Seventy-four British patents.

(d) Twenty-one applications for British patents.

(e) Seventy-three French patents.

(f) Fourteen applications for French patents.

(g) Forty-two German patents.

(h) Forty-seven applications for German patents.

(i) Twenty-six Austrian patents.

(j) Fifty-eight applications for Austrian patents.

(k) Thirty-three Australian and eleven New Zealand patents.

(l) Fifteen thousand shares of the preferred and seven thousand five hundred shares of the common stock of the Thomas G. Plant Company. This company, which was engaged in *shoe manufacturing* exclusively, had outstanding twenty-five thousand shares of preferred stock and twelve thousand five hundred shares of common stock. The par value of each share of preferred and common stock was $100.

(m) The contents of a machine shop located in the Pevear Building in Lynn, Mass., and two-thirds of the capital stock of the Bresnahan Shoe Machinery Company, which was manufacturing for Plant; also patterns, tools, jigs, etc., built for the purpose of manufacturing the "Wonder Worker" shoe machinery (Plant's machinery). These patterns, etc., were in use at the place of business of the Bresnahan Shoe Machinery Company, at the machine shop in the Pevear Building, at the place of business of C. P. Stanbon & Company, Lynn, Mass., Taft-Pierce Manufacturing Company, Woonsocket, Rhode Island; Stanley Manufacturing Company, Lawrence, Mass., National Machine & Tool Company, Boston. Certain machines and parts were also included. (R. I, 563, l. 9.)

(n) There were also assigned the following agreements:

i. Between Charles P. Stanbon & Company and the Manufacturers' Machine Company, which latter was controlled by Plant, under which the Stanbon Company gave to the Manufacturers' Company an option to purchase on or before November 1, 1906, the busi-

ness of the Stanbon Company. (Plff's Ex. 132, R. IV, 931.) By a separate contract the United Company assumed all obligations and liabilities of Plant under the Stanbon contract. (Plff's Ex. 138, R. IV, 1038.)

ii. Between the Keighley Company and Thomas G. Plant, dated January 26, 1910, whereby the Keighley Company agreed to furnish to Plant its rapid inseam trimming machines in such quantities, up to twenty-five per cent of its output, as Plant might desire, said machines to be subject to a lease of forty-nine years without the payment of royalty. Plant agreed that he would place said machines only in the factories of such shoe manufacturing concerns as equip their factories with his general line of machinery; that he would use his best efforts to induce the users of his machines to use the Keighley rapid inseam trimming machines; Plant further agreed that he would take thirty or more of said machines during the year 1910 and fifteen or more during each six months thereafter during the life of the agreement; and the Keighley Company agreed that it would not sell its business or patents to any one within one year in such manner or to such effect as would interfere with the performance of its contract with Plant. (Plff's Ex. 132, R. IV, 975.)

By separate contract, the United Company covenanted with Plant that it would indemnify and save him harmless from all actions, claims, and liabilities, which might at any time arise under the contract with the Keighley Company, and Plant agreed that he

would exercise the rights secured to him by said agreement *solely* as the United Company should direct. (Plff's Ex. 135, R. IV, 1023.)

iii. Between Plant and the Stanley Company, dated June 15, 1910, wherein Plant obtained the right to use certain machinery belonging to the Stanley Company. (Plff's Ex. 132, R. IV, 931.)

iv. Between Plant and the Stanley Company of the same date, which assigned to Plant the rights held by the Stanley Company under a contract it had made with the United Company on May 1, 1901. (Plff's Ex. 132, R. IV, 983.)

v. Between Plant and the Stanley Manufacturing Company whereby the latter leased to Plant certain real estate also a lot of machinery, by which Plant also agreed that on or before the termination of the lease, to wit, June 30, 1915, he would purchase the property described for $150,000 cash. (Plff's Ex. 132, R. IV, 988, 991.)

vi. Between Plant and the Stanley Manufacturing Company, whereby Plant agreed to manufacture for that Company so many of certain machines as the Stanley Company might thereafter need, and as Plant might find it convenient to make. (Plff's Ex. 132, R. IV, 1012.)

In connection with the several contracts above referred to, the United Company entered into special contracts to protect Plant against all liability that might arise therefrom. (Plff's Ex. 140, 142, R. IV, 1040–43.)

It was also agreed that claims against Plant to enforce certain leases for the use of United Company's machines, which were set forth in a bill of equity then pending in the Supreme Judicial Court of Massachusetts, and claims for infringement of letters patent by Plant would be abandoned.

We invite attention to the large number of important obligations assumed by the United Company for the purpose, defendants say, of procuring a few patents owned by Plant.

The United Company took from Plant covenants that he would assign to it all inventions, etc., which he might make or otherwise acquire within 15 years thereafter, relating to the manufacture of shoes or to machinery, devices, etc., used in such manufacture.

Thus the several contracts executed between Plant and the United Company show within themselves that Plant was the owner of numerous patents upon shoe machinery, that he had obtained the ownership or control of or was in contract relations with a number of factories for the manufacture of shoe machinery located in different parts of the country, and that he was fully equipped to enter upon active and extensive competition with the United Company.

3. THE PURCHASE BY THE DEFENDANTS.

In June, 1910, negotiations were entered upon between the United Company and Plant with a view to purchasing the Plant machinery interests just described. At first they were without success. They

were renewed from time to time until September 23rd when they were closed, according to Howe, after an all-night session, at 4.30 a. m. (R. I., 688, l. 21.) The money consideration was $6,000,000; according to the defendants' testimony, $500,000 had been paid the day before when not so much as a scrap of paper had been drafted or signed. (R. I., 487, ls. 28 to 44; 488, l. 1.)

This covered the Plant machinery, 60 per cent of the capital stock of the Plant shoe manufacturing company, and the other Plant interests described under the previous head. (R. I., 486, ls. 1 to 11.)

The story of the negotiations eventuating in the purchase is told by Winslow (R. I., 558, l. 6 *et seq.*); Endicott (R. I., 578, l. 10 *et seq.*); Howe (R. I., 668, l. 35 *et seq.*) and Herrick (R. I., 602, l. 6 *et seq.*). We do not think it necessary further to abstract it here.

4. PLANT WAS A SERIOUS COMPETITOR OF THE DEFENDANTS.

a. He Had Already Completely Equipped a Large Shoe Factory.

As stated, *supra*, Plant had equipped with his machines the shoe factory of The Thomas G. Plant Company, Boston, which had a daily capacity approximating 17,000 pairs. The Thomas G. Plant Company conducted its entire business for several years with this machinery. It continued to use it even after the purchase by the United Company. Substantially all the machines were continued in use until December, 1912 (McGaffee, R. I, 774, l. 36), and some of them were in operation at the time when the testimony was taken [Jan. 7, 1914] (McGaffee, R. I, 781, l. 42).

b. He Was Offering to Equip Other Manufacturers and Was Ready to Do So.

Plant also had contracts with factories where his machines could be made in large quantities. (*Supra*, pp. 99–101.) He had offered to install them in the factories of the Commonwealth Shoe and Leather Company, the W. H. McElwain Company, and Endicott-Johnson & Company. (Jones, R. I, 114, l. 31; also Endicott, R. I, 576, l. 27.) He had issued an elaborate catalog (Plff's Ex. 266) and was prepared to furnish his machines to shoe manufacturers generally if the opportunity was presented.

Representatives of large shoe factories located in the west had caused his machines to be inspected and as will appear came to Boston immediately prior to the sale to the United Company and made a further inspection with a view to purchasing an interest in the business. (*Infra*, pp. 99–111.)

c. His Machines Were Efficient Competitors of the United Machines in the Opinion of Experts.

Apart from actual success in the Plant shoe factory, there was the following direct testimony as to the capabilities of Plant's machines:

Warren F. McElroy, from 1890 to 1911, superintendent of the manufacturing department of the Hamilton-Brown Shoe Company, later president of the Non-Royalty Shoe Company, and still later in the employ of Burrow, Jones & Dyer Shoe Company, St. Louis, Mo., testified that he went through Plant's factory in May, 1910, at the request of Mr. Brown, president of the Hamilton-Brown Shoe Company.

The shoe manufacturers just mentioned as contemplating acquiring an interest in Plant's shoe machinery had also sent McElroy as an expert to examine the machines.

Mr. McElroy testified:

> The machines were doing women's McKay and welt work of good workmanship and high grade. I spent practically two days going over the machinery. I can not state the number of machines in operation, but it was a full line, consisting of lasting, welting, stitching and leveling machines. The essential bottoming room machinery was the machinery I examined. The work done was equally as good as that done by our United Company machines (the Hamilton-Brown Company, his employer, had the United Company's machines) and I felt they were doing about the same number of pairs. They were actually at work on women's shoes. I saw men's shoes there which were made upon them. (R. I, 189, l. 15, et seq.)

Milton S. Florsheim, president of the Florsheim Shoe Company, of Chicago, Illinois, testified that he went through Plant's factory in 1910, and found that Plant's machines were doing very satisfactory work, and that Plant had a line of machines which were making welt shoes and also McKay sewed shoes. (Florsheim, R. I, 160, l. 37 et seq.)

E. F. Selz, general manager of the manufacturing department of Selz, Schwab & Company, Chicago, Illinois, engaged in the manufacture of men's and

women's shoes, testified that he spent a half day examining Plant's machinery which was in operation in Plant's shoe factory and that the machines were making women's welts and McKay sewed shoes, and that Plant had a full line of machinery for making such shoes; that the machines were doing equally as good work, as far as he could observe, as the United Company's machines in his own factory, and with as much rapidity; that the machines were capable of being used in the manufacture of men's welt shoes. (R. I, 145, l. 40, 146, l. 1 et seq.)

Charles H. Jones, president of the Commonwealth Shoe and Leather Company, with factories at Whitman, Mass., and at Gardiner and Skowhegan, Maine, testified that he spent one entire day in June, 1910, examining Plant's machines; that his examining the machines was with a view to arranging for their use in his own factory; that Plant offered him the complete line of machinery which included every machine that was then in use in the Jones factories belonging to the United Shoe Machinery Company, offering in all, somewhere between 125 and 150 machines; that the price named by Plant was somewhere between $125,000 and $150,000 for the complete line; that the proposition was rejected principally on account of the tying clauses of the United Company's leases; (*infra*, pp. 145–213) that Plant's machines were adapted for the manufacture of men's shoes as well as women's although witness never saw the machines manufacturing men's shoes. (Jones, R. I. 114, l, 26 et seq., 124, l. 16, et seq., 125, l. 31.)

George E. Warren, an expert in the employ of the United Company, testified that, in conjunction with a Mr. Phillips, he had made an examination of the Plant factory in September, 1910, at the instance of the United Company. (R. I, 808, l. 29.) He said there were "sixty-nine machines in the Plant catalogue, and we saw them all, but not all in operation. It was a very large factory and had a capacity of ten thousand pairs a day or more, and was in full operation at that time." (R. I, 809, l. 6.) "I found a welter which was welting shoes and doing the work rapidly. They were running it at different speeds, some of them as fast as we run ours. The work on the shoe looked very well." (R. I, 809, l. 21.) "I regard the United Company welter as mechanically superior, and, taken as a whole, to some extent a superior machine to the Plant machine." (Ibid, l. 35.) "These Plant improvements on the welter were the things which especially impressed me." (R. I, 813, l. 5.)

This, we may add, is high praise from a representative of the United Company.

Elmer P. Howe, director and expert of the United Company, said that he had examined the Plant machines with Winslow prior to the purchase (R. I, 668, l. 35), and that in the main the machines "were improvements on old machines" upon which the patents had expired (R. I, 787, l. 6, 669, l. 16). With respect to the Plant *welting* machines, he said that Plant had added certain improvements which constituted a very valuable feature. (R. I, 669, l. 21–30.)

The defendants introduced considerable evidence with reference to this transaction, designed to show that Plant's machines as they were in September, 1910, were not yet fully satisfactory for shoe making processes; that the purchase was intended merely to acquire certain inventions which the United Company believed that *it*, but inferentially not Plant, could develop so as to be of great value, and to relieve the United Company of litigation.

It appears, however, that after the report of Mr. Warren and his associate experts was made to Winslow, there was no suggestion whatever upon Winslow's part that the particular inventions mentioned by them should be singled out and purchased, but during the entire negotiations nothing was talked of but the buying of Plant's *entire* line of machinery. (R. I, 559, l. 19 et seq.) This is important.

The machines were new, and to a certain extent experimental, and, as was to be expected, certain weaknesses and defects developed under the test of actual operation. Much is made of this circumstance by the defendants. There is, however, nothing in the record to indicate that the defects were of such character as not to be easily remedied by the alterations and adjustments common in the practical working out of a project like Plant's and the evidence does show conclusively that Plant and his assistants were possessed of a very high grade of inventive genius which already had been shown in the production of a number of inventions admitted by the defendants to be very valuable.

d. Shoe Manufacturers Believed the Plant Machines to be Efficient and Were Eager to Purchase an Interest in Them.

In September, 1910, a group of shoe manufacturers had been for some time in negotiations with Plant with a view to acquiring an interest in his shoe machinery business for the purpose of obtaining a source of supply of machinery other than the United Company and to secure relief from what they regarded as oppressive and arbitrary methods of the United Company. These manufacturers were Jackson Johnson, representing the Roberts Johnson & Rand Shoe Company, with a capacity of over 30,000 pairs of shoes daily, A. C. Brown, representing the Hamilton-Brown Company of St. Louis, with a capacity of 25,000 pairs of shoes daily, George Brown, representing the Brown Shoe Company of St. Louis, Henry W. Peters, representing the Peters Shoe Company of St. Louis, Milton S. Florsheim, representing the Florsheim Shoe Company of Chicago, with a capacity of 4,000 pairs of shoes daily, E. F. Selz, representing the Selz, Schwab Company of Chicago, with a capacity of over 15,000 pairs of shoes daily, and Charles H. Jones of the Commonwealth Shoe and Leather Company of Boston, with a capacity of 6,000 to 7,000 pairs of shoes daily. (Rand, R. I, 178, l. 24; Florsheim, R. I, 158, l. 13; Selz, R. I, 141, l. 16; Jones, R. I, 105, l. 20; Brown, R. I, 617, l. 10.)

A further idea of the importance of these manufacturers may be gathered from the fact that they paid to the United Company royalties ranging from

$79,000 (Jones, R. I, 117, l. 23) to $600,000 per annum (Rand, R. I, 186, l. 40).

These gentlemen met in Boston on September 22, 1910. Plant made them an offer to sell an undivided *one-half* of the *shoe machinery* business for $1,600,000. They asked for specifications as to what he owned. He was then unable to give them, but insisted that it was unnecessary as they had seen the machinery in operation, and he assured them that he had the facilities to manufacture the machines in large quantities. This was true. (*Supra*, pp. 99–101.) That was between eight and nine o'clock on the evening of September 22d. The purchase was not effected that night because they were unable to raise before Plant left them the very large sum required. The following morning, before they heard anything further from Plant, they succeeded in procuring subscriptions for $1,100,000, and Wade, treasurer of the North American Company of St. Louis, and Campbell, president of the Mercantile Trust Company of St. Louis, men abundantly able to supply the money, undertook to underwrite the purchase. That occurred about nine or ten o'clock in the morning of September 23d, but when the shoe manufacturers heard from Plant on that morning, they learned that about three or four o'clock on the previous night, after Plant had left them, he had gone to the office of counsel for the United Company and had sold all his interests to that company for $6,000,000. (Jones, R. I, 114, l. 39 *et seq.;* 115, l. 1 *et seq.;* Selz, R. I,

147, l. 7 *et seq.;* Florsheim, R. I, 160, l. 30 *et seq.;* 161, l. 1 *et seq.*)

The fact that the shoe manufacturers who had examined the machinery were willing to purchase a half interest in Plant's shoe machinery business, and pay therefor $1,600,000, is very persuasive that they regarded the machinery as capable of doing well the same work as that done by the United Company's product.

e. Winslow Knew of Their Desire.

Winslow states that on the evening of September 20th, the day *prior* to the meeting when Winslow practically agreed to buy the Plant property, Plant advised him that he was expecting the "western people," and that if he traded with Winslow, he would have to put up a proposition to the western people that they could not accept, or words to that effect. (R. I, 488, l. 18–23.) Mr. Endicott who became a director of the United Company "to carry through the deal for the Plant machinery" (R. I, 587, l. 33) also knew that the western shoe manufacturers were interested and were coming to examine Plant's machines (R. I, 589, l. 25). He knew this at least as far back as June, 1010. (R. I, 589, l. 27.)

He also testified that Plant had told him the day *before* the papers closing the purchase were signed that the western manufacturers *were in town and that he was going to take them out that day to show them his factory,* but that he, Endicott, didn't "think" that he knew of their presence in Boston until *then.* (R. I, 589, l. 30.)

Mr. Endicott, a leading figure in the defendants' negotiations, must have informed Mr. Winslow and Mr. Herrick of the presence of the western manufacturers in the town and the object of their mission. No other hypothesis is reasonable.

From this testimony it is fair to conclude that Winslow and his associates were well aware that negotiations were going on between Plant and the shoe manufacturers, and that unless the United people were prompt in closing the bargain the shoe manufacturers would obtain the Plant machines and establish a vigorous rival of the United Company. The result was the all-night session ending in closing the deal at 4.30 a. m. (R. I, 688, l. 9.)

f. Defendants Knew That Other Capitalists Contemplated the Purchase of the Plant Machines.

Herrick, attorney for the United Company who took an important part in the Plant negotiations (R. I, 602, l. 6 et seq.) stated that on September 1, 1910, while the Plant purchase was under consideration by the United people, he was called to New York by Wiggin, President of the Chase National Bank, who said to him that Evans of the North American Insurance Company desired to see him; that when he asked what Evans wanted to see him about, he was told by Wiggin to call upon Wallace, president of the Central Trust Company, New York; that he did so and Wallace, after talking for a while about other matters, said in effect that a large concern with international banking connections was considering buying into the Plant machinery, and

that he, Wallace, was planning to have an expert, together with a patent lawyer, go to Boston for the purpose of seeing what Plant had and that if this concern which he was speaking about took over the Plant machinery it would undoubtedly establish a strong and prosperous business; (R. I, 613, l. 28 et seq.) that he also saw Woodward of the Hanover National Bank, a director of the United Company, who told him that he had heard "Plant owed the City Bank (of New York) some money and that the City Bank and a hide man, whose name he would not tell me, had some plan for buying Plant's business" (R. I, 614, l. 14).

g. Winslow was Exceedingly Anxious to Get Plant's Machines.

The whole history of the transaction shows that the defendant's were keenly alive to the importance of removing from their path so dangerous a competitor and were exceedingly anxious to accomplish that end. The negotiations were continuous from their inception in June, 1910, until their consummation in September. When they were not proceeding between Plant and Winslow, through Endicott, they were going on between Herrick and Plant, at the instance of one Smith. Herrick was reporting to Winslow after every interview. (R. I, 602, l. 17; 604, l. 10; 605, l. 18; 608, l. 43; 609, l. 1 et seq., 610, l. 4, 20.)

One very significant circumstance shows this anxiety in sharp relief. When the negotiations had once reached the semblance of agreement although none of the intricate details had been worked out the

defendants hastened to give Mr. Plant a check for $500,000. (R. I, 488.) When this check was delivered not a document had been drawn.

Other facts indicate this imperative anxiety even more strongly.

1. Endicott's Strange Story.

Henry B. Endicott, of Endicott-Johnson Shoe Company, Endicott, New York (daily capacity about 40,000 pairs) testified that in 1909 Plant had told him that he would give to him $250,000 if he would complete or help to complete the sale of Plant's machinery to the United people; (R. I, 576, l. 40) and that thereupon Endicott arranged for a meeting between Winslow and Plant at his house; (R. I, 577, l. 1) that, after he had failed as the representative of Plant, he then sought Winslow, and made to him a remarkable proposition. Here is the way he tells it:

> "I am going to make a proposition to you, Mr. Winslow, and you may laugh at it, but you shall be the only man that will laugh at it, because you must promise me, if you don't accept it, never to reveal it," which of course he did promise. I said, "Hanan and Keith refuse to take the responsibility of this recommendation" (to examine the Plant machines and report on the advisability of the purchase.) "I have been thinking that if I had been director in your company I would have been wil'ing to take that responsibility; if you care to elect me as a director in your company, I will do my share toward taking that responsibility." Mr. Winslow said he would not laugh at that;

(of course not) that he liked the idea of it; and he asked me if I would go and see Mr. Howe, which we did—took a motor and went to Mr. Howe's residence, I think to Marblehead. (R. I, 578, l. 22.)

Asked why he thus pledged Mr. Winslow to secrecy, Mr. Endicott said, "I am not in the habit of offering myself as a director."

Q. Why did you offer yourself as a director in this case?

A. Because I wanted to make a success of what I had started in on.

Q. In other words, you wanted to be elected a director of the United Shoe Machinery Company to carry through this deal to acquire the plant machinery; is that right?

A. As far as I was concerned; yes, sir; and because I believed, of course, as I have stated here, that there was value there. (R. I, 587, l. 30.)

That night he informed Plant that he had changed his allegiance (R. I, 579, l. 4), went with Winslow to New York, where they met others of the directors, and was elected to the Board, although he did not own a dollar's worth of stock in the company (R. I, 587, l. 43). He then continued his efforts to forward the purchase. (R. I, 579, l. 11.) But, according to his story, he had, simply for the sake of accomplishing that end, exchanged a position where $250,000 was to reward his success for one where he could profit not a penny.

It will be remembered in this connection that this was not the first time Mr. Endicott was so used to serve the ends of the United Company. When Mr. Winslow desired to secure control of the Eppler Company, he did not go about it directly, but employed Mr. Endicott as the man to accomplish the result. (R. I, 530, l. 4.)

Here we find Mr. Endicott appearing as the most active agent in the purchase of a much more important competitor. He was made a director expressly to carry forward those negotiations. When it was decided that he assume that position he had not yet renounced his character as agent for Plant. As agent he had acquired information about the machinery. It had been examined by his experts. (R. I, 576, l. 12.) He knew of the desire of the western men to buy it. (*Supra*, p. 111.) When he became a director of the defendants he knew better than any other how likely Plant was to become a powerful competitor of the defendants.

Endicott's maneuvers are difficult to understand. His story excites curiosity and suspicion. We doubt that it has a parallel in the history of great business transactions. But, however that may be, it shows the deep anxiety of Mr. Winslow and his associates to acquire the Plant machinery and their willingness to adopt any means necessary to accomplish the result.

There was a cause for this anxiety. It rested in the fact that the Plant machinery was seriously competitive and that men capable of making that

machinery a vigorous antagonist of the United Company were on the spot or near at hand ready to purchase it.

ii. Suits by United Company to Compel Him to Sell.

On July 5, 1910 a committee appointed by Winslow to examine the Plant machinery made an adverse report. (R. I, 484, l. 16 et seq.) On that day the United Company commenced a suit against Plant and the Thomas G. Plant Company to enjoin the latter company from using the machines which had been supplied to it by Plant; to enjoin Plant from supplying to the Plant Company other machines in place of those leased by the United Company, and for other purposes. (Pff's. Ex. 162.) Soon thereafter a number of patent infringement suits were instituted against Plant and others made ready for filing. (R. I, 480, l. 19, 484 l. 38; Dft's Ex. 270, R. V, 723.) Defendants' witnesses talk of counter infringements by their machines. (R. I, 820, l. 17; Dft's Ex. 277.) *But no litigation was begun by Plant.* These suits, no doubt, were intended in part at least as spurs to induce Plant to sell and hence certainly tend to show that the United Company believed Plant to be a dangerous competitor.

5. DEFENDANTS' ALLEGED REASONS FOR MAKING THE PURCHASE ARE INSUFFICIENT TO CONCEAL THEIR FEAR OF PLANT AS A COMPETITOR.

Defendants say that the purchase was made to obtain Plant's improvements so that they might advance the art of shoe machinery for the benefit of shoe manufacturers.

This altruistic motive might have been satisfied without the expenditure of $6,000,000. All that was necessary was to permit the shoe manufacturers who were ready and anxious to purchase an interest in Plant's machinery to carry through their design. They were ready to interest themselves in the machinery to which the improvements had already been successfully applied.

And the facts demonstrate that the United Company which is directed by pretty efficient business minds hardly could have invested $6,000,000 for the purpose of getting control of a few improvements.

In the first place no effort was made to acquire the improvements or any of them or any right to use them without at the same time acquiring all of Plant's interests in shoe machinery. In the second place, the defendants' own witnesses show that however valuable the Plant improvements were to him as a present and prospective competitor of the defendants, they were of little use to the United Company. For the following testimony shows what, according to the defendants, the improvements were and what they did with them.

Warren, an expert of the United Company, said:

> These Plant improvements on the welter were the things which especially impressed me. (R. I, 813, l. 5.)

Howe said that Plant had added a certain improvement to his welting machine which constituted a valuable feature. (R. I, 669, l. 20 to 30.)

From Howard we learn that these improvements were an automatic stopping mechanism on an outsole stitcher and a welt measurer and cutter attached to the welting machine. (R. II, 2259–2263, *passim.*)

With respect to the stopping mechanism, Howard said:

> The Plant mechanism was far from satisfactory as it was not a good mechanical arrangement and occasioned much trouble from breakage. After the acquisition of the Plant patents by the United Company in September, 1910, *five* different inventors employed by the United Company were put to work upon the *problem* of providing a *commercially satisfactory stopping* mechanism. * * * The mechanism finally produced by the joint work of these five inventors was that which I have described and *was entirely different in structure and mode of operation from the Plant mechanism.* (R. II, 2297.)

Concerning the welt measurer and cutter, he said:

> Some four or *five* inventors were put to work by the United Company to adapt [it] to the United Company's Model G. welter. * * * The United Company's inventors made *important improvements* upon them so that, as finally incorporated in the Model G. machine embodying these improvements and others to which I shall refer, became known as Model K. machine, improvements were made which represent almost as *important advances* in the industry as did the Plant improvements. In

> operating the Plant welt holder and cutter, it was necessary for the operator to step on a treadle at the time when he desired to sever the welt. In the Model K. machine it is only necessary for the operator to move the shoe slightly to the left. (R. II, 2260–2261.)

It appears, then, that none of the improvements purchased from Plant at enormous cost were used without radical and far reaching change by the United Company.

Plant's machines were efficient and were of great value *to him as a competitor of the defendants.* But the United Company already had machines, of different design, which it believed efficient. All that it could get from Plant in the way of machinery of value to it was improvements which it could add to its own machines. The foregoing testimony shows that Plant's improvements could not be added to its machines without being so changed that they were *entirely different* in structure and mode of operation. New invention was required. What was of immediate value to the defendants in the Plant acquisition was the removal of Plant's competition. This is what they bought and it was for this that they paid their millions.

It is suggested by the defendants also that the purchase was inspired by a desire to avoid litigation. This would not be a defense for an otherwise illegal purchase. (*Infra*, p. 242.) But that the avoidance of litigation was in fact an actuating factor in the transaction does not appear. In no part of the negotia-

tions was it suggested that the defendants should buy out Plant in order to avoid litigation. And no litigation *against* the United Company had been bought or threatened.

It is true that a number of infringement suits had been instituted against Plant, as above noted. But it does not appear that if any or all of them had been sustained it would have been fatal to the line of machinery owned by him. His improvements, so far as his two principal machines were concerned were made upon machines previously put out by the United Company. (R. I, 787, l. 6.) The patents on these machines had expired, by limitation.

Nor will it do to say that Plant had developed his line of machines with the design to force the United Company to purchase them and that the purchase was made at his instance. He did not have to sell to the United Company. The western manufacturers and the people of whom Herrick was told in New York (*supra*, pp. 112, 113), were ready to go in with him. He had two courses open, one to sell to the United Company and restore the complete monopoly in his lines of machinery which existed before he came into the field, and the other to sell to the others and thus perpetuate the active competition in those lines. He chose the former and no doubt was moved thereto by the fact that the United Company was willing to buy out his entire interest in both his shoe machinery and his shoe manufacturing business and permit him to retire to enjoy his mountain in New

Hampshire. (R. I, 488, l. 24.) But whether the initiative came from the defendants or from Plant, the result was the same. A powerful existing and potential competitor was purchased. That is the significant fact.

The purchase of the shoe factory is in itself enlightening. The United Company had never been in the shoe manufacturing business and, so far as this record shows, had never intended to go into that business. (R. I, 580, l. 42.) Yet, in order to obtain Plant's machines, it took sixty per cent of the stock of the Thomas G. Plant Shoe Company, *whose factory was equipped with Plant's machines*, at a price which Winslow says was $3,500,000. (R. I, 499, l. 35.)

Furthermore Winslow says that this stock was not purchased because he wanted it. It was because Plant made it a condition of his proposition. (R. I, 562, l. 12.) It is inconceivable that such an expensive piece of property which was not desired and in which the United Company had never manifested any interest was purchased for no other reason than to obtain inventions which defendants say had to be entirely worked over before they could be adjusted to the United Company's machines, machines which defendants insist were already better machines than those made by Plant.

In addition, the magnitude of the consideration paid clearly shows that the value of the purchase did not consist alone in the machines and improvements obtained. In the original organization the stockholders of the Consolidated & McKay Lasting

Machine Company received $4,599,840 of stock, preferred and common, and $432,000 in cash, or a total of $5,031,840, or $968,160 less than was paid Plant. (R. I, 568, l. 21.) The Goodyear stockholders received $4,800,000 in stock, or $1,200,000 less than was paid Plant. (R. I, 569, l. 3.) The McKay Shoe Machinery Company stockholders received $5,500,000, or a half a million dollars less than was paid Plant. (R. I, 569, l. 8.) Furthermore, it is difficult to conceive how Winslow could value 60 per cent of the stock of T. G. Plant Company at $3,500,000. The total capitalization of that company was $3,750,000, of which $2,500,000 was preferred and $1,250,000 was common stock. Plant owned and the United Company received by this purchase only $1,500,000 preferred and $750,000 common, or a total of $2,250,000 (R. I, 486, l. 8 et seq.), and the statement furnished the company by Plant showed that the Plant Company had a net investment at that time of only $2,500,000 (Plffs. Ex. 132, IV, 1015), 60 per cent of which was $1,500,000. Moreover, the evidence does not show that the stock of the Plant Company was specially valuable.

Besides the amount paid Plant, the United Company also paid under the several contracts which Plant had, $122,000 to Stanbon (R. I, 558, l. 33 et seq.) $150,000 to the Stanley Company and also considerable sums to other concerns which were taken over; but Winslow says that these purchases were regarded as mere incidents.

4. RESULT OF THE ACQUISITION OF THE PLANT PROPERTIES.

a. The United Company Again Acquired Substantial Control of Welters and Stitchers.

In order to fully comprehend the effect of this purchase, the conditions then existing must be kept in mind. The only concern at that time engaged in putting out welters and stitchers to any material extent was the United Company. Winslow named the Haverhill Company, R. H. Long, and the Boylston and Duplessis Companies as being engaged in manufacturing welting machines but the evidence of representatives of each of those companies is in the record and shows that when the Plant purchase was made no one of them was manufacturing welting machines to any material extent. (R. I, Webster, I, 290, l. 26; 291, l. 42; 292, l. 8; Doidge, I, 344, l. 17 and 26; Maloy, I, 301, l. 26; Hamel, I, 326, l. 9, 36, 37.)

b. The United Company Secured Control of the McKay Sewing Machine.

The Richardson Shoe Machinery Company manufactured an improved McKay sewing machine, but its factory was obtained by the United Company through the purchase of all its assets in 1908. (R. I, 69, l. 20 et seq.)

Since that time the United Company had been putting out the McKay machine either by absolute sale or, more recently, by lease; but the Stanley Company was manufacturing the original McKay machine (R. I, 564, l. 22). Its properties were pro-

cured at a consideration of $150,000 in accordance with the terms of the Plant acquisition. This gave the United Company complete control of that machine.

Winslow testified that the machine could be obtained elsewhere, but he was wholly unable to name any other concerns which manufacture it in competition with the United Company. (R. I, 564, l. 25.) Possibly second-hand machines can be obtained from dealers, but when that supply is exhausted it will be necessary for every manufacturer to equip his factory with McKay machines held by the United Company. Not only that, but the McKay machines are all tied to the lasting machines of the United Company by its system of leasing. (*Infra*, pp. 145–213.) No one may use a United lasting machine upon any shoe which has been operated upon by a machine not procured from the United Company, therefore not upon a shoe operated on by a McKay machine procured outside of the United Company. The lasting machine is virtually, if not absolutely controlled by the United Company. (*Infra*, p. 164.) Practically, every shoe manufacturer in the United States must have it. Therefore, every such manufacturer must also procure his McKay machines from the United Company.

In consequence, the United Company by procuring control of the McKay sewing machine completed its monopoly of every important machine used in bottoming shoes.

c. It Removed the One Formidable Competitor of the Defendants.

Mr. Johnson of the International Shoe Company, one of the largest practical shoe manufacturers of the country, truly said of the Plant purchase that—

> it showed either that somebody was able to make a superior line of shoe machinery to what the United Company had, or else they wanted to retain an absolute monopoly of the shoe machinery business. (R. I, 161, l. 26.)

There is no pretense that any competitor of the defendants except Plant has ever undertaken to place upon the market anything approaching a complete and successful line of machinery for the manufacture of welt or McKay shoes. The fact is that the purchase removed the one really formidable competitor which had appeared since the organization of the United Company.

VI. THE POSITION OF THE UNITED COMPANY AT THE TIME WHEN THIS ACTION WAS BEGUN.

A. IT WAS OVERWHELMINGLY PREPONDERANT.

Facts already reviewed show that upon its formation the United Company acquired every company then actively putting out or planning to put out lasting, pegging, welt sewing, outsole stitching, heeling and metallic fastening machines. (*Supra*, p. 54.) In the twelve years before the bringing of this action no substantial change took place but rather the monopoly so acquired was in some respects extended and in many respects strengthened and intrenched. In 1911 the United Company was putting out a complete line of machinery in the field which it then

had entered. It was offering machines for every operation performed by machinery in the bottoming of shoes, clicking and eyeletting machines. (Dfts.' Ex. 232, R. V, 480.) As to many of these machines, it appears from exhibit 232 that the defendants admit that they have no competition. No company in this country except the United Company offers such a full line of machines. (Jones, R. I, 115, l. 31; Long, R. I, 231, l. 17; Dfts.' Ex. 232, R. V, 480.) The testimony of the many shoe manufacturers who appeared as witnesses either for the United States or for the defendants shows that substantially every machine used for these operations by shoe manufacturers in the United States is a machine put out by the defendants.

Charles H. Jones, president of the Commonwealth Shoe & Leather Company, of Boston, Mass.—capacity 6,000 to 7,000 pairs per day—testified that his company does not use any welting, outsole stitching, lasting, heeling, or metallic fastening machines other than those of the United Company. (R. I, 114, l. 22.)

E. F. Selz, of Selz, Schwab & Co., Chicago, Illinois—daily capacity about 15,000 pairs—testified that his company has obtained all its welting, stitching, lasting, heeling, and metallic fastening machines under lease from the United Company. (R. I, 144, l. 15.)

Milton S. Florsheim, president of the Florsheim Company, Chicago—daily capacity about 4,000 pairs—testified that his company leases all of its welting and stitching, lasting and heeling machines from the United Company, except a few machines which

had been obtained previous to the consolidation from companies which became a part thereof. All royalties are paid to the United Company, except royalties for the use of the Xpedite finishing machine, which is paid direct to the Xpedite Company, a subsidiary of the United. (R. I, 159, l. 44; 160, l. 1 et seq.)

Frank C. Rand, vice president of the International Shoe Company, of St. Louis, Mo.—daily capacity about 50,000 pairs—testified that his company leases all of its lasting, heeling, welting, stitching, and metallic fastening machines, etc., from the United Company. (R. I, 178, l. 37 et seq.)

George R. Harsh, president and general manager of Harsh-Edmands Shoe Company, Milwaukee, Wisconsin, testified that his company did not use in the bottoming department any machines other than those obtained from the United Company, except one stitching machine of the Union Lock Stitch Company for ornamental work. (R. I, 195, l. 14.)

Pearl E. Selby, of the Selby Shoe Company, Portsmouth, Ohio—daily capacity about 6,000 pairs—testified that his company uses the United Company's welters and stitchers exclusively for welt work, but for fair stitching, viz. inserting an ornamental stitch in, the McKay shoe they have used a Puritan machine for about fifteen years, and were trying out the Union lock-stitch machine (R. I, 210, l. 38; 213, l. 11 et seq.) and that the company uses exclusively lasting, heeling and metallic fastening machines of the United Company (R. I, 212, l. 33).

John E. Williams, with factories at Portsmouth and Ironton, Ohio, testified that he used exclusively the United's bottoming machines (R. I, 216, l. 37.)

William A. Hogan, treasurer of T. D. Barry Company, Brockton, Mass.—daily capacity from 3,000 to 3,500 pairs—testified his company uses exclusively the United Company's welters, stitchers, heeling, lasting, and metallic fastening machines. (R. I, 222, l. 10; 224, l. 14.)

Frank R. Hilliard, Haverhill, Mass., manufacturer of women's welt and turn shoes—daily capacity about 4,000 pairs, uses the United Company's machines exclusively. (R. I, 282, l. 42; 283, l. 4.)

Ernest Bottomley, Haverhill, Mass., manufacturer of McKay shoes—daily capacity about 700 pairs—testified that with the exception of two old McKay sewing machines he uses exclusively bottoming machines of the United Company. (R. I, 285, l. 2, 24; 287, l. 18.)

James H. Cunningham, general superintendent of the Stacy-Adams Company, Brockton, Mass.—daily capacity about 1,200 pairs of welt shoes—testified that his company uses exclusively the United Company's welting and outsole stitching, lasting, heeling, metallic fastening and eyeletting machines. (R. I, 288, l. 35; 289, l. 29.)

Ira J. Webster, Haverhill, Mass., shoe manufacturer, testified that he uses exclusively bottoming machinery of the United Company. (R. I, 362, l. 20.)

Thomas H. Shinn, superintendent for the Curtis & Jones Company, Reading, Pa.—daily capacity

about 10,000 pairs—testified that his company uses the United Company's bottoming machinery exclusively. (R. I, 366, l. 35, 37.)

Alanson C. Brown, president of Hamilton-Brown Shoe Company, St. Louis, Mo., manufacturers of welts, turns and McKays, with a daily capacity of about 25,000 pairs, testified that practically all of the machinery used in his factories was obtained from the United Company. (R. I, 617, l. 10 and 26.)

Robert P. Hazzard, of the R. P. Hazzard Company, Gardiner, Maine, manufacturers of men's welt shoes, with a daily capacity of about 5,000 pairs, testified that his company "got from the United Company all the machinery they could supply." (R. I, 651, l. 10, 26.)

Martin E. Welch of the Welch Shoe Company of Lynn, Mass., testified that every machine used by that company in the bottoming room with the exception of two or three machines are United machines. (R. I, 710, l. 25.)

Frederick Allen, of the Allen, Foster, Willett Company of Lynn, Mass., manufacturers of welts, turns, and McKays with a daily capacity of about 6,000 pairs testified that his concern uses the United Company's bottoming machines exclusively, with the exception of the Puritan fair stitching machines. They also used defendants' eyeletting and clicking machines. (R. I, 723, l. 37.)

Jonathan Brown, Jr., manufacturers of women's, misses', and children's McKay-sewed and standard screw shoes, with an output of about 7,500 pairs per

day testified that he uses practically all of the United's bottoming machines in his factory. (R. I, 730, l. 15, 31; Plff's Ex. 269, R. IV, 1441.)

James W. Hitchings, of Luther S. Johnson & Co., Lynn, Mass., manufacturers of slippers, testified that all of the bottoming machines used by his company belonged to the United Company. (R. I, 738, l. 6.)

Edward W. Burt, of E. W. Burt & Co., (Inc.) of Lynn, Mass., manufacturers of men's, women's, misses', boys' and children's welt shoes, with a daily capacity of about 500 pairs testified that he was using the United Company's machines. (R. I, 739, l. 4.)

Charles A. Eaton, of the Charles A. Eaton Company, Brockton, Mass., manufacturers of men's welt shoes, with a daily capacity of about 2,400 pairs, testified that he had not made any attempt to obtain bottoming machines from any other source than the United Company. (R. I, 751, l. 20, 27; 755, l. 25 et seq.)

C. Willis Bennett, Fitchburg, Mass., manufacturer of women's, misses', and children's McKay-sewed shoes, with a daily capacity of from 800 to 1,400 pairs, testified that, with the exception of machines for fair stitching, all of his sewing, heeling, lasting, and metallic fastening machines were obtained from the United Company. (R. I, 757, l. 42; 760. l. 1.)

Frederick J. Gross, of Field Bros. & Gross Company, Auburn, Maine, shoe manufacturers, with a capacity of 7,200 pairs per day, testified that at the time of his examination his company was using no bottoming

machines except those of the United Company. (R. I, 806, l. 21; 808, l. 1.)

Evidence of this kind might have been indefinitely multiplied but even the foregoing was hardly necessary in view of the defendants' admission that they are in business relations with 1,033 shoe manufacturers in the United States. (Donham, R. I, 26, l. 39.) When the testimony in this case was closed in 1914, there were, according to the census figures in all 1,090 such manufacturers. The census of 1910 showed that in 1909, there were in the neighborhood of 1,300 manufacturers.

B. EXISTING COMPETITION WAS NEGLIGIBLE IN EXTENT.

1. IN GENERAL.

The foregoing testimony in itself shows that the defendants had in the American market no competition worthy of the name as to any of the more important machines used for operations lying within the field to which the Government's charge of monopolization applies. In the course of the testimony of Mr. Winslow and of other officers of the United Company, various manufacturers are named as offering to the trade machines which competed with the United Company's machines of these departments, and a number of exhibits containing lists of such names were introduced. The claims of the defendants, however, were summed up in a final exhibit. (Dfts. Ex. 337, R. V, 906.) This was chronologically the last of the series of these exhibits to be produced and therefore may fairly be taken as stating

the defendants' case on this point in the way in which they desired to leave it and the heading of the exhibit itself indicates this. It is headed: "List of Machines Offered by Shoe Machinery Manufacturers and Dealers Other Than United Shoe Machinery Company for Preparing and Attaching the Bottoms to the Uppers of Shoes, Eyeleting Machines, Dieing-Out Machines and Clicking Machines. Named in Defendants' Exhibit 311 (Folio of Catalogs), Defendants' Exhibits 312, 313, 314, 315, 316, 317, 318, 319, and 320 (Catalogs), Defendants' Exhibit 321 (Letters, Advertisements and Catalogs)."

Analysis of this exhibit (Dfts. Ex. 337, R. V, 906) in the light of certain testimony in the record discloses the unsoundness of any claim that the defendants have any substantial competition in the field which they have undertaken to preempt.

The basis of the exhibit as is shown by its descriptive heading was a number of catalogs, letters and advertisements which defendants were permitted to introduce. The circumstances under which this material was received appear in the examination of the witness Sampson. (R. I, 836–837, 879–881.) He was permitted to put in, as Dfts. Ex. 311, what he described as

> catalogs of machines which I have not seen specifically advertised within a few years, but which were generally known to be those of manufacturers who have these machines for sale as a matter of general trade knowledge. (R. I, 836, l. 43; 837, l. 1–3.)

Other catalogs were gathered by solicitation. As to the actual putting out of machines by the concerns whose catalogs he had collected, the witness testified in substance that he had no way of knowing, and he explained:

> As to how I know that these various concerns that have catalogs are holding themselves out to the trade as furnishing these various machines, I know it from the advertisements and catalogs which they issue and from general trade knowledge. I have not undertaken to buy anything from them * * I do not know how many they are selling. (R. I, 880, l. 43; 881, l. 1–5.)

In view of the care and labor expended by the defendants in collecting these catalogs, in writing letters to the concerns, many of them mere machine shops (R. I, 837, l. 6 et seq.), asking them for quotations on machines which the concerns had described themselves as ready to furnish upon order, and in utilizing the "general trade knowledge" of the witness, it is very significant that neither he nor any witness called by the defendants informed the Court of any appreciable use of the machines furnished by this cloud of alleged competitors. Eighty-five representatives of a number of these manufacturers were, however, called by the Government (R. I, 882–960 and elsewhere) and testified as to the actual character and amount of the business of these companies.

2. THE FOREIGN COMPANIES.

Before reviewing that testimony, however, it is convenient to dispose of the eleven foreign companies which are mentioned by the defendants in connection with a large number of the machines enumerated in Defendants' Exhibit 337. A number of companies in France, England and Germany are named by the defendants as manufacturing one or more of the more important machines used for bottoming operations and it is contended by the defendants that these companies compete with them in this country. The defendants did not show the use of a single foreign machine in the United States, offered no evidence of any attempt to introduce such machines and contented themselves with producing catalogs bearing the names of the companies in question which they were allowed to introduce as evidence of something.

On the other hand, the United States produced witnesses Stone, McElroy and Cavanaugh who testified specifically on the matter and supplied the full story of foreign machines in this country. This evidence was in addition to the testimony of the shoe manufacturers as to their exclusive use of the defendants' machines which has been noted *supra*. The testimony shows that these foreign companies had not attempted marketing their machines in the United States in competition with the United Company.

Cavanaugh (R. I, 954, l. 31 et seq.; 955, l. 1 et seq.) testified that as a salesman of shoe machinery he had visited shoe factories all over this country. He was acquainted with nearly all the foreign companies mentioned, and testified that he knew of no business in shoe machinery having been done in the United States by any of the foreign companies mentioned.

McElroy was especially qualified to testify on this point because of his experience in attempting to fit up a factory to manufacture welt shoes without using any of the machinery supplied by the United Company. (R. I, 190, l. 1 et seq.) In his effort to do so, he "looked over all the available markets." (R. I, 190, l. 18.) He did obtain in England certain machines, to wit: sole molding, stitching, indenting, rough rounding, leveling and lasting machines "because we could only get them from the United Company in this country." (R. I, 190, l. 43.) These are the only foreign machines which the record shows ever to have been used in this country. To obtain these machines, he was compelled to make a journey to England (R. I, 190, l. 20, 45; 191, l. 1 et seq.) and then was unable to secure a machine without waiting for it to be constructed. It took him in all seven months to get together machinery (R. I, 922, l. 2) sufficient to equip *one* factory with a capacity of six hundred to one thousand pairs of shoes a day. (R. I, 194, l. 18.) On page 923, this witness reviewed the foreign concerns named in defendants' list. The only one which he knew of as having done any business in this country was the Standard Rotary Machine Com-

pany of England, and in connection with it he refers *only* to the machinery which he himself had obtained. He testified that it had no machinery in this country at the time when he resorted to it for his machinery. (R. I, 190, l. 35.)

Stone, who was called by the United States (R. I, 339, l. 41), testified to all that the record shows as to the making of any efforts by any foreign company to market machines in this country. Representing the Atlas Works of Leipsic, Germany, he spent six weeks in this country. In that time he succeeded in selling two machines for nailing wooden heels on turn shoes to two small manufacturers. (R. I, 341, l. 21.) He placed no important machines and did no business with any manufacturers of any considerable size.

Why he was unable to do any more business is graphically illustrated by the reception he got from Mr. Jackson Johnson, of the Roberts, Johnson & Rand Company of St. Louis. Mr. Johnson said:

> My boy, I know all about it, about the machines you are producing in Germany, and what kind of machines can be made in Germany or in Europe; but, as it is, you know, if you bring over a machine which is constructed in such a way that we drive a cow into it, and on one side ready made shoes come out and on the other side ready made sausages and you want to sell it to us for ten cents, then we are not allowed to install it or make use of it.

and added (R. I, 340; l. 13) that this situation arose from the leases of the United Shoe Machinery

Company which are discussed *infra*. Other large manufacturers gave him the same reason. (R. I, 340, l. 29; 341, ls. 12, 16.)

This witness who was the only person ever connected with any foreign company who testified, was asked as to the capacity of the Atlas Works. He answered that his proposition to the American shoe manufacturers was that if they would put at his company's disposal the capital that they would pay in one year in royalties they "might be able *to enlarge* their plant and furnish them machinery but as it was *they were equipped only for European business.*" (R. I, 344, l. 4.) He stated that he had given up his employment "automatically" being unable to do anything for his employers. (R. I, 343, l. 28.) It will be noticed that he was not even permitted to show his wares. In fact he had no wares in the shape of actual machines to show.

Nothing on the record goes further than to show that these foreign companies are doing business in the countries in which they are respectively situated, and issue catalogs of which the United Company had been able to procure copies.

With respect to the Plant transaction, the United Company contended that Mr. Plant was not in competition with them, although he had issued an elaborate catalog, and announced that he stood ready to supply shoe manufacturers with all of the machinery therein named. The Government, however, supported its contention as to Mr. Plant with the concrete evidence of ability to supply

machines which has heretofore been reviewed. The United Company made no such effort as to the foreign or indeed as to most of the domestic concerns whose catalogs were introduced and referred to in Defendants' Exhibit 337.

It is submitted, therefore, that the alleged foreign competition may be dismissed without further notice.

3. AMERICAN COMPANIES.

It has just been noted that Warren F. McElroy testified that in the year 1911 he attempted to equip, as a demonstration, a factory to manufacture welt shoes having a capacity of from 600 to 1,000 pairs a day from sources independent of the United Company. (*Supra*, p. 136.) He searched all over the United States, picking up machines here and there. But he could not get in this country, and was compelled to go to England to obtain many essential machines which he desired. (*Supra*, p. 136.) Certain machines such as heeling machines he found he could obtain in this country with the exercise of sufficient patience "but it took two months to get the first one." (R. I, 191, l. 6.) He could not get a full line of welt machines in this country (R. I, 190, l. 45; 191, l. 1–2), although he did get two welt machines for trial from *two* American manufacturers. After his return from England he found that the Krentler Company of Detroit had a crude lasting machine which they were ready to instal on trial. That machine was not a commercial proposition at the time. (R. I, 190, l. 22.) The record shows that

Krentler's entire output was two machines, both of which were installed in this demonstration factory. (R. I, 190, l. 29.) Winslow testified that the Krentler property had been offered to the United Company. It had not been accepted at the time the suit was brought. (R. I, 570, l. 25.) Under the rule of the Court limiting the introduction of evidence, the subsequent history of this company could not, of course, appear in the record.

McElroy also spoke of the circumstance that from the organization of the United Company he observed the discontinuance of calls from agents for different shoe machines which had been customary before. (R. I, 188, l. 35, 189, l. 2.)

Winslow also testified that while other machines for dieing out heavy stock were offered, he knew "of no clicking machine that is being used in this country in the manufacture of light grades of shoes except ours." (R. I, 592, l. 38.)

The foregoing testimony in itself tends to show the situation with respect to the dominance of the United Company, already disclosed by the evidence of the shoe manufacturers and otherwise. (*Supra*, pp. 126–132.) It did appear that certain companies were preparing to enter the field, provided a reasonable opportunity of successful competition presented itself. Representatives of practically every one of these factories testified with reference to the machines which they had put out, the supply of machinery which they had on hand and the capacity and re-

sources of their factories. It is to be presumed that they made the best possible showing for their respective companies. Their evidence showed that these companies are at present wholly inadequate to supply any appreciable part of the American demand. (Merrick, R. I, 199, l. 8; Long, R. I, 232, l. 4, and 233, l. 11; Malloy, R. I, 301, l. 23, 302, l. 2; Webster, R. I, 298, l. 1; Doidge, R. I, 344, l. 14.)

Charles H. Jones of the Commonwealth Shoe Manufacturing Company testified that from his knowledge of the shoe machinery business no one outside of the United Company could, on December 12, 1911, furnish machines for the purpose of fitting out a factory for the manufacture of welt and turn shoes. (R. I, 115, l. 31.)

Long testified to the same effect. (R. I, 231, l. 17.).

Appendix B, parts 1 and 2, attached hereto is a condensed statement drawn from the uncontradicted evidence of the eighty-four witnesses referred to with respect to the catalogues, etc., and from other undisputed sources indicated therein showing in part 1, the number of principal bottoming machines together with eyeletting and clicking machines which the United Company had out March 1, 1911, and the number which all other concerns had out at that time. The appendix, part 1, does not give the number of pulling over, standard screw, or pegging machines in use at that time, but they are found in Defendants' Exhibit 228. A summariza-

tion of the appendix aided by Defendants' Exhibit 228, as just indicated, is as follows:

Machines.	By defendants.	By all others.
Clicking machine	3,655	None.
Eyeletting machine	4,472	150
Pulling-over machine	1,632	None.
Lasting machine	7,496	7
Standard screw machine	409	None.
Pegging machine	146	None.
Tacking machine	3,488	6
McKay sewing machine	898	8
Welt sewing machine	2,527	142
Outsole stitching machine	2,676	758
Loose-nailing machine	1,835	24
Heeling machine	2,019	17
Slugging machine	1,876	23

According to this summary, the United Company controls all the clicking, all the pulling over, all the pegging and all the standard screw machines, and about 96 per cent of the total number of bottoming machines in use (clicking and eyeletting machines are not bottoming machines).

It should also be noted that welt sewing and outsole stitching machines are used in repair work and many of the independent machines of these classes are used for that work and not for making new shoes. Doidge, general manager of the R. H. Long Machinery Company said:

> We have sold 285 outsole stitching machines of which 3 went to shoe manufacturers and the others to cobblers. (R. I, 344, l. 25).

Remarkable as this showing is, it finds ample support in the testimony of Mr. Winslow. He said "that a large proportion, to wit, more than

90 per cent of all the welt and turn shoes made in this country are sewed upon such machines" (meaning the machines of the United) (R. I, 597, l. 10) also, "I know of no clicking machine that is being used in this country in the manufacture of light grades of shoes except ours" (R. I, 592, l. 38).

The evidence therefore demonstrates conclusively that there is now no substantial competition with the defendants in the field which they have preempted by combination and acquisition.

To this the defendants made no answer other than to introduce the catalogs, letters, and advertisements already referred to and discussed unless certain testimony of Mr. Winslow based upon lists made up for him (R. I, 575 l, 4. *et seq.*), can be said to supplement them. The defendants did not call any *independent* maker of machinery *or any shoe manufacturer* to testify *to the use* of such *independent* machinery. In view of the evidence offered by the Government the reason for their so doing is obvious.

Two other claims of the defendants with respect to the question of their monopoly may be here noted. The defendants suggest that they are not to be charged with monopolizing because a number of ideas and inventions had been offered to the company which it had not bought. And because a number of concerns manufacturing or dealing in certain kinds of shoe machinery had been offered to the United Company but rejected. But Mr. Winslow was asked to name a single one of the rejected ideas or inventions which had developed into a machine of

any value. His reply was that he should "hope [he] could not mention a single one," but [he had] not looked through the list to see." (R. I, 574, l. 25.) He was asked whether any one of the concerns which had been offered to the United Company and rejected by it was in existence on December 12, 1911, and was doing a substantial business in competition with the United Company. His answer (R. I, 575, l. 14) was that he should have to study the list before he could state.

A further example of the value of Mr. Winslow's elaborate testimony as to the existence of competition, testimony based on lists which were worked up laboriously by clerks who were not called, (R. 575, l. 4 et seq.) appears in what he says regarding the acquisition of the Stanley Company, the last independent manufacturer of the McKay sewing machine. He referred to a list previously filed which shows Walter Pearson, A. Johnson & Sons, the American Worsted Machine Company and the Nolle Works as manufacturers of or dealers in the McKay machine. But he was unable to state who Walter Pearson was, or anything about A. Johnson & Sons, except that they were probably somewhere in France. He did not know what the American Worsted Machine Company was putting out. He did know that the Nolle Works were in Germany. (R. I, 565, l. 29.)

It is respectfully submitted that Mr. Winslow would not need to make any particular research to remember the names of substantial competitors. The fact is that the United Company is now the only company

in this country making and putting out the McKay sewing machine. That circumstance is unaffected by the fact that second-hand machines may be had, if one wants second-hand machinery, or that the old types of McKay machines are unaffected by patent control, and therefore *could* be manufactured by others than the United Company.

A final reason why no one else *will* manufacture such machines will appear when the leases of the United Company are considered.

Winslow also filed a list showing the increase in welt machines, lasting machines, and certain other shoe machines from 1900 to 1911. He admits, however, that the entire increase in welt machines and in lasting machines was in machines put out by his company.

The evidence is wholly convincing and indeed substantially uncontradicted that the United Company which had a complete monopoly of the field which it entered at its organization in 1899 retained that monopoly down to the institution of this suit, and that in 1911 it had no substantial competition.

VII. CLAUSES IN DEFENDANTS' LEASES UNDULY INTERFERE WITH INTERSTATE COMMERCE.

A. IN GENERAL.

Irrespective of whether the original formation of the United Company or the subsequent acquisitions by that company were legal or illegal the defendants have adopted and are enforcing a system of leasing which is unlawful in that it directly and inevitably interferes with the free flow of trade in the channels of interstate commerce.

The United States raises no objection to the fact that the United Company leases but refuses to sell its more important machines. The illegality to which it directs the attention of the Court lies in the insertion in the defendants' leases of certain specific clauses "framed to accomplish exactly what they seemed to be intended to accomplish" (Choate, R. I, 113, l. 31) whose necessary effect is the restraint described.

These leases themselves are in every respect carefully and skillfully drawn and contain every ordinary provision to protect the interests of a lessor. Among these is a clause which appears in every lease requiring the payment of a fixed minimum royalty. In many leases there is a clause authorizing the lessor to take back all machines not needed for the business requirements of the lessee. The lessee is bound at his own expense to keep the machinery in good and efficient working order; to procure from the lessor exclusively the parts which he may need to replace defective ones and to pay therefor "the regular prices from time to time *established by*

the lessor." The machine is held at the sole risk of the lessee, who is bound to pay all taxes and assessments upon it, and when the term of the lease has expired he must return the machine to Beverly, Mass., and pay the freight on it. If the machinery be destroyed by fire, he must pay for it a sum fixed in the lease; and whether the machine is put out on a rental or a royalty basis he is obligated to guarantee a minimum monthly return. Plaintiff's Exhibit 21 (R. III, 182) is in these and other respects a fair sample of the defendants' leases.

But in addition to these provisions there are clauses in general use in defendants' system of leases which are sometimes called "tying clauses." These restrict the freedom of choice of the lessee between the defendants' machines and those of their competitors not merely as to the particular need for machinery whose satisfaction was the occasion for the making of the particular lease but also as to his future desires both for machinery of the kind leased and for shoe machines of different but important and necessary kinds. Correlatively they limit and prevent the possibility of access to the shoe manufacturers—the only market possible to defendants and their competitors—of all competitors of the defendants not only as to the immediate transaction closed by the particular lease but as to all future transactions, including the replacement of existing equipment with superior or cheaper machinery.

The objectionable clauses are inter-related and operate together with cumulative effect. They are unlawful both as integral and effective parts of an unlawful whole, and, for the most part, in and of

147

themselves. It is, however, in their combined effect as a system of leasing used and insisted upon by a powerful corporation that the full extent of their illegality is to be perceived.

B. THE LEASE FORMS.

Plaintiff's Exhibits 14 to 49, inclusive (R. III, 121–435), 149, 168 to 174, 176 (R. IV, 1082, 1144–1197, 1212) are leases made by the United Company or controlled companies subsequent to the organization of the United Company. Defendants' Exhibits 278 to 308 are riders attached by the defendants at different times to their leases. The testimony as to the circumstances and frequency of their use is in the record (832 to 835). The exhibits first referred to cover samples of all the United Company leases of lasting machines (Exhibits 14 to 22, R. III, 121–203), welt sewing and outsole stitching machines (Exhibits 23 to 26, R. III, 204–254), heeling machines (Exhibits 27, 28, R. III, 254–272), metallic machines, including slugging, nailing, standard screw, and all the remaining machines classified by the defendants as metallic machines (Exhibits 29 to 35, R. III, pp. 272–331), pulling over machines and auxiliaries (Exhibits 36, 39, R. III, 331–373), general department machines (Exhibits 40, 41, R. III, 373–387), eyeletting machines (Exhibits 42, 43, R. III, 387–401), clicking machines (Exhibit 44, R. III, 402), and pegging machines (Exhibits 45, 46, R. III, 413–430). Order forms used by the United Company are Exhibits 47 to 49 (R. III, 430–435). Leases used by companies

controlled by the United Company are Exhibits 50 to 59 (R. III, 436–514).

The foregoing leases are forms of all the leases used by the United Company. (Donham, I, 5–17, *passim*.) The riders referred to are all the riders ever used by the defendants, (Donham, I. 822, l. 12) and together the exhibits cover the entire body of leases in force and exemplify both what the defendants call their restricted system and their "independent" system.

C. THE "TYING" CLAUSES.

The leases are characterized by the inclusion in them of the tying clauses to which reference has been made. They are called "tying" clauses because they tie the use of the machine leased to the use of machines not covered by the particular lease. Their result is to make it in effect a condition of the lease that the lessee shall not use the machines of competitors either to supply a need for additional machines of the kind leased or for machines of other important though wholly different types. For example, a welting machine may not be used upon any shoe operated upon by a sole stitching machine procured from another than the lessor. This necessitates taking the sole stitching machine from the United Company, and thus the use of the welter and the sole stitcher are *tied* together. (Plff's Ex. 21, par. 9, R. III, 182.) As it is in the case of the welting machine, so it is with respect to the other machines used in the bottoming of shoes.

In addition to these clauses there are certain other clauses which make the tying clauses more effective

and give to them their maximum effect as destroyers of the possibility of competition with the defendants.

Examples of the various tying clauses and other clauses which together give the defendants' leasing system its illegal character are set out below. The names given to them are adopted purely for convenience.

1. THE SEVENTEEN YEAR TERM.

All leases made by the defendants are made for a uniform term of seventeen years. The result is of course that during that long period no replacement of a machine so leased and no avoidance of any of the requirements of the lease is open to the lessee except with the defendants' consent and upon their terms. The particular application of this provision in the general situation is noticed later (p. 162).

2. THE "ADDITIONAL MACHINES CLAUSE."

This clause appears in many leases. It is said by the defendants (R. I, 444, l. 17) to have been abandoned in 1907, but the defendants have called in no leases containing this clause, (Donham, R. I, 981, l. 2, 16 et seq.) and therefore have now in full force many leases in which it appears. A typical form is that of Plaintiff's Exhibit 30, Lease for Metallic Department machines (R. III, 281, par. 3)—covering in one lease twenty-six machines. The clause reads:

> In case the lessee has more work of the kind which can be performed by any of the machines belonging to the Metallic Department of the lessor than the capacity of the Metallic machinery which he has under lease from the lessor will permit, then the lessee *shall either take from the lessor*, under a like lease and

agreement sufficient *additional machinery* to perform the work, *or* in case the lessee does not thus lease additional Metallic machinery from the lessor, then *the lessor may*, if it so elects, *cancel* forthwith this lease *and any other* lease of Metallic machinery then in force between the lessor and the lessee. [Italics ours.]

The extent of the use of this clause and any material modifications which have been made in its phraseology are noted in Appendices C & D. This is true of all the clauses here set out.

3. THE EXCLUSIVE USE CLAUSE.

This clause as it appears in Plaintiff's Exhibit 21 (R. III, 187, par. 8) lease of No. 5 lasting machine, reads as follows:

> If at any time the lessee shall fail or *cease to use exclusively* lasting machinery held by him under lease from the lessor for lasting all boots, shoes, and other footwear made by or for him, which are lasted by the aid of machinery, or shall fail or cease to use *exclusively* tacking mechanisms and appliances held by him under lease from the lessor, for doing all work in the manufacture of all boots, shoes, and other footwear made by or for him which is done by the aid of tacking mechanisms and appliances, *the lessor*, although it may have waived or ignored prior instances of such failure or cessation, *may* at its option *terminate forthwith* by notice in writing *any or all leases* or licenses of lasting machines, lasting machinery, lasting mechanisms, or lasting devices, then existing between the lessor and the lessee, whether as the result

of assignment to the lessor or otherwise; and the possession of and full right to and control of all lasting machines, lasting machinery, lasting mechisms, and lasting devices, the lease or license of which is so terminated shall thereupon revest in the lessor free from all claims and demands whatsoever.

4. THE PROHIBITIVE CLAUSE.

This clause as it appears in the lease last referred to, Exhibit 21 (R. III, 185, par. 5), is as follows:

> The leased machinery *shall not* nor shall any part thereof *be used in the manufacture* or preparation *of any* welted boots, shoes, or other footwear or portions thereof *which* have been or *shall be welted in whole or in part*, or the soles in whole or in part stitched by the aid of any welt-sewing or sole-stitching machinery not held by the lessee under lease from the lessor, or in the manufacture or preparation of any turned boots, shoes, or other footwear or portions thereof, the soles of which have been or shall be in whole or in part attached to their uppers by the aid of any turn-sewing machinery not held by the lessee under lease from the lessor, *or in the manufacture of any boots, shoes, or other footwear which have been or shall be in whole or in part pulled over, slugged, heel seat nailed, or otherwise partly made by the aid of any pulling-over or "metallic" machinery not held by the lessee under lease from the lessor.* [Italics ours.]

5. THE "RIGHT TO TERMINATE ALL LEASE" CLAUSE.

This clause as it also appears in Plaintiff's Exhibit 21 (R. III, 188, par. 9) is as follows:

> But if any breach or default shall be made in the observance of *any one or more* of the conditions in *this* agreement contained or contained *in any other* lease or license agreement subsisting between the lessor and the lessee, whether as the result of assignment to the lessor or otherwise and expressed to be obligatory upon the lessee, *the lessor shall have the right* by notice in writing to the lessee *to terminate* forthwith *any or all leases* of or licenses to use machinery then in force between the lessor and the lessee, whether as the result of assignment to the lessor or otherwise, and this notwithstanding that previous breaches or defaults may have been unnoticed, waived, or condoned by or on behalf of the lessor. * * * Upon the expiration or termination of this agreement or any extension thereof, or of the lease and license herein contained by notice or by reason of any default on the part of the lessee as to the terms of this agreement or of any other lease or license agreement from the lessor or otherwise, in any manner whatsoever, the *lessee shall forthwith deliver* the leased machinery to the lessor at *Beverly, Massachusetts, complete* and *in good order*, reasonable wear and tear alone excepted. [Italics ours.]

6. THE "FULL CAPACITY" CLAUSE.

This clause as it appears in Plaintiff's Exhibit 21 (R. III, 185, par. 5) reads as follows:

> The lessee shall use the leased machinery to its full capacity upon all boots, shoes, or other footwear or portions thereof made by or for the lessee in the manufacture or preparation of which such machinery is capable of being used.

7. THE RETURN CHARGE.

Where machines are installed by the defendants under certain of their restricted leases no charge is made at the time of installation. Many of these leases, however, provide for what is called a "return charge." The provision for the charge as it appears in Plaintiff's Exhibit 21 (R. III, 189, par. 9), previously referred to, reads as follows:

> Upon the expiration or termination of this agreement or any extension thereof or of the lease and license herein contained by notice or by reason of any default on the part of the lessee as to the terms of this agreement or of any other lease or license agreement from the lessor or otherwise, in any manner whatsoever, the *lessee shall forthwith deliver* the leased machinery to the lessor *at Beverly*, Massachusetts, complete and *in good order*, reasonable wear and tear alone excepted; *and shall thereupon pay* to the lessor without prejudice to any other rights or remedies of the lessor the sum of *One Hundred and Fifty Dollars* ($150) in respect to each lasting machine hereby leased as partial reimbursement to the lessor

> for deterioration of the leased machinery, expenses in connection with the installation thereof and instruction of operators.

The figure above set out is significant upon the question of the value of the machine when considered in connection with the fire insurance demanded of $225.00.

8. "ROYALTY" CHARGES ON WORK NOT DONE ON DEFENDANTS' MACHINES.

A clause which is not strictly a "tying" clause in the sense in which that phrase is ordinarily used, but which operates to support and extend the monopoly of the defendants, appears in several leases and especially in leases of welt machinery which the defendants contend are "unrestricted" and classify as such in tabulations introduced as exhibits. Plaintiff's Exhibit 24 (R. III, 214) is an example of such a lease. In addition, to the exclusive use, full capacity, and right to terminate all leases clauses it provides (par. 6, p. 218) that

> The lessee shall pay to the lessor throughout the full term of this agreement the respective amounts set forth in the following schedule in respect to each pair of welted boots, shoes, or other footwear, or portions thereof, manufactured or prepared by or for the lessee, which shall have been welted in whole or in part or the soles of which shall have been in whole *or in part* attached to welts by the use of *any welting* or stitching or sewing *machinery*, and in respect to each pair of "turned" boots, shoes, or other footwear, or portions

> thereof, manufactured or prepared by or for the lessee, the soles of which shall have been sewed or attached to their uppers in whole or in part by the use of *any* sewing or stitching machinery, viz: * * * [Here follows a schedule of prices.]

It will be noted that if a shoe manufacturer made 1,000 pairs of shoes of which 500 were sewed on defendants' machines *used to their full capacity* and 500 on a machine of a competitor he would nevertheless have to pay to defendants royalties both on the 500 pairs made on their machines *and on the 500 pairs made on the competing machine.* In addition, he would, of course, have to pay for the competing machine. The likelihood of a shoe manufacturer's taking a welt machine of a competitor of defendants under such circumstances need not be enlarged upon.

The lease proceeds (p. 219):

> All payments and the guarantee in this agreement provided for are independent of and in addition to all payments and guarantees provided for in any other leases or licenses or agreements between the lessor and the lessee, provided, however, that (excepting in so far as is required by the guarantees herein contained or contained in other lease and license agreements between the lessor and the lessee) in case under any other "Goodyear Department" lease and license agreement between the lessor and the lessee and covering one or more Goodyear Welt and Turn Shoe Machines, Goodyear Universal Inseam Sewing Machines or Goodyear Outsole Rapid Lockstitch Machines,

> the lessee shall have paid to the lessor the amount set forth in the Schedule of Payments in such lease and license agreement contained in respect to any pair of boots, shoes, or other footwear, then the lessee shall be relieved from said payment hereunder in respect to that pair of boots, shoes, or other footwear.

This means that the United Company charges in the first instance for *each* machine what it deems an adequate compensation for *all* the machines of the group described. When, therefore, the lessee pays for one, he has paid for all, and is relieved by the provision quoted from further payment for the use of any of the others. That is to say, he is obliged to pay as much *for one machine* as *for all* in the group. The evident purpose and result of this provision is to prevent a manufacturer who leases one of the machines, without which he can not get along, e. g. under the prohibitive clauses in his leases of lasting and other machines, from taking an independent machine. For if he did he would have to pay not only for it, but also royalties to the defendant in the same amount as though the work were done on their machines. It is a cunning and effective provision.

9. DISCRIMINATORY ROYALTY CHARGES WHERE COMPETITORS' MACHINES ARE USED BY THE LESSEE.

Apart from the "initial premiums" which characterize the so-called "independent" leases, which are discussed *infra*, the defendants in many cases make higher demands for compensation where the lessee uses machines of defendant's competitors than where he refrains from such use. These demands are made

although the use of competitors' machines be for purposes for which the machine covered by the particular lease is not designed.

An example of such a clause is the following, taken from Plaintiff's Exhibit 44 (R. III, 405, par. 6), lease of a clicking machine, a machine used for cutting out the parts of uppers, whose importance is indicated *supra*, p. 16:

> The lessee shall pay to the lessor on the last day of each calendar month the amount or amounts set forth in the following schedule of payments in respect to each pair of footwear of a kind or kinds therein specified cut during the preceding calendar month in whole or in part by the aid of any clicking machine or machines held by the lessee under lease from the lessor or by the aid of any Clicking Machine dies of the lessor:
>
> *Schedule of Payments.*
>
> | | Per pair. |
> |---|---|
> | For all footwear which is lasted by machinery *not* held by the lessee under lease *from* the *lessor* | 1 cent |
> | For all welted footwear which is welted or stitched by machinery *not* held by the lessee under lease *from* the *lessor* | 6 cents. |
> | For all turned footwear the soles of which are sewed to their uppers by machinery *not* held by the lessee under lease *from* the *lessor* | 1¾ cents. |
>
> (Italics ours.)
>
> (NOTE.—The lease provides for a discount of fifty per cent for prompt payment.)

It will be noted that the royalties above stated are cumulative.

The same principle in another form appears in a lease for metallic machines. As to these machines, comprising a large and important group, it appears

that the defendants' compensation is derived from payments for material used in the machines, the lease requiring all such material to be bought of the lessor.

Exhibit 31 is a lease for metallic machines. It may cover a number of machines or only one, e. g. a standard screw machine. (R. I, 11, l. 20.) It contains the full capacity clause, additional machines clause, applying not only to machines of the kind leased but to *all* metallic machines, and the right to to terminate all leases clause. It provides for the return to the lessor of any machines which the *lessor* thinks the lessee does not need for the requirements of his business and for the payment on such return of such sums as may be necessary to put the machine into condition to be leased to another lessee. It provides for the purchase of a minimum amount of material. It does not contain the prohibitive clause and therefore apparently permits the use of the machines leased upon shoes operated upon by machines, other than metallic machines, supplied by competitors of the defendants. In return for this apparent grant of freedom, wholly illusory as will be shown (*infra*, p. 175), the lease contains this clause:

> The lessee, as rent and royalty for the leased machinery shall purchase exclusively of the lessor all the fastening material used by him in or in connection with the leased machinery, and shall pay the lessor in cash on delivery the regular and uniform prices therefor as established *from time to time by the lessor*, which shall not be more than *ten* per cent *in excess*

of the prices to be established from time to time by the lessor for like fastening material to be used in its metallic department machinery by lessees who shall *agree not* to use the metallic department machinery leased to them in the manufacture of boots or shoes which are lasted on machines *other* than those leased from the lessor, or of welted boots or shoes which are *not* welted and stitched on welt-sewing and sole-stitching machines leased from the lessor, or of turned shoes the soles of which are *not* attached by turn sewing machines leased from the lessor. (Plff's Ex. 31, R. III, 290 par. 4.)

D. THE USE OF THE RESTRICTIVE CLAUSES IN LEASES OF DEFENDANTS' MACHINES.

All of defendants' leases as we have seen provide for a seventeen years' term. All contain the "right to terminate all leases" clause. The varying use of the other clauses noted above appears from the summaries which are to be found in appendices C and D. These appendices contain all the forms of lease used by the defendants for the machines mentioned, whether such leases are in the "noninitial payment" form or in the "initial payment" form in which in some cases though not in all the prohibitive clause is replaced by the demand for an installation charge. Appendix C is a brief statement of the clauses contained in each lease of the defendants. Appendix D shows as to each of the various clauses set out, the leases in which it is to be found.

E. THE EFFECT OF THE RESTRICTIVE CLAUSES.

Certain of the foregoing clauses clearly restrain the freedom of trade of buyers and sellers of shoe machinery even when considered separately and not as parts of a greater whole. The exclusive use clause, for example, obviously limits the freedom of choice of every lessee as to all his future needs for machines of the kind leased and clearly prevents access to him, as a possible customer for any such machines, of all who seek to compete with defendants as to those machines.

Some other clauses considered separately and without regard to the circumstance that in practice they are combined with the other clauses as units in an interrelated system used by a dominant monopoly might be argued to be unexceptionable. Such an argument, for example, has been made regarding the full capacity clause taken by itself. Similarly the seventeen-year term alone might be said to be no more restrictive than an outright sale. But even these clauses can not be considered separately and it is a grave misconception of the situation to endeavor to so dispose of them. Were all the clauses, considered separately, legal enough, which we deny, their combined and cumulative effect constitutes a clearly illegal restraint of trade.

For example, if it be assumed that the full capacity clause standing alone is a reasonable and not unduly restrictive condition where machinery is leased, here it is not alone. A manufacturer is not only forbidden by it even to try out a competing machine by doing

upon it work which could be done on the leased machine, but he is bound for seventeen years. During all that long period he is legally unable to replace that machine with that of a competitor. Should he take the one method open to him of obtaining freedom, that of violating his lease and permitting the defendants to exercise the right of cancellation, he finds—under a lease like Exhibit 24, paragraphs 9 and 10 (R. III, 222–3) for example—that he must pay not only the cost of putting the machine into condition to be leased to another, but in addition a return charge amounting practically to the value of the machine. Nor is this heavy payment all. He also, under the right to cancel all leases clause, subjects himself to the penalty of cancellation of *all* his leases and the loss of *all* his leased machinery. And this though he may conceivably have made heavy payments for "initial premiums" in order to obtain machines under the so-called "independent" leases. The result, then, of an attempt to replace a machine of sufficient capacity to do his work may be not only to cost him a prohibitive sum of money but also to take away from him machines necessary to his business which he can not obtain elsewhere, e. g. lasting machines. (*Infra*, p. 164.) The practical operation, then, of this clause which to outward seeming is perhaps the most reasonable of all the restrictive clauses is to prevent the displacement by competitors of any of the defendants' machines. Without looking beyond it and those which have just been mentioned as giving it its peculiar effect

the United Company is, indeed, as Brown, J., says in a phrase not marked by exaggeration, "a very formidable competitor." Without going further, it is apparent that no field of competition is left open except the equipment of entirely new manufacturers and the satisfaction of new or additional requirements of old manufacturers.

This latter field however is closed by the exclusive use clause. *Every lease* has that clause or an equivalent. No new demand by an existing lessee of the United Company can be satisfied by a competitor of the defendants without a violation of this clause. The consequences of such a violation need not be repeated. They are the same as those which follow the violation of the full capacity clause. It is enough to say that "as a practical question" no manufacturer can afford to incur them.

Nor is this enough for the defendants. Even the opportunity to do business with new manufacturers is closed by the all-embracing system of defendants' leases. Here the "prohibitive clause" is peculiarly effective. It is the "tying clause" *par excellence*. The defendants term leases which do not contain it "independent" leases. How complete a misnomer the term "independent" is as applied to these leases and how fictitious the pretended choice offered to the shoe manufacturer really is will appear when those leases are examined, as shortly they will be. (*Infra*, p. 175.)

What is important here is the fact that a shoe manufacturer about to enter the field who finds,

as he will find, himself compelled by business necessity to take one important machine from the defendants under a lease which contains a "prohibitive clause" is thereby removed as a possible customer for competitors of the defendant not only as to machines of the particular type leased but also as to machines of all other important types used in the bottoming of shoes. This can, perhaps, best be made clear by stating a specific case, based on the facts as they were at the filing of the petition.

One of the necessary machines for bottoming shoes is the lasting machine (*supra*, pp. 11, 15). A manufacturer in need of lasting machines finds in the first place that except the United Company which has out 7,496 such machines, only one American company is professing to put them out (Appendix B.) That company, the R. H. Long Machinery Company, has out in all only four and it does not appear that it is able to supply any lasting machines for standard screw shoes, loose nailed shoes, McKay sewed shoes, or turn shoes. (Dfts. Ex. 235, V, 531.) It has no machine for lasting the sides of welt shoes (Dfts. Ex. 235, V, 531), no pulling over or assembling machines, and no lasting machine auxiliaries (Dfts. Ex. 235, V, 531). These circumstances, in themselves compelling of resort to the defendants for lasting machines, are reinforced by the further circumstances that if he should do any of his lasting on machines supplied by any concern other than the United Company, his payments for pulling over machines as to which the United Com-

pany has no American competition (Dfts. Ex. 235, V, 531) would be nearly tripled (Pffs. Ex. 38 III, 350, par. 6, appendix C *infra*), and his payments for clicking machines as to which also the United Company has no American competition (Winslow, R. I, 592, l. 38) would be increased by a penalty royalty of from one to three cents a pair (*supra*, p. 158).

Obviously such a manufacturer must go to the defendants for the kinds of lasting machines which no other American manufacturer even professes to be able to supply. Practically, he must go to them for all, for the defendants offer no form of lease for lasting machines which does not contain an "exclusive use clause" under which he can use in his factory only lasting machines and devices supplied by the defendants. The manufacturer is thus committed to the defendants for all of his present and future demands for any kind of lasting machine or device. He is presented with the form of lease for lasting machines which the defendants assure him (Winslow, R. 594, l. 6) is most favorable to him. It contains the "prohibitive clause." He may learn of another form without this clause. But he will also learn of certain conditions attached thereto which make the choice of the alleged alternative commercially impossible. These will be discussed. (*Infra*, p. 175.) Accordingly he accepts the lease containing the prohibitive clause.

At once the possibilities of competition with the defendants in respect of future needs of that manu-

ufacturer, already closed as to lasting machines, are closed as to welting, sole stitching, turn sewing, pulling over, slugging, nailing, and all "metallic" machines. For under the prohibitive clause, he can not use any machine of any competitor of the defendants for any of those operations upon any shoe lasted in any part on the defendants' lasting machine. And for the reasons already given he can have in his factory no lasting machine not the defendants'.

A chart illustrative of the practical effect of the tying clauses in these restrictive leases is submitted herewith as Appendix A. This chart has been criticised by the defendants, but all the criticisms are trivial and none of them is based upon fact. It will be observed that this chart relates to provisions in "restrictive" leases and not to leases generally, and it will be found that every statement made in it is supported by the provisions of the leases to which reference is made therein.

It follows, therefore, that by the cumulative and interrelated operation of the various parts of the defendants' leasing system coupled with the circumstance that, as to certain machines necessary in the bottoming of shoes the defendants admit a virtual monopoly (Dfts. Ex. 235, R. V, 531) the defendants have brought about a situation in which competition with them either as to the existing or the future needs for machinery of existing or future shoe manufacturers has become entirely impossible. The United Company is not merely "a formidable com-

petitor." It is absolute monarch of the industry. No competitor can exist unless for its own pleasure or policy it withholds its destroying hand.

It remains only to notice certain special features in regard to the leases of certain machines.

1. GOODYEAR MACHINES.

Much is made by the defendants of the circumstance that the leases of their principal welt method machines while tying them to each other do not forbid the use of competitors' machines other than welt method machines on shoes on which defendants' welt method machines are used. This might be important were it not that the prohibitive clauses in leases of the other indispensable machines as above indicated make the use of such competing machines impossible.

The defendants also call attention to the circumstance that they permit the use of their principal welt method machines with auxiliary machines supplied by other manufacturers. This would be more important were there such machines to be had. But Winslow testified that a great many of these machines were manufactured only by the defendants. (R. I, 545, l. 31 et seq.; 546, l. 3; and Dfts. Ex. 235, R. V, 531.)

(For the definition of "principal" and "auxiliary" in this connection, see *supra*, p. 13.)

A much more important circumstance is the fact that the defendants do *not* permit their "auxiliary" machines to be used with principal welt method machines supplied by other manufacturers. (R. I,

544, l. 8.) The operations performed by these auxiliary machines are necessary to the making of welt shoes. The effect of the defendants' refusal to permit the auxiliary machines of which they have an admitted monopoly to be used with principal welt method machines supplied by their competitors upon the possibility of competition is too obvious to require elaboration. Winslow was questioned regarding this practice of the defendants. Attention is invited to the evasive character of his answers. (R. I, 867, l. 17.) The upshot of his testimony is that the defendants have not departed from the practice just noted because no competitor has yet produced welt method machines which, in their opinion, are the equal of their own machines. But he suggests that when the happy day arrives on which a competing welt method machine is produced which the defendants recognize as equal to their own, then the company will establish prices for its auxiliary machines. The prospect which this position holds out to competitors of the defendants is also too obvious to warrant elaboration.

It may be said, however, that if no welter or stitcher made by any competitor of the defendants is in fact equal to those of the defendants, the defendants who offer increased economy and efficiency of manufacturing as the justification of their combination need fear no competition even if they made it possible by relaxing the rigors of their practices as regards these auxiliary machines. Nor can the practice in any way redound to their advantage except by

extending their monopoly of principal welt method machines and intrenching it by keeping out competitors.

It is apparent that these machines are tied together and are tied to the principal welt method machines of the defendants in order to hold for the United Company the monopoly in such machines which it acquired at its organization.

2. HEELING MACHINES.

It will be observed (Appendix C.) that from 1900 to 1904 the only form of lease for heeling machines which had been adopted by the United Company was Exhibit 27. In 1904, Exhibit 28 was adopted. This superseding lease contained in addition to the "right to terminate all leases" clause which had appeared in Exhibit 27, the full capacity, exclusive use, and prohibitive clauses.

Winslow testified that the prohibitive clause was inserted in the lease of Exhibit 28 because it had been decided to get out a lease for welt method machines without requiring an initial payment and it was decided "to have the manufacturer use our heeling machines or [to be] entitled to limit it to use with the welter or stitcher." (R. I, 546, l. 29.) He said that compensation for ceasing to charge the initial premium was not to be obtained by requiring manufacturers to put in more heeling machines but by getting a greater volume of business in a given factory. (R. I, 546, l. 34.) Pressed for further explanation, he said, that since the productive capacity

of a series of machines depends on regularity of operation, the breaking down of a heeling machine obtained from a competitor might stop defendants' machines (R. I, 547, l. 1), and added that "What we wanted to bring about was the productivity of the machines that were in use." (R. I, 547, l. 25.)

The machines whose breakdowns are in Mr. Winslow's apprehension to stop the flow of work are machines of competitors of the defendants. Productivity was to be increased by replacing them with defendant's machines. In other words, the defendants proposed to increase productivity by so designing their system of leasing as to produce monopoly. The probabilities as to increase of productivity depend upon whether the Court is willing to believe that no other manufacturer could produce a machine as effective as that of the defendants. But there was nothing problematical about the effect of the defendants' efforts in respect of their monopoly. The tie created between the welt method and the heeling departments rendered doubly secure the monopoly already enjoyed as to each.

3. METALLIC FASTENING MACHINES.

The prohibitive clause was applied to metallic machines upon the adoption of Exhibit 30 in June, 1900. The defendants attempt to justify it as an offset to the rising cost of copper. They say that instead of increasing the price of the material sold by them (Winslow, R. I, 548, l. 5) they adopted the

policy of limiting the use of these metallic machines to work that had been done on machines of other departments (*ibid*). But while it was practical and desirable in the opinion of the defendants to tie the metallic machines to the other machines when the price of copper rose it was "not a practical proposition" to untie them when it fell. (Winslow, R. I, 548, l. 29.)

The obvious effect of the tying was to protect the defendants' control of machines. That this was the object is consistent with their having found it impracticable to give up the tie when the conditions which they say justified it disappeared. That such was the purpose is substantially admitted. Mr. Winslow testified that at the time this lease was adopted the United Company "was about the only one that had any metallic machines or any welting or stitching machines in the factories in this country." (R. I, 550, l. 20.) In other words, it had a monopoly. The purpose of the tying as expressed by Mr. Winslow was to lessen the cost of service by placing two sets of defendants' machinery in a given factory where without the tying there might be only one. (R. I, 549, l. 29.) But when asked how in view of the circumstance that his company had at the time a virtual monopoly of the business that result could follow, his only answer was "The best way I can answer is to ask why didn't we raise the price." (R. I, 550, l. 25.) Mr. Winslow was a resourceful witness, and such an answer is extremely suggestive. The real reason is indicated by Mr. Winslow's testi-

mony, as far as it can be understood, at the bottom of page 549. The increased revenue was to be obtained by "treating the metallic machines in the broad sense like auxiliary machines." How the defendants treat auxiliary machines has just been shown. The change of the form of lease could not change the location of a single machine or add a penny to any royalty. But it could and did operate to prevent future competition with the defendants in the machines to which the metallic machines were tied. And it could have been intended for no other purpose.

F. OTHER OPPRESSIVE PROVISIONS OF DEFENDANTS' LEASES

In addition to the tying and rebate clauses there are other clauses which are extremely burdensome. Brief reference has been made to these, *supra*, but a more extended statement is warranted at this point.

Take for example the provisions of Exhibit 21. (R. III, 182, par. 1.)

The lessee can not without permission from the lessor remove a machine from one of his factories to another.

The lessor "and its agents and employees shall at all times be given access to the leased machinery for the purpose of inspecting it or watching its use and operation, or of altering, repairing, improving, or adding to it, or determining the nature or extent of its use." The representatives of the United Company may enter the factory of the lessee at any time they please, and put themselves in a position to learn

any manufacturing secret the lessee may have. They have the power to determine when repairs are needed and the extent thereof. (Par. 11.) If a lessee should refuse he violates his lease and the lessor acquires the right to cancel every lease on machines in his factory. (Par. 8.)

Further, he is required "at his own expense" to keep the machinery "in good and efficient working order," although the machinery belongs to the lessor and the lessee is bound to pay for its use. He is also required to obtain from the "lessor exclusively" the parts needed for repairs and to pay therefor the prices "from time to time established by the lessor;" no matter how unreasonable. (Plffs. Ex. 21, par. 2.)

The machinery must be held by the lessee at his risk and in case of its destruction by fire he is required to pay a stated sum (where it is a lasting machine, $225), and must return whatever remains of it to the defendants. (Plffs. Ex. 21, par. 3.)

Where the machine has not been lost, he must return it at the end of the term for which it has been leased, to Beverly, Mass., and pay a return charge of $150, in the case of a laster "as partial reimbursement to the lessor for deterioration," etc.

If the value of the machine is $225 as we may infer from the amount which the lessee is required to pay in case of destruction, payment of this return charge is exorbitant. In other words, after paying for the use of the machine for 17 years, paying for all repairs necessary and all taxes and assessments upon

it during that period and the freight from Beverly to the lessee's factory, and the freight from the latter place to Beverly at the end of the term (par. 9), he is compelled to pay the lessor almost the value of the machine while the lessor takes the machine. Could there be anything more extortionate?

He must also pay a *minimum* charge of ten dollars a month for seventeen years, or $2040 for the use of a machine, valued as we have just said, at $225. (Par. 6.)

He is obligated to keep accurate accounts showing the number of boots and shoes or other footwear operated upon, to submit these accounts to the defendants or their representatives, and to "furnish any further information which may be called for in relation to the leased machinery or the use thereof." (Par. 7.)

He gives to the lessor the full right, power, and authority to enter upon his premises and take possession of the machine and remove it in case of "any default on the part of the lessee as to the terms of this agreement or of any other lease," and he agrees that he will not have any claim for the repayment of any sum which shall have been paid upon the machine. (Par. 9.)

For the use of machinery under these conditions he pays an extraordinary price. Assuming a small factory with a daily production of 350 pairs, making all the deductions for which defendants contend (R. I, 444, ls. 41–43) its actual annual production will be over 41,000 pairs. At 6 cents per pair the royalty

fixed for machines making welt shoes (I, 503, l. 32) the defendants would receive annual royalties of $2,460. For this they lease nine principal machines. Assuming their value to average $225, the defendants have here an investment of $2,025. They receive *annually* a return of over 120 per cent on this investment. This calculation omits both the auxiliary machines, whose value ranges from a small figure to a large one, and the rentals paid by the manufacturers for them.

No self-respecting business man would enter into stipulations so offensive and destructive of his liberty unless he was coerced by the circumstances surrounding him. This is additional evidence that all competition in bottoming shoe machinery is substantially dead, and that by reason of the tying clauses the defendants hold all shoe manufacturers in a steel-like grip from which escape is impossible save through a decree of this court.

G. THE SO-CALLED "INDEPENDENT" LEASES.

The defendants also offer what they call "independent" leases. The difference between them and the "restricted" leases lies in the fact that they do not contain the "prohibitive" clause. But these leases do contain the exclusive use, full capacity, and right to terminate all leases, clauses, and other burdensome and restrictive provisions. The defendants grant these leases only upon terms which, as a practical matter prohibit their acceptance and coerce the manufacturer into taking the restricted form.

In the first place they are granted only on the payment of heavy initial premiums.

In the second place, a manufacturer must take the independent lease as to every class of machines, in order to be relieved from the restrictions. For illustration, suppose one entering upon the manufacture of welt shoes should take restricted leases for lasting and metallic fastening machines, but an independent lease for heeling machines. His independent heeling machine lease would avail him nothing, because his lasting machine and metallic fastening machine leases would prohibit the use of such machines in connection with a heeling machine not owned by the United Company. So, if he were to take independent leases for all machines other than lasting machines, *that one lease* would prohibit the use of the lasting machines in connection with either of the *other classes* of machinery. Hence, the manufacturer must take the *entire* independent system to obtain any freedom whatever.

Mr. Winslow makes this very clear. He testified:

> For example, if a manufacturer wished to use Pettingill heelers, which are not built by our company, in the place of our heeling machine, we asked him to respect his leases up to the time when he made that decision. Then he could return our heeling machines, place his machines in the other departments upon the independent forms of leases, and continue to use the heeling machines of others. (R. I, 443, l. 2.)

This means that the shoe manufacturer would have first to find Pettingill heelers enough to satisfy his wants for heelers, and having done this he would then have to place *all his machines* "in the other departments upon the independent forms of leases." In other words, to enjoy the privilege of using an "independent" set of heelers, he would have to take over other classes of machines upon so-called "independent" leases and pay initial premiums for all of them. He could not be half slave and half free.

Now let us see what it would cost him in "initial premiums" to get the Pettingill heeler under these circumstances. Winslow says that in 1899 when his company was operating under the so-called independent form of lease it cost $11,350 to equip a factory with sufficient machinery to manufacture a thousand pairs of welts per day, while in 1911, under the restricted form of lease, it would cost only $2,467.50 to equip the same kind of a factory, a difference of $8,833.00. In other words, the owner of such a factory would have to pay at the time Mr. Winslow testified about $8,833.00 for the privilege of using a Pettingill heeler.

Williams, a shoe manufacturer of Portsmouth, Ohio, testified that the United people proposed to charge him $3,675.00 for equipping his factory, having a capacity of less than 600 pairs per day, with machines under the "independent" leases. (R. I, 217, l. 28, also 218, l. 20.)

George A. Learned was told by Matthew Gray, a representative of the United Company, that it would

cost him $3,000 to secure the machines which he desired from the United Company under the "independent" leases. (R. I, 313, l. 35.)

Rand of the International Shoe Company obtained from Winslow a careful estimate of what it would cost his company to change from the restricted to the "independent" leases, and it amounted to about $250,000. (R. I. 180, l. 42.)

Winslow made a proposition to F. E. Leavitt to install certain machines under "independent" leases (Dfts. Ex. 334, R. V, 848; R. I, 873, l. 22 et seq.) Leavitt's factory was a small one, as there was but one McKay and one lasting machine included in the list. However, the total charge for the privilege of installing one "independent" machine would be $1,800.

In this regard, it must not be forgotten that after the shoe manufacturer had paid for the privilege of using an independent machine he was required to pay to the United Company the same royalty, for that machine as if he had taken it upon a "restricted" lease. And in addition he must pay increased royalties upon certain other United machines—clicking, lasting, and metallic fastening machines, *supra*, pp. 159, 165. Of course, no shoe manufacturer could afford the luxury of an independent lease under such circumstances. He could not compete with the shoe manufacturer who took his machines under the restricted system. Consequently the privilege of taking the so-called independent leases may not be used by shoe manufacturers, and they are as

a result compelled to take their machines under the restricted leases or not at all. But as we have heretofore shown, even after the shoe manufacturer has obtained the independent lease he has gained but little freedom, because every such lease contains the "exclusive use" clause as well as the "right to terminate all leases" clause. (Appendix D, p. 351.)

In fact, it is not claimed by the defendants that the shoe manufacturers can obtain any benefits by taking the independent leases. Touching this question, Winslow says: "I believe a manufacturer is better off if he uses all our machines in series." (R. I, 550, l. 39.) Again: "I do not think it is any advantage for a manufacturer to take metallic machines on the independent lease; I never have thought so." (R. I, 551, l. 26.)

Therefore, Winslow has deliberately formulated two classes of leases, and has so framed the so-called "independent" class that in his judgment it is more beneficial to the lessee to adopt the other class, which ties him hand and foot to the United Company.

No shoe manufacturer testified that under the present conditions there are any advantages in operating under the United's so-called "independent" leases. Many of the large manufacturers who are the most strongly opposed to the present system equip their factories under the restricted leases.

The competitive disadvantage which they otherwise would suffer is a sufficient explanation. This disadvantage results not only from the heavy initial premiums which have been noticed but from other con-

ditions of the defendants' system. It should not be forgotten that this is an industry where pennies in machinery charges may make the difference between success and bankruptcy. One cent a pair sounds trifling. But one cent a pair means many dollars to a manufacturer making thousands of pairs a day. Florsheim came to Boston to beg for Eppler machines which cost 3 c. a pair instead of the four cents charged for Goodyear machines. (*Supra*, p. 46.) Herrick did not dare to keep a Haverhill machine because under his leases with defendants it meant an increase of royalties of 1½ cents a pair. (R. I, 293, l. 2 et seq.; 318, l. 6.)

Apart from losing the rebates and bonuses given by the defendants to obedient manufacturers (*infra*, p. 185), a lessee using machines of competitors under the "independent lease" would not only have to pay the initial premiums but his premiums for pulling over machines would be nearly tripled and his clicking machines would cost him an additional and discriminatory royalty of from one to three cents a pair. (*Supra*, p. 165.) On top of all this, he would have to pay ten per cent extra for any of the defendants' metallic machines which he might have to use. (*Supra*, p. 159.)

Assuming for convenience that these cumulative disadvantages to the manufacturer who tried the "independent" lease amounted only to four cents a pair it would mean to a manufacturer like Selby, a small manufacturer as compared with many mentioned in the record (R. I, 210–214), $72,000 in a

working year of 306 days. It is no wonder that Selby gave up an attempt to use independent machines upon welt shoes but acquired an interest in the Boylston Manufacturing Company "to get independence" (I. 212, l. 44). It would cost the International Shoe Company (R. I, 170) $600,000 a year. The difference in the clicking machine royalties (*supra*, p. 158) is alone sufficient "as a matter of dollars and cents" to compel the choice of the restricted leases.

The natural result of the system appears in the relative number of manufacturers who held restricted and those who held unrestricted leases in the years 1905 and 1911. (Winslow, R. I, 448, l. 42 et seq.)

In 1905 the United Company had under lease 8,129 metallic machines of which 603, or 7.4 per cent, were under independent leases.

In 1911, it had out 7,587 metallic machines, of which 225, or 3 per cent, were under independent leases. (R. I, 449, l. 17.)

In 1905 it had out 1,652 heeling machines, of which 1,500, or 90.8 per cent, were under independent leases. (R. I, 448, l. 44.)

In 1911 it had out 2,019 heeling machines, of which 415, or 20.5 per cent, were under independent leases.

In 1905 it had out 5,289 lasting machines, of which 1,956, or 37 per cent, were under the independent leases (R. I, 449, l. 3, 23) while in 1911 it had out 7,819, of which 1,506, or 19.3 per cent, were under independent leases.

That is, from 1905 to 1911 there had been a decrease in the number of machines held under inde-

pendent leases, of metallic machines, 3.4 per cent; heeling machines, 70.3 per cent; and lasting machines, 18.7 per cent. These figures not only show that a very large proportion of the principal machines are now held under the restricted forms of leases, but that there is an increasing tendency among shoe manufacturers to take the restricted form in preference to the so-called "independent" leases; and that the result of the system in actual operation is to destroy such independence upon the part of the shoe manufacturers as heretofore existed, to tie them more strongly to the United Company, and thus to prevent the development of any competition with the defendants. Nothing could demonstrate more clearly the actual workings of the system than these figures presented by Winslow.

The defendants attempt to offset these figures by presenting Exhibit 225 (R. I, 450), which purports to show that of 90,296 machines out on lease (Pffs. Ex. 163, R. IV, 1125) 23,403 are on independent leases. But of these 23,403, 5,203 are Goodyear principal machines and 16,054 are auxiliary machines of various kinds. How far these are "independent" is noted *supra*. It follows, then, that on defendants' own figures only 2,146 machines, or 2.3 per cent of their leased machines, are out on the leases pretended to be independent. In view of the conditions attending these leases, there is no cause for wonder.

H. ALLEGED MODIFICATIONS OF THE RESTRICTIVE LEASES.

The defendants insist that the leases do not represent the policy of the company because of certain "riders" by which their leases are modified upon occasion. (Winslow, R. I, 546, l. 16 et seq.) Donham, however, produced (R. I, 822, l. 12 et seq.) all riders of which he had any knowledge. They are Exhibits 278 to 310. (R. V, 777–809.) Winslow produced no others.

On account of the large number of these exhibits, no special analysis will here be attempted, but a glance at them will show that the modifications were either an elimination of the "prohibitive" clause, merely changing a restricted lease to one of the so-called "independent" form which has just been discussed, or the giving of permission to a lessee to use some particular machine upon a certain kind of work, as, for instance, an outsole stitcher upon shoes welted by hand, or upon McKay shoes, for fair-stitching. In no instance does any modification indicate the least deviation from the general policy or effect of the lease system.

There is certainly no material proof otherwise than from the officers of the company that any liberality of spirit along this line was shown.

The legality of the lease system must be determined independent of occasional concessions to particular individuals for the special use of a machine. There is certainly nothing in any lease which obligates the company to make such concessions.

If they are made it is by favor of the company and not as a matter of right to the lessees.

I. EFFECT OF THE LEASING SYSTEM UPON COMPETITION WHICH WOULD OTHERWISE EXIST BETWEEN SHOE MANUFACTURERS.

Mr. Winslow testified upon this point:

> We have never granted concessions of any sort. * * * Our royalties have been the same to all, whether they used a thousand machines or one; they are charged by the pair and the service is exactly the same. (R. I, 439, l. 43; 440, l. 2 et seq.)

This testimony is not quite correct, for the record shows that the United Company granted rebates in the form of stock donations. (R. I, 351, l. 43.) But it is generally true and characteristic of the United Company's system.

The general effect of it is to place shoe manufacturers upon a common plane—to which we do not object (*infra*, p. 258)—and to eliminate all opportunity of competition as to a very important element embraced in the manufacture of footwear, namely, machinery.

Manufacturers may compete in the purchase of hides and other material for the manufacture of shoes, in the location of their factories with regard to shipping and manufacturing convenience, in the construction and arrangement of the factory and in marketing the finished product. But the skillful manufacturer is denied the privilege of exercising a choice as to machines or to exercise his judgment as to the terms on which he will take them or the manner of keeping them in proper efficiency. Un-

doubtedly the cost of a shoe must depend to a very material extent upon the kind and cost of the machinery used in its manufacture. But from the time the shoe is presented to the pulling-over machine until it emerges from the final bottoming machine, the possibility of competition in this respect to any material extent is entirely cut off; and the cost of preparing and attaching the sole of every shoe of a given kind must be exactly the same to every lessee of the United Shoe Machinery Company, which comprises substantially all the shoe manufacturers of the United States.

Any scheme which is enforced by contracts, and which has the effect of making absolutely uniform one element of cost of practically all the shoes which enter into interstate commerce, must be violative of the Sherman Act.

J. ENFORCEMENT BY THE UNITED COMPANY OF THE RESTRICTIVE PROVISIONS OF ITS LEASES.

The United Company in administering its leasing system and its consequent control of the shoe manufacturing industry has adopted a system of rewards for those who assist its program of monopoly and of punishment for those who do not comply with its requirements.

1. REBATES GRANTED TO OBEDIENT LESSEES.

As a part of its plan for monopolizing the shoe machinery business, the United Company has granted rebates and special inducements to its lessees upon

condition that they should use its machines exclusively and faithfully observe the covenants of the leases.

On June 10, 1910, the United Shoe Machinery Company of New Jersey by its president, Sidney W. Winslow, addressed a circular letter "To the Lessees of the United Shoe Machinery Company" in which it was provided that beginning with January 1, 1910, the company would create a fund by investing in the common stock of the United Shoe Machinery Company and would add to it from time to time; that at the end of three years it would distribute the stock among the lessees of "the Goodyear welting, Goodyear stitching, and Goodyear turn sewing machines in the United States," who had "faithfully observed the covenants of their leases," and that in this fund not less than fifteen per cent of the amount received from the use of the Goodyear welters and stitchers in the United States would be invested and of the amount received from Goodyear turn machines not less than ten per cent would be invested. (Plff's Ex. 146, R. V, 1067, last four paragraphs.) The covenants referred to embrace the tying clauses which in effect obligated the lessees, as we have said, not to use machinery procured from competitors of the United Company.

This proposition of the United Company is of special significance, in view of the fact that the offer was made at a time when serious competition threatened the United Company. It was in May, 1910, that Plant discontinued the use of the United Company's

machines in the factory of the Thomas G. Plant Company and installed in their place the Plant machines. It was about that time that Endicott invited Winslow to meet Plant at Endicott's house at Dedham, Mass., for a conference with respect to the Plant machines, and it was in June, 1910, that the meeting was held. (R. I, 558, l. 6.) Furthermore, while this notification to the lessees of the United Company of the plan for rebating was not made until June 10, 1910, the plan, by the terms of the notification, became operative on January 1, 1910, antedating the notification by a period of more than five months.

The testimony of defendants' witnesses is to the effect that the principal improvements obtained by the United Company through the Plant purchase, were embodied in the welters and stitchers. (R. I, 785, l. 44; 787, l. 34 et seq.) The conclusion is irresistible that the defendants realized that Plant's welters and stitchers would appeal to the shoe manufacturers, and that it was for the purpose of holding the shoe manufacturers in line and inducing them to continue the exclusive use of the United Company's machines that the proposition of June 10, 1910, was made by that company. The United Company was organized in February, 1899, and a period of more than ten years had elapsed before there was any expression of an intention to grant a rebate. It is noteworthy that the plan did not present itself to the minds of the representatives of the United Company prior to the time when serious competition was threatened. Furthermore, it will be

observed that only those lessees "*who shall faithfully observe the covenants of their leases*"—the tying clauses—were entitled to the benefits of the plan.

2. PUNITIVE ACTION AGAINST DISOBEDIENT LESSEES.

The defendants contend that they have used their great power mildly and that their policy is much more liberal than the leases indicate. This forbearance if genuine can not be of any legal consequence. But it does not appear that the defendants have refrained from enforcing their rights in any appreciable number of cases of violation of the leases. That there should be few instances of violation is not remarkable when one considers the possible consequences to a recalcitrant manufacturer of such violation. The manufacturers could obtain no machines elsewhere, and hence they dare not violate the leases. But when the evidence is taken as a whole, there can be no doubt that the provisions of the leases which are especially obnoxious have been strictly enforced.

The efforts made by the United Company to enforce the restrictive provisions and their effect upon the business of competitors, are indicated by the following evidence, which is practically uncontradicted.

Frank R. Hilliard is a shoe manufacturer. His company attempted to install a turn sewing machine, made by the Haverhill Shoe Machinery Company, at a time when they had machines of the United Company doing the same work. They talked with Winslow, who stated that they were using that machine contrary to their lease, and would either have to change the lease or stop using the machine. They

had the Haverhill machine on trial, and returned it, on account of the objection of the United Company based on the provisions of the lease. (Hilliard, R. I, 282–4.)

The Haverhill Shoe Machinery Company installed with Herrick, of Lynn, a channeling machine, a turn sewer, a heeling machine, and a heel-breasting machine. There was a clause in Herrick's clicking machine lease, from the United Company, prohibiting the use of these machines. Under the terms of that lease he had to pay the United Company royalty *on work done on the Haverhill machines* of one and one-half cents per pair, with a fifty per cent discount for prompt payment, so Herrick did not dare keep the machine, and took it out. He kept the nailing machine for some time, but found that if he kept it, he would lose his rebate on his Gem insoles, and also the fifteen per cent rebate that the United was giving for not violating the leases. Consequently Herrick gave up the Haverhill machine. (Webster, R. I, 293, l. 2 et seq.; also Harriman, R. I, 318, l. 6.)

Fred W. Herrick testified as to one of these machines, that on negotiating for a return of a United machine, it was said by the United people that the Herrick Company would have to pay them royalty on the same shoes on which they had already paid for the use of the Haverhill machine, consequently the Haverhill machine was taken out. (Herrick, R. I, 357, l. 2 et seq.)

Louis H. Harriman, treasurer of the Haverhill Shoe Machinery Company, details the following instances

in which that company had trouble in installing machines, in addition to those detailed by the witnesses Webster and Hilliard:

Lynch & Sherman had a turn sewing machine which was installed in their factory and operated for a short time. They caused the Haverhill Company to take it out, because the agents of the United Company had told them that they were violating their lease (R. I, 318, l. 26).

W. S. Chase & Company had installed two channeling machines, a turn sewing machine, and a heeling machine, which were operated very satisfactorily, but a year before the witness testified the Haverhill Company was told to remove all their machines. One reason given by Chase & Company was that they had been sued for infringement by the Xpedite Company, and that one of the terms of the settlement of the suit without charging damages was that they should remove the Haverhill machines; and another reason assigned was that the United Company said they were violating the conditions of their leases. (R. I, 319, l. 35 et seq.)

Carleton & Hunt installed a channeling machine in 1908, and about two years later a turn sewing machine, which were operated until early in 1912. The machines were taken out because otherwise the manufacturers could not get from the United Company a line of machinery for making welt shoes. (R. I, 320, l. 1 et seq.)

The Haverhill Company installed two turn sewers and two channelers in N. D. Dodge & Son's factory.

Their use was discontinued because the Haverhill Company *could not furnish a line of welt machinery, and they could not get such line from the United Company while they used the Haverhill machines.* (R. I, 320, l. 9.)

Ned Pike was employed to install machinery by the Haverhill Company and while so employed he traveled in eight States, and he details certain difficulties which he encountered (R. I, 329–331) as follows:

He attempted to install a machine in the factory of Ashe, Noyes & Small, Auburn, Maine, but they said that under their existing leases with the United Company it would be impossible to take the machinery, without laying themselves open to a great deal of trouble with that company.

Dunn & McCarthy of Auburn, New York, stated "they would like to consider the proposition of putting in my machine, particularly the turn sewer, but under the United Company's leases, their toe-laster and heel-seat machines would cost them more than any saving they could make on our machines."

Krippendorf & Dittman, of Cincinnati, ordered some machines from another solicitor for the Haverhill Company, and when witness saw them afterwards, they said they did not dare put in the machines at that time, on account of the character of the leases of the United Company they were operating under.

The Syracuse Shoe Company, in New York, said it meant altogether too much to them to install a

competing machine, as it would make lots of trouble for them with the United Company.

The Irving Drew Shoe Company of Portsmouth, Ohio, said in substance that they were owned, body and soul, by the United Company, so far as shoe machinery was concerned.

George A. Learned, a shoe manufacturer at Newburyport, Mass., had been using United Company machines and some machines belonging to the Haverhill Shoe Machinery Company. He was told by one Gray, representing the United people, that if he wanted to use other machines in conjunction with the Haverhill machines he would have to pay $3,000 in addition to the sum that would be required from him if he discontinued the use of the Haverhill machines. Later he was told by Winslow that unless he did comply with the terms of his leases, that is, those which in effect prohibited him from using independent machinery, the United Company would withdraw all their machines from his factory and drive him out of business. (R. I, 313, l. 27 to 314, l. 16.)

Prior to December 12, 1911, the Union Lockstitch Company had difficulty in installing its curved needle machine, which had the same function as the United Company's outsole stitcher. In fact, the Lock Stitch Company had succeeded in installing but one and that was with a small manufacturer. The company had tried to sell to Roberts, Johnson & Rand, Harsh & Edmands, Commonwealth Shoe & Leather Company, and the Peters Shoe Company. Jones, of

the Commonwealth Company, said he could not afford to touch the Union Lockstitch Machine because his lease forbade it. (R. I, 203, l. 5.)

Merrick, of the Lockstitch Company, when subsequently recalled filed as Plff's Exs. 177, 178, and 179 letters showing that these parties would not take machines from his company on account of the United Company's leases. (R. I, 207, l. 36.)

John E. Williams, of the Portsmouth Shoe Co., has four factories at Portsmouth and Ironton, Ohio, manufacturing men's and boys' welts and mock welts. They had installed a Union lock-stitch machine, and talked with Colonel King, of Boston, representative of the United Company. After three days' talk, Colonel King said: "Mr. Williams, under the leases we feel that you have broken your obligation, and would ask you to discontinue it."

King, through Ross, the local representative of the United Company, submitted a plan whereby they could use the Union machine, but the initial charges would have been $3,675, and there would have been an additional royalty of one and one-eighth cents per pair. They thereupon sent the machine back, and took no more. The proposition was made with reference to the installation of a new factory, with much auxiliary machinery left out, the shoe to be a simple one. (R. I, 217, l. 14; 218, l. 27.)

E. P. Reed was using a turn sewing machine of the Standard Shoe Machinery Company, which was manufactured by the Bay State Shoe Machinery Company, and the Standard Company wanted him to introduce

more of its machine, but he said he was afraid—that the United Company was such a gigantic corporation that no shoe manufacturer could afford to be a martyr. (Darrah, R. I, 334, l. 35.)

The Standard Company had a Woodward machine with Mark J. Worthley, of Lynn, Mass., who reported that he was afraid he would have to return it; that the United Company's agents were after him all the time and were making threats. (Darrah, R. I, 335, l. 1.)

Thomas G. Plant who was using the Standard's Woodward machines told the witness Darrah that the United Company's agents had been after him so often and so persistently that he was afraid he would have to surrender the Woodward machines and install the McKay machines of the United Company. (Darrah, R. I, 335, l. 8.)

The T. D. Barry Company had obtained some machines from the Standard Shoe Machinery Company. The United Company's machines were also in use in that factory. Barry was in Europe, and the United Company had had a replevin warrant issued and started to take the United machines out, when William A. Hogan, treasurer of the Barry Company, threatened to shoot the officer. Hogan then obtained a writ of injunction, which was subsequently dissolved, and he then agreed with Storrow, counsel for the United Company, to stop the Standard machines until Barry should return. After his return the Standard machines were taken out. (Hogan, R. I, 222, l. 11–38.)

The Standard Shoe Machinery Company was incorporated in 1899 and went into the hands of a receiver in 1901. (R. I, 335, l. 30.)

Prior to 1912, Curtis & Jones had one shoe factory at Reading, Pennsylvania, and another at Hamburg, 16 miles from Reading. In the Hamburg factory they used a miscellaneous lot of machinery and the Lincoln machine made by the Campbell Sewing Machine Company, but used the United Company's sewing machines altogether in the Reading plant. They combined the two factories, moving the Hamburg plant to Reading, in July, 1902. (R. I, 363, l. 36, 364.) About the time of the consolidation they bought three Duplessis turn sewing machines, and they already had five Lincoln machines. Mr. Clark, the local representative of the United Company, told them that the operation of the Duplessis machines in the same factory with a Goodyear machine was prohibited by the United Company's leases, and that since the factories had been consolidated the rule applied. He said they would remove all their leased machines, unless they discontinued the use of the independent machines. (R. I, 365, l. 41.) Colonel King a manager of the United Company then came, and they agreed to turn over the independent machines at cost price, and replace them with Goodyear machines. (Shinn, R. 366, l. 3; Curtis, 377, l. 29 et seq.)

Curtis, of the same firm, testified that they changed to United Company's machines to avoid a fight with the United Company; that company told them that

they could not, under their leases, use any independent machinery in the same building, and that the United would take its machinery away if they kept on operating the independent machinery. If the witness's company had thrown the United machines out, he said they *could not have obtained substitutes, as he knew of no other concern from which he could obtain them.* (R. I, 380, l. 21 et seq.) The use of the United machines increased the cost one-half cent per pair. The independent machines were doing satisfactory work and they wanted to keep them. (R. I, 381, l. 8.)

In 1904, Peter Tessier, of Peter Tessier & Company, Haverhill, Mass., was manufacturing shoes. He had two channelers, a slugging machine, a molder, and a Goodyear stitcher, which he had obtained from the United Company. He installed a Duplessis sewing machine, and the United Company thereupon took all its machines out of his factory. (R. I, 281, 2.)

Ernest Bottomley, of Haverhill, Mass., testified that about 1903 he was engaged in making turn shoes, and had nailing and stitching machines made by the Duplessis Company. Prior to that time he had a Goodyear stitcher, which he quit using when he took the Duplessis. He had a sole rounder, and several other United machines. He had a talk with Colonel King of the United Company, in which King said, in effect, that witness would have to use one or the other line of machines. Witness chose the Duplessis, and the United Company took its machines out. Subsequently witness's factory was

changed from making turn shoes to McKays, and therefore had to change its machines. Witness went to the United Company, and they required him to pay royalty on the shoes *made on the Duplessis machinery*, after the machinery of the United Company had been taken out. He now uses United machinery exclusively, except a buffer or rounder, which he bought from others. (R. I, 284, l. 26.)

George R. Harsh, of Harsh-Edmands Shoe Company, Milwaukee, Wisconsin, had procured a clicking machine from the Richardson Shoe Machinery Company, of Lynn, and was trying to procure other clicking machines. Wilson a representative of the United Company told Harsh that it would be better for him if he ceased his activities against the United Company, and would take things as they were, and showed him that in a lease for a metallic fastening machine he was already bound by a provision similar to the one he was complaining about in the clicking machine lease. As a result the witness made no further efforts to obtain such machines elsewhere, but took them from the United Company. (R. I, 196, l. 5.)

George H. Clark had invented a method of molding shoes, and had also invented an attachment for a stitcher which enabled him to stitch the shoe and trim it at the same time. He had one of the machines in Richardson's factory at Lynn. The United Company refused to place any of their machines in that factory, saying, through its manager, Hurd,

"We have to put the knife and protect our interests." (R. I, 307, l. 12.)

Kimball & Hadley, of Lynn, Mass., were making needles and awls. Beginning about January, 1904, they found that they could not sell Universal Slugging Machine awls. Five firms told Hadley personally that the reason they would not purchase was that the use of their needles and awls was in violation of the lease of the United Company; and if they continued to use their needles and awls, the United Company would take its machines away from them. (Hadley, R. I, 308, l. 11.)

In truth, Mr. Choate, one of counsel for the defendants, concedes that they enforce the tying clauses, for he said in answer to a question by the presiding judge: "I do admit that they carry out the terms of the leases." (R. I, 281, l. 30.)

K. UNSUCCESSFUL EFFORTS OF SHOE MANUFACTURERS TO OBTAIN MODIFICATIONS OF THE RESTRICTIVE CLAUSES.

From the very beginning of the United Company's existence shoe manufacturers have attempted unsuccessfully to secure modifications of the restrictive clauses. These efforts have been uniformly unsuccessful. And the circumstances, taken together with Mr. Winslow's declarations show that the object sought by the defendants in devising and insisting upon the clauses was the exclusion of competitors.

We have already referred to the first of these efforts. It was made by the National Boot & Shoe Manufacturers' Association, of which Charles H. Krippendorf was a director. He testified that on November 8,

1900, members of the association had a conference with Winslow for the purpose of asking him to eliminate the restrictive clauses from the new leases for the metallic machines. They had a stenographer present, who reported the proceedings. The witness produced the report. In the course of Winslow's remarks refusing to modify the tying clauses, he said that if the tying clauses were eliminated his company would be compelled to buy out every new machine that might be manufactured, and when asked why he would have to do this, stated:

> Why? Well, let me ask you if we haven't got either to purchase that machine *or compete* with the man who is simply doing that to force us to buy. (Krippendorf, R. I, 216, l. 6.)

In January or February, 1907, Winslow sent for Charles H. Jones, president of the Commonwealth Shoe & Leather Company who went to his office with McElwain, another manufacturer, now deceased. During the meeting they urged Winslow to abandon the tying clauses. Winslow replied in substance that he could not consider doing so; that those clauses gave him complete control; that without that complete control other machines would creep in; that if the clauses were eliminated "the *intense competition* which existed before would return."

Florsheim testified that while in Boston in September, 1910, in connection with the Plant purchase (*supra*, p. 109), and a few days after the United Company had acquired that business, he and Jackson Johnson told Winslow that the manufacturers were

dissatisfied with the tying clauses of the leases, and after considerable talk Winslow proposed to let the matter rest for the present. (R. I, 161, l. 23.)

Winslow went to St. Louis in the following February, and Johnson, who presided at the meeting called to hear him, submitted to him a proposition looking towards the elimination of the clauses. No definite action was taken, but Winslow proposed another meeting in Boston. (Florsheim, R. I, 161, l. 38; 162, l. 15; Selz, R. I, 145, l. 5.)

The next meeting between them was in Boston, in May, 1911; and Winslow then said that he had given the matter a good deal of consideration, but he didn't see how he could make any changes in the leases, and that any such change as they suggested in the leases would ruin the system, and could not be made. (Selz, R. I, 147, l. 22–32.)

L. OTHER EFFORTS OF SHOE MANUFACTURERS TO ESCAPE THE TYING CLAUSES.

For the purpose of protecting themselves against the oppressive practices of the United Company a number of the shoe manufacturers invested in the Boylston Manufacturing Company.

Johnson, of the International Company, said:

> Our company has an interest in the Boylston Manufacturing Company. It amounts to about $80,000. We went into it to protect our business by insuring the permanency of the supply of shoe machinery. (R. I, 171, l. 19.)

Rand of the same Company says that they invested in the Boylston Company" to safe guard our shoe

business by developing another source of supply in shoe machinery, and competition in that commodity." (R. I, 182, l. 41.)

Harsh, of the Harsh-Edmonds Shoe Company, Milwaukee, speaking of his investment in the Bolston Company, said:

> My sole and only reason for taking that interest was to supply my business with shoe machinery. (R. I, 196, l. 33.)

Selz, of Selz, Schwab & Company, Chicago, said that he had invested between $25,000 and $30,000 in the Boylston Company, and when asked the object of that organization, said:

> If these leases are declared invalid, we want to have a competitive shoe machinery in the market. (R. I, 157, l. 31, 33.)

Sleby, of Drew, Selby & Company, testified:

> I have an interest in the Boylston Manufacturing Company which I acquired in January or February of this year to protect the business of the Selby Shoe Company, to get independence. (R. I, 212, l. 42.)

Jones, of the Commonwealth Company, says he invested $20,000 to $25,000 in the Boylston Company, "Because we could see no other way in which to establish competition in shoe machinery." (R. I, 135, l. 28.)

It does not appear that the Boylston Company has put out bottoming machinery to the trade. (R. I, 301, l. 29.) It stands ready to enter active competition "if the leases are declared invalid."

Even Mr. Choate, counsel for defendants, admits that producers of independent shoe machinery are doomed to destruction if the tying clauses are not struck down. This undoubtedly is the purport of the following colloquy between him and Mr. Selz, while cross-examining the latter. After Selz had stated that he had an investment of between $25,000 and $30,000 in that company, this took place:

> So you have that amount at stake upon these machinery leases being declared invalid?
>
> A. If you choose to look at it that way.
>
> Q. If they are not, you stand to lose that money?
>
> A. Yes, sir.
>
> Q. If they are, you stand to make it?
>
> A. Yes. (R. I, 158, l. 1.)

This is undoubtedly true, and Mr. Choate has made a valuable contribution to the Government's contention by his implied admission. The sustaining of the leases would destroy not only the Boylston Company, but every company that dared to compete with the United Company.

M. CERTAIN ALLEGED DEFENSES.

1. THAT THE "RIGHT TO CANCEL ALL LEASES" CLAUSE IS A NECESSARY PROTECTION AGAINST DISHONEST LESSEES.

This clause as has been shown makes every tying clause in *any* lease signed by a shoe manufacturer a condition of *every* lease signed by that manufacturer. The defendants contend that this is necessary to protect them against dishonesty on the part of lessees. (Winslow, R. I, 447, l. 22, et seq.) It can **not** be so easily disposed of.

All lessees are not dishonest. But this clause is contained in every lease put out by the company and the power created thereby remains whether it is exercised or not. It is a threat to honest manufacturers as well as to those described by Mr. Winslow in explaining the purpose of the clause. Its existence is sufficient to coerce them into strict obedience to the terms of their leases. It is not matter of wonder in view of this clause that defendants rarely need to take steps to enforce their leases.

But even if every lessee was dishonest, that remarkable circumstance would not justify the existence of this clause. It is a violation of the law. The defendants must find some legal method of protecting themselves in their just rights. There are many such.

2. THAT IT IS NECESSARY TO EFFICIENT WORK THAT MACHINES BE LEASED AND OPERATED IN "TEAMS."

Emphasis is laid by the defendants upon the circumstance that in practical shoe manufacturing, the product is routed so as to advance progressively along the line of machines. It is said that for maximum production and economy it is necessary that the flow of work should be continuous. And that in a factory so organized the breaking down of a single machine may throw the entire organization out of gear and the inferiority of a single machine may result in a deleterious effect upon the output of the line. (Winslow, R. I, 866, l. 33 et seq., 867.)

There is nothing peculiar to the shoe manufacturing industry in this. Such organization is a com-

monplace of modern manufacturing. The special application sought by the defendants is in their contention that in this industry it is peculiarly necessary that all of the machines comprising a given line be specially designed to work with each other, and that that circumstance and the further necessity of protecting the reputation of their machines by preventing the introduction into the line of an inferior machine of one of their competitors are a justification of their leasing system. (Winslow, R. I, 866, 867.)

Certain facts regarding this contention should be noticed. It is obvious that a machine must be properly designed to perform the function for which it is used. It does not follow that no machine not designed by the defendants can perform a given function. Unless there is some direct physical connection between the operation of two machines there can be no practical difficulty in their proper performance of successive related functions if each is in fact properly designed for its own work. It has already been pointed out that the defendants concede that even the machines which they term "auxiliary" to other machines perform entirely independent operations. "The operations are as separate and distinct as the lasting operation and the welting operation only they are not so far removed from each other." (Winslow, R. I, 537, l. 9.) This is borne out by the testimony of McElroy and Selby. McElroy, who equipped the Non-Royalty factory, a man of very wide experience, testified:

"I do not think it necessary for a factory to have all its machines from one manufacturer in order to get efficient service." (R. I, 921, l. 1.)

Selby, a shoe manufacturer of large experience in the use of shoe machinery, said:

> The operation of the lasting machine has nothing to do with the operation of the welt sewing machine. The operation of the welt sewing machine has nothing to do with the operation of the outsole stitching machine. The operations are performed by separate operators on different machines. The same is true of heeling machines. (R. I, 924, l. 21.)

Therefore, no machine is necessary to the operation of any other, and this is one of the grounds upon which the case is distinguishable from *Henry* v. *Dick* (*infra*, p. 274).

A further and even more convincing circumstance, however, is to be found in certain facts upon which the defendants rely to support certain other arguments which they make. The method of making shoes by the welt process is that which the defendants say they have peculiarly fostered and promoted. It is upon shoes of this type that defendants earn their largest royalties. Welt shoes made in that particular manner which distinguishes the operation of the defendants' machines have been given by the defendant a trade mark. (R. I, 22, l. 3.) They are claimed to be the best type of shoes. (R. I, 441, l. 38.) In their manufacture more different types of machines are used than in the making of shoes by

any other method. (Dfts. Ex. 235, R. V, 631.) Especially are more "auxiliary" machines used. (*Ibid.*) In no branch of shoe making can the "continuity of operation" of which defendants talk have greater significance. The operations of no machines are more closely related than those of the welt method principal and auxiliary machines. Yet in this all important division of their business it is not only admitted by the defendants but is asserted by them that "Auxiliary machines doing any of the operations that are performed by any of our auxiliary machines may be obtained from any one and used in connection with (our) welter and stitcher." (Winslow, R. I, 544, l. 12.)

Another thing that should be remembered in this connection is the fact that defendants boast their readiness for a consideration to admit independent machines into their line of machinery under the so-called independent leases. An independent machine thus admitted would be as likely to break down and disturb the continuity of operation as if admitted in any other way, but still defendants are willing to let it enter. Does this not expose the hollowness of their continuity argument?

3. THAT DEFENDANTS HAVE MADE IMPROVEMENTS IN MACHINERY AND METHODS.

The United Company further insists that it has greatly improved the different kinds of machinery; that it gives excellent service to the manufacturers; that its leasing system is satisfactory to some of the manufacturers and is a benefit to the public gener-

ally. From these things they seek to argue that the tying clauses are lawful. But even were they true, which we deny, they furnish no justification for violating the anti-trust act. Some such palliation is offered for every monopolistic endeavor. The question here is not whether some beneficial results have followed in the train of the defendants' acts. It is whether those acts were acts in restraint of trade—whether competition or monopoly shall be the law of this industry. Upon what is relevant to that inquiry this Court has long since passed.

In this connection it is proper to observe that shoe manufacturers may well prefer a leasing system to a system under which they could obtain machines only by purchase with a necessary investment of large amounts of fixed capital. That, however, shows no approval of the tying clauses. Those clauses are neither essential nor proper accompaniments to a satisfactory leasing system.

4. THAT ITS SUCCESS IS DUE WHOLLY TO THE EFFICIENCY OF ITS MACHINES.

It is also claimed by the defendants that their preponderant position in the shoe machinery business is due to the efficiency of their machines and not to the tying clauses. Assuming the claim of superiority for their machines to be well founded it is not clear how the defendants expect the Court to differentiate between the contribution to their control made by that circumstance and the contribution made by the fact that the United Company began with an admitted monopoly and has sup-

ported and extended it in the way herein indicated. Nor do the defendants indicate the answer to another obvious question. The superiority of their machines, if any, has been gained in a field in which the efforts and the possibilities of competitors of the defendants have been limited and circumscribed by the conditions which the defendants have been able to impose upon the industry. They have won in a race in which they have themselves allotted the handicaps. Who shall say what would have been the merits of competing machines developed by competitors to whom a fair and equal opportunity was open? Who can predict as to the future of such a field?

In fact it is here that the argument of the defendants destroys itself. If it be true that the superiority of their machines is in itself a sufficient explanation of their success, then it certainly is true that now that such superiority has been established it is unnecessary for them to hedge about the shoe manufacturers of the country with the restrictions and penalties of the tying and cognate clauses of the leases. Or is it the contention of the defendants that the shoe manufacturers do not understand their own best interests and therefore need the restraints imposed upon them,—that the defendants must be permitted to be the benevolent despots of the shoe machinery world? Unless this be their position, they should allow shoe manufacturers to exercise freely their own judgment as to what machines are best suitable for their purposes. For the tying clauses are utterly opposed to that freedom of trade which

it is the purpose of the Sherman Act to foster and are antagonistic to the genius of American institutions.

5. THAT THE UNITED COMPANY GIVES GOOD SERVICE.

Defendants make much of their alleged free service. They talk of service stations, of a force of six or eight thousand men maintained for the purpose of keeping leased machines in repair without charge, *except for parts*, to the lessee. But the machines are the defendants machines and they produce revenue only when in good condition. Keeping the machines in repair is in every respect a good business proposition for the defendants. It affords no basis for claims of altruism.

And it is very doubtful whether anything is given without compensation. The lessees are bound by the leases to permit defendants' men to enter their factories at any time, to determine whether repairs or repair parts are needed without the concurrence of the lessee. The lessee is obligated to purchase repair parts exclusively from the defendants at the prices which defendants fix. (Plff's Ex. 30, par. 2, 3, R. III, 278.) Given the power to determine when repair parts shall be bought and the price that shall be paid it is a pretty safe inference that the defendants do not lose money on this vaunted service system.

The weakness of the argument, however, is the failure to indicate any connection whatever between this service and the tying clauses. As a matter of fact, the defendants are by no means the only

corporation which gives service. The Singer Manufacturing Company for example does so. (R. I, 734, l. 44.) But it does not find it necessary to bind and gag its customers in order to do so.

It may however be repeated that the question here is whether the defendants have done acts which restrain trade in violation of the Sherman Law. It is no answer to such a charge to say that certain other acts of the defendants are not blameworthy.

6. THAT IT IS AS LIBERAL AS ITS CONSTITUENT COMPANIES WERE.

The defendants contend that they have not restrained trade because they continue to offer machines on substantially the same terms as they were offered before the consolidation. If this were true, it would be irrelevant. For the defendants have adopted also the restrictive system of leases and have so devised it as to compel its acceptance by shoe manufacturers. The contention, however, has no basis in fact. The leases under which machines were put out by the constituent companies are all set out in the record. (Plff's Exs. 3–17, R. III, 3–153; see also Donham, R. I, 2–6.)

Inspection of the leases shows that the McKay Shoe Machinery Company, at the time of the consolidation, was putting out its machines (comprising the numerous and important group of metallic and heeling machines) *without initial payment* and *without exclusive use or other tying clauses.* Its previous initial payment lease had no such clauses. (Plff's Exs. 11, 12, R. III, l. 90, 103.) The defendants offer no such

lease. The Goodyear Company was offering lasting machines upon leases (Plff's Ex. 5, III, 37) which forbade the use of the machine with welt method machines supplied by competitors of the Goodyear Company, *but had no other tie* to any other kind of bottoming machinery. It had no exclusive use clause and therefore permitted the lessee to have in his factory an independent lasting machine to use with independent welt method machines. The United Company offers no such lease. The Consolidated Company, Mr. Winslow's original company, had an initial payment for the hand-method machine. (Plff's Ex. 8, R. I, III, 6, 9, par. 1.) It contains none of the tying clauses. The United Company offers no such lease. The Goodyear Company's "full set" lease for welt method machines (Plff's Ex. 4, R. III, 29) contained no exclusive use clause. No such lease is now offered by the United Company.

It has already been pointed out that no lease of a constituent company could contain a prohibitive clause of the kind and effect of those which characterize the "restricted" system devised by the United Company. A prohibitive clause in the McKay Shoe Machinery Company leases could not have affected competition in lasting machines. It made no such machines. The effect of such a clause could have been produced only by an agreement that each company would refuse to put out their machines to shoe manufacturers who would not undertake to deal with the other companies exclusively as to the machines dealt in by them. The illegality of such a

boycott need no longer be argued to this Court. Yet what the defendants actually did, by progressive steps and what they must have intended since it resulted inevitably from what they did was to give such an illegal agreement the form of corporate organization. In so far as the defendants follow the leasing system of the constituent companies, they apply it under wholly different conditions to wholly different circumstances, with very different practical and legal effect.

7. THAT THE RESTRICTIVE LEASES SIMPLY MAKE A WHOLESALE PRICE

The defendants contend that their restrictive leases simply are the making of a wholesale price. But they regard it as a virtue that they charge a manufacturer who uses a dozen lasting machines no less per machine than a manufacturer who uses only one such machine. (*Supra*, p. 184.)

In no sense do they make any quantity discount. The discount—and it is a heavy one—is for monopoly and for monopoly alone. Where the ordinary purchaser who buys at wholesale is free to make his next purchase where he will, he who deals with the defendants surrenders his liberty of choice for seventeen years, at least—possibly for his business life.

8. THAT COMPETITORS HAVE NO RIGHT TO EXIST.

The defendants contend in effect that they can not be charged with violation of law in excluding competitors because competitors have no right to exist. They urge this especially in respect to welt machinery, a field which they say would not exist had they not

discovered and developed it. In so far as this contention is based on patent rights, it is discussed *infra* pp. 263–280. But a competitor who produces a non-infringing welt method machine has the same right to equal opportunity and users of such machines have the same right to a free choice as to welt method machines as in any other division of industry. No rights of preemption or prescription of a whole field of modern industry are recognized by the Sherman Law.

THE LAW OF THE CASE.

I.

THE UNITED COMPANY IS A COMBINATION IN VIOLATION OF THE FEDERAL ANTI-TRUST LAW.

A. RESTRAINT OF TRADE BY A COMBINATION OF PREVIOUSLY COMPETITIVE UNITS IS ILLEGAL NO MATTER WHAT FORM IT ASSUMES.

In view of the thoroughness with which the Federal Anti-Trust Act has been discussed recently in the Harvester and Steel cases, those features of the act which do not relate to facts peculiar to the instant case require only a very brief consideration.

In the foregoing pages it has been shown that the Goodyear Company, the Consolidated & McKay Company, McKay Shoe Machinery Company, and Eppler Company were "able competitors" (*International Harvester Company* v. *Missouri*, 234 U. S. 199) at the time the United Company was incorporated (*supra*, pp. 17–49), and that the purchase of those companies by the latter destroyed the existing and potential competition between them.

At one time it was apparently believed by some that the Federal Anti-Trust Law permitted the *purchase* of competitors, and Howe seemed to have thought so at the time this combination was formed, for he tells us that he feared a trade agreement between the companies would be illegal on the ground that it would restrain trade, and therefore he advised the formation of a corporation. In other

words he was conscious that the effect of what he and his associates were about to do would be the restraint of trade, but he thought he could escape the consequences of the act by forming a corporation. In this purpose Winslow, who says that he agreed with Howe in all matters of policy, concurred. (*Supra*, p. 52.) Both, however, were mistaken. The law can not be defeated by any "disguise or subterfuge of form." (*Tobacco Case*, 221 U. S. 106, 181.)

The prohibitions of the Federal Anti-Trust Law apply no less to combinations formed by a purchase of property by a corporation than to combinations formed by simple agreements. In the *Tobacco Case*, 221 U. S. 106, it was held that each of six New Jersey corporations was an unlawful combination. The Chief Justice, speaking for the court, observed (184):

> The assailed combination in all its aspects—that is to say, whether it be looked at from the point of view of stock ownership or from the standpoint of the principal corporation and the accessory or subsidiary corporations viewed independently, including the foreign corporations in so far as by the contracts made by them they become cooperators in the combination—comes within the prohibitions of the first and second sections of the Anti-Trust Act.

And it was decreed (187):

> That the combination in and of itself, as well as each and all of the elements composing it, whether corporate or individual, whether considered collectively or separately, be de-

> creed to be in restraint of trade and an attempt to monopolize and a monopolization within the first and second sections of the Anti-Trust Act.

In *Harriman* v. *Northern Securities Co.*, 197 U. S. 244, 291, it was said:

> Some of our number thought that as the Securities Company *owned* the stock the relief sought could not be granted, but the conclusion was that the possession of the power which, if exercised, would prevent competition, brought the case within the statute no matter what the tenure of title was. (Italics ours.)

In the *Union Pacific Case*, 226 U. S. 61, 97, it was held that the—

> acquisition [by the Union Pacific Company of a controlling stock interest in the Southern Pacific, a competing line,] constituted an unlawful combination in violation of the Anti-Trust Act.

Justice Brewer in his concurring opinion in the *Northern Securities Case*, 193 U. S. 197, said (362):

> There was a combination by several individuals separately owning stock in two competing railroad companies to place the control of both in a single corporation.

Continuing, he observed that a corporation—

> is an artificial person created and existing for the convenient transaction of business. In this case it was a mere instrumentality by which separate railroad properties were com-

> bined under one control. That combination is as direct a restraint of trade by destroying competition as the appointment of a committee to regulate rates. The prohibition of such a combination is not at all inconsistent with the right of an individual to purchase stock. The transfer of stock to the securities company was a mere incident, the manner in which the combination to destroy competition and thus unlawfully restrain trade was carried out.

In the *Standard Oil Case*, 221 U. S. 1, 59, the Chief Justice said:

> In view of the many new forms of contracts and combinations which were being evolved from existing economic conditions, it was deemed essential by an all-embracing enumeration to make sure that no form of contract or combination by which an undue restraint of interstate or foreign commerce was brought about could save such restraint from condemnation.

In *United States* v. *Great Lakes Towing Company*, 208 Fed. 733, it was proved that the Great Lakes Company was formed in 1899 and *acquired* the properties of various tug owners and operators, and subsequently secured by purchase the properties of other tug owners and operators, with the result that it then owned all the prominent towing companies at 14 important lake ports. The Government alleged that the Towing Company was a combination in restraint of trade and a monopoly.

The district court, three judges sitting, held that the Towing Company and the corporations controlled by it constituted a combination in violation of the Sherman Act. The court said (741):

> a combination which places the direct instrumentalities of interstate commerce in such a relation as to create a single dominating control in one corporation, whereby natural and existing competition in interstate commerce is unduly restricted or suppressed, is within the condemnation of the act (*Standard Oil Co. case, supra; American Tobacco Co. case, supra*).
>
> * * * * *
>
> (744) Has the Towing Company acquired this domination of the towing and wrecking service by normal methods alone; or, as otherwise stated, has it unduly restrained or suppressed competition? We think it clear that the Towing Company's domination does not result from normal methods alone. Whatever may be the views of individual economists, under the Federal statutory policy normal and healthy competition is the law of trade; and such evils as may result from such competition must be considered less than those liable to follow a complete unification of interests and the power such unification gives. The evil of unification lies in the temptation to higher rates and lessened regard for the public interests; and the tendency to this evil result must be recognized, even though not in a given case yet realized in actual experience. *United States* v. *Union Pacific R. R. Co.*, 226 U. S. 61; *Joint Traffic Association Case*, 171 U. S.

> 505, 576; *Standard Sanitary Mfg. Co.* v. *United States, supra.* Even competitive practices, of a nature which as between business rivals standing practically on equal terms may be normal and lawful, yet when employed by a powerful monopolistic combination with the ability to crush, and for the purpose of crushing, a weak rival, may become abnormal and unlawful.

Although the constituent elements of an illegal combination or monopoly considered separately may be unobjectionable, if they are bound together as a part of a plan to restrain trade, they are unlawful. Mr. Justice Holmes, who delivered the opinion of the court in *Swift & Company* v. *United States,* 196 U. S. 375, 396, said:

> Moreover, whatever we may think of them separately when we take them up as distinct charges, they are alleged sufficiently as elements of the scheme. It is suggested that the several acts charged are lawful and that intent can make no difference. But they are bound together as the parts of a single plan. The plan may make the parts unlawful.

In the *Reading Co. case,* 226 U. S. 324, Mr. Justice Lurton said (357):

> It is not essential that these contracts considered singly be unlawful as in restraint of trade. So considered, they may be wholly innocent. Even acts absolutely lawful may be steps in a criminal plot, *Aikens* v. *Wisconsin,* 195 U. S. 194, 206. But a series of such contracts, if the result of a concerted

> plan or plot between the defendants to thereby secure control of the sale of the independent coal in the markets of other States, and thereby suppress competition in prices between their own output and that of the independent operators, would come plainly within the terms of the statute, and as parts of the scheme or plot would be unlawful.

The application of these principles of law to the facts of this case is clearly suggested by the Supreme Judicial Court of Massachusetts (*United Shoe Machinery Co.* v. *La Chapelle*, 212 Mass. 467) which, in a carefully written opinion by Chief Justice Rugg reviewing all the decisions of this court up to the time at which he was speaking (1912) found that the plaintiff in that case, the principal defendant herein, was a combination in violation of the Federal Anti-Trust Act.

United States v. *Winslow*, 227 U. S. 202, is in nowise inconsistent with our argument on this or on any other point in the case. There the decision was on a demurrer to an indictment against Winslow, Hurd and Brown alleging a violation of the Sherman Act by combining three companies which became a part of the United Company, and by the adoption of the restrictive leasing system. The court below found that the facts stated in the indictment were insufficient to show competition at the time of the consolidation and this court held that it had "no jurisdiction to review" that interpretation of the indictment and also that "the validity of the leases or

of a combination contemplating them can not be passed upon in this case."

B. NO SPECIFIC INTENT IS REQUIRED WHERE THE NECESSARY RESULT IS MATERIALLY TO RESTRAIN TRADE.

The defendants deny any intent to restrain or monopolize trade and commerce, and strenuously urge that benefits to the shoe manufacturers and to the public have resulted from the organization of the United Shoe Machinery Company and its subsequent acquisitions.

It is well settled that the lawfulness or unlawfulness of a combination which restrains trade does not depend upon the primary intent or motive of the parties forming it. Otherwise the actual destruction of competition would become immaterial. Necessary consequences are presumed to have been intended, and the lawfulness of defendants' acts must be determined by the direct results.

Mr. Justice Peckham, in the *Trans-Missouri Freight Case*, 166 U. S. 290, said (341):

> If the intent alleged in the bill were a necessary fact to be proved in order to maintain the suit, the bill would have to be dismissed. In the view we have taken of the question, the intent alleged by the Government is not necessary to be proved. The question is one of law in regard to the meaning and effect of the agreement itself, namely: Does the agreement restrain trade or commerce in any way so as to be a violation of the act? We have no doubt that it does.

(342) The necessary effect of the agreement is to restrain trade or commerce, no matter what the intent was on the part of those who signed it.

In the *Addyston Pipe Case*, 175 U. S. 211, 234, it was held:

> If the necessary, direct, and immediate effect of the contract be to violate an act of Congress and also to restrain and regulate interstate commerce, it is manifestly immaterial whether the design to so regulate was or was not in existence when the contract was entered into. In such case the design does not constitute the material thing. The fact of a direct and substantial regulation is the important part of the contract, and that regulation existing, it is unimportant that it was not designed.

In the *Standard Sanitary Case*, 226 U. S. 20, 49, this Court went so far as to accept as true, for the purposes of argument, the alleged intent of the defendants to improve the quality of the ware and thereby benefit the public by forming the combination. Mr. Justice McKenna, speaking for the court, stated, however, that the prohibitions of the statute can not be evaded by good motives, and said (49):

> The law is its own measure of right and wrong, of what it permits, or forbids and the judgment of the courts cannot be set up against it in a supposed accommodation of its policy with the good intention of parties, and it may be of some good results. (*United*

> *States* v. *Trans-Missouri Freight Assn.*, 166 U. S. 290; *Armour Packing Co.* v. *United States*, 209 U. S. 56, 62.)

Also in *United States* v. *Patten*, 226 U. S. 525, 543, where, after holding that the conspiracy burdened commerce and inflicted upon the public the injuries which the Sherman Act is designed to prevent, Mr. Justice Van Devanter said:

> And that there is no allegation of a specific intent to restrain such trade or commerce does not make against this conclusion, for, as is shown by prior decisions of this Court, the conspirators must be held to have intended the necessary and direct consequences of their acts and can not be heard to say the contrary. In other words, by purposely engaging in a conspiracy which necessarily and directly produces the result which the statute is designed to prevent, they are, in legal contemplation, chargeable with intending that result (*Addyston Pipe & Steel Co.* v. *United States*, 175 U. S. 211, 243; *United States* v. *Reading Co.*, 226 U. S. 324, 370).

To the same effect is the opinion of Mr. Justice Lurton in the *Reading Case*, 226 U. S. 324, 370, where he observed:

> Of course, if the necessary result is materially to restrain trade between the States, the intent with which the thing is done is of no consequence. * * * (*U. S.* v. *St. Louis Term. Assoc.*, 224 U. S. 383, 394; *Swift & Co.* v. *U. S.*, 196 U. S. 375.)

The record in the case at bar discloses beyond any doubt a direct, material, and undue restraint of trade. We submit that all of the evidence introduced by the defendants tending to show good motives and the absence of intent to restrain trade is wholly immaterial.

C. EVEN IF IT WERE NECESSARY TO PROVE INTENT, THE COMPREHENSIVENESS OF THE COMBINATION WOULD DO IT.

Where a combination takes in so large a proportion of the units in any branch of trade that those outside can not hope effectively to compete with it except by sufferance, it is a legitimate inference that one of the purposes of the combination was to prevent effective competition by those outside. This is clear from the *Standard Oil Case*, 221 U. S. 1, 75, where it was held that—

> the unification of power and control over petroleum and its products which was the inevitable result of the combining in the New Jersey corporation by the increase of its stock and the transfer to it of the stocks of so many other corporations, aggregating so vast a capital, gives rise, *in and of itself*, in the absence of countervailing circumstances, *to say the least*, to a *prima facie* presumption of intent and purpose to maintain the dominancy over the oil industry, not as a result of normal methods of industrial development, but by new means of combination which were resorted to in order that greater power might be added than would otherwise have arisen had normal methods been followed, the whole with the

> purpose of excluding others from the trade and thus centralizing in the combination a perpetual control of the movements of petroleum and its products in the channels of interstate commerce. [Italics ours.]

Again, in *United States* v. *St. Louis Terminal Railroad Ass'n*, 224 U. S. 383, 394–395, and in *United States* v. *Reading Co.*, 226 U. S. 324, 370, it was recognized that an intent to exclude others might be inferred from the "extent of the control" acquired by the combination, the court saying in the latter case:

> In the instant case the *extent of the control* over the limited supply of anthracite coal by means of the great proportion theretofore owned or controlled by the defendant companies, and the *extent of the control* acquired over the independent output which constituted the only competing supply, affords evidence of an intent to suppress that competition and of a purpose to unduly restrain the freedom of production, transportation and sale of the article at tide-water markets. [Italics ours.]

There was a similar ruling in *Shawnee Compress Co.* v. *Anderson*, 209 U. S. 423, 433, 434, where it was said:

> To what object was the assembling in one ownership or management so many compresses, and keeping the means and declaring the purpose of acquiring more? The answer would seem to be obvious. The first effect would necessarily be the cessation of competition. If there was left a possibility of other compresses being constructed, it was

> made less by the power that could be opposed to them * * *. This case presents something more than the lease of property by the Shawnee Company, induced or made necessary by financial embarrassment. It presents something more than the acquisition by the Gulf Company of another compress—of a mere addition to its business. It presents acts in aid of a scheme of monopoly.

The bearing upon its purpose of a combination's conduct toward its competitors of course requires no elucidation. In the case at bar the combination has acquired and now controls 89 per cent of the shoe eyelet production, over 96 per cent of the eyeletting machines, all the clicking machines, pegging machines and pulling-over machines, and over 96 per cent of the remainder of the machinery used in the United States in attaching the bottoms of shoes to the uppers. (Appendix B, part 1, *infra*.)

This is not denied. Even Mr. Winslow admits that more than 90 per cent of all the welt and turn shoes made in the United States are sewed upon machines put out by his company. (R. I, 597, l. 11.)

This is the necessary and direct result of the combination and therefore must have been intended by those who formed it. In the face of these circumstances, the literal denials by Winslow and Howe that they had in mind restraining trade are of no possible consequence.

D. THE COMBINATION, BEING A UNION OF ABLE COMPETITORS TOGETHER OCCUPYING A PREPONDERATING POSITION, VIOLATES THE LAW.

The testimony to which we have just re-called attention under the preceding head demonstrates that the defendants have acquired a preponderating position in the shoe machinery trade with respect at least to many essential machines—machines without which the trade of shoemaking can not be carried on profitably. Not only this, but they occupy such a position that every shoe manufacturer of consequence in the United States must deal with them. Out of 1,090, big and little, they do business with more than 1,033 (*supra*, p. 132) and have out 90,000 leases. (R. I, 37, l. 5.) Those with whom they do not have business relations must be insignificant. Donham, secretary of the United Company, could mention only two in the United States who do not receive their bottoming machinery from the United Company. (R. I, 30, l. 31.)

None of the manufacturers with whom the United Company does business can use machines for bottoming shoes obtained outside of the United Company, except upon conditions that are prohibitive. (*Supra*, p. 175.) It is impossible to procure a full line of shoe machinery anywhere except from the defendants, and as we have seen, they will not put out any of that machinery except upon conditions which in effect prohibit shoe manufacturers from dealing with the producers of independent machinery. Although the United Company does not embrace all

competitors in the manufacture of bottoming machinery, it does so virtually. But it is not necessary that it should control all in order that it may be guilty of monopolization. This court has said in the *Knight Case*, 156 U. S. 1, 16, that "all the authorities agree that in order to vitiate a contract or combination it is not essential that its result should be a complete monopoly. It is sufficient if it really tends to that end and to deprive the public of the advantages which flow from free competition."

Circuit Judge Day, now Mr. Justice Day, said in the *Chesapeake & Ohio Case*, 115 Fed. 610, 623:

> It is not required in order to violate this statute that a monopoly be created. It is sufficient if that be the necessary tendency of the agreement.

A price-fixing combination which included a preponderant portion of the existing competitors would clearly violate the law. *Addyston Pipe & Steel Co.* v. *United States*, 175 U. S. 211; *Swift & Co.* v. *United States*, 196 U. S. 375.

In the last named case "a dominant proportion" was held to be a combination in restraint of trade.

E. THE FACT, IF IT BE A FACT, THAT PRICES WERE NOT RAISED OR THAT SERVICE AND MACHINES HAVE BEEN MADE MORE EFFICIENT, IS NO JUSTIFICATION FOR THE COMBINATION.

A combination may temporarily or perhaps even permanently reduce the price of the article traded in or manufactured. But that is no defense. Thus in the *Trans-Missouri Freight Association Case*, 166 U. S. 290, 323, the court said:

> In business or trading combinations they may even temporarily, or perhaps permanently, reduce the price of the article traded in or manufactured, by reducing the expense inseparable from the running of many different companies for the same purpose. Trade or commerce under those circumstances may nevertheless be badly and unfortunately restrained by driving out of business the small dealers and worthy men whose lives have been spent therein, and who might be unable to readjust themselves to their altered surroundings. Mere reduction in the price of the commodity dealt in might be dearly paid for by the ruin of such a class, and the absorption of control over one commodity by an all-powerful combination of capital.

Mr. Justice Day, in the *Union Pacific Case*, 226 U. S. 61, said (88):

> Nor does it make any difference that rates for the time being may not be raised and much money be spent in improvements after the combination is effected. It is the scope of such combinations and their power to suppress or stifle competition or create monopoly which determines the applicability of the act.

In *United States* v. *Addyston Pipe & Steel Company*, 85 Fed. 271, Mr. Taft, then circuit judge, had the following to say with respect to the question of the reasonableness of the prices claimed to have been charged by the combination (293):

> It has been earnestly pressed upon us that the prices at which the cast-iron pipe was sold

> in pay territory were reasonable. A great many affidavits of purchasers of pipe in pay territory, all drawn by the same hand or from the same model, are produced, in which the affiants say that, in their opinion, the prices at which pipe has been sold by defendants have been reasonable. We do not think the issue an important one, because, as already stated, we do not think that at common law there is any question of reasonableness open to the courts with reference to such a contract. Its tendency was certainly to give defendants the power to charge unreasonable prices, had they chosen to do so.

In *United States* v. *Great Lakes Towing Company*, 208 Fed. 733, 743, 744, *supra*, it was contended by the defendants that in 1899, when the Towing Company was formed, the tug service, both towing and wrecking, at certain of the lake ports was unsatisfactory. With respect to that contention, the court assumed that under the Towing Company's administration, the service had been improved, but held that improvement of service was no justification for the combination. The court said (743, 744):

> The question is whether the unsatisfactory towing facilities, including their practical operation, justified the making of this combination. * * *
>
> The fact that the towing and wrecking service has been improved under the Towing Company's administration can not legalize the combination if otherwise unlawful.

Much has been said by the defendants to the effect that their system of doing business results in greater efficiency and that it is in harmony with the best canons of modern commercial life. We deny both propositions, but even if they were true, it would make no difference. This court, replying to a like contention, said in the *Eastern States Lumber Case*, 234 U. S. 600, 613:

> The argument that the course pursued is necessary to the protection of the retail trade and promotive of the public welfare in providing retail facilities is answered by the fact that Congress, with the right to control the field of interstate commerce, has so legislated as to prevent resort to practices which unduly restrain competition or unduly obstruct the free flow of such commerce, and private choice of means must yield to the national authority thus exerted. *Addyston Pipe & Steel Co.* v. *United States*, 175 U. S. 211, 241–242.

II.

THE PLANT PURCHASE WAS ILLEGAL EVEN THOUGH PLANT HAD NOT INSTALLED HIS MACHINES IN ANY FACTORY OTHER THAN THAT OF THE PLANT COMPANY.

The Plant purchase resulted in the elimination of an able, existing and growing competitor. (*Supra*, p. 124.) Like the original combination, this purchase was a violation of the Anti-Trust Laws, as we have just disclosed.

If, however, it should be urged that Plant was not engaged in actual competition with the United Company because his machines were not in use in

any shoe factory except that of Thomas G. Plant Company (R. I, 778, l. 13), although they were in use in that company's factory at the time of the acquisition of the Plant property by the United Company and, indeed, until long afterward (*supra*, p. 103), it is none the less true that he had also offered, as we have seen, to install his machines in a number of large factories (R. I, 575, l. 36), and that representatives of other large factories were trying to make some arrangement whereby they might acquire an interest in Plant's machinery for the purpose of installing his machines (*supra*, p. 109). In other words, the record clearly shows that the Plant machines were right at the threshold of extended competition with the United Company's machines.

But conceding, *arguendo*, that Plant had invented and manufactured but had not yet installed his machines in any shoe factory, the purchase, nevertheless, would have been contrary to the provisions of the Sherman Act.

As was said by Circuit Judge Putnam in the *Patterson Case*, 59 Fed. 280, 283 (Mass.):

> neither the letter of the statute [the Sherman Act] nor its purpose distinguishes between strangling of commerce which has been born and preventing the birth of a commerce which does not exist.

And the language of this court in the *Reading Case*, 226 U. S. 324, *supra*, with respect to preventing competition from coming into existence is peculiarly applicable here. There the situation

was dominated by a number of carriers. It was desired to introduce competition and an independent railroad was projected for the purpose of providing it. The prevention of its construction was brought about by a combination through the defendants and the Temple Iron Company. Speaking of this Mr. Justice Lurton said (351):

> The New York, Wyoming & Western Railroad Company was successfully *strangled*, and the monopoly of transportation collectively held by the six defendant carrier companies was maintained.
>
> The *projected* competing railroad was undoubtedly a good faith proposition and held out *promise* to independent coal operators not only of the prospect of competition in transportation from the mines to tidewater, but the possibility of selling their coal either to the controlled coal companies defendant at better prices or to the consuming public at tidewater in competition with that of the controlled coal companies. *But if we assume that its construction was doubtful, the result must be the same* as characterizing the purpose and design of the concerted action of the defendants. They were so far convinced of the *threatening* character of the enterprise that they were moved at great cost *to thwart it and at the same time remove the temptation* for a like competition by securing to themselves forever the product of the collieries named. [Italics ours.]

That was precisely the situation in the Plant case, with respect to the threatening character of the Plant enterprise. Certain shoe manufacturers had been endeavoring for years to have the United Company modify its leases so that they might be enabled to place in their factories competing machinery. (*Supra*, p. 198.) The defendants feared the competition that the Plant machines were about to create, and they were willing, in the language of Mr. Justice Lurton, at a cost of $6,000,000 to "thwart it and at the same time remove the temptation for a like competition" by securing to themselves the product of Plant's genius and labor, and that of his large force of inventors, in perfecting a complete line of competitive machines, which made secure the monopoly that defendants already possessed of the shoe machinery industry. It was the first time in its history that the United Company was threatened with competition in the United States by a single concern in position to furnish to shoe manufacturers a complete line of shoe machinery.

III.

THE RESTRAINING AGREEMENTS MADE WITH VENDORS AT THE TIME THEIR PROPERTIES WERE ACQUIRED ARE ILLEGAL.

With respect to the various acquisitions of competitors, and others, we shall not discuss at length the question as to whether the covenants entered into with the vendors at the time their respective businesses were acquired are in each instance in

restraint of trade. All of the covenants restraining the vendors from again engaging in business, etc., are a part of the general plan of defendants to monopolize the bottoming shoe machinery business, and it is immaterial whether the contracts considered singly are void.

However, the majority of them, when considered separately, are clearly illegal, as they go far beyond what was necessary to afford fair protection to the legitimate interests of the purchaser, and all such agreements when entered into as part of a plan for monopolizing trade and commerce, are illegal.

In *United Shoe Machinery Co.* v. *La Chapelle* (*supra*, p. 220) the Supreme Judicial Court of Massachusetts applied the law to the facts of the case at bar. That was an action, it will be remembered, in which the United Shoe Machinery Company, one of the defendants herein, began a suit in equity against La Chapelle, to compel the specific performance of a contract between him and it. The contract provided among other things that La Chapelle, who was an inventor, should assign to the plaintiff all inventions he should make during the continuance of the contract and for ten years thereafter, and that for a like period he should not engage in any similar business. Speaking of the question as to whether or not the plaintiff was an unlawful combination within the meaning of the Federal Anti-Trust Act, Chief Justice Rugg said (479):

> It is to be observed that the averment of the answer is positive and direct that the plaintiff

> has acquired and maintained a monopoly of interstate trade in shoe machinery, *and the offer of proof in this regard was co-extensive with the averment.* This brings the case within the words of Section 2 of the Anti-Trust Act.

Continuing, the court, speaking of the contract in suit, observed (485):

> It was made by one who had a monopoly of one branch of trade; it was one of many similar contracts with individuals enough to constitute a practical monopoly of skill in that department; it was a necessary link in a chain of contracts essential to the maintenance and preservation of monopoly in interstate trade which had been established by the plaintiff.

In *Shawnee Compress Company* v. *Anderson*, 209 U. S. 423, *supra*, it appeared that the company had leased its property and business relating to the compressing of cotton to the Gulf Company.

The lease conveyed all of the property of the Shawnee Company to the Gulf Company and the former covenanted that it would not "directly or indirectly engage in the compressing of cotton within 50 miles of any plant operated by the Gulf Company," and further agreed to give to the latter "its good will, moral and legal support, and that it" would "render the Gulf Company every assistance in discouraging unreasonable and unnecessary competition." (430, 431.)

This court held that the lease was in restraint of trade and in furtherance of a scheme to monopolize. Mr. Justice McKenna, in delivering the unanimous opinion, said (433):

> It may be conceded that the evidence shows that the Shawnee Company was financially embarrassed, and its condition might have justified a lease of its property if that had been all it did. It however, covenanted for its assistance in discouraging competition against its tenant, and bound itself not to "directly or indirectly engage in the compressing of cotton within fifty miles of any plant operated by the tenant." So far it covenanted to aid in the restraint of trade. It went out of the field of competition; it covenanted not to enter into that field again, and it pledged itself to render every assistance to prevent others from entering it. And it could not misunderstand the purpose for which its lease was solicited.

Continuing, the court observed (434):

> This case presents something more than the lease of property by the Shawnee Company, induced or made necessary by financial embarrassment. It presents something more than the acquisition by the Gulf Company of another compress—of a mere addition to its business. It presents acts in aid of a scheme of monopoly. *Swift Co.* v. *United States*, 196 U. S. 375.
>
> But it is contended that it was held * * * that the sale of the good will of the business with an accompanying agreement not to engage in a similar business was not a restraint of trade within the meaning of the Sherman Act. Counsel has discussed with an affluent citation of cases the principle which regulates such contracts, and insists that the lease by the

> Shawnee Company conforms to such principle. The principle is well understood. The restraint upon one of the parties must not be greater than protection to the other party requires, and it needs no further explanation than is given in *Gibbs* v. *Baltimore Gas Company*, 130 U. S. 396.

In the *Gibbs* case it was held relative to restraints of trade, first, that (408)—

> In the instance of business of such character that it presumably can not be restrained to any extent whatever without prejudice to the public interest, courts decline to enforce or sustain contracts imposing such restraint, however partial, because in contravention of public policy.

And, secondly, that (409)—

> Even at common law such contracts were void when they are general, not to pursue one's trade at all, or not to pursue it in the entire realm or country. The country suffers the loss in both cases; and the party is deprived of his occupation, or is obliged to expatriate himself in order to follow it. A contract that is open to such grave objection is clearly against public policy.

The principle is also well stated in *United States* v. *Great Lakes Towing Company*, 208 Feb. 733, *supra*. There the Towing Company exacted from those whose properties it had acquired covenants whereby the vendors agreed that during the period of five years they would not engage in or be interested, directly or indirectly, in the business of towing and

wrecking or in any branch thereof, upon the Great Lakes (except Lake Ontario and its harbors and the waters east thereof), excepting only and so far as they, or either of them, shall be interested in or with the party of the second part, as shareholder or employee."

The court (three judges sitting) had the following to say with respect to those covenants (742):

> While the sale of a business and the surrender of the good will pertaining thereto, and an agreement thereunder, within reasonable limitations as to time and territory, not to enter into competition with the purchaser, when made as part of the sale of a business, and not as a device to control commerce, is not within the federal Anti-Trust Law (see authorities cited in *Darius Cole Transp. Co.* v. *White Star Line* (C. C. A. 6) 186 Fed. 63, 65, 108 C. C. A. 165), the imposition of a restraint greater than necessary to afford fair protection to the legitimate interests of the purchaser, or contractor, constitutes an unreasonable restraint under the Sherman act. *Shawnee Compress Co.* v. *Anderson*, 209 U. S. 423.

In *Darius Cole Transportation Co.* v. *White Star Line*, 186 Fed. 63, the lessor agreed "to surrender to the party of the second part all of the good will of the river business, so called, that may be controlled by it, and to that end agrees not to enter into competition with the party of the second part upon the routes herein named, and not to operate any of its vessels, or any vessel whatsoever, on the said routes, between

Detroit and Port Huron or between Detroit and Toledo during the period of the said three years."

Circuit Judge Knappen, who delivered the opinion of the Court of Appeals, had the following to say with respect to the agreement (68):

> On the other hand, if the restraint imposed is greater than necessary to afford a fair protection to the legitimate interests of a vendee or lessee, the contract is rendered void. *Shawnee Compress Co.* v. *Anderson*, 209 U. S. 423, 425, 28 Supt. Ct. 572, 52 L. ed. 865. The same test has been recognized by this court in several cases under the common law, including *Hitchcok* v. *Anthony*, 83 Fed. 779, 28 C. C. A. 80; *American Strawboard Co.* v. *Haldeman Paper Co.*, 83 Fed. 619, 27 C. C. A. 634; *Knapp* v. *S. Jarvis Adams Co.*, 135 Fed. 1008, 70 C. C. A. 536; *Prame* v. *Ferrell*, 166 Fed. 702, 92 C. C. A. 374.

It will be observed that in the *Darius Cole* case, *supra*, the court had before it but a single contract or lease, and it was held that the restrictive provisions against competition were illegal, as in restraint of trade, for the reason that the "restraint imposed" was "greater than necessary to afford a fair protection to the legitimate interests of the vendee or lessee."

Practically all of the agreements against competition in the case at bar are unlimited as to territory, and some of them as to time. A large number, in instances where only a single machine or a few machines were acquired, prohibit the vendors from en-

gaging in the shoe-machinery business in any way whatsoever, regardless of the properties conveyed. Many of them, in addition to the restraints against competition, provide that if the vendor shall invent or shall acquire any interest under any invention relating to shoe machinery, all such inventions shall be assigned to the United Company without additional compensation therefor. Such agreements not only restrict competition, but also tend to discourage the invention and improvement of shoe machinery.

These agreements, considered in their entirety, present "something more than the acquisition" by defendants of the business of others—"of a mere addition to" their "business." They present "acts in aid of a scheme of monopoly." (*Shawnee Compress Company* v. *Anderson*, 209 U. S. 423, *supra*.)

Thus in the *American Tobacco Case*, 221 U. S. 106, this court held that the wrongful purpose and illegal combination was overwhelmingly established by various considerations, and among others (183)—

> By the constantly recurring stipulations, whose legality, isolatedly viewed, we are not considering, by which numbers of persons, whether manufacturers, stockholders, or employees, were required to bind themselves, generally for long periods, not to compete in the future.

IV.

THE CLAIM THAT THE PLANT AND OTHER PURCHASES WERE MADE TO SETTLE LITIGATION IS IMMATERIAL.

Under a previous caption we saw that if the necessary and direct effect of what defendants did was illegal, they could not justify themselves by showing that they had a legitimate motive. (*Supra*, p. 221.) So here, they may not defend on the ground that their purpose in making the acquisitions complained of was the settlement of litigation and not the suppression of competition.

In *United States* v. *Patten*, supra (226 U. S. 525), Mr. Justice Van Devanter said (543):

> Conspirators must be held to have intended the necessary and direct consequences of their acts and can not be heard to say the contrary.

In the *Addystone Pipe Case* (175 U. S. 211) Mr. Justice Peckham observed (234):

> If the necessary, direct and immediate effect of the contract be to violate an act of Congress and also to restrain and regulate interstate commerce, it is manifestly *immaterial* whether the design to so regulate was or was not in existence when the contract was entered into. In such case the design does not constitute the material thing. The fact of a direct and substantial regulation is the important part of the contract, and that regulation existing, it is unimportant that it was not designed. (Italics ours.)

Neither will the defendants here be heard to say that they "did not intend the necessary and direct

consequences of their acts" but were moved by a lawful purpose only, to wit, the settlement of litigation.

The *Standard Sanitary Case* (226 U. S. 20, 49) is to the same effect. It says:

> The law is its own measure of right and wrong, of what it permits, or forbids, and the judgment of the courts can not be set up against it in a supposed accommodation of its policy with the *good intention* of parties, and it may be, of some good results. (Italics ours.)

And directly on the specific point is this language from the Circuit Court of Appeals, 3d Circuit (*National Harrow Co.* v. *Hench*, 83 Fed. 36, 38):

> The suggestion that the contract is justified by the situation of the parties—their exposure to litigation—is entitled to no greater weight. *Patentees* may compose their differences, *as the owners of other property may*, but they can not make the occasion an excuse or cloak for the *creation* of *monopolies* to the public disadvantage. (Italics ours.)

Between saying that the defendants did not intend to unlawfully restrain trade, although they did it, and protesting that their purpose was legitimate, though resulting in an illegal restraint of trade, there is no difference. The law rejects both defenses.

As was observed by this Court in the *International Harvester Case* (234 U. S. 199, 209):

> It is too late in the day to assert against statutes which forbid combinations of competing companies that a particular combination was induced by good intentions and has had some good effect.

V.

THE OBNOXIOUS CLAUSES OF THE LEASES ILLEGALLY RESTRAIN TRADE.

A. THEY SUPPRESS COMPETITION AND MAINTAIN A MONOPOLY.

We repeat that we do not complain of the circumstance that the United Company leases rather than sells its important machinery. (*Supra*, p. 146.) Eliminate the objectionable clauses from those leases and the Government will find no fault with them, but the tying clauses, we insist, are illegal whether put out by a lawfully organized corporation or by one which is a combination in restraint of trade.

In our discussion of the facts (*supra*, pp. 145–213) we showed that the dominant purpose and necessary effect of those clauses were to suppress competition. It is not necessary to repeat here the argument made there.

The House Judiciary Committee, when it was considering the Clayton Bill (38 Stat. 730) conducted extensive hearings relative to these leases. In its report to the House the Committee said:

> Where the concern making these contracts is already great and powerful, such as the *United Shoe Machinery Company*, * * * the exclusive or "tying" contract made with local dealers becomes one of the *greatest agencies and instrumentalities of monopoly ever devised by the brain of man.* It completely shuts out competitors not only from trade in which they are already engaged but from the opportunities to build up trade in any com-

> munity where these great and powerful conditions are appearing under this system and practice. By this method and practice the *Shoe Machinery Company* has built up a monopoly that owns and controls the entire machinery now being used by all great manufacturing houses of the United States. No independent manufacturer of shoe machines has the *slightest opportunity* to build up any considerable trade in this country while this condition obtains. If the manufacturer who is using machines of the *Shoe Machinery Company* were to purchase and place a machine manufactured by an independent company in his establishment, the *Shoe Machinery Company could*, under its contracts, withdraw all their machinery from the establishment and *thereby wreck* the business of the manufacturer. (Report of Committee, p. 13.) [Italics ours.]

This view of the clauses here in question is sustained by judicial decision. Judge Dyer of the Eastern District of Missouri, in *United States* v. *United Shoe Machinery Company*, 227 Fed. 507, said of them (509):

> Are the clauses inserted in and forming parts of the contracts between the defendants and their lessees prohibited by the act of Congress heretofore referred to. Reading this act of Congress and the clauses complained of together, there can be but one conclusion, and that is that all of the clauses (with the possible exception of No. 2) complained of in the bill are clearly violative of the plain words of the statute.

Continuing, the court observed with respect to the same clauses (511):

> It is hard to see how the ingenuity of man could have devised a scheme that would more effectually create a monopoly than the scheme set forth in the bill in this case.

Afterwards, in the same case upon a motion to dismiss (234 Fed. 127), Judge Trieber, of the Eastern District of Arkansas, was called upon to consider the same question. He called the tying clauses conditions and, speaking of them, said (148):

> What is the natural, direct, and necessary effect of these conditions? There can be but one answer to this: To compel the lessees to use defendants' machinery and material, regardless of whether the terms granted by the defendants are as favorable as can be obtained from other manufacturers of some of the machines or dealers in some of the materials.
>
> In addition, it is charged that by reason of these leases there is no market for any one inclined to manufacture these or some of these machines, and therefore all are deterred from engaging in their manufacture, as, there being no market for them, financial failure is bound to result from the attempt. Such a condition of affairs clearly tends to substantially lessen competition, and create, *in favor of the defendants, a monopoly in that line of commerce.* [Italics ours.]

True, both of these decisions were rendered under Section 3 of the Clayton Act (38 Stat. 731), which was

passed after this action was submitted to the court below and which declares:

> That it shall be unlawful for any person engaged in commerce * * * to lease machinery * * * on the condition, agreement or understanding that the lessee * * * shall not use or deal in * * * machinery * * * of a competitor * * * of the lessor or seller, where the effect of such lease, * * * agreement or understanding may be to substantially lessen competition or tend to create a monopoly in any line of commerce.

This section, as we view it, presents a different measure of duty from that embodied in the Sherman Act, but, nevertheless, the clauses which were considered by the Judges were the very clauses here in question and the judicial pronouncements to which we have just referred clearly show that their necessary effect and tendency are to restrain trade and create a monopoly.

We cannot conceive how any other conclusion could be reached, when their language is given that meaning which, according to Mr. Justice Holmes in the *Swift Case*, 196 U. S. 395, "it fairly conveys to a dispassionate reader."

B. THEY UNLAWFULLY COERCE SHOE MANUFACTURERS AND FORCE A BOYCOTT OF DEFENDANTS' COMPETITORS.

All leases made by the United Company run for a period of 17 years. New leases are made from time to time by every shoe manufacturer who deals with the United Company. Each lease is tied to all the earlier

leases. It would be hard to imagine a time when a lessee would be free from all such leases in the ordinary course of business. Therefore there is no time when he is at liberty to procure his bottoming, clicking, or eyeletting machinery where he wills. He is coerced by virtue of the tying clauses into dealing with the United Company whether he desires to do so or not. It may well be said of that system that he who enters it "leaves all hope behind."

A system of leases or contracts producing such a situation must be illegal.

If the combined companies in the case at bar had entered into a trade agreement instead of a corporate combination, thereby securing control of more than 96 per cent of a certain line of machinery, and an absolute monopoly of other lines, and had agreed that no one company would trade with any shoe manufacturer unless he purchased all his machinery from the members of the combination, clearly we would have that "potency in numbers" spoken of in the *Loewe Case*, 187 Fed. 522, which amounts to coercion and creates a boycott. As was further said in that case (524):

> If it be shown that individuals have combined in order to induce a manufacturer engaged in interstate commerce to conduct his business as they wish, and upon his refusal, retaliatory steps are taken * * * such combination of individuals must be held to have essentially obstructed the free flow of com-

> merce between the States, a combination to effect such an obstruction is in violation of the Anti-Trust Law.

If the Danbury Hatters were guilty of boycotting by combining for the purpose of preventing dealers in hats from trading with Loewe, why are not the defendants equally guilty by combining with the shoe manufacturers through the tying clauses, to prevent the latter from dealing with independent shoe machinery manufacturers. True, the shoe manufacturers are unwilling members of the combination, but nevertheless they are members for the purpose of the combination—the destruction of trade with independent shoe machinery manufacturers.

The mere fact that the combined companies have united by a corporate combination instead of a loose combination, is wholly immaterial. They can not do by the one what they could not do by the other. Their conduct in either case would be in substance a boycott.

The power which the tying clauses gives to the defendants over the shoe manufacturers is analogous to that possessed by the combination in the *Eastern States Retail Lumber Case*, 234 U. S. 600; or in *Montague* v. *Lowry*, 193 U. S. 38; or in *Jayne* v. *Loder*, 149 Fed. 21.

In the former case the court said (614):

> When the retailer goes beyond his personal right, and conspiring and combining with others of like purpose, seeks to obstruct the free course of interstate trade and commerce

> * * * by placing obnoxious wholesale dealers under the coercive influence of a condemnatory report * * * he exceeds his lawful rights, and such action brings him and those acting with him within the condemnation of the act of Congress.

Every shoe manufacturer who deals with the appellees is by the coercive influence of the leases prohibited from trading with competitors of the defendants.

In *Continental Wall Paper Company* v. *Voight & Sons*, 212 U. S. 227, manufacturers of wall paper, controlling 97 per cent of interstate commerce therein, organized a corporation to act as their common selling agent, which corporation made separate contracts with wholesalers and jobbers in the several States by which such wholesalers and jobbers agreed to buy only of such corporation.

This court, speaking through Mr. Justice Harlan, quotes with approval the following language of Judge Lurton in the court below (256):

> The jobbers and wholesalers, who were to be *coerced* into contracts to buy their entire demands from the Continental Wall Paper Company or be driven out of business, were in every State. Before the combination each of the combining companies was engaged in both State and interstate commerce. The freedom of each, with respect to prices and terms, was restrained by the agreement and interstate commerce directly affected thereby, as well as by the enhancement of prices which resulted. *A more complete monopoly in an article of uni-*

> *versal use has probably never been brought about. It may be that the wit of man may yet devise a more complete scheme to accomplish the stifling of competition.* But none of the shifts resorted to for suppressing freedom of commerce and securing undue prices, shown by the reported cases, is half so complete in its details. None of the schemes with which this may be compared is more certain in results, more widespread in its operation, and more evil in its purposes. It must fall within the definition of a "restraint of trade," whether we confine ourselves to the common-law interpretation of that term or apply that given to the term as used in the Federal act. [Italics ours.]

In the *Reading Company Case*, 226 U. S. 324 *supra*, the defendant carriers controlled about seventy-five per cent, and the independent operators about twenty per cent, of the annual supply of anthracite coal. Contracts were entered into whereby the independent operators severally agreed to deliver their entire output to the defendants and in consideration therefor they were to receive sixty-five per cent of the general average price prevailing at tidewater points. The purpose of the contracts was to prevent the output of the independent mines being sold in competition with the output of the mines belonging to the defendants.

Speaking of these contracts the court said (357):

> It is not essential that these contracts, considered *singly*, be unlawful as in restraint of trade. So considered, they may be wholly innocent. Even acts absolutely lawful may be

> steps in a criminal plot. (*Aikens* v. *Wisconsin*, 195 U. S. 194, 206.) But a *series* of such contracts, if the result of a concerted plan or plot between the defendants to thereby secure control of the sale of the independent coal in the markets of other States, and thereby suppress competition in prices between their own output and that of the independent operators, would come plainly within the terms of the statute, and as parts of the scheme or plot would be unlawful. [Italics ours.]

The opinion proceeds (358):

> That the plan was calculated to accomplish the design averred, in the present case, seems plain enough. The anthracite field was very limited. The means for transportation from the mines to seaboard shipping points were in the hands of the defendant carriers. They, together with their subsidiary companies, controlled about ninety per cent of the coal deposit and about seventy-five per cent of the annual output. If the remaining output, that of the independent operators along their several lines, could be controlled as to production and sale at tidewater points, there would inevitably result such a dominating control of a necessity of life as to bring the scheme or combination within the condemnation of the statute.

We submit that the contracts in the *Continental Wall Paper case*, *supra*, and the 65 per cent contracts in the *Reading case*, *supra*, were not as far-reaching in their evil results as the system of leasing used by defendants.

C. THE TYING CLAUSES ARE CONDEMNED BY THE LAW IRRESPECTIVE OF WHETHER THE UNITED COMPANY IS A LAWFUL OR UNLAWFUL COMBINATION.

Assuming without conceding, that the United Company in absorbing the four companies at the time of its organization and in its subsequent acquisitions of concerns engaged in the shoe machinery business, did nothing illegal, still the tying clauses would be unlawful since their motive and necessary effect is the restraint and monoplization of trade. Especially is this true when it is considered that they are enforced by a single corporation (for the various corporate defendants must be treated as one) having such a preponderant position in the trade as that indicated by this record. (*Supra*, pp. 126–145.) What might be entirely harmless by an unimportant trade unit, is extremely vicious when practiced by an aggregation as powerful financially and industrially as the United Company.

Systems of exclusive contracts have been condemned in several cases under the Sherman Act. In *United States* v. *Keystone Watch Case Co.*, 218 Fed. 502, it is said (510):

> As power increases, the temptation to abuse it is likely also to increase, so that the acts of an influential factor in a particular trade may well be scrutinized with more suspicion than the acts of a *weak and inconspicuous* contributor. * * * Beginning in 1904, or thereabouts, it made several attempts—perhaps not very numerous, but numerous enough—that showed a definite purpose to

> restrain trade by attempting to fix and maintain prices, and *by using a species of boycott or blacklisting in order to lessen the trade of its rivals.* [Italics ours.]

Every lease in the case at bar containing a tying clause is not only an attempt to restrain trade, but an actual restraint thereof, especially when it is considered that more than 1033 of the 1090 shoe manufacturers in the country are compelled to accept such leases for all the bottoming, clicking, and eyeletting machinery used by them.

Continuing, the same court said, in speaking of a circular letter informing jobbers that the Keystone Watch Case Company would refuse to deal with those who handled *independent* goods (512):

> We regard it not as a request, but as a threat; and *not as an empty threat, but as a real menace from a strong manufacturer* * * * Now what the defendant company did was either to close these already existing and already utilized outlets, or to narrow them materially so far as the cases of its competitors were concerned; and we think the proposition need not be discussed that this was *pro tanto* a direct and unlawful restraint of trade. [Italics ours.]

The United Company is a "strong manufacturer"—a giant. It refuses to deal with shoe manufacturers who use independent machines.

The Court in the *Great Lakes Towing Case* (208 Fed. 733 *supra*) says emphatically (745):

> *No more effective obstacle to successful competition could well be devised than is found in this exclusive contract system.* It is manifest that no competitor doing business at less than all 14 of the ports could compete with the Towing Company on anything like equal terms. With the field already occupied by a strong combination, with a large patronage fixedly secured through stockholding interests, the formation of another company equipped to do business at all 14 ports would seem a commercial and financial impossibility. [Italics ours.]
>
> * * * * *
>
> Even competitive practices, of a nature which as between business rivals standing practically on equal terms may be normal and lawful, yet when employed by a powerful monopolistic combination with the ability to crush, and for the purpose of crushing, a weak rival, may become abnormal and unlawful. (744.)

It is equally manifest here that no competitor having less than a complete line of bottoming machinery could compete with the United Company on any terms.

In the *Window Glass Jobbers Association Case*, 152 Fed. 864, we read (870–871):

> *It is argued with much force and ingenuity* by the defendant in error that the combination set out in the declaration was only an agreement by which a certain number of wholesalers were to trade exclusively with a certain manufacturer, with the reciprocal understand-

> ing that the manufacturer was to sell to no one else, except at a price higher than that paid by the parties to the contract; *that this was, in effect, nothing more than an agreement to sell to one person or to several at a price advantageously lower than the general price, on condition that such person or persons would buy exclusively from the manufacturer so agreeing.* In other words the American Window Glass Co. had the right to select its customers and charge one price to one and another price to another. It had the right to offer certain inducements to certain customers in exchange for their exclusive trade. And it had the right to do all or any of these things. But it is always to be borne in mind, in considering arguments of this kind, that the act of Congress has made, and was intended to make, illegal many sorts of contracts and agreements that prior thereto were not only legal, but were regarded as meritorious and beneficial, and has materially restricted the area within which freedom of contract may be exercised. (Italics ours.)

If a contract to sell to one person "at a price advantageously lower than the general price on condition that such person or persons would buy exclusively from the manufacturer so agreeing," is invalid, then a contract leasing to one person, who must agree to any terms fixed by the lessor, on condition that he will lease "exclusively" from the lessor, must be void.

In *Nash* v. *United States*, 229 U. S. 373, 375, one of the means of monopolization named was,

> coercing factors and brokers into contracts with the defendants for the storage and pur-

chase of their receipts and refusing to purchase from such factors and brokers unless such contracts were entered into.

The illegality of such systems even at common law is indicated by Stimson, Popular Law Making, as follows (p. 175):

> We have legislated * * * against what we have termed "*unfair competition,*" that being generally defined to be the making of an artificially low price in a certain locality for the purpose of destroying a competitor, or the making of *exclusive contracts; that is to say, refusing to deal with a person unless he binds himself not to deal with anybody else. This last thing can hardly, however, be said to add to common law principles.* [Italics ours.]

That is precisely what we have here and it is unlawful according to the foregoing authorities.

D. EVEN IF ALL THE SHOE MANUFACTURERS WERE SATISFIED WITH THE CLAUSES COMPLAINED OF THEY WOULD STILL BE ILLEGAL.

Defendants urge that a large number of shoe manufacturers are satisfied with the tying clause system. This can make no difference from a legal standpoint. No man nor body of men can enter into contracts that violate the law of the land merely because such contracts may be to his or their advantage. It is very doubtful, however, whether this contention of the defendants finds any support in the evidence. That a small number of shoe manufacturers prefer the leasing system to one which would require them to purchase their machines out-

right because, as they seem to think, it saves the investment of a large amount of capital in machinery, may be conceded. That it does in fact save the investment of much capital is far from clear, when we consider the great amount of royalties which manufacturers have to pay. (*Supra*, p. 175.) Be that as it may, the Government, as we have heretofore observed, does not find fault with the leasing system as such. That system can continue with all its actual or imaginary benefits to shoe manufacturers after the obnoxious clauses have been eliminated. Those clauses are burdens on, not benefits to, the shoe manufacturers of the country.

The following language from the opinion of this court in the *Reading Case*, 226 U. S. 324, *supra* is applicable here (359):

> That the conditions were not accepted by the independent producers as satisfactory, is evident. The majority at all times stood out, and those making such agreements as well as those refusing to do so, maintained an agitation for better freight rates and better prices for those who preferred to sell at their breakers. For many years before this proceeding they maintained an organization called "the Anthracite Coal Operators' Association," and through that body endeavored to improve their situation.

And so it is here. The so-called "Shoe Manufacturers' Alliance," composed of both large and small shoe manufacturers in the West and in the East, has been endeavoring for several years past through

their organization to devise some plan whereby they might be relieved from the domination of defendants. Practically their last effort was to obtain an interest in the inventions and machines of Thomas G. Plant, but even in that attempt they were thwarted, by the defendants going in during the late hours of the night and acquiring control of all of Plant's inventions, patents, and machinery.

We submit that with respect to the tying clause system employed by defendants the mind of man has about reached the zenith of perfection in devising a scheme to accomplish the stifling of competition and to monopolize trade and commerce. It is illegal and should be condemned.

VI.

THE LESSEES ARE NOT NECESSARY PARTIES TO THIS LITIGATION.

It was intimated in the trial court that the leases could not be condemned unless the lessees were parties to the action. As we have said before, the Government does not attack the leases, but only certain clauses of them. These clauses are, we say, illegal. They impose obligations upon the lessees and are made for the sole benefit of the defendants. The relief sought is a prohibition against the defendants enforcing them. We do not seek in any wise to control the action of the lessees. What we ask would not in the least impinge their rights. Neither would it impose any obligation upon them. On the contrary, it is designed to relieve them from an oppressive and wholly illegal burden.

There is nothing in *Minnesota* v. *Northern Securities Co.* (184 U. S. 199) which militates against our position. In that case, the Court said (245) that the controversy was between—

> the State of Minnesota, the Great Northern Railway Company, the Northern Pacific Railway Company * * * and the Northern Securities Company * * *, the stockholders and bondholders of those corporations, and of the numerous railway companies whose lines are alleged to be owned, managed, or controlled by the Great Northern and Northern Pacific Railway Companies

and that—

> the rights of the minority stockholders of the two railroad companies are not represented * * * ; they have a right to be represented * * * and their rights ought not to be affected without a hearing.

In the words "their rights ought not to be affected without a hearing" lies the gist of that case. But if their rights were not involved, it would follow that they were not necessary parties. As we have just observed, the rights of the lessees are not touched in this case, except to preserve them. Hence, it was not necessary to bring the lessees before the court.

Moreover, this action is not like a private one involving only private rights. It is an action in which the Government charges the defendants with violation of law, and asks for a judgment restraining them from continuing their illegal practices. They can not object to the suit proceeding because parties whom

they claim are interested in their unlawful conduct are not before the Court. No one has the right to say that the unlawful conduct of another shall be permitted to continue because he has an interest in it. The acts complained of are illegal, and the Government has an indubitable right to have defendants restrained from their continuance. This was all brought out very clearly by Judge Lanning in the case of *U. S.* v. *Du Pont de Nemours* (188 Fed. 127).

Speaking for the Circuit Court of Appeals, he said (153):

> We do not propose by our decree to deal with titles to property. Our power is defined in the fourth section of the Anti-Trust Act. That section invests us "with jurisdiction to prevent and restrain violations" of the Act. The same section provides that the petition may contain a prayer that the violation of law, therein alleged, "shall be enjoined or otherwise prohibited." It is our purpose, as it is our duty, to exert the power thus conferred on us to the extent necessary to "prevent and restrain" further violations of the act. In other words, *the relief we can give in this proceeding is preventive and injunctive only.* If our decree, limited to that purpose, shall *necessitate* a *discontinuance* of *present business methods,* it is *only because those methods are illegal.*

Again (155):

> We have not overlooked the motion of the defendants to dismiss the petition for *want* of *necessary* parties. It appears that certain of the defendant corporations have outstanding

> bonds secured by mortgages or trust deeds, held by trust companies, who are not defendants. As already stated, *this suit* is not designed, primarily, to deal with or dispose of *property* rights. We see no reason for bringing in mortgage or other creditors. [Italics ours.]

If "mortgage or other creditors" were not necessary parties in that case, neither are the lessees here. This suit is not designed to deal with any questions that may arise between the defendants and their lessees concerning the leases. It has to do alone with the enforcement of a public statute which defendants have violated.

VII.

STATEMENTS BY SHOE MANUFACTURERS OF THE REASONS WHY THEY DID NOT BUY INDEPENDENT MACHINES WERE ADMISSIBLE.

There is considerable evidence in the record consisting of statements made by shoe manufacturers to the representatives of independent shoe machinery dealers to the effect that they would like to trade with such dealers but could not do so because of the tying clauses in the United Company's leases to which they were parties. These statements were objected to on the ground that they were hearsay, but the objections were overruled and the testimony admitted. This was correct. (*Lawlor* v. *Loewe*, 235 U. S. 522; *Wigmore on Evidence*, Sec. 1729; *Casey* v. *Cincinnati Typographical Union*, 45 Fed. 135, 146, 147; *Elmer* v. *Fessenden*, 151 Mass., 359, 361.)

VIII.

LETTERS PATENT DO NOT JUSTIFY ACTS OTHERWISE ILLEGAL UNDER THE SHERMAN ACT.

A. CERTAIN RIGHTS NOT CONFERRED BY THE PATENT LAW.

The answer of defendant, the United Shoe Machinery Company of New Jersey, the principal operating company, with respect to its alleged rights under letters patent, says:

> If this defendant is engaged in interstate trade and commerce, which it denies, and has any monopoly of such trade or commerce, which it denies, *then this defendant says any such monopoly is a valid and legal monopoly of such trade or commerce derived under and pursuant to and coextensive with letters patent of the United States or of foreign countries, owned by it.* [Italics ours.] (R. I, 1045.)

It seems to be upon this defense that defendants chiefly rely. But we submit that there is no authority under the patent laws or in the decisions of the courts which sustains their contention.

> The right to make, use, and sell an invented article is not derived from the patent law. This right existed before and without the passage of the law, and was always the right of an inventor. The act secured to the inventor the exclusive right to make, use, and vend the thing patented, and consequently to prevent others from exercising like privileges without the consent of the patentee. *Bauer* v. *O'Donnell*, 229 U. S. 1. (See also *Bloomer* v. *McQuewan*, 14 How. 539, 549; *Continental Paper Bag Co.* v. *Eastern Paper Bag Co.*, 210

U. S. 405, 425; *Blount* v. *Yale & Towne Mfg. Co.*, 166 Fed. 555.)

The right to contract concerning the patent is not derived from the patent itself, but from the general law, and is governed by that law. *Pope Manufacturing Co.* v. *Gormully*, 144 U. S. 224; *State* v. *Bell Telephone Co.*, 23 Fed. 539; *State* v. *Delaware etc. Tel. Co.*, 47 Fed. 633; *Delaware, etc., Tel. Co.* v. *Postal Telegraph Co.*, 50 Fed. 677 (affirming 47 Fed. 633); *Heaton Peninsular Button-Fastener Co.* v. *Eureka Specialty Co.*, 77 Fed. 288; *Strait* v. *National Harrow Co.*, 18 N. Y. Supp. 224. *Opinion of the Justices*, 193 Mass. 605.

Thus, in *Pope* v. *Gormully, supra*, it was held that an agreement not to contest the validity of certain patents of the licensor, in consideration of a license to use certain other patents, is unenforceable.

Again, it was held in the three telephone cases, *supra*, that the holder of telephone patents could not lawfully impose in its licenses to subsidiary companies a condition that telephone service should not be furnished to any telegraph company except the Western Union Company, because such a condition violated the common-law duty of the licensee to serve all alike. The principle is thus stated by Wales, J., in *State* v. *Delaware, etc.*, 47 Fed. 633, 636:

> The conclusion drawn from an examination of these cases is that the patent laws give to the patentee a monopoly in his invention, and afford him protection in its proper and legitimate employment; but that they do not authorize him to employ it for a purpose or

in a manner that may be *forbidden to all other persons in the use of their unpatented property or discoveries.* [Italics ours.]

In the *State of Missouri, etc.*, v. *Bell Telephone Company*, 23 Fed., 539, Brewer, J., said (540):

> I believe fully in the sacredness of property; but I think all property stands upon an equal basis, whether that property consists of gold dollars in your pocket, real estate, or the ownership of a patent. There is no peculiar sanctity hovering over or attaching to the ownership of a patent. It is simply a property right, to be protected as such. Starting from that as a basis, while every property owner may determine for himself to what he will devote his property, yet the moment he puts that property into what I perhaps may, for lack of a better expression, define as the channels of commerce, that moment he subjects that property to the laws which control commercial transactions.

Similarly, in *Heaton-Peninsular Button-Fastener Co.* v. *Eureka Specialty Co.*, 77 Fed. 288, *supra*, Lurton, J., said (292–293):

> We are not at all prepared to say that there are no limitations upon a patentee's power of contract with reference to the use of his invention by others. *The property right of a patentee is, after all, but a property right, and subject, as is all other property, to the general law of the land.* We may also concede that contracts respecting the use of inventions and discoveries are, like all other contracts, sub-

> ject to the limitations imposed by definite principles of public policy. [Italics ours.]

In the same case the court continued thus (293):

> The patentees were under no obligation to license the use of their inventions by any public telephone company. Having done so, however, they were not at liberty to place restraints upon such a public corporation which would disable it from the discharge of all the duties imposed upon companies engaged in the discharge of duties subject to regulation by law. * * * Neither the patentee, nor the machine involving his invention, nor a license for use, can be exempted from the liabilities and regulations which, in the public interest, attach to all persons and property under the general law of the land.

Again, it was held in *Strait* v. *National Harrow Co.*, *supra*, that restrictive agreements extending 50 years beyond the life of the patent are invalid, though entered into in consideration of a license to use the patented invention.

In the same way, in the *Opinion of the Justices*, 193 Mass. 605, it was held that the State had the power to pass a statute prohibiting the owner of patented machinery to embody in leases thereof a condition that the lessee should procure other machinery from the lessor. That opinion was given by the Supreme Judicial Court of Massachusetts to the State Senate upon the question of the constitutionality of a proposed act "To regulate the lease and sale of ma-

chinery, tools, implements, and appliances" (St. 1907, c. 469,—Mass.).

The justices after quoting from the decision of Mr. Justice Harlan in *Patterson* v. *Kentucky*, 97 U. S. 501, with respect to property rights of patentees or assignees, went on to say (p. 610):

> We think also that it is manifest that not every right which in the absence of legislative prohibition can be by contract annexed to the assignment of a patent right, or to a license given thereunder, or to the sale or lease of a patented machine, is therefore to be said to be necessarily incident to the full exercise of the right secured by the patent.

The distinction between the right to exclude others from making, using, or selling the invention and the right to contract with respect to the invention is clear. The right to exclude is derived from the patent. That is the only right which the patent confers. The right to contract is derived from the general law. The patentee had it before he took out the patent. (*Brown* v. *Shannon*, 20 How. 55; *Hartell* v. *Tighlman*, 95 U. S. 547; *Wilson* v. *Sandford*, 10 How. 99; *Albright* v. *Teas*, 106 U. S. 613; *Dale Tile Mfg. Co.* v. *Hyatt*, 125 U. S. 46.) He would still have it if he had never obtained the patent. Clearly, therefore, it is not derived from or dependent upon the patent. Therefore since the right to contract is derived from the general law, the validity of the contracts so made must depend upon that law. But, *if the validity of such contracts is*

determined by the general law, they must be subject to the Sherman Act, which is a part of that law.

B. PATENTS CONFER NO RIGHT ON PATENTEES OR ASSIGNEES ENGAGED IN INTERSTATE TRADE AND COMMERCE TO COMBINE TO RESTRAIN OR MONOPOLIZE SUCH TRADE AND COMMERCE.

The cases on this point are not numerous and we shall refer briefly to each.

In *National Harrow Co.* v. *Hench et al.*, 76 Fed., 667, Circuit Judge Acheson, holding the Harrow Co. to be an illegal combination, said (p. 669):

> It is true that a patentee has the exclusive control of his invention during the life of the patent. He may practice the invention or not, as he sees fit, and he may grant to others licenses upon his own terms. But where, as was the case here, a large number of independent manufacturing concerns are engaged in making and selling, under different patents and in various forms, an extensively used article, competition between them is the natural and inevitable result, and thereby the public interest is promoted. Therefore, a combination between such manufacturers, which imposes a widespread restraint upon the trade, and destroys competition, is as injurious to the community, and as obnoxious to sound public policy, as if the confederates were dealing in unpatented articles. * * * To sanction such a result, because accomplished by a combination of patentees would be, I think, to pervert the patent laws. * * * I am constrained to regard the license contracts sued on as part of an illegal combination and in unwarrantable restraint of trade.

Plaintiff appealed to the Circuit Court of Appeals for the Third Circuit, 83 Fed. 36, where the judgment below was affirmed. On the question of illegal combination the appellate court said (p. 38):

> The fact that the property involved is covered by letters patent is urged as a justification; but we do not see how any importance can be attributed to this fact. Patents confer a monopoly as respects the property covered by them, but they confer no right upon the owners of several distinct patents to combine for the purpose of restraining competition and trade. Patented property does not differ in this respect from any other. The fact that one patentee may possess himself of several patents, and thus increase his monopoly, affords no support for an argument in favor of a combination by several distinct owners of such property to restrain manufacture, control sales, and enhance prices. Such combinations are conspiracies against the public interests and abuses of patent privileges. The object of these privileges is to promote the public benefit, as well as to reward inventors. The suggestion that the contract is justified by the situation of the parties—their *exposure to litigation*—is entitled to *no* greater weight. Patentees may compose their differences, *as* the owners of *other* property may, but they can *not* make the occasion an excuse, or cloak for the creation of monopolies to the public disadvantage. We do not see anything to distinguish this case, in principle, from *Nester* v. *Brewing Co.*, 161 Pa. St. 473; 29 Atl. 102; *Carbon Co.*

> v. *McMillin*, 119 N. Y. 46; 23 N. E. 530; *Morris Run Coal Co.* v. *Barclay Coal Co.*, 68 Pa. St. 173; *Distilling & Cattle Feeding Co.* v. *People* (Ill. Sup.). 41 N. E. 188; *Strait* v. *Harrow Co.* (Sup.), 18 N. Y. Supp. 233. [Italics ours.]

The italicized part is especially pertinent in view of the contention of the defendants that many of their illegal acquisitions were justified by the fact, as claimed by them, that they were made to avoid litigation (*supra*, pp. 43, 63, 120).

There is nothing in *Bement* v. *National Harrow Co.*, 186 U. S. 70, that is opposed to our position. In that case there was no proof that the contract involved was a contract and combination in violation of the Anti-Trust Law, and because of this the court refused to say that it was illegal. This was very clearly pointed out in the *Standard Sanitary Case*, 226 U. S. 20, where the court said (48):

> There was a contention in that case [Bement case] that the contract of the National Harrow Company with Bement & Sons was part of a contract and combination with many other companies and constituted a violation of the Sherman law, *but the fact was not established and the case was treated as one between the particular parties, the one granting and other receiving a right to use a patented article with conditions suitable to protect such use and secure its benefits.* [Italics ours.]

In Blount Manufacturing Company v. *Yale & Towne Manufacturing Company*, 166 Fed. 555, the Court said (557):

> The monopoly granted by letters patent is of a particular invention. Devices thus protected by patents are as a matter of fact in commercial competition with both patented and unpatented devices. A contract whereby the manufacturers of two independent patented inventions agree not to compete in the same commercial field deprives the public of the benefits of competition, and creates a restraint of trade which results, not from the granting of letters patent, but from agreement. While the monopoly of the patented articles is not increased, the monopoly of the commercial field is increased by the "unified tactics" as to prices.
>
> (562) Combinations between owners of *independent patents*, whereby, as a part of a plan to monopolize the commercial field, competition is eliminated, *are* within the Sherman Act, for the reason that the restraint of trade or monopoly arises from *combination*, and *not* from the exercise of rights granted by letters patent. As by the terms of the contracts under consideration the owners of *distinct patents* each agreed to restrain its own interstate trade, I am of the opinion that the contracts are in these particulars obnoxious to the Sherman Anti-trust Act. [Italics ours.]

That case is supported and supplemented by *United States* v. *Standard Sanitary Mfg. Co.*, 191 Fed. 172. The Court (three Judges sitting) said, through Rose, J. (190):

> A patentee is as much subject to the laws of the land as is any other man * * *. It [a

> patent] does not give a right to sell indulgences to violate the law of the land, be it the Sherman Law or another.

Continuing, the Court observed:

> A patentee who monopolizes his invention breaks no law. He who uses his property right to exclude others from the making, selling, or using his invention for the purpose and with the effect of making a combination to restrain trade in something from which his patent gives him no right to exclude others, does break the law. He breaks it precisely as the individual defendants in the Standard Oil and American Tobacco Companies broke it. They had the same right to use their brains, their capital, and their credit as they thought best, as he had to use his right to exclude all others from making, using, or selling automatic dredgers. He was subject to the same limitations as they were. They could not lawfully use their brains, their money, and their credit to restrain trade in petroleum and tobacco. He can not use his patent rights to restrain trade in unpatented bathtubs.

The judgment of the Circuit Court in that case was affirmed by this Court (226 U. S. 20, *supra*) in an opinion by Mr. Justice McKenna. After pointing out the distinction between that case and the *Bement* case as above noticed, he said:

> The agreements in the case at bar combined the manufacturers and jobbers of enameled ware very much to the same purpose and results as the association of manufacturers and dealers

> in tiles combined them in *Montague & Co.* v. *Lowry*, 193 U. S. 38, which combination was condemned by this court as offending the Sherman law. The added element of the patent in the case at bar can not confer immunity from a like condemnation for the reasons we have stated. * * * *Rights conferred by patents are indeed very definite and extensive, but they do not give any more than other rights an universal license against positive prohibitions. The Sherman law is a limitation of rights, rights which may be pushed to evil consequences and therefore restrained.* [Italics ours.]

The case of *Straus et al.* v. *American Publishers' Association et al.*, 231 U. S. 222, involved the question as to whether or not the copyright laws protected an agreement made by the defendants restricting the sale, price, etc., of copyrighted books, in violation of the Sherman Act. In it the foregoing language of Mr. Justice McKenna was quoted with approval, and then the Court observed:

> So, in the present case, it can not be successfully contended that the monopoly of a copyright is in this respect any more extensive than that secured under the patent law. No more than the patent statute was the copyright act intended to authorize agreements in unlawful restraint of trade and tending to monopoly, in violation of the specific terms of the Sherman law, which is broadly designed to reach all combinations in unlawful restraint of trade and tending because of the agree-

> ments or combinations entered into, to build up and perpetuate monopolies. * * *

To the same effect are *Virtue* v. *Creamery Package Co.*, 227 U. S. 8; *International Harvester Co.* v. *Missouri*, 234 U. S. 199, 209; and *U. S.* v. *Pacific and Arctic Co.*, 228 U. S. 87, 104.

United States v. *Winslow*, 227 U. S. 202, *supra*, contains no statement that owners of competing patents have a right to combine and no expression of any opinion upon a state of facts like those here in evidence.

Nor is *Henry et al.* v. *Dick*, 224 U. S. 1, applicable to the case at bar. A careful examination of that decision will show that it rests on ground fundamentally distinct from it.

The only restriction placed upon the purchaser of the mimeograph machine in that case was thus expressed (p. 11):

> This machine is sold by the A. B. Dick Co., with the license restriction that it may be used only with the stencil paper, ink, and other supplies made by A. B. Dick Company, Chicago, U. S. A.

As construed by this Court, the restriction is limited to "supplies necessary for" the operation of the machine. We quote from the opinion (34):

> For the purpose of testing the consequence of a ruling which will support the lawfulness of a sale of a patented machine for use only in connection with supplies *necessary for its operation* bought from the patentee, many fanciful suggestions of conditions which might

> be imposed by a patentee have been pressed upon us. [Italics ours.]

In the present case, the restrictions which the defendants impose go far beyond the use of its machines "only in connection with supplies necessary for (their) operation." They apply to the use of entirely different and independent machines which have no mechanical or other necessary connection with the machine as to which the alleged limitation of use is insisted upon by the defendants. (*Supra*, p. 14, 204–205.)

There are other differences, equally fundamental, between the *Dick* case and that now before the Court. In the *Dick* case, there was but one contract involved, a contract between the patentee and Miss Skou. In this case we have a vast number of contracts with a great number of people embodying a comprehensive system of restrictions. It might well be said that one contract such as existed in the *Dick* case would not be a violation of the Sherman Act, while a large number of like contracts with many persons as in the instant case, would be.

As the Court said in the *La Chapelle* case (212 Mass. 467, *supra*, at p. 485):

> A single contract for the employment in labor of one person is far away from interstate commerce. * * * As a single incident it may be harmless. As an integral part of an unlawful scheme for monopolizing commerce between the States which can not be perpetu-

> ated successfully without contracts of like tenor with all practicing a similar craft, it partakes of the illegality of the scheme.

This distinction was recognized and enforced in the *Bement* case, 186 U. S. 75, upon which the Court seemed to greatly rely in the *Dick* case. In the former there were but two contracts. Speaking of them, Mr. Justice Peckham observed (87):

> There is no finding by the referee that this agreement was ever signed by anyone other than the parties to this action or that any other person received the licenses from and made contracts with the plaintiffs similar to the ones entered into between these parties. * * * In the absence of any finding as to the escrow agreement having been signed by others, it must be regarded as unimportant, and we are brought back to the question whether these contracts or licenses, A and B, irrespective of any contracts not found by the referee as in any way connected with or forming a part thereof, are void as a violation of the Act of Congress (Anti-Trust Act).

He reached the conclusion they were not, but for the obvious reason that within themselves they were not sufficient to constitute an unreasonable restraint of trade.

This Court pointed out and emphasized the same distinction in the *Standard Sanitary Case*, 226 U. S. 20, where it said (48):

> There was a contention in that case that the contract of the National Harrow Company with Bement & Sons was part of a contract and

> combination with many other companies and constituted a violation of the Sherman law, *but the fact was not established, and the case was treated as one between the particular parties, the one granting and the other receiving a right to use a patented article with conditions suitable to protect such use and secure its benefits,* * * * and there is nothing in *Henry* v. *A. B. Dick Co.*, 224 U. S. 1, which contravenes the views herein expressed. [Italics ours.]

Even the *Dick* case recognizes that in certain circumstances the State and Nation may impose restrictions upon the rights of a patentee. It says (29):

> That there are limitations upon the right of vending and using a patented machine may be conceded. Thus, if the thing patented belong to a class of things which on account of their inherent danger to the public safety or health, can not be sold or used because prohibited by an exertion of the police power of a state, they will not be immune to such a law because patented.

If the state may impose restrictions for the reasons indicated *a fortiori* so also may the Nation where the public good demands it.

In *Bauer & Cie* v. *O'Donnell*, 229 U. S. 1, the right of a patentee to limit the price at which the vendee might dispose of a patented article is denied and attention is called to the narrowness of the facts in the *Dick* case and its scope is limited to them (pp. 14–16).

The precise question which we have here was before the Supreme Judicial Court of Massachusetts in the

La Chapelle case *supra*, p. 220. There the Court observed:

> Therefore, the further question arises whether a combination among several patentees of competing devices is within the inhibition of the statute.

Answering this, after referring to all the decisions of this Court upon the subject, including the *Dick* case, it was said (482–3):

> No word or phrase in the Sherman Anti-Trust Act reveals an intent to exempt the owners of patents from its sweeping provisions against monopolistic combination. We are unable to perceive any underlying reason for supposing that by implication growing out of economic or business conditions such an exemption was intended. There appears to be no inherent natural distinction between owners of patents and owners of oil which would justify the application of the statute to one and not to the other. The conclusion seems to follow that the comprehensive condemnation of the act against every person who monopolizes interstate commerce by combination with others includes holders of patents as well as others.

In *United States* v. *Motion Picture Patents Company*, 225 Fed. 800, a very recent decision, the court discusses at great length the question as to whether or not owners of patents may combine and thereby restrain and monopolize trade without violating the Anti-Trust Law, and he reaches the conclusion, after careful examination of all the decisions of this court

upon the question, that they may not. In that connection the Court says:

> The distinction sought to be pointed out is that while the owner of a patent on a plow covering the handles or beam might acquire or join with the owners of patents covering the moldboard or share or other parts of the plow for the protection of the patented rights of all and thereby incidentally secure an enlarged part of the trade in plows, the judgment would refuse to sanction a combination between the owners of patented plows, patented harrows, patented reapers and binders * * * for the purpose of monopolizing the whole trade in the products of agriculture if the direct end first proposed was to unduly and unreasonably restrain trade as a means to the final purpose of monopolizing. The ownership of the patents in such a case surely could not be accepted as a defense to the charge of unlawful combination. (810)

We can not end our discussion of this point better than by repeating the language of Mr. Justice McKenna in the *Standard Sanitary* case, *supra* (458):

> Rights conferred by patents are indeed very definite and extensive, but they do not give any more than other rights an universal license against positive prohibitions. The Sherman Act is a limitation of rights, rights which may be pushed to evil consequences and therefore restrained.

IX.

THE ALLEGED PATENT INFRINGEMENTS DO NOT REMOVE THE ILLEGALITY OF THE DEFENDANTS' ACQUISITIONS.

A. THE CHALLENGED PATENTS WERE PRESUMPTIVELY VALID.

The purchase of the Eppler Company, the Plant interests, and other acquisitions is sought to be justified by the defendants upon the ground that patented machines owned by them infringed machines belonging to the United Company. The defendants have attempted to prove such infringements. We deny that this may be done in an action under the Anti-Trust Act, because it would constitute a collateral attack upon the novelty and utility of the patent. Every patent issued is *prima facie* valid. It represents the judgment of the patent officials in a matter concerning which Congress has conferred upon them the exclusive right to decide in the first instance, and this judgment can not be reviewed or set aside except in the manner provided by statute.

In *Smelting Co.* v. *Kemp*, 104 U. S. 636, speaking of the issuance of a patent by the officers of the Land Department, the court said (640–641):

> In that respect they exercise a judicial function and, therefore, it has been held in various instances by this court that their judgment as to matters of fact properly determinable by them is conclusive when brought to notice in a collateral proceeding.

In *Boyd* v. *Jaynesville Hay Tool Co.*, 158 U. S. 260, the following language from Mr. Justice Strong in a former case was approved (261):

> The grant of the letters patent was virtually a decision of the patent office that there is a substantial difference between the inventions. It raises the *presumption* that, according to the claims of the later patentees, this invention is not an infringement of the earlier patent. [Italics ours.]

In *Lehnbeuter* v. *Holthaus*, 105 U. S. 94, 96, it was said:

> The patent is *prima facie* evidence of both novelty and utility.

See also *Barden* v. *Northern Pacific R. R. Co.*, 154 U. S. 288, 327; *U. S.* v. *Motion Pictures Patents Co.*, 225 Fed. 800, 804; *Marsh* v. *Nichols, etc., Co.*, 128 U. S. 605, 610.

B. THEIR VALIDITY MAY BE CHALLENGED ONLY IN AN APPEAL OR AN ACTION FOR INFRINGEMENT.

Congress has provided for appeals in certain cases from the decisions of the patent officials to the Supreme Court of the District of Columbia. (R. S. Sec. 4911–4914.) It has also provided that the validity of a patent may be attacked for certain reasons in a collateral proceeding. (R. S. Sec. 4920.) But this attack may be made only "*in an action for infringement*" and in accordance with the provisions of that Act.

Rubber Co. v. *Goodyear*, 9 Wall. 788, was an action for infringement. The court was asked to go behind the decision of the Commissioner of Patents and inquire into the frauds by which it was alleged that

a patent extension was procured (796). It refused to do so on the ground that this defense was not included amongst those that might be presented under the act of 1836, which was the statute then in force with respect to the grounds upon which a patent could be collaterally attacked. After stating that no defense could be entertained in a collateral proceeding *except that provided for in the statute*, the court said, quoting from Chancellor Kent (797):

> Unless letters patent are absolutely void on the face of them, or the issuing of them was without authority or was prohibited by statute, they can only be avoided in a regular course of pleading in which the fraud, irregularity or mistake is *regularly* put in issue. [Italics ours.]

In *Mahn* v. *Harwood*, 112 U. S. 354, 358, we read:

> It was not intended then, and is not now, to question the conclusiveness, in suits for infringements of patents, of the decisions of the Commissioner on questions of fact necessary to be decided before issuing such patents, except as the *statute* gives *specific* defenses in that regard. [Italics ours.]

In *Marsh* v. *Nichols, Shepard & Co.*, 128 U. S. 605, Mr. Justice Field, speaking for this court said (610):

> It is undoubtedly true, as a general rule, that a patent of the United States, whether for land or for an invention, can be attacked for defects, not apparent on its face, only by *regular* proceedings instituted for *that purpose*, and is not open to collateral attack except

> where *specially* provided by statute. [Italics ours.]

Continuing, he observed:

> In such cases the impeachment must be by pleadings setting up the *specific* acts, which it is alleged, vitiate and defeat the instrument. [Italics ours.]

We have no such pleading in this case.

Besides, Section 4920 R. S. requires the party who desires to avail himself in a collateral proceeding of the defenses enumerated therein, to give notice in writing thirty days before the trial of the defenses relied upon. That was not done in the case at bar and this alone would, under the authority of *Eureka Co.* v. *Bailey Company*, 11 Wall. 488, 492, prevent the defendants from availing themselves of the defenses.

This court has said in *United States* v. *Bell Telephone Co.*, 167 U. S. 224, at page 269, that courts of the United States sitting as courts of equity could not—

> entertain jurisdiction of a suit by the United States to set aside a patent for an invention on the mere ground of error of judgment on the part of the patent officials. That would be an attempt on the part of the courts in collateral attack to exercise an appellate jurisdiction over the decisions of the patent office although no appellate jurisdiction has been by the statutes conferred.

Why? Manifestly because suit by the United States would not be "an action for infringement."

If it was, the judgment of the patent officials in the respect mentioned could be attacked collaterally under Section 4920 of the Revised Statutes, *supra*.

Congress has, according to this court in that case, given to the patent office "exclusive jurisdiction in the first instance" over all questions of "novelty and utility" and "has specifically provided under what circumstances its decisions may be reviewed either *collaterally* or by appeal." (267) [Italics ours.]

In that case one of the contentions of the Government was that a prior patent covered the same invention covered by the subsequent one and therefore that the latter was invalid. The court held that the Government could not present such a question in the case then before the court because that question had been determined by the patent office (264), and that if presented at all it must be done in a suit brought by an *individual* for infringement under Section 4920, R. S. *supra*.

The meaning of this decision, as we read it, is that the contention of the Government being in the nature of a collateral attack upon the validity of the patent, the point could be presented *only* "in an action for infringement." The action at bar not being one for infringement, the validity of the patents can not be drawn in question—all must be treated as valid.

If the law were otherwise it would be very unfortunate, because it would greatly burden the administration of the Anti-Trust statute. In this case it would be necessary for the court to decide many hun-

dred patent claims before it could determine whether or not the Sherman Act had been violated. The patent expert, Howard, says that with respect to the Plant purchase alone, the number of patents would be 132 and the number of claims would be 708. (R. I, 800, l. 5.) The total number involved in all the acquisitions would be, of course, much greater.

C. WHETHER THE PATENTED MACHINES WHICH WERE ACQUIRED INFRINGED PATENTED MACHINES OWNED BY THE UNITED COMPANY IS IMMATERIAL FOR ANOTHER REASON.

There was actual and vigorous competition between the companies owning the machines which the United Company claims infringed machines belonging to it. That competition was suppressed by the acquisition. The Anti-Trust statute, it appears, makes no distinction between rightful or wrongful interstate trade. It was so held by the decision of the Circuit Court of Appeals for the 6th Circuit in *Patterson* v. *United States*, 222 Fed. 599, in which Mr. Justice Day concurred.

The lower Court had rejected certain evidence offered to prove that the purchasing corporation owned unexpired patents covering the machines made by 16 competitors whom it bought out. This evidence was offered for the purpose, as here, of showing that in acquiring the competitors the corporation did not violate the Anti-Trust Act. The court of appeals in sustaining the action of the lower court said of the Sherman Act (646):

> It includes every conspiracy in restraint of interstate trade or commerce. It is not a

question whether it is *rightful or wrongful interstate* trade or commerce that is covered by the conspiracy. It is *sufficient* that it is interstate trade or commerce. If two or more persons in no way interested in a patent were to conspire in restraint of interstate trade or commerce of an infringer, no one would contend that the conspiracy was not covered by the statute. *No more* is it open to contend that a *conspiracy* by a *patentee* and *another*, or by the officers and agents of a patentee in his interest, to restrain the interstate trade and commerce of an infringer is not within the statute. *The intent of the statute was to sweep away all conspiracies in restraint of such trade or commerce whatever their character may be. The statute respects the monopoly of the patentee.* It to no extent invades the rights conferred upon him. (Citing authorities.) But the right to conspire with another or others in his interest in restraint of the interstate trade or commerce covered by his patent *is not* one of the rights conferred thereby and such a conspiracy is within the statute. [Italics ours.]

CONCLUSION.

The Government has established then, that there existed vigorous competition between three of the Companies merged in the organization of the United Company, and that the fourth Company, which at any moment might have become a competitor, was taken in for the purpose and with the effect of furthering the unlawful scheme of the combination thus brought into being; that there was like competition

between the United Company and many of its subsequent acquisitions, and that such competition was especially vigorous and threatening with the Plant interests; that these acquisitions not only destroyed prevailing but also strangled potential competition both by combination and through the operation of restrictive contracts exacted from the vendors; and further that the defendants have adopted and are enforcing certain oppressive tying clauses in their leases which coerce the shoe manufacturers of the country into dealing with them on their own terms and force them to boycott independent shoe machinery manufacturers—clauses which have practically destroyed all competition in bottoming, eyeletting, and clicking machinery, and have eliminated every inducement to the birth of new competition. In the language of the House Judiciary Committee, those clauses form "one of the greatest instrumentalities of monopoly devised by the brain of man." Considering the entire record, the Government urges that the prayer of its petition in all respects should be granted.

Respectfully submitted.

T. W. GREGORY,
Attorney General.
JOHN W. DAVIS,
Solicitor General.
G. CARROLL TODD,
Assistant to the Attorney General.

Ex. 321, reference—Note by U. S. M. Co. representative as to operation of machine in Non-Royalty Shoe Company. This company used no U. S. M. Co. machines, and was in existence but a few months—about 1912. Also note by Haverhill Company to U. S. M. Co. that it can supply this machine.

LASTING DEPARTMENT.

LASTING MACHINE.

Company.	Manufactured and marketed in U. S. to shoe manufacturers.	References.		Remarks.
		Testimony.	Exhibits.	
Under lease by U. S. M. Co., on Mar. 1, 1911.	**7,496**	.....	Pltffs. Ex. 163, IV, 1125, 1126. Defts. Ex. 228, V, 430, 432.	Total represents: Hand method (four divisions), 3,854; Chase, 780; McKay & Copeland, 300; Ideal & Copeland (five divisions), 482; No. 5, 2,080.
R. H. Long Mchy. Co... So. Framingham, Mass.	**4**	Doidge (R. I, 344, l. 34).	Defts. Ex. 321, p. 5E.....	Three to Buffalo Shoe Company, not a lessee of U. S. M. Co.; one to Zion Coop. Merc. Ass'n, a hand-process concern mostly. Defts. Ex. 321, reference—Note by Haverhill Shoe Mchy. Co. to U. S. M. Co. that it can supply Long machine.
Boylston Mfg. Co..... Boston, Mass.	**1**	Maloy (R. I., 301, l. 23; 302, l. 16). Cavanaugh (R. I, 956, l. 8).	Defts. Ex. 321, p. 192A.....	Not included among machines specified by witness Maloy, nor in catalog of company. Machine noted was installed on trial in January, 1914 (subsequent to death of Maloy). Defts. Ex. 321, reference—Note by U. S. M. Co. representative that he has reason to believe this company manufactures this machine.
Louis G. Freeman Co.... Cincinnati, O.	**2**	McElroy (R. I, 190, l. 20).	Defts. Ex. 321, p. 7, A1, A2..	No representative of company called. Defts. Ex. 321, reference—Note by U. S. M. Co. representative as to operation of machine in Non-Royalty Shoe Company. This company used no U. S. M. Co. machines and was in existence but a few months—about 1912. Witness McElroy stated that the only lasting machine used in the Non-Royalty Shoe Company which was procured in the United States was a trial machine of the Krentler Company—last manufacturers—Detroit, Mich. This had not been perfected and was not a commercial proposition. The Krentler Company—prior to 1913—had produced only two of these machines. Both of these were installed in the Non-Royalty Shoe Company, but only one was operated. The Louis G. Freeman Co. was the representative for the Krentler Company.

APPENDIX "B."

PART II.

OTHER MACHINES.

WELT BEATING MACHINE.

BOYLSTON MFG. CO., Boston, Mass.

Not included in list specified by witness Maloy on pages 301 and 302, nor in catalog of company—page 302.

(Maloy, I, 301, l. 23; 302, l. 16.)

Defts.' Ex. 321. Reference: page 192, item D. Note by U. S. M. Co. representative that he has reason to believe the Boylston Co. manufactures this machine.

HAMEL SHOE MCHY. CO., Lynn and Haverhill, Mass.

Twenty-five machines manufactured and marketed in United States by Duplessis Shoe Mchy. Co.—a defunct concern—and its successors, C. A. Hamel and Hamel Shoe Mchy. Co.

No division of sales shown in Pltff's Ex. 159, customers of Duplessis Co. and successors.

(Hamel, I, 326, l. 44.)

Defts.' Ex. 321. Reference: page 95, item G. Notation in sale list of Non-Royalty Shoe Company machines—June, 1913. This company used no U. S. M. Co. machines and was in existence but a few months—about 1912.

HAVERHILL SHOE MCHY. CO., Haverhill, Mass.

None marketed since date of manufacture—May, 1913.

(Webster, I, 292, l. 30.)

Defts.' Ex. 321. Reference: page 5, item T. Haverhill Co. statement to U. S. M. Co. that it can furnish this machine.

R. H. LONG MCHY. CO., South Framingham, Mass.

None marketed prior to June, 1913.

Doidge explained that not all machines listed in catalog were manufactured at date of June, 1913, but that it was the intention of the company to do so.

(Doidge, I, 346, l. 16.)

Defts.' Ex. 321. Reference: page 56, item E. Notation for this machine in catalog of company.

BOUND
N BOOK

OUTSOLE BLOCKING MACHINE (cutting outsoles).

QUARMBY & HILLIKER, Lynn, Mass.

Twelve machines manufactured and marketed among shoe manufacturers—sometimes referred to as "sole cutters."

The manufacture of these machines has been discontinued.

(Hilliker, I, 929, l. 5.)

Defts.' Ex. 321. Reference: page 11, items A and B. Quotation to U. S. M. Co.

HEEL BUILDING MACHINE.

W. T. BOSWORTH, Brockton, Mass.

Machine manufactured by the Brockton Heel Co., which Bosworth represents.

This is sold or leased to shoe and heel manufacturers and is a measuring machine or device, rather than a heel building machine.

Manufacture of this machine commenced about January, 1914.

To Bosworth's knowledge the U. S. M. Co. builds no machine for performing a similar operation.

(Bosworth, I, 911, l. 22 et seq.)

Defts.' Ex. 321. Reference: page 43, item A. Quotation to U. S. M. Co. on "Log Building and Log Slicing Machines."

JAMES BOSTOCK & SONS, Brockton, Mass.

Approximately 100 machines per year have been sold during past 17 years to shoe and heel manufacturers. A fair proportion of these have been sold to the U. S. M. Co., which also manufactures a heel building machine, although not essentially the same as the Bostock machine.

(Bostock, I, 904, l. 24 et seq.)

Defts.' Ex. 321. Reference: page 21, item F. Quotation to U. S. M. Co.

FORTUNA MACHINE CO., New York, N. Y.

None manufactured since organization of this company in 1903.

This company intended to manufacture and market a heel-building machine invention of one Geiger. It did not prove commercially successful, however, and nothing further was done by the Fortuna Company.

(Diehl, I, 911, l. 1.)

Defts.' Ex. 321. Reference: page 79. Announcement by the company that a heel building machine will be exhibited at a shoe and leather fair.

W. J. Young Mchy. Co., Lynn, Mass.

Approximately 2,500 machines have been manufactured since about 1906, practically all of which were marketed in the United States. The majority of these machines were sold to shoe manufacturers, although this was not true during the earlier years of the sale of these machines.

(Young, I, 942, l. 27.)

Defts.' Ex. 321. Reference: page 62, item F. Advertisement of machine.

Geo. Knight & Co., Brockton, Mass.

None manufactured during the past 15 years.

(Knight, I, 902, l. 32.)

Defts.' Ex. 321. Reference: page 9, item H. Quotation to U. S. M. Co.

Parsons Mchy. Co., Marlboro, Mass.

No representative of company called as a witness.

Defts.' Ex. 321. Reference: page 12, item C. Quotation to U. S. M. Co. on a "Pieced Heel Machine."

F. H. White & Co., So. Easton, Mass.

No representative of concern called as a witness.

Defts.' Ex. 321. Reference: page 46, item A. Quotation to U. S. M. Co. and catalog of the concern.

CEMENTING MACHINES (cementing taps for soles).

Universal Supply Co., Haverhill, Mass.

No representative of company called as a witness.

Witness Donnelly, who has been engaged in the shoe machinery business for the past 14 years, stated that he has never heard of this company.

(Donnelly, I, 943, l. 38; 944, l. 31.)

Defts.' Ex. 321. Reference: page 160. Letter offering machine for sale.

Hazen-Brown Co., Brockton, Mass.

None manufactured by this company itself, although these machines are manufactured for it. These are sold to the Cochituate Oilproof Company, which loans them free to

shoe manufacturers in connection with sale of a special cement known as "gumbo tap sticker."

(Hazen, I, 906, l. 14.)

Defts.' Ex. 321. Reference: page 158. Letter to the U. S. M. Co. explaining that these machines are loaned to shoe manufacturers buying "gumbo cement" and using nothing else in these machines.

BOSTON MACHINE WORKS, Lynn, Mass.

Approximately 700 to 800 Julian cementing machines for cementing soles of shoes marketed among shoe manufacturers during past 10 years, 90% of which have been sold in the United States.

This company manufactures a fold-cementing machine which can not properly be included under this classification.

(Illingworth, I, 926, l. 43, et seq.)

Defts.' Exhibit 321. Reference: page 95, item X. Notation in sale list of Non-Royalty Shoe Company machines—June, 1913. This company used no U. S. M. Co. machines and was in existence but a few months—about 1912.

Another reference is to page 49 (Cat. p. 34). Notation for this machine in catalog of company.

CHANNELING MACHINES (insoles and outsoles).

R. H. LONG MCHY. CO., So. Framingham, Mass.

No information obtained as to the output of Arnold channeling machine referred to in testimony of witness Doidge—page 1698—as one of the machines manufactured by the company.

In explanation of catalog Doidge stated that not all machines listed therein were manufactured at date of June, 1913, but that it was the intention of the company to do so.

(Doidge, I, 346, l. 5–16.)

Defts.' Ex. 321. Reference: page 56. Notations for "Arnold Channeler" and "Insole Channeler" in catalog of company.

HAVERHILL SHOE MCHY. CO., Haverhill, Mass.

Fifty-nine machines at present used by customers of company—Pltff.'s Ex. 161, IV, 1118.

The manufacture of this machine—a turn sole channeler—was commenced in 1908.

(Webster, I, 291, l. 35.)

Defts.' Ex. 321. Reference: page 95, item A. Notation in sale list of Non-Royalty Shoe Company machines—June, 1913. This company used no U. S. M. Co. machines and was in existence but a few months—about 1912.

Another reference is to page 5, item B. Note by Haverhill Co. to U. S. M. Co. that it can furnish this machine.

HAMEL SHOE MCHY. CO., Lynn & Haverhill, Mass.

Four machines manufactured and marketed in United States by the Duplessis Shoe Mchy. Co.—a defunct concern—and its successors, C. A. Hamel and Hamel Shoe Mchy. Co.

No division of sales shown in Pltff.'s Ex. 159—customers of Duplessis Co. and successors.

(Hamel, I, 326, l. 52.)

WALTER PEARSON, Whitman, Mass.

No representative of company called as a witness.

Defts.' Ex. 321. Reference: page 23, item B. Quotation to U. S. M. Co.

AMERICAN WORSTED MCHY. CO., Abington, Mass.

Approximately 25 to 30 McKay channeling machines marketed among shoe manufacturers from 1907 to 1914.

(Hall, I, 953, l. 5.)

Defts.' Ex. 321. Reference: page 2, item A. Quotation to U. S. M. Co.

GEORGE KNIGHT & Co., Brockton, Mass.

No McKay channeling machines manufactured or marketed during past 15 years.

(Knight, I, 902, l. 38.)

Defts.' Ex. 321. Reference: page 9, item I. Quotation to U. S. M. Co.

CLICKING MACHINE.

SEELYE MFG. CO., Boston, Mass.

PARSONS MCHY. CO., Marlboro, Mass.

Reference to the above in Appendix "B"—Part I.

CLINCHING MACHINE.

UNIVERSAL SHOE MCHY. CO., St. Louis, Mo.

No representative of company called as a witness.

Defts.' Ex. 321. Reference: page 88. Advertisement of machine.

HEEL COMPRESSING MACHINE.

QUARMBY & HILLIKER, Lynn, Mass.

Manufacture of this machine discontinued about 1907.

(Hilliker, I, 929, l. 8.)

Defts.' Ex. 321. Reference: page 109. Quotation to U. S. M. Co.

W. J. YOUNG MCHY. CO., Lynn, Mass.

Approximately 300 machines manufactured and marketed—almost exclusively among heel manufacturers.

(Young, I, 942, l. 38; 943, l. 18.)

Defts.' Ex. 321. Reference: page 62, item G. Advertisement of machine.

LEATHER CUTTING MACHINES (including dieing-out machines).

THOMAS BOSTOCK & SONS, Brockton, Mass.

Rand cutting and tap cutting machines—properly included under this classification—manufactured by this concern.

Extent of output not stated.

This concern conducts a general machine shop business in which 15 men are employed.

(Bostock, I, 904–905.)

Defts.' Ex. 321. Reference: page 21, items C and H. Quotations to U. S. M. Co.

JAMES BUSFIELD, Haverhill, Mass.

No representative of concern called as a witness.

Defts.' Ex. 321. Reference: page 6, item H. Quotation to U. S. M. Co. on "Rand Cutter."

PARSONS MCHY. CO., Marlboro, Mass.

No representative of company called as a witness.

Defts.' Ex. 321. Reference: page 12, item H. Quotation to U. S. M. Co.

BOSTON MACHINE WORKS CO., Lynn, Mass.

Approximately 50 flap-slashing machines—properly included under this classification—manufactured and marketed principally in the United States.

(Illingworth, I, 927, l. 15.)

Defts.' Ex. 321. Reference: page 49 (Cat. p. 32). Advertisement of machine.

QUARMBY & HILLIKER, Lynn, Mass.

Approximately 150 to 200 dinking machines—properly included under this classification—manufactured and marketed since 1904, one-third of these among shoe manufacturers.

(Hilliker, I, 929, l. 39.)

Defts.' Ex. 321. Reference: page 10, item B. Quotation to U. S. M. Co. on "Beam Dinker."

SEELYE MFG. CO., Boston, Mass.

Approximately 50 to 100 beam-die pressers or dinking machines—properly included under this classification—manufactured and marketed yearly prior to formation of U. S. M. Co. Subsequent to 1899 not more than 25 per cent of this output marketed yearly.

(Seelye, I, 327, l. 37; 328, l. 11.)

Defts.' Ex. 321. Reference: pages 92, 93, 94. Advertisement of machine.

Another reference is to page 95, item N. Notation in sale list of Non-Royalty Shoe Company machines—June, 1913. This company used no U. S. M. Co. machines and was in existence but a few months—about 1912.

TOWER BROS., Hudson, Mass.

Approximately 10 to 12 sole cutting machines manufactured and marketed yearly.

(Tower, I, 907, l. 35.)

Defts.' Ex. 321. Reference: page 3, item F. Quotation to U. S. M. Co. on "Beam Sole Cutter."

W. J. YOUNG MCHY. CO., Lynn, Mass.

A wedge lift dinker or cutter—properly included under this classification—is manufactured by this concern and marketed both to shoe and heel manufacturers.

Extent of output not stated.

(Young, I, 942, l. 39.)

Defts.' Ex. 321. Reference: page 62, item J. Advertisement of machine.

HEEL LIFT EVENING MACHINE.

QUARMBY & HILLIKER, Lynn, Mass.

Not referred to in testimony of witness Hilliker.

(Hilliker, I, 928–929.)

Defts.' Ex. 321. Reference: page 10, item F. Quotation to U. S. M. Co. on "Knox 30-inch Splitter."

This same reference is also used under the classification for "Splitting Machine."

SEELYE MFG. CO., Boston, Mass.

Not referred to in testimony of witness Seelye.

(Seelye, I, 327–328.)

Defts.' Ex. 321. Reference: page 91, item C. Quotation (unsigned) purporting to have been received by U. S. M. Co from Seelye—on "Splitting Machine."

This same reference is also used under the classification for "Splitting Machine."

J. S. WHEELER & Co., Boston, Mass.

Not referred to in testimony of witness Wheeler.

On page 4555 Counsel Choate, for the U. S. M. Co., stated "I want to call attention to the fact that all we offered was that this man put out a splitting machine and an insole flexing machine."

(Wheeler, I, 889, l. 43; 890, l. 27.)

Defts.' Ex. 321. Reference: page 41, item A. Quotation on "Baby Splitters" (upper leather and sole evener).

This same reference is also used under the classification for "Splitting Machine."

EYELETTING MACHINE.

AMERICAN WORSTED MCHY. CO., Abington, Mass.

GEO. KNIGHT & Co., Brockton, Mass.

PEERLESS MFG. CO., Boston, Mass.

Reference to the above in Appendix "B"—Part I.

FAIRSTITCHING MACHINE.

LANDIS MACHINE CO., St. Louis, Mo.

No representative of company called as a witness.

Witness McElroy, of St. Louis, Mo., stated that he knew this company to be engaged in the manufacture of harness machinery but had no knowledge that it manufactured shoe machinery.

(McElroy, I, 923, l. 4.)

Defts.' Ex. 316. Reference: page 161. Catalog of C. V. Engstrom Co., Peoria, Ill., containing a reference to this machine.

This same reference is also used under the classification for "Welt Outsole Stitcher."

LARSEN MCHY. CO., Brooklyn, N. Y.

No specific reference is made in the testimony of witness Wirths to a "Fairstitching Machine."

On page 4746 Wirths stated that this company manufactures a "Welt Outsole Lockstitch Machine," but that none have been marketed among shoe manufacturers.

(Wirths, I, 928, l. 4–6.)

Defts.' Ex. 316. Reference: page 161, item A. Catalog of C. V. Engstrom Co., Peoria, Ill., containing reference to an "Automatic Stitcher."

This same reference is also used under the classification for "Welt Outsole Stitcher."

C. V. ENGSTROM CO., Peoria, Ill.

No representative of company called as a witness.

Defts.' Ex. 316. Reference: page 161, item A. Notation for "Automatic Stitcher" in catalog of company.

THE JOHN O'FLAHERTY CO., Rouses Point, N. Y.

No representative of company called as a witness.

Witness Spencer stated that he had handled machines for the O'Flaherty Company and that its lockstitch machine was adapted for harness work principally and could not be used in shoe bottoming operations.

(Spencer, I, 885, l. 13.)

Defts.' Ex. 321. (NOTE.—This Exhibit is one of many "physical" exhibits. It has not been printed, but is a part of the record. It is often referred to herein.) Reference: page 58. Advertisement of "Harness Sewing Machine."

It is to be noted that this machine is advertised for harness work, and that the advertisement appeared in the publication "Harness World."

PURITAN MFG. CO., Boston, Mass.

Approximately 1,000 machines manufactured and marketed since 1892, practically all among shoe manufacturers. A number of these have also been sold to the U. S. M. Co.

(Lingley, I, 891, l. 19 et seq.)

Defts.' Ex. 321. Reference: page 73, item E. Advertisement of "Flax or Dry Thread Machine."

J. D. Randall Co., Cincinnati, O.

No representative of company called as a witness.

Witness McElroy stated that the J. D. Randall Company was not known to him in the shoe machinery field.

(McElroy, I, 922, l. 42.)

Witness Spencer stated that the J. D. Randall Company particularized on machines for the harness trade and that, to his knowledge, it handles no machines for use in shoe manufacture other than strip cutters.

(Spencer, I, 885, l. 17.)

Defts.' Ex. 321. Reference: page 57. Advertisement in "Harness World."

Another reference is to Defts.' Ex. 313. Catalog of the company.

From both references it appears that no claim is made that this machine can be or is ordinarily used in shoe factories but rather for harness and horse collar work. In the catalog particularly this company sets itself forth as manufacturing only this type of machinery.

James Clark Leather Co., St. Louis, Mo.

No representative of company called as a witness.

Witness McElroy, of St. Louis, Mo., stated that this company is engaged in the shoe findings business and that it manufactures no shoe machinery.

(McElroy, I, 921, l. 29.)

Defts.' Ex. 321. Reference: page 161 (Cat. pp. 68, 69, 70). Catalog of the company.

On page 71 of this catalog it appears that this machine had not been placed upon the market prior to date of issuance, and there is no evidence that any of these machines have ever been marketed. Furthermore, although this announcement appears in the catalog of the Clark Company, it is signed by the Simplex Mfg. Co. of St. Louis, Mo., a company which has not been referred to elsewhere in the record as ever having been engaged in the shoe machinery business.

Union Lockstitch Co., E. Boston, Mass.

Four curved-needle stitching machines manufactured and marketed since May, 1910, and 350 to 400 straight-needle machines since 1906.

The curved-needle machines have been sold to shoe manufacturers. Of the straight-needle machines 75 only have been installed in shoe factories and the balance among harness and saddlery manufacturers.

From the testimony of witness Merrick it appears that both the curved-needle machine and the straight-needle machine may be used for fairstitching—an ornamental operation. The curved-needle machine, however, is capable of stitching around the shank, a very necessary operation, inasmuch as it attaches the outsole to the inner sole, and hence is essentially a bottoming operation.

(Merrick, I, 199, l. 27; 200, l. 18.)

Defts.' Ex. 321. Reference: page 44, item B; page 5, item J. Quotations to U. S. M. Co. on "curved-needle machines."

BOTTOM FILLING MACHINE.

No. American Chemical Co., Boston, Mass.

No representative of company called as a witness.

Defts.' Ex. 321. Reference: page 147. Note by U. S. M. Co. representative that one of these machines had been seen in operation in a shoe factory.

McKAY NSOLE FLEXING MACHINE.

Edward E. Spencer, jr., New York, N. Y.

In connection with the concern of Edw. E. Spencer & Co., witness Spencer stated that this concern went into bankruptcy in August, 1912.

During the period from 1906 to 1911, Edw. E. Spencer & Co. averaged a yearly business of between $25,000 and $30,000 in shoe machinery and accessories, the larger proportion being in the shoe manufacturers' supply business, such as nails, tacks, wax, etc.

A strip cutter manufactured by Edw. E. Spencer & Co. has been referred to in Defts.' Ex. 321 as an insole flexing machine. Witness Spencer admitted that this machine, although not particularly adapted for this work, can be changed for this purpose by an adjustment of the knives.

(Spencer, I, 884, l. 40; 885, l. 5, 40.)

Defts.' Ex. 321. Reference: page 26. Quotation to U. S. M. Co. stating "We build a special machine for this

purpose—machine fitted up for McKay flexible-insole work on principle of our strip-cutting machine."

Another reference is to Defts.' Ex. 312. Catalog of Edward E. Spencer & Co.—issued in 1897. Few of these had been distributed among shoe manufacturers, but mostly outside of this field.

EDWIN B. STIMPSON & Co., New York, N. Y.

Witness Stimpson stated that this company manufactures a strip cutter—which has been used as a reference under this classification.

Stimpson further stated that the letter used as a reference was signed by him at the insistence of Nichols of the U. S. M. Co. that a strip cutter was the same as an insole flexing machine. Stimpson maintained, however, that this machine had been manufactured for stripping leather for belts and for cutting welts, and had been sold at all times for these purposes only.

Referring to the catalog of this company, Stimpson stated that it had been printed in 1890 and could not be considered applicable to present conditions.

(Stimpson, I, 882, l. 20.)

Defts.' Ex. 321. Reference: page 26. Letter to the U. S. M. Co. stating "In addition to illustrations in catalogue we build an insole flexing machine." (See above explanation.)

Another reference is to Defts.' Ex. 312. Catalogue of the company.

J. S. WHEELER & Co., Boston, Mass.

No insole flexing machines manufactured or marketed.

Witness Wheeler insisted that a welt cutting machine could not be used as a flexing machine—by an adjustment of the knives—as then it would be changed into an entirely different machine.

(Wheeler, I, 890, l .21.)

Defts.' Ex. 321. Reference: page 65, item X. Advertisement of "Welt Cutter."

HEEL LIFT GOUGING MACHINES.

THOMAS BOSTOCK & SONS, Brockton, Mass.

This machine is manufactured by this concern.

Extent of output not stated.

This concern conducts a general machine shop business in which 15 men are employed.

(Bostock, I, 904–905.)

Defts.' Ex. 321. Reference: page 21, item B. Quotation to U. S. M. Co.

W. J. Young Mchy. Co., Lynn, Mass.

Approximately 150 to 200 machines have been manufactured and marketed—evenly divided between shoe and heel manufacturers.

(Young, I, 942, l. 43; 943, l. 18.)

Defts.' Ex. 321. Reference: page 62, item K. Advertisement of machine.

GRADING MACHINE (gauging thickness of soles).

Lacene Mfg. Co., Manchester, N. H.

No representative of company called as a witness.

Witness Winslow stated that there is no other machine upon the market doing the work of this machine, and that the U. S. M. Co. has never put out a similar one.

(Winslow, I, 600, l. 9.)

Defts.' Ex. 321. Reference: page 77. Advertisement of machine.

This same reference is also used under the classification for "Splitting Machine."

WELT GROOVING AND BEVELING MACHINE.

Hamel Shoe Mchy. Co., Lynn & Haverhill, Mass.

Twenty-five of these machines have been manufactured and marketed in the United States by the Duplessis Shoe Mchy. Co.—a defunct concern—and its successors, C. A. Hamel and the Hamel Shoe Mchy. Co.

No division of sales shown in Pltff's Ex. 159, IV, 1113, customers of Duplessis Co. and successors.

(Hamel, I, 326, l. 45.)

Defts.' Ex. 321. Reference: page 178, item B. Note by U. S. M. Co. representative that a "Duplessis Welt Groover and Beveler" had been seen in operation in a shoe factory.

Haverhill Shoe Mchy. Co., Haverhill, Mass.

Not included in the list of machines at present used by customers of this company—Pltff.'s Ex. 161, IV, 1118.

Witness Webster included this machine as one manufactured at date of June, 1913, but no information was obtained as to the extent of output.

(Webster, I, 291, l. 2.)

Defts.' Ex. 321. Reference: page 5, item U. Note by Haverhill Co. to U. S. M. Co. that it can furnish this machine.

R. H. Long Mchy. Co., So. Framingham, Mass.

Extent of output not stated.

Doidge explained that not all machines listed in catalog were manufactured at date of June, 1913, but that it was the intention of the company to do so.

(Doidge, I, 346, l. 16.)

Defts.' Ex. 321. Reference: page 56, item M. Notation for this machine in catalog of company.

HARDENING SHOULDER MACHINE (for Gem insoles).

Plymouth Rubber Co., Canton, Mass.

No representative of company called as a witness.

Witness Donnelly stated that this machine has been manufactured by him for this company, but no further information was obtained.

(Donnelly, I, 944, l. 25.)

Defts.' Ex. 321. Reference: page 81. Advertisement of machine.

Walpole Shoe Supply Co., Boston, Mass.

Approximately 50 machines manufactured and marketed among shoe manufacturers from 1912 to 1914.

(Chamberlin, I, 889, l. 28.)

Defts.' Ex. 321. Reference: p. 80. Advertisement of machine.

HEELING MACHINE (attaching heels).

R. H. Long Mchy. Co., South Framingham, Mass.
Haverhill Shoe Mchy. Co., Haverhill, Mass.
References to the above in Appendix "B"—Part I.

LASTING MACHINE.

R. H. Long Mchy. Co., South Framingham, Mass.
Boylston Mfg. Co., Boston, Mass.
Louis G. Freeman Co., Cincinnati, O.
References to the above in Appendix "B"—Part I.

CHANNEL LAYING MACHINE.

AMERICAN WORSTED MCHY. CO., Abington, Mass.

None manufactured, marketed, or handled from 1907 to 1914.

(Hall, I, 953, l. 14.)

Defts.' Ex. 321. Reference: page 1, item D. Quotation to U. S. M. Co.

GEORGE KNIGHT & CO., Brockton, Mass.

None manufactured or marketed during past 15 years.

(Knight, I, 902, l. 38.)

Defts.' Ex. 321. Reference: page 9, item J. Quotation to U. S. M. Co.

McKAY WELT LAYING MACHINE.

KIMBALL BROS. & SPRAGUE, Brockton, Mass.

Approximately 25 to 30 machines, adapted only for laying the Arnold flex welt, manufactured and marketed from 1909 to 1914.

(Sprague, I, 904, l. 5.)

Defts.' Ex. 321. Reference: page 36. Quotation to U. S. M. Co.

SOLE LAYING MACHINE.

R. H. LONG MCHY. CO., South Framingham, Mass.

Included—as turn sole layer—among machines specified by witness Doidge as manufactured by this company.

Extent of output not stated.

In explanation of catalog, Doidge stated that not all machines listed therein had been manufactured at date of June, 1913, but that it was the intention of the company to do so.

(Doidge, I, 346, l. 11, 15.)

Defts.' Ex. 321. Reference: page 5, item H. Note by Haverhill Co. to U. S. M. Co. that it can furnish sole laying machine of the Long Company.

Another reference is to page 56, item F. Catalog of Long Company, including notation for "Twin Sole Layer."

LEVELING MACHINE.

BOYLSTON MFG. CO., Boston, Mass.

Not included in list of machines specified by witness Maloy on pages 1457 and 1460, nor in catalog of company—page 1463.

Cavanaugh explained that when the company absorbed the Giant Leveler Company in 1904—referred to in testimony of C. S. Johnson—some machines on hand were disposed of. Occasionally the company had rebuilt machines of this type for manufacturers, but had never manufactured any.

(Maloy, I, 301, l. 23: 302, l. 16, 36.)
(Cavanaugh, I, 955, l. 44.)

Defts.' Ex. 321. Reference: pages 108, 109, 179. Statements by U. S. M. Co. representatives that Giant leveling machines had been seen in operation in shoe factories.

A catalog of the Boylston Co. showing an advertisement for C. & J. leveling machines is also included.

HAMEL SHOE MCHY. CO., Lynn and Haverhill, Mass.

Five machines manufactured and marketed in the United States by the Duplessis Shoe Mchy. Co.—a defunct concern—and its successors, C. A. Hamel and the Hamel Shoe Mchy. Co.

Pltff.'s Ex. 159, IV, 1113—customers of Duplessis Co. and successors—shows that all of these machines had been marketed by the Duplessis Co. Four of these were installed in the Framingham Shoe Co.—controlled by Richard H. Long—which uses no U. S. M. Co. machines.

(Hamel, I, 326, l. 33.)

R. H. LONG MCHY. CO., South Framingham, Mass.

Not included among machines specified by witness Doidge as manufactured by the company.

In explanation of catalog, Doidge stated that not all machines listed therein had been manufactured at date of June, 1913, but that it was the intention of the company to do so.

(Doidge, I, 346, ls. 5, 16.)

Defts.' Ex. 321. Reference: page 56, item I. Notation for "Eclipse Leveler" in catalog of company.

HAVERHILL SHOE MCHY. CO., Haverhill, Mass.

Not included in the list of machines at present used by customers of company—Pltff.'s Ex. 161, IV, 1118.

Not included among machines enumerated by witness Webster as manufactured by company at date of testimony, June, 1913.

This company handles a Webster leveler, however.

(Webster, I, 291, l. 1.)

Defts.' Ex. 321. Reference: page 5, item M. Note by Haverhill Co. to U. S. M. Co. that it can furnish a "Turn Leveler" manufactured by the Webster Machine Co.

WELT OUTSOLE STITCHER.

BOYLSTON MFG. CO., Boston, Mass.

LANDIS MACHINE CO., St. Louis, Mo.

LARSEN MFG. CO., Brooklyn, N. Y.

C. V. ENGSTROM CO., Peoria, Ill.

JAMES CLARK LEATHER CO., St. Louis, Mo.

UNION LOCKSTITCH CO., East Boston, Mass.

UNIVERSAL SHOE MCHY. CO., St. Louis, Mo.

VICTOR SHOE MCHY. CO., Boston, Mass.

R. H. LONG MCHY. CO., South Framingham, Mass.

HAMEL SHOE MCHY. CO., Lynn and Haverhill, Mass.

References to the above in Appendix "B"—Part I.

MOULDING MACHINE (for outsoles and turn soles).

BOYLSTON MFG. CO., Boston, Mass.

Not included in list of machines specified by witness Maloy on pages 1457 and 1460, nor in catalog of company—page 1463.

(Maloy, I, 301, l. 23; 302, ls. 16, 36.)

Defts.' Ex. 321. Reference: page 110. Note by U. S. M. Co. representative that he had seen a moulding machine in a shoe factory which he claimed was manufactured by the Boylston Company.

SEELYE MFG. CO., Boston, Mass.

Not referred to in testimony of witness Seelye.

(Seelye, I, 327–328.)

Defts.' Ex. 321. Reference: page 91, item F. Quotations (unsigned) purporting to have been received by the U. S. M. Co. from Seelye—on "Moulders."

QUARMBY & HILLIKER, Lynn, Mass.

None manufactured since 1907.

(Hilliker, I, 929, l. 14.)

Defts.' Ex. 321. Reference: page 10, item D. Quotation to U. S. M. Company.

HAVERHILL SHOE MCHY. CO., Haverhill, Mass.

Not included in list of machines at present used by customers of company—Pltff.'s Ex. 161, IV, 1118.

Witness Webster stated that the company manufactured a sole moulder for turn soles, and that 40 to 50 of these have been sold from 1910 to 1913—one with each Haverhill Co. stitcher marketed.

(Webster, I, 292, l. 18.)

Defts.' Ex. 321. Reference: page 5, item D. Note by Haverhill Co. to U. S. M. Co. that it can furnish a "Turn Moulder."

HAMEL SHOE MCHY. CO., Lynn and Haverhill, Mass.

Thirty-five machines manufactured and marketed in the United States by Duplessis Shoe Mchy. Co.—a defunct concern—and its successors, C. A. Hamel and Hamel Shoe Mchy. Co.

No division of sales shown in Pltff.'s Ex. 159, IV, 1113—customers of Duplessis Co. and successors.

(Hamel, I, 326, l. 40.)

Defts.' Ex. 321. Reference: page 159. Note by U. S. M. Co. representative that he had seen two "Duplessis Turn Moulding machines" in operation in a shoe factory.

LOOSE NAILING MACHINE.

HAMEL SHOE MCHY. CO., Lynn and Haverhill, Mass.
R. H. LONG MCHY. CO., South Framingham, Mass.
UNIVERSAL SHOE MCHY. CO., St. Louis, Mo
VICTOR SHOE MCHY. CO., Boston, Mass.

References to the above in Appendix "B"—Part I.

CHANNEL OPENING MACHINE.

AMERICAN WORSTED MCHY. CO., Abington, Mass.
None manufactured or marketed from 1907 to 1914.
(Hall, I, 953, l. 19.)
Defts.' Ex. 321. Reference: page 1, item J. Quotation to U. S. M. Co.

GEORGE KNIGHT & CO., Brockton, Mass.
None manufactured during past 8 or 10 years.
(Knight, I, 902, l. 43.)
Defts.' Ex. 321. Reference: page 9, item K. Quotation to U. S. M. Co.

VENEER PRESS (for pressing cemented soles and taps).

JAMES BUSFIELD, Haverhill, Mass.
No representative of concern called as a witness.
Defts.' Ex. 321. Reference: page 6, item E. Quotation on "Veneer Sole Press."

HEEL PRESSING MACHINE.

SEELYE MFG. CO., Boston, Mass.
Not referred to in testimony of witness Seelye.
(Seelye, I, 327–328.)
Defts.' Ex. 321. Reference: page 91, item B. Quotation (unsigned) purporting to have been received by the U. S. M. Co. from Seelye—on "Presses."

TACK PULLING MACHINE.

LOUIS G. FREEMAN CO., Cincinnati, Ohio.
No representative of company called as a witness.
Defts.' Ex. 321. Reference: page 78, items A and F. Announcement that company will exhibit tack pulling machines.

PULLING OVER MACHINE.

Reference to the above in Appendix "B"—Part I.

TACK PULLING AND RESETTING MACHINE.

LOUIS G. FREEMAN CO., Cincinnati, Ohio.
No representative of company called as a witness.
Defts.' Ex. 321. Reference: page 7, item B. Note by U. S. M. Co. representative as to operation of machine in

Non-Royalty Shoe Co., St. Louis, Mo. This concern used no U. S. M. Co. machines and was in existence but a few months—about 1912.

REDUCING MACHINE.

American Worsted Mchy. Co., Abington, Mass.

No feather-edge or shank reducing machines—properly included under this classification—manufactured or marketed from 1907 to 1914.

(Hall, I. 953, l. 19.)

Defts.' Ex. 321. Reference: page 1, item F. Quotation to U. S. M. Co. on "Feather Reducer."

George Knight & Co., Brockton, Mass.

Feather-edge and shank reducing machines—properly included under this classification—manufactured and marketed by this company, mostly to shoe manufacturers.

Some of these are sold to and through the U. S. M. Co.

Extent of output not stated.

(Knight, I. 903, l. 6, 15.)

Defts.' Ex. 321. Reference: page 9, item D. Quotation to U. S. M. Co.

Theodore Ringenbach, Cincinnati, Ohio.

No representative of company called as a witness.

Defts.' Ex. 321. Reference: page 126. Advertisement of "Rapid Shoe Feathering Machine."

This same reference is also used under the classification for "Thin Edge Machine."

ROLLING MACHINE.

James Busfield, Haverhill, Mass.

No representative of concern called as a witness.

Defts.' Ex. 321. Reference: page 6, item D. Quotation to U. S. M. Co. on "Rolling Mills."

Quarmby & Hilliker, Lynn, Mass.

Approximately 50 machines manufactured and marketed since 1904, one-half of these among shoe manufacturers.

(Hilliker, I. 929, l. 15.)

Defts.' Ex. 321. Reference: page 10, item E. Quotation to U. S. M. Co. on "Light Roller."

SEELYE MFG. CO., Boston, Mass.

Not referred to in testimony of witness Seelye.

(Seelye, IV, I, 327–328.)

Defts.' Ex. 321. Reference: page 91, item D. Quotation (unsigned) purporting to have been received by U. S. M. Co. from Seelye on "Rollers."

TAP ROUGHING MACHINE.

PEERLESS MCHY. CO., Boston, Mass.

The machine referred to is undoubtedly the sanding machine manufactured by this company, which merely "finishes or roughs the sole before it is put on the shoe."

Extent of output not stated.

(Muther, I, 303, l. 24.)

Defts.' Ex. 321. Reference: page 67, item J. Advertisement for "Auto-Scourer."

ROUGH ROUNDING AND CHANNELING MACHINE.

R. H. LONG MCHY. CO., South Framingham, Mass.

Not included as a single machine in list of machines specified by witness Doidge—page 1698—manufactured by the company.

Doidge stated that the company was "Getting ready to build" a rough rounder. From this it appears that none of these machines had been manufactured or marketed at date of June, 1913.

In explanation of catalog, Doidge stated that not all machines listed therein had been manufactured at date of June, 1913, but that it was the intention of the company to do so.

A channeling machine manufactured by this company is also included under the "Channeling Machine" classification.

(Doidge, I, 346, l. 9, 15–16.)

Defts.' Ex. 321. Reference: page 56, item G. Notation for "Rough Rounder" in catalog of company.

VICTOR SHOE MCHY. CO., Boston, Mass.

Three machines manufactured and marketed since 1911.

None were sold to shoe manufacturers, but to repair men only.

(Johnson, I, 893, l. 29; 894, l. 5, 9.)

Defts.' Ex. 321. Reference: page 74, item B. Note by U. S. M. Co. representative that this machine was seen by him in demonstration at the Victor Co. factory.

HAVERHILL SHOE MCHY. CO., Haverhill, Mass.

Not included in list of machines used at date of June, 1913, by customers of company—Pltff's Ex. 161, IV, 1118.

Not included—as a single machine—in list of machines specified by witness Webster (R. I., 291) as manufactured by the company.

This company has manufactured and marketed a turn channeling machine, included under the "Channeling Machine" classification.

(Webster, I, 291, l. 1.)

Defts.' Ex. 321. Reference: page 5, item B. Note by Haverhill Co. to U. S. M. Co. that it can furnish a "Rough Rounding and Channeling Machine."

ROUNDING MACHINE (rounding heels, heel seats, and taps).

LOUIS G. FREEMAN CO., Cincinnati, Ohio.

No representative of company called as a witness.

Defts.' Ex. 321. Reference: page 8, item T. Note by U. S. M. Co. representative as to operation of "Heel Seat Rounding Machine" in Non-Royalty Shoe Company, St. Louis, Mo. This company used no U. S. M. Co. machines, and was in existence but a few months—about 1912.

CONSOLIDATED ROTARY ROUNDER CO., Cincinnati, Ohio.

No representative of company called as a witness.

Defts.' Ex. 321. Reference: page 128, item A. Telegram from W. F. Harmon to S. G. Ross naming certain shoe factories using Ross rounders; also catalog of company.

The catalog of this company was issued in 1897, evidently by the Ross-Moyer Mfg. Co. of Cincinnati, Ohio, now a subsidiary company of the U. S. M. Co.—its first page being headed "Ross-Moyer Mfg. Co., Distributing Agents." It is further to be noted that both Harmon and Ross were formerly connected with the Ross-Moyer Mfg. Co.—prior to its absorption.

Witness Selz, of Selz, Schwab & Co., Chicago, Ill.—one of the shoe factories named in the Ross telegram as using Ross

rounders—stated that these machines had been, and are now, marketed by the Ross-Moyer Mfg. Co.

(Selz, I, 144, l. 21; 154, l. 13.)

Boylston Mfg. Co., Boston, Mass.

A "Julian rounder" is included in the list of machines manufactured by this company specified by witness Maloy on page 302, and in catalog.

Extent of output not stated.

(Maloy, I, 302, l. 17.)

Defts.' Ex. 321. Reference: page 8, item K. Note by U. S. M. Co. representative as to operation of "Julian" machine in Non-Royalty Shoe Company, St. Louis, Mo. This company used no U. S. M. Co. machines and was in existence but a few months—about 1912.

A further reference is to page 95, item B_2. Notation in sale list of Non-Royalty Shoe Company machines—June, 1913.

Another reference is to page 5, item A. Note by Haverhill Company to U. S. M. Co., that it can furnish a Boylston Co. "Sole Rounder."

American Worsted Mchy. Co., Abington, Mass.

None manufactured by this company from 1907 to 1914.

(Hall, I, 953, l. 19.)

Defts.' Ex. 321. Reference: page 1, item A. Quotation to U. S. M. Co. on "Severance Tap Rounder."

SPRING HEEL SCARFING MACHINE.

James Bostock & Sons, Brockton, Mass.

None manufactured.

Second-hand machines have from time to time in the past been purchased and resold.

Extent of sales not stated.

(Bostock, I, 904, l. 37.)

Defts.' Ex. 321. Reference: page 21, item D. Quotation to U. S. M. Co.

Thomas J. Bowden & Son, Marblehead, Mass.

No representative of company called as a witness.

Defts.' Ex. 321. Reference: page 28. Quotation to U. S. M. Co.

W. J. Young Mchy. Co., Lynn, Mass.

A spring heel scarfing machine manufactured and marketed by this company.

Extent of output not stated.

(Young, I, 943, l. 2.)

Defts.' Ex. 321. Reference: page 152, item K. Advertisement of machine.

LITTLE McKAY TURN SEWING MACHINE.

George Hobbs, Boston, Mass.

No representative of concern called as a witness.

Defts.' Ex. 321. Reference: page 177. Note by U. S. M. Co. representing that Hobbs machines have been seen in operation in a shoe factory. Also a catalog of parts for McKay turn sewing machine and channeler, issued in 1902.

McKAY SEWING MACHINE.

Shawmut Mchy. Co., Boston, Mass.
Haverhill Supply Co., Haverhill, Mass.
Louis G. Freeman, Cincinnati, O.
E. E. Spencer & Co., New York, N. Y.
Manufacturers' Supply Co., St. Louis, Mo.
J. W. White & Co., Haverhill, Mass.
Lynn Supply Co., Lynn, Mass.
American Worsted Mchy. Co., Abington, Mass.
Walter Pearson, Whitman, Mass.

References to the above in Appendix "B"—Part I.

WELT AND TURN SEWING MACHINE.

Hamel Shoe Mchy. Co., Lynn and Haverhill, Mass.
Haverhill Shoe Mchy. Co., Haverhill, Mass.
R. H. Long Mchy. Co., So. Framingham, Mass.
Universal Shoe Mchy. Co., St. Louis, Mo.
Boylston Mfg. Co., Boston, Mass.

References to the above in Appendix "B"—Part I.

SKIVING MACHINE (tap skiving, welt and rand splitting).

Victor Shoe Mchy. Co., Boston, Mass.

Witness Johnson indirectly admitted that this company manufactures a skiving machine.

Extent of output not stated.

(Johnson, I, 894, l. 21.)

Defts.' Ex. 321. Reference: page 174, item C. Note by U. S. M. Co. representative that Victor "Tap Skiving Machine" was seen in demonstration at Victor Co. factory.

JAMES BUSFIELD, Haverhill, Mass.

No representative of concern called as a witness.

Defts.' Ex. 321. Reference: page 6, item F. Quotation to U. S. M. Co. for "Welt Splitting Machine." This same reference has also been used under the classification for "Splitting Machine."

AMERICAN WORSTED MCHY. CO., Abington, Mass.

Output of machines not stated in testimony of witness Hall.

(Hall, I, 954, l. 8.)

Defts.' Ex. 321. Reference: page 2, items G and J. Quotations to U. S. M. Co. on Tripp "Improved" and "New Old-Style" skivers.

This same reference for "Tripp Improved Skiver" has also been used under the classification for "Splitting Machine."

McKAY WELT SLASHING MACHINE.

THOMAS BOSTOCK & SONS, Brockton, Mass.

This machine is the same as the "Heel Lift Gouging Machine" included under the latter classification—for which the same reference has been used.

(Bostock, I, 904, l. 35.)

Defts.' Ex. 321. Reference: page 21, item G. Quotation to U. S. M. Co. on "Rand Chopping and Welt Slashing Machine."

A. G. BREWER, Natick, Mass.

Approximately ten machines manufactured and marketed, the last one about 1912.

(Brewer, I, 907, l. 15.)

Defts.' Ex. 321. Reference: page 105. Quotation to U. S. M. Co., and advertisement of "Double Rapid Welt Splitter."

WILLIAM KNIPE, Ward Hill, Mass.

No representative of concern called as a witness.

Defts.' Ex. 321. Reference: page 167. Note by U. S. M. Co. representative that he had seen at Knipe Bros. shoe factory a "Knipe Welt Slasher."

JAMES BUSFIELD, Haverhill, Mass.

No representative of concern called as a witness.

Defts.' Ex. 321. Reference: page 6, item G. Quotation to U. S. M. Co. on "Combination Welt Splitter and Slasher."

SLUGGING MACHINE.

BOYLSTON MFG. CO., Boston, Mass.

HAMEL SHOE MCHY. CO., Lynn and Haverhill, Mass.

R. H. LONG MCHY. CO., South Framingham, Mass.

References to the above in Appendix "B"—Part I.

SPLITTING MACHINE.

AMERICAN TOOL & MACHINE CO., Boston, Mass.

The machine referred to by witness Eichler—included under this classification as manufactured by this company—is a belt knife splitting machine.

Eichler stated that this company manufactures no bottoming machines, or eyeletting or clicking machines.

(Eichler, I, 886, l. 43; 887, l. 1.)

Defts.' Ex. 321. Reference: page 51. Advertisement of "Belt Knife Leather Splitting Machine."

JAMES BUSFIELD, Haverhill, Mass.

No representative of concern called as a witness.

Defts.' Ex. 321. Reference: page 6, items A and F. Quotations to U. S. M. Co.

The latter reference (6 F) is also used under the classification for "Skiving Machine."

J. S. WHEELER & CO., Boston, Mass.

None manufactured by this company.

Some have been rebuilt from time to time.

This concern does a small jobbing business and employs from two to six men only.

(Wheeler, I, 890, l. 3.)

Defts.' Ex. 321. Reference: page 41, item A. Quotation to U. S. M. Co. on "Baby splitters" (upper leather and sole evener).

This same reference has also been used under the classification for "Evening Machine."

SEELYE MFG. CO., Boston, Mass.

Not referred to in testimony of witness Seelye.

(Seelye, I, 327–328.)

Defts.' Ex. 321. Reference: page 91, item C. Quotation (unsigned)—purporting to have been received by the U. S. M. Co. from Seelye—on "Splitters."

Another reference is to page 95, item V. Notation in sale list of Non-Royalty Shoe Company machines—June, 1913. This company used no U. S. M. Co. machines and was in existence but a few months—about 1912.

These same references are also used under the classification for "Evening Machine."

QUARMBY & HILLIKER, Lynn, Mass.

None manufactured.

From time to time some have been purchased second-hand and resold.

Extent of sales not stated.

(Hilliker, I, 929, l. 23.)

Defts.' Ex. 321. Reference: page 10, item F. Quotation to U. S. M. Co. on "Splitter."

This same reference has also been used under the classification for "Evening Machine."

AMERICAN WORSTED MCHY. CO., Abington, Mass.

Not referred to in testimony of witness Hall.

(Hall, I, 954, l. 8.)

Defts.' Ex. 321. Reference: page 2, item G. Quotation on "Tripp Improved Skiver."

This same reference has also been used under the classification for "Skiving Machine."

LACENE MFG. CO., Manchester, New Hampshire.

No representative of company called as a witness.

Witness Winslow stated that there is no other machine upon the market for doing the work of this machine and that the U. S. M. Co. has never put out a similar one.

(Winslow, I, 600, l. 9.)

Defts.' Ex. 321. Reference: page 77. Advertisement of machine.

This same reference is also used under the classification for "Grading Machine."

TURNER TANNING MCHY. CO., Peabody, Mass.

No representative of company called as a witness.

Defts.' Ex. 321. Reference: page 119. Quotation to U. S. M. Co. on "Belt Knife Splitting Machine."

In this connection reference is made to the testimony of witness Eichler, for the American Tool & Machine Co., to the effect that this is not properly included as a bottoming machine.

(Eichler, I, 886, l. 43–887, l. 4.)

W. J. YOUNG MCHY. CO., Lynn, Mass.

None manufactured by this company.

At close of cross-examination, Counsel Choate for the U. S. M. Co. requested permission to correct this reference from "Rand Splitting Machine" to "Rand Trimming Machine."

(Young, I, 943, l. 2, 32.)

Defts.' Ex. 321. Reference: page 185. Advertisement of "New Rand Trimmer."

STRIPPING MACHINES (cutting leather or leatherboard into strips).

QUARMBY & HILLIKER, Lynn, Mass.

Approximately 75 machines manufactured and marketed since 1904, one-third of these to shoe manufacturers.

(Hilliker, I, 929, l. 20.)

Defts.' Ex. 321. Reference: page 10, item C. Quotation to U. S. M. Co. on "Knox Old-Style Geared Stripper."

PARSONS MCHY. CO., Marlboro, Mass.

No representative of company called as a witness.

Defts.' Ex. 321. Reference: page 13. Quotation to U. S. M. Co. on "Old-Style Stripper."

SEELYE MFG. CO., Boston, Mass.

Not referred to in testimony of witness Seelye.

(Seelye, I, 327–328.)

Defts.' Ex. 321. Reference: page 91, item E. Quotation (unsigned)—purporting to have been received by U. S. M. Co. from Seelye—on "Strippers."

TOWER BROS., Hudson, Mass.

On page 4622 witness Tower stated—in answer to the question whether this concern manufactures this machine—

"We make stripping machines for anybody who wants them, but they have gone out of fashion." This indicates that this machine is not one regularly manufactured and marketed by this company.

(Tower, I, 907, l. 42.)

Defts.' Ex. 321. Reference: page 3, item E. Quotation to U. S. M. Co.

W. J. Young Mchy. Co., Lynn, Mass.

A wedge stripping machine—properly included under this classification—is manufactured by this company.

The majority of these are sold to heel manufacturers rather than to shoe manufacturers.

Extent of output not stated.

(Young, I, 942, l. 35.)

Defts.' Ex. 321. Reference: page 62, item I. Advertisement of "Wedge Stripper."

TACKING MACHINES (tacking soles and heel rands).

Universal Shoe Mchy. Co., St. Louis, Mo.
Hamel Shoe Mchy. Co., Lynn and Haverhill, Mass.
Louis G. Freeman Co., Cincinnati, Ohio.
Victor Shoe Mchy. Co., Boston, Mass.

References to the above in Appendix "B"—Part I.

THIN EDGE MACHINE.

Theodore Ringenbach, Cincinnati, Ohio.

No representative of concern called as a witness.

Defts.' Ex. 321. Reference: page 126. Advertisement of "Rapid Shoe Feathering Machine."

This same reference is also used under the classification for "Reducing Machine."

INSEAM TRIMMING MACHINE.

The Keighley Co., Vineland, N. J.

Witness Tappey stated that, during 1911, about 20 inseam trimming machines had been placed among shoe manufacturers on trial in New England.

(Tappey, I, 913, l. 4.)

In this connection it is to be noted that an agreement was entered into on September 21, 1912, between the U. S. M. Co.

and the Keighley Co., whereby the U. S. M. Co. obtained control of the inseam trimming machine business of the Keighley Co. in the United States.

The agreement provided in part that neither company, during the period of the agreement, would enter into, engage in, or financially or otherwise encourage or assist any other person, firm, or corporation from entering into or developing any business in inseam trimming machines.

It further provided that the Keighley Co. should not thereafter sell any inseam trimming machine of the type covered by the agreement for a price less than $650, and also that the U. S. M. Co. should not be required to pay more than $250 for a single inseam trimming machine of the same type.

Pltff.'s Ex. 275, IV, 1529 (U. S. M. Co.-Keighley Co. agreement).

Defts.' Ex. 321. Reference: page 7, item F. Note by U. S. M. Co. as to operation of machine in Non-Royalty Shoe Company, St. Louis, Mo.

Another reference is to page 95, item F. Notation in sale list of Non-Royalty Shoe Company machines—June, 1913. This company used no U. S. M. Co. machines and was in existence but a few months—about 1912.

HEEL RAND TURNING MACHINE.

James Bostock & Sons, Brockton, Mass.

A rand turning machine is manufactured by this concern. Extent of output not stated.

(Bostock, I, 904, l. 36.)

Defts.' Ex. 321. Reference: page 21, item E. Quotation to U. S. M. Co.

American Worsted Mchy. Co., Abington, Mass.

No rand turning machines manufactured or marketed from 1907 to 1914.

(Hall, I, 953, l. 22.)

Defts.' Ex. 321. Reference: page 6, item B. Quotation to U. S. M. Co. on "Rand Crimping Machine."

LIP OF INSOLE TURNING MACHINE.

American Worsted Mchy. Co., Abington, Mass.

None manufactured or marketed from 1907 to 1914.

(Hall, I, 953, l. 22.)

Defts.' Ex. 321. Reference: page 1, item I. Quotation to U. S. M. Co. on "Lip Turner."

HAMEL SHOE MCHY. Co., Lynn and Haverhill, Mass.

Twelve lip turning machines manufactured and marketed in the United States by the Duplessis Shoe Machy. Co.—a defunct concern—and its successors, C. A. Hamel and Hamel Shoe Mchy. Co.

No division of sales shown in Pltff.'s Ex. 159, IV, 1113—customers of Duplessis Co. and its successors.

(Hamel, I, 326, l. 41.)

Defts.' Ex. 321. Reference: page 178, item A. Note by U. S. M. Co. representative that he had seen a "Duplessis Channeling and Turning machine (hand power)" in operation in a factory.

HAVERHILL SHOE MCHY. Co., Haverhill, Mass.

Four lip turning machines manufactured and marketed from June, 1913, to June, 1914.

(Webster, I, 292, l. 24.)

Defts.' Ex. 321. Reference: page 5, item C. Note by Haverhill Co. to U. S. M. Co. that it can furnish an "Innersole Lip Turner."

Another reference is to page 8, item Z. Note by U. S. M. Co. representative as to operation of machine in Non-Royalty Shoe Company, St. Louis, Mo.

A further reference is to page 95, item Z. Notation in sale list of Non-Royalty Shoe Company machines—June, 1913. This company used no U. S. M. Co. machines and was in existence but a few months—about 1912.

GEORGE KNIGHT & Co., Brockton, Mass.

A lip turning machine is manufactured by this company. Extent of output not stated.

Some of the machines manufactured by this company are sold to and through the U. S. M. Co. Witness Knight did not specify whether a lip turning machine was so included, however.

(Knight, I, 903, l. 8, 15.)

Defts.' Ex. 321. Reference: page 9, item F. Quotation on "Lip Turner."

R. H. LONG MCHY. Co., South Framingham, Mass.

Number placed not stated.

In explanation of catalog, Doidge stated that not all machines listed therein had been manufactured at date of June, 1913, but that it was the intention of the company to do so.

(Doidge, I, 346, l. 7, 16.)

Defts.' Ex. 321. Reference: page 56, item L. Notation for machine in catalog of company.

LIP GEM INSOLE TURNING MACHINE.

Inasmuch as the same companies and the same references thereto in Defts.' Ex. 321 have been used under this classification as under "Lip of Insole Turning Machine," no further reference thereto is considered necessary herein.

INSOLE REINFORCING MACHINE.

No competition in the United States.

TACKING MACHINE.

References to the above in Appendix "B"—Part I.

POUNDING AND TRIMMING MACHINE.

No competition in the United States.

STANDARD SCREW MACHINE.

Reference to the above in Appendix "B"—Part I.

* * * * *

FOREIGN COMPANIES.

That the Foreign Companies Referred to in the Catalogs Letters, Advertisements, &c., have not been Engaged in Marketing Shoe Machinery in the United States is Evidenced by the Testimony of witnesses Stone, McElroy, and Cavanaugh. (I, 339–344; 954–957; 190–193; 923.)

APPENDIX C.

SYNOPSIS OF LEASE FORMS SHOWING TYING CLAUSES CONTAINED IN EACH.

1. Lasting Machines.

(Exhibits 14–22)

(a) Consolidated Hand Method Machine.

i. Non Initial Payment.

Exhibit 16 (adopted September, 1900) contains

Prohibitive clause, applying to welting, stitching, turn sewing and metallic fastening machines.

Exclusive Use clause.

Full Capacity clause.

Return charge of $150.00.

Minimum royalty of $15 per month with deduction for months in which factory is wholly idle.

Right to terminate all leases clause.

Exhibit 15 (adopted December, 1900) contains

Same provisions in particulars here material as Exhibit 16, except that prohibitive clause does not extend to metallic fastening machines.

(Note this form of lease is used for the hand-method type of machine when adapted to lasting welt shoes.)

ii. Initial Payment.

Exhibit 14 (adopted December, 1900) contains

Full Capacity clause.

Exclusive Use clause, applying to all lasting machines and devices.

Initial payment of $300.

Minimum royalty $75 per annum.

1. Lasting Machines—Continued.
   (a) Consolidated Hand Method Machine—Continued.
      ii. Initial Payment—Continued.
         Exhibit 17 (adopted ———).
            Same provisions in particulars here material as Exhibit 14, except that exclusive use clause is extended to include all *tacking* devices as well as lasting machines and devices. There is also a difference in the royalty which is fixed at one cent per pair straight in Exhibit 14 and at one cent per pair for misses' and children's shoes and one and one-fourth cents for all other kinds in Exhibit 17. The latter figure is also that of Exhibits 15 and 16. In each case there is a 50% discount for prompt payment.
   (b) Chase Lasting Machine.
      Exhibit 19 (adopted June, 1901) contains
      Non Initial payment.
         Exclusive Use clause, applying both to lasting machines and tacking devices.
         Prohibitive clause, applying to welting, stitching, turn sewing and metallic machines.
         Full capacity clause.
         Right to terminate all leases clause.
         Minimum royalty $10.00 a month.
         Abated royalty ¾c for long legged boots, ½c for all others.
      No other form of lease was adopted by the defendants for this machine, but it is claimed by Mr. Winslow that a manufacturer might still have had the lease formerly offered by the Consolidated & McKay Company. (R. 543.) No evidence of any actual lease or offer to lease in that form subsequent to the adoption of Exhibit 19 appears. The royalties under the old lease (Exhibit 7) "were very much in excess of what they were under the United lease." (Winslow, R. 543.)

1. Lasting Machines—Continued.

(c) McKay & Copeland Machine.

Initial payment.

Exhibit 20 (adopted August, 1903) contains

Exclusive Use clause applying to tacking appliances as well as lasting machines.

Prohibitive Clause applying to welting, stitching, sewing, pegging, metallic fastening and heeling machines.

Full Capacity Clause.

Right to Terminate All Leases clause.

Minimum royalty of $125.00 per annum.

No other lease for this machine was adopted by the United Company. (Winslow R. 542.) It is worth noting in connection with the defendants' claim that the fields of the various lasting machines were so distinct as to exclude the idea of competition that the prohibitive clause of this lease indicates that in the opinion of the defendants it could be used in a serious attempt to last welt shoes—a circumstance which they are now inclined to deny. The lease used previously by the Consolidated & McKay Company indicates a similar opinion.

(d) Ideal Lasting Machine.

Initial Payment.

Exhibit 18 (adopted August, 1901) contains

Exclusive Use clause applying to tacking devices as well as lasting machines.

Prohibitive Clause applying to welting, sole stitching, and turn sewing machines.

Full Capacity clause.

Initial Payment of $300.

Minimum Royalty of $75 per annum.

Right to Terminate All Leases clause.

NOTE.—Mr. Winslow testified in response to the question whether there had ever been any "unrestricted" form of the leases for the Ideal machine that he did not "recall any different lease ever used by the United Company for the Ideal machine from that of Plaintiff's Exhibit 18. (R. 543.)

1. Lasting Machines—Continued.
   (e) Number Five Lasting Machine.
      i. Non Initial Payment.
         Exhibit 21 (adopted ——, 1906).
            Exclusive Use clause.
            Prohibitive Clause, applying to welt sewing, sole stitching, turn sewing, pulling over and metallic machines.
            Full Capacity Clause.
            Return charge of $150.
            Right to Terminate All Leases Clause.
            Minimum Royalty of $10 a month.
      ii. Initial Payment.
         Exhibit 22.
            Exclusive Use Clause.
            Full Capacity Clause.
            Right to Terminate All Leases clause.
            Initial Payment of $300.
            Minimum Royalty $75 per annum.
               NOTE.—The Royalties are the same in both forms of lease. The minimum royalty provision of the initial payment lease, Exhibit 22, provides for the return of the machine at the option of the lessor in case the royalty in any succeeding 12 months does not amount to $75. In case of such return, one-third of the initial payment is returned.
2. Welt and Turn Sewing and Outsole Stitching Machines and Auxiliaries.
   i. Non Initial Payment.
      Exhibit 24 (adopted January, 1905) contains
         Exclusive Use clause, applying to welt stitching and turn sewing machines.
         Prohibitive Clause, applying to the same machines.
         Full Capacity Clause.
         Return Charge of $150.
         Right to Terminate All Leases clause.
         Minimum Royalty, $15 a month for each machine.

2. Welt and Turn Sewing and Outsole Stitching Machines and Auxiliaries—Continued.

i. Non Initial Payment—Continued.

Exhibit 24—Continued.

NOTE.—This lease provides for "royalties" to the defendants upon shoes made upon machines supplied by competitors of the defendants.

Exhibit 25 (adopted January, 1905) lease for Auxiliary Machines only, contains

Exclusive Use clause applying to welting, turn sewing, inseaming and outsole stitching machines.

Prohibitive Clause applying to same machines.

Right to Terminate All Leases clause.

Annual Rental, amounting to about $184 per annum.

Return Charges as scheduled.

NOTE.—This lease embraces twenty-four different kinds of machines. There is no lease under which these auxiliary machines can be obtained without the prohibitive clause restricting their use to use on shoes upon which the defendants' principal welt method machines are used. That is to say, the United Company does not permit on any terms the use of its auxiliary machines with principal machines supplied by some other manufacturer.

ii. Initial Payment.

Exhibit 23 (adopted December, 1906) contains

Exclusive Use Clause as to welting and outsole stitching machines.

Prohibitive Clause applying to same machines.

Right to Terminate All Leases clause.

Initial Payment provided for in the written application for the lease. (Donham, R. I, 9.)

Exhibit 26 (adopted 1905).

This lease was intended as a substitute for Exhibit 23. To the provisions of that lease are added the full capacity clause applying

2. Welt and Turn Sewing and Outsole Stitching Machines and Auxiliaries—Continued.
   ii. Initial Payment—Continued.
      Exhibit 26—Continued.
         to all welting, turn sewing, inseam sewing and outsole stitching machines held under that *and all other leases;* the exclusive use clause was extended to turn sewing machines.
            NOTE.—There is no lease under which the defendants will put out a welt sewing machine for welt work without a limitation to work that is to be stitched on the outsole stitcher or under which it will put out the stitching machine for use upon work that has not been welted on the welt sewing machine. (Winslow, R. I, 544.) In order to obtain either the welt sewing or the stitching or any of the auxiliary machines, the lessee must agree that he will not use at any time in his factory any welt sewing or outsole stitching machines made by any competitor of the defendants.
3. Heeling Machines.
   i. Non Initial Payment.
      Exhibit 27 (adopted 1900) contains
         Right to Terminate All Leases clause.
         Minimum Royalty $230 per annum.
      Exhibit 28 (adopted 1904) contains
         Exclusive Use clause.
         Prohibitive Clause applying to welt sewing, sole stitching, turn sewing, lasting, pegging and metallic machinery.
         Full Capacity Clause.
         Right to Terminate All Leases Clause.
            NOTE.—It is not unusual for the defendants to contend that they did not withdraw previous forms of leases upon the formulation of the new. Such a claim has already been introduced, *supra*. There can hardly be any question, however, in the light of Mr. Wins-

3. Heeling Machines—Continued.
   i. Non Initial Payment—Continued.
      Exhibit 28—Continued.
         Right to Terminate All Leases Clause—Contd.
         low's testimony that upon the adoption of Exhibit 28, the more favorable terms of Exhibit 27 were withdrawn, for, according to Mr. Winslow, the reason for the formulation of Exhibit 28, the insertion of the prohibitive clause which had not appeared in Exhibit 27, was the fact that the United Company at the time was bringing out its leases of welt method machines without initial payment. (R. I, 546.) His attempt to explain that the compensating advantage which he expected to obtain by way of off-set to giving up requirements of the initial payment on the welt method machines was not the exclusion of competition in heeling machines will be noticed later.

         There was no form of lease of heeling machines without the prohibitive clause at the time of filing the petition, but there is testimony as to a rider which eliminated the prohibitive clause and substituted an initial payment.

4. Metallic Fastening Machines.
   i. Non Initial Payment.
      Exhibit 29 (adopted March, 1900).
         Additional Machinery clause.
         Full Capacity clause.
         Right to Terminate All Leases clause.
      Exhibit 30 (adopted June, 1900).
         Superseding Exhibit 29 which was then discontinued contains
            Additional machines clause, providing for the cancellation of all leases for metallic machinery if the lessee fails to take from the lessor any additional metallic fastening machines which he may need.

4. Metallic Fastening Machines—Continued.
   i. Non Initial Payment—Continued.
      Exhibit 30—Continued.
         Superseding Exhibit 29, etc.—Continued.
            Prohibitive clause, applying to lasting, welting, outsole stitching, and turn sewing machines.
            Full Capacity clause.
            Royalty in this lease is to be paid by the purchase of material of which not less than 400 pounds per annum is to be taken.
      Exhibit 31 (adopted March, 1901) contains
         Additional machines clause.
         Full Capacity Clause.
         Clause permitting removal of machines deemed by the lessor unnecessary for the lessee's business.
         Right to Terminate All Leases clause.
         Provision for payment for material at prices "which shall not be more than ten per cent in excess of prices to be required from time to time by the lessor for like fastening material to be used in its metallic department machinery by lessees who shall agree not to use the metallic department machinery leased to them in the manufacture of boots and shoes which are lasted on machines other than those leased from the lessor, or of welted boots and shoes which are not welted and stitched on welt sewing and sole stitching machines leased from the lessor, or of turned shoes, the soles of which are not attached by turn sewing machines leased from the lessor."
         Provision for minimum use of 400 pounds of material per annum.
      Exhibit 32.
         This is a lease like Exhibit 30 with a rider attached eliminating the prohibitive clause.

4. Metallic Fastening Machines—Continued.
   i. Non Initial Payment—Continued.
      Exhibit 33 (printed July, 1911).
         This is a form which takes the place of Exhibit 32.
      Exhibit 34 (adopted 1911).
         This is described by the witness Donham (R. I, 11) as the current form of lease for metallic machines "when taken without the initial payment and without the provision for ten per cent excess in royalty charge." These provisions present no substantial change from the form of Exhibit 30.
      Exhibit 35.
         This is a form of lease for a single machine, the standard screw machine, belonging to the metallic department. Its provisions are the same as those of Exhibit 34.
5. Pegging Machines.
   i. Non Initial Payment.
      Exhibit 45, (adopted June, 1901) contains
         Prohibitive Clause applicable to lasting and metallic machines.
         Exclusive Use clause.
         Right to Terminate All Leases clause.
         Full capacity clause.
         Minimum royalty $10 a month.
   ii. Initial Payment.
      Exhibit 46 (adopted 1905 or 1906) contains
         Exclusive Use clause.
         Right to Terminate All Leases clause.
         Full Capacity clause.
         Initial Payments.
6. Pulling Over machines.
   i. Non Initial Payment.
      Exhibit 36 (adopted March, 1902) contains
         Prohibitive clause applying to heeling, welting, stitching, lasting, pegging, and metallic fastening machines.
         Additional machines clause.

6. Pulling Over Machines—Continued.
   i. Non Initial Payment—Continued.
      Exhibit 36—Continued.
         Right to Terminate All Leases clause.
         Full Capacity clause.
         Return charge of $200.
         Minimum royalty of $15 a month.
      Exhibit 37 (adopted January, 1905) contains
         Exclusive Use clause providing for optional forfeiture of all leases existing between the lessor and lessee in case of its violation.
         Prohibitive Clause applying to welting, stitching, turn sewing, hand-method lasting machines, pegging, metallic fastening and heeling machines.
         Additional Machines clause requiring auxiliary machines to be used exclusively with lessors' pulling over machine.
         Right to terminate all leases clause applying to "stipulation" and "provisions" as well as to "conditions."
         Full capacity clause.
         Return charge of $200.
         Minimum royalty of $20 a month.
      Defendants' Exhibit 345, (adopted 1907).
         This form is the same as Exhibit 37 except that the additional machine clause is omitted, and the exclusive use clause, while retained, gives the lessor the right only to forfeit all leases for pulling over machines.
      Exhibit 38 (Adopted 1909).
         Covering auxiliaries to pulling over machines contains
            Prohibitive clause, including the machinery of the pulling over system held under that *and all other* leases, and prohibiting their use with independent welting, stitching, turn sewing, lasting, pegging, heeling and metallic fastening machines.
            Exclusive use clause.

6. Pulling Over Machines—Continued.
   i. Non Initial Payment—Continued.
      Exhibit 38—Continued.
         Covering auxiliaries to pulling over machines contains—Continued.
            Right to terminate all leases clause.
            Full capacity clause, extending also to all pulling over machines held under these or other leases from the lessor.
            The royalty provisions are noticed just below.
   ii. Initial Payment.
      Exhibit 39 (Printed August, 1911) contains
         Full Capacity clause.
         Prohibitive Clause extending only to the use of the auxiliary machines with the principal machines.
         Exclusive use clause.
         Right to terminate all leases clause.
         Minimum royalty $20 a month.
         Initial payment.

NOTE.—The royalty provisions of Exhibit 38 require the payment of ½ c. for each pair of shoes pulled over in whole or in part by machinery, plus a further payment of ¼ c. for the use of each of 6 of the 8 auxiliary machines named in the schedule, making a total payment if all the machines are used of 2 c., with the proviso, however, that if the lessee shall use no lasting machines or devices except those, of the defendants, the royalty shall not be more than ¾ c. on each pair. This royalty is in addition to all other royalties except royalty paid under other leases for pulling over machines. A minimum royalty is also required.

This lease furnishes an example of the interrelation and cumulative effect of the various parts of the defendants' leasing system. The defendants are here leasing a patented *pulling over* machine. Their price

6. Pulling Over Machines—Continued.
   ii. Initial Payments—Continued.
      Exhibit 39—Continued.
         Initial payment—Continued.

for it is ¾ c. a pair to those who aid them to obtain a monopoly in *lasting* machines, and 2 c. a pair to those who do not.

It may be noticed, also, that under the exclusive use clause, they could not have in their factory a competing pulling over machine if they could find one and the possession of this pulling over machine is conditioned upon its not being used upon any shoes which are operated upon by any welting, stitching, turn sewing, lasting pegging, heeling, or metallic fastening machine made by any competitor of the defendants.

Exhibit 39 as is noted omits the prohibitive clause. To obtain it, however, the lessee must pay an initial payment amounting to about the value of the machine, and the royalty is 1c. a pair straight, with no deduction for royalties paid on the lasting machine. The royalty charges are stated as to both Exhibits 38 and 39 without the 50% discount for prompt payment. The net result is for lasting and pulling over under Exhibit 39, the so called independent lease, the lessee has to pay 1c. a pair while under Exhibit 38, he pays only 3/8c. a pair.

7. General Department Machines.

Exhibits 40 and 41 cover these machines. It is said that they were discontinued after the filing of the Government's petition, and that the company now does not lease these general department machines, but sells them exclusively. Before the filing of the petition, manufacturers who did not use United Company machines exclusively could obtain the machines by outright purchase, but not by lease. Lessees of the United Company could obtain them upon lease.

7. General Department Machines—Continued.

Many of these leases are still in force. Their terms are as follows:

Exhibit 40 (adopted about 1902) contains

Prohibitive clause, applying to stitching, turn sewing, lasting, pegging, and metallic machinery.

Right to Terminate All Leases clause.

The only charge made is payment of the lease premium except that the lessee was bound to purchase repair parts from the lessor. Donham testified that the lease premium *was substantially less* than the price at which the machine was sold, but it will be observed that this lease was used as an inducement to manufacturers to take other machines.

Exhibit 41 (adopted about 1908).

Like Exhibit 40. This lease could be obtained only by users of other machines of the United Company. It is different from Exhibit 40 in that it required an annual rental instead of a lump sum payable at the beginning.

8. Eyeletting machines.

i. Non Initial Payment.

Exhibit 43 (adopted about 1902).

Prohibitive clause, applying to welting, stitching, turn sewing, lasting, pegging, metallic fastening and heeling machines.

Right to Terminate All Leases clause.

ii. Initial Payment.

Exhibit 42 (adopted 1902).

Initial Payment $100.

Right to Terminate All Leases clause.

NOTE.—In both leases, the lessor's further compensation is derived from the requirement that the lessee purchase only from the lessor the eyelets used in the machines.

9. Clicking Machines.

Exhibit 44 (adopted about 1907) contains

Prohibitive clause, prohibiting the use of the lessor's dies with clicking machines other than those furnished by the lessor.

9. Clicking Machines—Continued.
Exhibit 44—Continued.
Exclusive Use clause.
Full Capacity Clause.
Right to Terminate All Leases clause.

NOTE.—The compensation for the use of the machine in case it is used only on shoes lasted and welted or stitched on the lessor's machines is derived from the sale by the defendants of dies at a fixed price. The lease requires the lessee to pay the United Company 5 c. for each inch of cutting edge of any dies which the lessee purchases from manufacturers other than the defendants. It also provides that *1 c.* per pair is to be paid for footwear lasted on lessor's machines, and *6 c.* per pair for footwear welted, or stitched otherwise than by lessor's machines. These royalties are cumulative, but are subject to 50 per cent discount.

This is a further example of the interlocking and cumulative effect of the defendants leases. The compensation for the use of this machine in itself is definitely fixed, and makes the profits upon the sale of dies at established prices, but the lessor who uses a lasting machine or a welting and stitching machine supplied by competitors of the lessor is penalized an amount ranging from ½ c. to 3½ c. a pair, net. While this penalty is stated as a charge for the use of this machine its true purpose and effect as a destroyer of competition in other types of machines is apparent.

APPENDIX D.

RÉSUMÉ OF LEASES IN WHICH THE VARIOUS OBJECTIONABLE CLAUSES APPEAR.

That the effect of these clauses as used in the United Company's entire system of leases may the more readily appear, the leases containing each one of them will be separately designated. In doing so, neither the leases executed by the constituent companies, nor those executed by the subsidiary companies of the United Company will be considered.

First. All the leases contain the seventeen year term.

Second. All the leases contain the "right to terminate all leases" clause.

Third. The following leases contain the "full capacity" clause:

(1) Exhibit 16, adopted September, 1900, a noninitial payment lease for the Consolidated hand-method lasting machine. (Sec. 4, R. III, 139.)

(2) Exhibit 15, adopted December, 1900, a noninitial payment lease for the Consolidated hand-method lasting machine. (Sec. 4, R. III, 131.)

(3) Exhibit 14, adopted December, 1900, an initial payment lease for the Consolidated hand-method lasting machine. (Sec. 4, R. III, 123.)

(4) Exhibit 17, adopted December, 1906, an initial payment lease for the Consolidated hand-method lasting machine. (Sec. 4, R. III, 147.)

(5) Exhibit 19, adopted June, 1901, a non-initial payment lease for the Chase lasting machine. (Sec. 4, R. III, 165.)

(6) Exhibit 20, adopted August, 1903, an initial payment lease for the McKay & Copeland lasting machine. (Sec. 4, R. III, 174.)

(7) Exhibit 18, adopted August, 1901, an initial payment lease for Ideal lasting machine. (Sec. 4, R. III, 156.)

(8) Exhibit 21, adopted in 1906 or 1907, a non-initial payment lease for No. 5 lasting machine. (Sec. 5, R. III, 184.)

(9) Exhibit 22, adopted in 1906 or 1907, an initial payment lease for No. 5 lasting machine. (Sec. 4, R. III, 196.)

(10) Exhibit 24, adopted January, 1905, a non-initial payment lease for Goodyear machines. (Sec. 5, R. III, 217.)

(11) Exhibit 26, adopted in 1905, an initial payment lease for a full set of Goodyear machines. (Sec. 4, R. III, 245.)

(12) Exhibit 27, adopted in 1900, a non-initial payment lease for a heeling machine. (Sec. 3, R. III, 256.)

(13) Exhibit 28, adopted in 1904, a non-initial payment lease for heeling machine. (Sec. 5, R. III, 264.)

(14) Exhibit 29, adopted March, 1900, a non-initial payment lease for metallic machines. (Sec. 3, R. III, 274.)

(15) Exhibit 30, adopted in June, 1900, succeeding Exhibit No. 29, a non-initial payment lease for metallic machines. (Sec. 3, R. III, 280.)

(16) Exhibit 31, adopted March, 1901, equivalent to an initial-payment lease for metallic machines. (Sec. 6, R. III, 290.)

(17) Exhibits 32 and 33. No. 32 is Exhibit 30 with a rider, eliminating the "prohibitive" clause, adopted June, 1900; and Exhibit 33 is a reprint of July, 1911, with the provisions of the rider incorporated in the face of the lease, which is an initial payment lease for metallic machines. (Sec. 3, R. III, 300, 308.)

(18) Exhibit 34, adopted May, 1911, a non-initial payment lease for metallic machines. (Sec. 3, R. III, 316.)

(19) Exhibit 35, adopted May, 1911, a non-initial payment lease for Standard screw machine of metallic department. Sec. 3, R. III, 325.)

(20) Exhibit 45, adopted June, 1901, a non-initial payment lease for Davey pegging machine. (Sec. 5, R. III, 416.)

(21) Exhibit 46, adopted in 1905 or 1906, an initial payment lease for Davey Pegging machine, an alternative form for Exhibit 45. (Sec. 5, R. III, 425.)

(22) Exhibit 36, adopted March, 1902, a non-initial payment lease for pulling over machine. (Sec. 4, R. III, 334.)

(23) Exhibit 37, adopted January, 1905, a non-initial payment lease for pulling over set. (Sec. 5, R. III, 342.)

(24) Defendants' Exhibit 345, adopted as early as 1907, a non-initial payment lease for pulling-over machines. (Sec. 5, R. V, 962.)

(25) Exhibit 38, adopted February, 1909, a noninitial payment lease for pulling-over machine. Clause extends to entire system. (Sec. 5, R. III, p. 354.)

(26) Exhibit 39, adopted August, 1911, an initial payment lease for pulling-over machine. (Sec. 4, R. III, 366.)

(27) Exhibit 42, adopted about 1902, an initial payment lease for eyeletting machine. (Sec. 4, R. III, 390.)

(28) Exhibit 43, adopted about 1902, a noninitial payment lease for eyeletting machine. (Sec. 5, R. III, 397.)

(29) Exhibit 44, adopted 1907, 1908, or 1909, a noninitial payment lease for clicking machine. (Sec. 5, R. III, 405.)

(30) Exhibit 52, adopted December, 1907, a noninitial payment lease for Economy insole reenforcing set. Clause applies only to principal machines. (Sec. 5, R. III, 453.)

This clause, therefore, appears in each of the nine leases for lasting machines, two of the four leases for Goodyear machines, both heeling-machine leases, all six of the leases for metallic machines, both of the leases for pegging machines, all five of the leases for pulling-over machines, both leases for eyeletting machines, and the one lease for clicking machines.

Fourth. The following leases contain the "additional machines" clause:

(1) Exhibit 27, adopted in 1900, a non-initial payment lease for a heeling machine. (Clause 3, R. III, 256.)

(2) Exhibit 29, adopted March, 1900, a non-initial payment lease for metallic machines. (Sec. 3, R. III, 274.)

(3) Exhibit 30, adopted June, 1900, succeeding Exhibit 29, a non-initial payment lease for metallic machines. (Sec. 3, R. III, 280.)

(4) Exhibit 31, adopted March, 1901, equivalent to an initial payment lease, for metallic machines. (Sec. 6, R. III, 290.)

(5) Exhibit 32 and 33: Exhibit 32 is the same as Exhibit 30, with rider eliminating prohibitive clause, adopted June, 1900, and Exhibit 33 is a reprint of same in July, 1900. An initial payment lease for metallic machines. (Sec. 3, R. III, 300, 308.)

(6) Exhibit 34, adopted May 11, 1911, a non-initial payment lease for metallic machines. (Sec. 3, R. III, 316.)

(7) Exhibit 35, adopted May, 1911, a non-initial payment lease for Standard screw machine of metallic department. (Sec. 3, R. III, 325.)

(8) Exhibit 36, adopted March, 1902, a non-initial payment lease for pulling-over machine. (Sec. 4, R. III, 334.)

(9) Exhibit 39, adopted January, 1905, a non-initial payment lease for pulling-over set. (Sec. 5, R. III, 367.)

This clause therefore appears in the first of the two leases for heeling machines, all six leases for metallic machines, and in two of the four leases for pulling-over machines.

Fifth. The following leases contain the "exclusive use" clause:

(1) Exhibit 16, adopted September, 1900, a non-initial payment lease for the Consolidated hand-method lasting machine. (Sec. 7, R. III, 141.)

(2) Exhibit 15, adopted December, 1900, a non-initial payment lease for Consolidated hand-method lasting machine (Sec. 7, R. III, 133.)

(3) Exhibit 14, adopted December, 1900, an initial payment lease for the Consolidated hand-method lasting machine. (Sec. 7, R. III, 125.)

(4) Exhibit 17, adopted December, 1906, an initial payment lease for Consolidated hand-method lasting machine. (Sec. 7, R. III, 150.)

(5) Exhibit 19, adopted June, 1901, a non-initial payment lease for the Chase lasting machine. (Sec. 7. R. III, 168.)

(6) Exhibit 20, adopted August, 1903, an initial payment lease for the McKay & Copeland machine. (Sec. 7, R. III, 177.)

(7) Exhibit 18, adopted August, 1901, an initial payment lease for the Ideal lasting machine. (Sec. 7, R. III, 158.)

(8) Exhibit 21, adopted in 1906 or 1907, a non-initial payment lease for No. 5 lasting machine. (Sec. 8, R. III, 187.)

(9) Exhibit 22, adopted in 1906 or 1907, an intial payment lease for No. 5 lasting machine. (Sec. 7, R. III, 198.)

(10) Exhibit 23, adopted December, 1900, in initial payment lease for Goodyear set. Clause requires exclusive use of only welting, sewing, and outsole stitching machines, but a violation authorizes the forfeiture of all machines men-

tioned in schedule of machines held by lessee from lessor. (Sec. 7, R. III, 209.)

(11) Exhibit 24, adopted January, 1905, a noninitial payment lease for Goodyear machines. Clause requires exclusive use of welting, sewing, and outsole stitching machinery, and turn sewing machinery belonging to lessor, and its violation authorizes forfeiture of all Goodyear machinery. (Sec. 8, R. III, 221.)

(12) Exhibit 26, adopted in 1905, an initial payment lease for full Goodyear set. Clause excludes use of all but lessor's welting and turn sewing machines, but if violated authorizes forfeiture of all Goodyear department machines. (Sec. 7, R. III, 247.)

(13) Exhibit 25, adopted about January, 1905, a noninitial payment lease for the auxiliary machines of the Goodyear department. Clause excludes use of all but lessor's welting and turn sewing machines, but its violation authorizes forfeiture of all machines of Goodyear department. (Sec. 9, R. III, 234.)

(14) Exhibit 28, adopted in 1904, a noninitial payment lease for heeling machine. (Sec. 10, R. III, 267.)

(15) Exhibit 45, adopted June, 1901, a noninitial payment lease for Davey pegging machine. (Sec. 8, R. III, 418.)

(16) Exhibit 46, adopted in 1905 or 1906, an initial payment lease for Davey pegging machine, alternative form for Exhibit 45. (Sec. 8, R. III, 427.)

(17) Exhibit 37, adopted January, 1905, a noninitial payment lease for pulling-over set. For violation of clause the lessor is authorized to terminate "any or all leases or licenses of machinery then existing between the lessor and the lessee." (Sec. 9, R. III, 345.)

(18) Defendants' Exhibit 345, adopted as early as 1907. A noninitial payment lease for pulling-over machine. (Sec. 9, R. V, 965.)

(19) Exhibit 38, adopted in February, 1909, a noninitial payment lease for pulling-over machine. (Sec. 8, R. III, 358.)

(20) Exhibit 39, adopted August, 1911, an initial payment lease for pulling-over machine. (Sec. 8, R. III, 369.)

(21) Exhibit 44, adopted 1907, 1908, or 1909, a noninitial payment lease for clicking machine. (Sec. 9, R. III, 408.)

(22) Exhibit 52, adopted in December, 1907, a noninitial payment lease for Economy insole reinforcing set. (Sec. 9, R. III, 456.)

This clause, therefore, appears in each of the nine leases for lasting machines, the four leases for Goodyear machines, one of the two leases for heeling machines, which has been in use since 1904, both leases for pegging machines, four of the five leases for pulling-over machines, one of the leases for clicking machines, and the one lease for Economy insole machines.

Sixth. The following leases contain the "prohibitive" clause:

(1) Exhibit 16, adopted December, 1900, a non-initial payment lease for the Consolidated hand-method lasting machine. This clause applies to welting, sole stitching, turn sewing, and metallic fastening machines. (Sec. 4, R. III, 139.)

(2) Exhibit 15, adopted December, 1900, a non-initial payment lease for the Consolidated hand-method lasting machine. Clause applies to welting, sole stitching and turn sewing machines. (Sec. 4, R. III, 131.)

(3) Exhibit 19, adopted June, 1901, a non-initial payment lease for the Chase lasting machine. Clause applies to welting, sole stitching, turn sewing, and metallic machines. (Sec. 4, R. III, 165.)

(4) Exhibit 20, adopted August, 1903, an initial payment lease for the McKay-Copeland lasting machine. Clause applies to welting, sole stitching, and sewing, pegging, metallic, and heeling machines. (Sec. 4, R. III, 174.)

(5) Exhibit 18, adopted August, 1901, an initial payment lease for the Ideal lasting machine. Clause applies to welting, sole stitching, and turn sewing machines. (Sec. 4, R. III, 156.)

(6) Exhibit 21, adopted in 1906 or 1907, a non-initial payment lease for No. 5 lasting machine. Clause applies to welting, sole stitching, turn sewing, pulling over and metallic machines. (Sec. 5, R. III, 185.)

(7) Exhibit 23, adopted December, 1900, an initial payment lease for the Goodyear set. Clause prohibits the use of the machine on welt shoes not welted and sole stitched, and turn shoes, the bottoms of which are not attached by

the lessor's machinery. This lease does not tie the leased machines to other than Goodyear machines. (Sec. 4, R. III, 207.)

(8) Exhibit 24, adopted in January, 1905, a non-initial payment lease for Goodyear machines. Clause prohibits the use of machines except on "Goodyear welts" and "Goodyear turns," which have been welted or soles attached by certain specified machines belonging to the lessor. (Sec. 4 R. III, 217.)

(9) Exhibit 26, adopted in 1905, an initial payment lease for full set of Goodyear machines. Clause prohibits use of machines upon other than "Goodyear welts" and "Goodyear turns," welted or soles attached by lessor's machines. (Sec. 4, R. III, 245.)

(10) Exhibit 25, adopted January, 1905, a non-initial payment lease for the auxiliary machines of the Goodyear department. Clause prohibits the use of machines in connection with other than designated welting, sole stitching and turn sewing machines belonging to the lessor. (Sec. 5, R. III, 230.)

(11) Exhibit 28, adopted in 1904, a non-initial payment lease for heeling machines. Clause prohibits use with other than lessor's welting, sole stitching, turn sewing, lasting, pegging, and metallic machines. (Sec. 5, R. III, 264.)

(12) Exhibit 30, adopted June, 1900, succeeding Exhibit 29, which did not contain this clause. The clause applies to lasting, welting, sole stitching and turn sewing machines. (Sec. 3, R. III, 280.)

(13) Exhibit 34, adopted May, 1911, a non-initial payment lease for metallic machines. Clause applies to lasting, welting, sole stitching and turn sewing machines. (Sec. 3, R. III, 316.)

(14) Exhibit 35, adopted May, 1911, a non-initial payment lease for Standard screw machine, of metallic department. Clause applies to lasting, welting, sole stitching, and turn sewing machines. (Sec. 3, R. III, 325.)

(15) Exhibit 45, adopted June, 1901, a non-initial payment lease for Davey pegging machine. Clause applies to lasting and metallic machines. (Sec. 5, R. III, 416.)

(16) Exhibit 36, adopted March, 1902, a non-initial payment lease for pulling-over machine. Clause applies to welt-

ing, sewing and stitching, and pegging and metallic machines. (Sec. 4, R. III, 334.)

(17) Exhibit 37, adopted January, 1905, a noninitial payment lease for pulling-over set. Clause extends to welting, stitching, turn sewing, lasting, pegging, metallic, and heeling machines. (Sec. 6, R. III, 343.)

(18) Defendants' Exhibit 345, adopted as early as 1907, a noninitial payment lease for pulling-over machines. (Sec. 5, R. V, 962.)

(19) Exhibit 38, adopted February, 1909, a noninitial payment lease for pulling-over machines. Clause extends to welting, stitching, turn sewing, lasting, pegging, metallic, and heeling machines, and is made to apply to pulling-over machines held by or for the lessee under that or any "other lease or license agreements from the lessor." (Sec. 5, R. III, 354.)

(20) Exhibit 39, adopted August, 1911, an initial payment lease for pulling-over machines. Clause extends only to use of auxiliary with principal machines. (Sec. 5, R. III, 367.)

(21) Exhibit 40, adopted about 1902. An initial payment lease for general department machines. Clause applies to welting, sole stitching, turn sewing, lasting, pegging, and metallic machines. (Sec. 4, R. III, 376.)

(22) Exhibit 41, adopted about 1908. Noninitial payment lease for general department machines. Clause extends to welting, sole stitching, turn sewing, lasting, pegging, and metallic machines. (Sec. 5, R. III, 382.)

(23) Exhibit 43, adopted about 1902, a noninitial payment lease for eyeletting machines. Clause extends to welting, sole stitching, turn sewing, lasting, pegging, metallic and heeling machines. (Sec. 5, R. III, 397.)

(24) Exhibit 51, adopted December, 1900, a noninitial payment lease for Gem insole machinery. Clause applies only to welting, sewing, and stitching machines. (Sec. 4, R. III, 445.)

(25) Exhibit 52, adopted December, 1907, a noninitial payment lease for Economy insole reinforcing set. Clause applies as to principal machines to welt and turn sewing machines, and as to auxiliary machines, to use with Economy insole reinforcing machine. (Sec. 5, R. III, 453.)

(26) Exhibit 56, adopted about 1910 or 1911, an initial payment lease for repairing machine, used to repair patent leather injured in the manufacture of the shoe. Clause applies to welting, sole stitching, turn sewing, and lasting machines. (Sec. 5, R. III, 487.)

(27) Exhibit 57, an initial payment lease for Miller treeing machines. Clause applies to welting, sole stitching, turn sewing, lasting, pegging and metallic machines. (Sec. 4, R. III, 494.)

The clause, therefore, appears in six of the nine leases for lasting machines, all four of the leases for Goodyear machines, the one of the two leases for heeling machines which has been in use ever since 1904, three of the six leases for metallic machines, all five of the leases for pulling-over machines, the two leases for general department machines, one of the two leases for Gem insole machines, the one lease for Economy insole machines, and the one lease for the Miller treeing machine.

Acquisitions of other businesses and properties 43
Covenants in contracts of purchase 46
The Plant purchase 46
Unfair and monopolistic acts 50
Conclusion 51

V.

FINDINGS OF FACT BY THE DISTRICT COURT 55–80

Containing quotations from the District Court's opinions showing that the District Court found that

1. The defendants did not plan to acquire a monopoly of all shoe machinery and to refuse to sell or lease essential machines unless practically all other machinery was taken 55
2. The United Company was not formed to eliminate competition between its constituent companies . . 57
3. The basic patents of the constituent companies were not about to expire 59
4. The United Company did not take over the constituent companies at excessive prices 60
5. The leasing system 61–67

   A. The leasing system was of great advantage to shoe manufacturers 61
   B. The United Company did not discontinue the sale of machines 61
   C. The leases did not compel a shoe manufacturer taking machines previously put out by one of the constituent companies to take other machines not previously put out by such company . . . 62
   D. The provisions in the leases were not adopted for the purpose of monopolizing or excluding the use of competitors' machines 63
   E. The leases did not result in the arbitrary exclusion of competitors' machines 65

PAGE

F. The United Company did not charge exorbitant prices for duplicate parts and exorbitant return charges 66
G. The leases have not been arbitrarily enforced . 66

6. The United Company did not acquire competing concerns with intent to monopolize 67
7. The purchase from Thomas G. Plant was not made in pursuance of a scheme to monopolize 69
8. The acquisitions were not made at exorbitant prices, 72
9. Unlawful covenants were not demanded from vendors, 72
10. The United Company did not commit other unfair, monopolistic or oppressive acts 73
11. The United Company did not make enormous and unreasonable profits 74
12. The defendants did not have an unlawful plan and purpose 75
13. The United Company has not obtained an unlawful monopoly 76–80

A. The United Company has no monopoly of all shoe machinery 76
B. The United Company has no monopoly of bottoming machinery, to which the United States limited its charge 77
C. The United Company's success has been due solely to the merits of its patented machines and the service which it renders with them 77

VI.

THE FINDINGS OF FACT MADE BY THE DISTRICT COURT SHOULD BE ACCEPTED UNLESS MANIFESTLY WRONG 81–92

1. The law 81
2. Strongest possible reasons in present case for accepting findings of fact by the District Court unless wholly unwarranted 87

VII.

GENERAL APPLICATION OF THE SHERMAN ACT TO THE PRESENT CASE 93–98

VIII.

PAGE

SPECIAL CONSIDERATIONS APPLICABLE TO THE PRESENT CASE 99–102

1. Present case unique in that (A) shoe machinery business is dominated by patents, and (B) no competition previously existing was eliminated 99
2. Conditions peculiar to the industry must be considered 101
3. Transactions are material only if they prove the charge of the United States 102

PART TWO.

FACTS AND ARGUMENT.

I.

FORMATION OF THE UNITED COMPANY . . . 103–203

1. The formation of the United Company was held legal under the Sherman Act in *United States* v. *Winslow*, 227 U. S. 202 103

2. Business done by the constituent companies . . 109–114

   A. The Goodyear Company 109
   B. The Consolidated & McKay Lasting Machine Company 111
   C. The McKay Shoe Machinery Company 112
   D. The Eppler Welt Machine Company 112
   E. The machines manufactured by the constituent companies were patented and were the best machines made and they were those principally used for the purposes for which they were adapted 113

3. Organization of the United Company 115–117

   A. No watered stock was issued 116
   B. Machines not manufactured by the constituent companies 117

4. Alleged competition between constituent companies, 118–170

PAGE

A. Alleged lasting machine competition between the Goodyear Company and the Consolidated & McKay Lasting Machine Company 119–151

(1) Introductory statement 119

(2) No competition between the Ideal lasting machine of the Goodyear Company and the Chase lasting machine of the Consolidated & McKay Company 121–139

(*a*) Introductory statement 121

(*b*) Chase lasting machine was not used for lasting women's welt shoes and was therefore not used in the field occupied by the Ideal machine 124

(*c*) Ideal machine was not competing with the Chase machine in lasting men's welt shoes 127

Ideal machine was structurally unadapted for use commercially on men's welt shoes 128

Much of the evidence introduced by petitioner relates to use of the Copeland Rapid machine and not the Ideal 129

Nearly all the evidence introduced by petitioner relates to the alleged use of Ideal machine after 1899 131

Slightly increased use of Ideal machine after 1899 due to introduction of high-toed last and new inventions 132

Incidental overlapping of fields of Ideal and Chase machines was insignificant and negligible 136

(*d*) Both the Chase and Ideal have become obsolete, so their possible competition has become a moot point 137

(*e*) Findings of the District Court on this subject 139

(3) No competition between the Ideal machine of the Goodyear Company and the hand method welt lasting machine of the Consolidated & McKay Company 139–146

(*a*) Introductory statement 139

(*b*) Hand method welt lasting machine not commercially successful until after 1899 142

PAGE

(c) No evidence that experimental hand method welt lasting machines had ever been used in the field of the Ideal . . . 143
(d) Hand method welt lasting machine when commercially successful had a distinct field of its own 144
(e) Finding of the District Court on this subject 146
(f) If any incidental competition existed it was unlawful by reason of patent infringements 146

(4) General statement of the situation in respect to alleged lasting machine competition . . . 146
(5) Summary of the evidence as to alleged lasting machine competition 147
(6) Acquisition of different types of lasting machines did not make the organization of the United Company unlawful nor show wrongful intent 149

B. Alleged competition between the Goodyear and Eppler Companies 152–170

(1) Introductory statement 152
(2) Purpose of the acquisition of the Eppler Company 153
(3) The purchase of the Eppler Company was not considered until after the formation of the United Company was agreed upon . . . 154
(4) Patent litigation between the Goodyear and Eppler Companies on account of which the Eppler Company was acquired 154
(5) If any competition existed between the Eppler Company and the Goodyear Company, such competition was trivial and negligible . . . 156
(6) If any competition existed it was illegal on the part of the Eppler Company on account of patent infringements 163
(7) United Company continued to put out Eppler machines so far as shoe manufacturers desired them 163
(8) The Eppler machines were patented machines of a different type and the United Company was entitled to acquire the patents, 165
(9) Other evidence submitted by the United States in respect to the Eppler purchase . . 166

PAGE

(10) Finding of the District Court as to the Eppler acquisition 168
(11) Conclusion as to the Eppler acquisition . . 169

5. Purposes for which the United Company was formed and the manner in which such purposes have been accomplished 171–203

A. Reasons for formation of United Company as testified to by Mr. Winslow and Mr. Howe . . . 171
B. Reasons for formation of the United Company as stated in circulars to stockholders 172
C. Specific denials of intent to monopolize shoe machinery as charged in the Petition 174
D. Methods by which and extent to which the United Company carried out and realized the purpose for which it was organized 175–203

(1) Concentration in one factory and standardization 176
(2) Inauguration and maintenance of efficient repair service 179–194

(*a*) Necessity for the service 179
(*b*) Inadequate service rendered by constituent companies prior to the formation of the United Company 183
(*c*) Improvements in service by United Company 186
(*d*) Testimony of shoe manufacturers as to importance of service by the United Company 189

(3) Inventions and improvements in machines made by the United Company 194
(4) Increased efficiency of machines resulting from inventions and service furnished by the United Company 197
(5) Savings of shoe manufacturers from increased efficiency of machines and from decrease of royalties and installation charges 198
(6) Benefits to shoe operatives resulting from inventions and service of United Company . 202
(7) Development by United Company of Goodyear method of making shoes 203

II.

PAGE

THE EVIDENCE REGARDING DEFENDANTS' PATENTS, 204–237

1. Introductory statement 204
2. Petitioner's evidence in support of the allegation of the Petition that early in 1899 many of the basic patents on the principal machines were about to expire 206
   - A. This claim disproved by Petitioner's own patent expert. 207
   - B. Petitioner's final position as to expiration of basic patents 209
3. Defendants' evidence as to the patents in 1899 on the machines discussed by Petitioner's expert . . . 211
4. Petitioner's attempt to belittle the importance of the later patents on the welter and stitcher in 1899, 214
5. Petitioner's contention that certain patents expired prematurely or were anticipated 218
6. Petitioner's evidence that patents on machines other than the welter and stitcher were not basic patents, 221
7. The patents on the machines in 1899 represented merely the 1899 stage in the continuous patented development of shoe machinery 222
8. In December, 1911, the United Company's machines were fully protected by strong and valuable patents, 233
9. Summary of the patent testimony 234
10. Findings of the District Court as to the patent situation 236

III.

THE DEFENDANTS' LEASES OF SHOE MACHINERY 238–422

1. Introductory statement 238
2. Allegations of the Petition as to the leases 240
   - A. Summary of charges of the Petition with respect to the leases 242
3. Provisions in the United Company's leases on which the United States relied in support of its charges . . 243
4. The provisions on which the United States relied do not support the allegations of the Petition 248
5. The United Company did not discontinue the sale of machines 251
6. Reasons for marketing shoe machinery by leases . . 252

PAGE

7. Necessity for provisions in the leases protecting the lessor 257
8. Lease system employed by the constituent companies prior to the formation of the United Company . . . 262
   A. Leases of Goodyear Company prior to 1899 . . 262
   B. Leases of Consolidated Company prior to 1899, 265
   C. Leases of McKay Company prior to 1899 . . . 268
9. Summary of lease situation just prior to the date of the formation of the United Company 270
   A. General summary of provisions in leases . . . 270
   B. Provisions by which the constituent companies protected themselves when leasing machines without initial payment 272
10. United Company necessarily continued the leasing system 274
11. Modifications by United Company of leases of constituent companies 275–298
   A. Introductory statement 275
   B. Adoption of Restricted Use Clause in metallic leases 276
   C. Adoption of Restricted Use Clause in heeling machine leases 278
   D. Summary of modifications made by the United Company in the constituent companies' leases . 280
      (1) General summary of modifications 280
      (2) Modifications of leases of Goodyear machines 282
      (3) Modifications of leases of lasting machines, 286
      (4) Modifications of leases of heeling machines, 289
      (5) Modifications of leases of metallic machines, 290
      (6) Modification of leases of Davey pegging machine 292
   E. Leases adopted by the United Company for new machines 293
      (1) Pulling-over machine leases 293
      (2) Clicking machine lease 294
      (3) Eyeletting machine leases 294
      (4) No. 5 lasting machine leases 295
      (5) General Department machine leases 295
      (6) Insole machine leases 296
      (7) McKay sewing machine lease 297
   F. Use of riders and special forms of lease 297

PAGE

12. Reasons for use of the various clauses and their legality 298–414
A. Clause requiring lessee to purchase from the lessor all repair parts needed in the machine . . 298
B. Clause requiring payment of a return charge on termination of the lease 301
C. Clause limiting the term of the lease to seventeen years 302
D. Full Capacity Clause 306
E. Exclusive Use Cancellation Clause 311
F. Additional Machinery Clause 323
G. Cancellation For Breach Clause 326
H. Restricted Use Clause 331–414
(1) Reasons for adoption of the Restricted Use Clause 331
(2) Testimony of shoe manufacturers to merits of restricted leases 343
(3) The Restricted Use Clause does not require a lessee taking essential machines from the United Company to lease of it practically all other machines 346
(4) The Restricted Use Clauses were not adopted for the purpose of excluding competitors' machines 356
(*a*) The fact that the United Company has always offered alternative leases containing no Restricted Use Clauses disproves any intent to compel the use of other machines 357
Prices charged for unrestricted leases are not prohibitive 361
That prices charged for unrestricted leases are reasonable is conclusively shown by the large number of machines taken on such leases 363
(*b*) Other considerations showing that the Restricted Use Clauses were not adopted for the purpose of excluding competitors' machines 364
(*c*) The effect of the Restricted Use Clauses is very limited. A shoe manufacturer holding machines under restricted use leases can use in connection with them by far the larger portion of the machines required by him whether or not obtained from competitors 366

PAGE

(5) Reasons for adoption of Auxiliary Restricted Use Clause 373
(6) The Auxiliary Restricted Use Clause does not restrict the principal machines to use with the auxiliary machines nor restrict the use of the auxiliary machines to use with each other 376
Legality of the Restricted Use Clause . . . 377
(7) The Restricted Use Clause is a normal provision adopted to accomplish a legitimate business purpose, beneficial to both the lessor and lessee, and is therefore lawful . . 377
(8) The Restricted Use Clause is merely the grant of a limited patent license, which is clearly lawful 388
(*a*) General discussion 388
(*b*) Patent restrictions are lawful unless in their very nature illegal 398
(*c*) Considerations of public policy are not relevant with regard to such restrictions, 398
(*d*) Restrictions which merely require the lessee to use the patented article in the manner in which the patentee himself might lawfully use it are not in their very nature illegal 402
(*e*) The Sherman Act does not prohibit such restrictions imposed by a patentee . . 402
(*f*) The grant of a restricted license imposes no restraint of trade 404
(*g*) If the course of trade is affected by such restrictions such effect is incidental to the exercise of lawful rights 406
(*h*) Restrictions of the character employed by the United Company have been recognized as lawful by a long line of decisions establishing "something like a rule of property" 409
(*i*) Consideration of decision in *Standard Sanitary Mfg. Co.* v. *U. S.*, 226 U. S. 20, 411
(9) Legality of Auxiliary Restricted Use Clause, 413

13. Enforcement by the United Company of its leases . 414
14. The provisions in the leases are essential to a continuance of the present satisfactory lease system . . 420

IV.

PAGE

THE ACQUISITIONS OF OTHER CONCERNS AND PATENTS 423–465

1. General discussion 423
2. Detailed discussion of the acquisitions 436
3. What the United Company has done with the acquired businesses 452
4. Conclusion as to the acquisitions 459

[A detailed statement of the evidence relating to the acquisitions is contained in the Appendix, pp. 1–87.]

V.

COVENANTS TAKEN FROM VENDORS, INVENTORS AND EMPLOYEES IN CONNECTION WITH THE ACQUISITIONS 466–475

1. General discussion 466
2. Law as to covenants not to compete 470
3. Law as to covenants to assign future inventions . . 472
4. Misstatements in the Petition as to the covenants . 475

VI.

THE PLANT PURCHASE 476–542

1. Introductory statement 476
2. Plant was not in competition with the United Company. He had no machines to sell and the machines which he had installed and sold to his own shoe company were not commercially successful 480
3. Crude and unsatisfactory as Plant's machines were, he had incorporated in them many very valuable inventions which were capable of being used in the United Company's machines 500
4. Use made by the United Company of the Plant inventions 503
5. The acquisition of the Plant patents by the United Company was of great benefit to the industry . . 506–519

   A. Common ownership of the Plant patents and the United Company's patents made possible, first, the use of the valuable Plant inventions by shoe manufacturers without infringement of the

PAGE

United Company's controlling patents; second, the incorporation of the Plant inventions in the superior machines of the United Company; and third, further important improvements on those inventions by the United Company's inventors, 506

B. Chaotic conditions in the shoe industry have been averted by common ownership of the patents of the United Company and the Plant patents 514

(1) Infringement of the United Company's patents by Plant 514
(2) Infringement of Plant patents by the United Company 516
(3) Interferences 517

Intolerable conditions would have resulted if the Plant purchase had not been made 517

6. The United Company acquired the Plant patents because its officers believed that the acquisition would be of great benefit to the shoe manufacturing industry 519–523

A. The controlling consideration was the value to the shoe industry which the Plant inventions would have if incorporated in the United Company's superior machines 519
B. Another consideration was the avoidance of endless litigation 521

7. The Plant patents were worth more than the price paid for them 523
8. The negotiations leading up to the Plant purchase show that the purchase was made because the United Company believed it would be a great benefit to the shoe industry and for no other reason 525
9. Misstatements as to facts in Mr. Chapman's deposition regarding infringement of Plant's patents by the United Company machines 536
10. Finding of the District Court as to the reasons for the Plant purchase 538
11. The practical impossibility of segregating Plant's inventions is in itself strong evidence that the Plant purchase was a normal and lawful transaction . . 538
12. Conclusion as to the Plant purchase 539

VII.

PAGE

THE CHARGE THAT THE UNITED COMPANY COMMITTED VARIOUS UNFAIR, OPPRESSIVE AND MONOPOLISTIC ACTS IS UNFOUNDED 543–552

[A detailed statement of the evidence in respect to these alleged acts is contained in the Appendix, pp. 88–131.]

VIII.

THE UNITED COMPANY HAS NOT MADE EXORBITANT PROFITS AS CHARGED IN THE PETITION 553–554

IX.

FORMATION OF THE UNITED SHOE MACHINERY CORPORATION 555

X.

THE UNITED COMPANY HAS NO UNLAWFUL MONOPOLY OF SHOE MACHINERY 556–579

1. Introductory statement 556
2. The United Company has not obtained a monopoly of all shoe machinery as charged in the Petition . . . 557
3. The United States of record limited its charge to a monopoly of machines for preparing and attaching the bottoms to the uppers of shoes, eyeletting and clicking machines 561
4. Such machines can be obtained of numerous competitors of the United Company 562
5. The United Company lawfully occupies the field it enjoys under its patents 567
6. The constituent companies had lawfully obtained monopolies of the machines they manufactured. The United Company has not acquired any new monopoly in those machines 571
7. The other machines not manufactured by the constituent companies as to which monopoly is charged were new inventions developed by the United Company. Any monopoly acquired by the United Company in those machines was due to the fact that the

PAGE

United Company created them and the fact that they were lawful patent monopolies 574

8. The United Company has maintained the business in shoe machinery which it lawfully acquired, not by unlawful methods, but by reason of the excellence of its patented machines and the service which it renders with them 577

XI.

RELIEF ASKED FOR BY THE UNITED STATES 580–584

The impossibility of granting the relief asked for by the United States without irreparable damage to the public proves the lawfulness of the United Company's business

1. A separation of the United Company's business would irreparably damage shoe manufacturers and the public 580
2. To hold the leases void would disastrously affect shoe manufacturers and the public 583
3. The leases cannot be declared unlawful or the United Company enjoined from enforcing them, as the lessees are not parties to the suit 583

XII.

CONCLUSION 585–589

In the Supreme Court of the United States.

OCTOBER TERM, 1916.

No. 545.

THE UNITED STATES, *Appellant*,

v.

UNITED SHOE MACHINERY COMPANY, OF NEW JERSEY, ET AL., *Appellees*.

Appeal from the District Court of the United States for the District of Massachusetts.

BRIEF FOR THE UNITED SHOE MACHINERY COMPANY, ET AL.

PART ONE.

INTRODUCTORY AND GENERAL MATTERS.

I. INTRODUCTORY STATEMENT.

This is a direct appeal by the United States under the Expediting Act (32 Stat. 823, c. 544; 36 Stat. 854, c. 428) from a decree dismissing its petition by the District Court for the District of Massachusetts.

The petition was filed December 12, 1911. It charged a plan or scheme to monopolize shoe machinery, and a monopoly obtained in pursuance thereof in violation of the Sherman Anti-Trust Act (26 Stat. 209, c. 647). It prayed for the dissolution of

the defendants, United Shoe Machinery Company and United Shoe Machinery Corporation, and for other relief.

The Attorney-General filed a certificate under the Expediting Act, and the court which tried the case was composed of three judges of the first circuit—Judge Putnam, Judge Dodge, and Judge Brown (R. Vol. 1, pp. 1064, 1070).

All the evidence and the witnesses were heard by the judges in open court with the exception of certain evidence relating to patents which was heard before a special examiner (R. Vol. 2). The evidence taken in open court occupied about eleven weeks.

All three judges rendered opinions agreeing that the case was without merit and that the petition should be dismissed. Judge Putnam's opinion contained a general survey of the case (R. Vol. 1, p. 1110). Judge Dodge analyzed in detail the various transactions treated in the evidence and concurred in the opinion of Judge Brown as to the validity of the defendants' leases (R. Vol. 1, p. 1127). Judge Brown considered at length the defendants' lease system and expressed his concurrence with the opinions of his associates (R. Vol. 1, p. 1160).

In accordance with the opinions of the court a decree was entered on May 14, 1915, dismissing the bill (R. Vol. 1, p. 1188).

The evidence taken in open court has been condensed and is contained in Vol. 1 of the Record. The evidence as to patents by direction of the court was not condensed and is contained in Vol. 2 of the Record. The exhibits are found in Vols. 3 to 5. There are also a large number of physical exhibits which could not be reproduced in the record.

II. PARTIES DEFENDANT.

The petition names twenty corporate defendants and twenty-three individual defendants.

On motion of the United States the petition was dismissed against nine of the corporate defendants prior to the taking of testimony (R. Vol. 1, pp. 1061, 1062).

The corporate defendants now parties are the following:—

United Shoe Machinery Company.
United Shoe Machinery Corporation.
United Shoe Repairing Machine Company.
United Shoe Machinery Company of Maine.
United-Xpedite Finishing Company.
O. A. Miller Treeing Machine Company.
W. W. Cross & Co., Inc.
Ross-Moyer Manufacturing Company.
J. K. Krieg & Company.
Booth Brothers Company.
Ellis Lacer Company.

United Shoe Machinery Company, hereinafter called the "United Company," a New Jersey corporation, incorporated in 1899, is the principal defendant. It manufactures, leases, and sells certain types of patented shoe machinery and supplies, and has specialized in machinery for making Goodyear Welt and Goodyear Turn shoes and is the owner of the trademarks "Goodyear Welt" and "Goodyear Turn."

United Shoe Machinery Corporation, a New Jersey corporation, incorporated in 1905, owns most of the stock of the United Shoe Machinery Company. It is not an operating company, and it does not manufacture, sell, or lease machinery or supplies.

The other corporate defendants are subsidiaries of the United Company, or companies in which it holds a majority of the stock; they conduct minor departments of the United Company's business. No one of these companies competes with the United Company or with any of the others. Practically no evidence was introduced as to most of them, and they may be disregarded so

far as the present argument is concerned. Their business is as follows:—

The United Shoe Repairing Machine Company was organized by the United Shoe Machinery Company to take over and carry on that part of the business of the United Shoe Machinery Company which consisted in supplying machines to cobblers and others for use in repairing shoes (R. Vol. 4, P.'s Ex. 187, p. 1239).

The United Shoe Machinery Company of Maine operates as a branch of the United Shoe Machinery Company, leasing machines in certain States of the United States (R. Vol. 4, P.'s Ex. 187, pp. 1238–1239).

The United-Xpedite Finishing Company is engaged in the business of manufacturing and dealing in a heel-finishing machine known as the Xpedite Finishing Machine (R. Vol. 4, P.'s Ex. 187, pp. 1239, 1240).

The O. A. Miller Treeing Machine Company manufactures treeing machines and shoe trees on which shoes are cleaned and polished before packing (R. Vol. 4, P.'s Ex. 187, pp. 1234–1235; R. Vol. 1, pp. 97, 98).

W. W. Cross & Co. makes tacks and nails for use in shoe machines and sells practically its entire output to the United Company (R. Vol. 4, P.'s Ex. 187, p. 1233).

The Ross-Moyer Manufacturing Company, prior to the formation of the United Company, was the agent in Ohio of two of the constituent companies taken over by the United Company. It is now the agent for the service department of the United Company in Cincinnati and Chicago. It also deals in various findings and manufacturing accessories (R. Vol. 4, P.'s Ex. 187, p. 1235; R. Vol. 1, p. 34, lines 17–18; pp. 100, 101).

The J. K. Krieg Company acts as agent for the United Company in New York and sells findings and general merchandise in New York. It took over the business of a partnership of the same name which had acted as agent for two of the constituent companies prior to the formation of the United Company (R. Vol. 4, P.'s Ex. 187, p. 1234; R. Vol. 1, p. 34, lines 15–16; pp. 92, 93, 95, lines 30 ff.).

Booth Bros. Co. makes upper beading and fudge-edge machines (R. Vol. 4, P.'s Ex. 187, p. 1232; R. Vol. 1, p. 33, lines 28–32; p. 88).

The Ellis Lacer Company has been dissolved and is out of business (R. Vol. 1, p. 35, lines 17–18).

Of the individual defendants no evidence whatever was offered against the following:—

Wallace F. Robinson,
Louis A. Coolidge,
Frank L. Babbott,
Edmund LeB. Gardner,
John H. Hanan,
Joseph C. Kilham,
Edward N. Chase,
Rudolph Matz,
Charles G. Rice,
Alfred R. Turner,
Samuel Weil,
Frank Wood,
William Woodward,
Harold G. Donham,

except that they were at some period directors or officers of some of the corporations originally mentioned as defendants.

The only remaining individual defendants with respect to whom there is any further evidence in the record are:—

Sidney W. Winslow,
Elmer P. Howe,
William Barbour,
Edward P. Hurd,
George W. Brown.

III. THE PETITION.

1. ALLEGATIONS OF THE PETITION.

The petition makes a general charge of a combination to monopolize the entire field of shoe machinery. The principal allegations of the petition are:—

That the defendants have combined, contracted, and conspired to restrain interstate and foreign trade and commerce, and have monopolized and attempted to monopolize the same, all as hereinafter set forth. . . .

That for twenty-five years, last past, practically all of the boots and shoes worn by the people of the United States have been manufactured by the aid and use of several different kinds of machines. . . . The principal essential machines are:—

Lasting Machines, for lasting the uppers of boots and shoes.

Welt Sewing Machines and Outsole Stitching Machines, for attaching the upper and welt to the insole of a welt shoe, and sewing the welt to its outsole.

Heeling Machines, for preparing and attaching heels.

Metallic Fastening Machines, for preparing and inserting metallic fastenings.

For many years prior to February, 1899, a large number of persons and corporations were engaged in the manufacture of shoe machinery in competition with each other. The principal concerns so engaged were:—

Goodyear Shoe Machinery Company, which, with its subsidiaries, the International Goodyear Shoe Machinery Company of Maine and the Goodyear Shoe Machinery Company of Canada, manufactured 60% of the machines made in the United States for sewing the upper and the welt to the insole, and the welt to the outsole, of a welt shoe; and 10% of the lasting machines.

The Consolidated & McKay Lasting Machine Company, which manufactured 60% of the lasting machines.

McKay Shoe Machinery Company, which manufactured 70% of the heeling machines and 80% of the metallic fastening machines.

The Eppler Welt Machine Company, and its subsidiary, the International Eppler Welt Machine Company, which manu-

factured 10% of the machines for sewing the upper and welt to the insole, and the welt to the outsole, of a welt shoe.

The Davey Pegging Machine Company, which manufactured 75% of the pegging machines made in the United States, and which was owned and controlled by the Consolidated & McKay Lasting Machine Company.

Early in 1899 these companies were manufacturing their machines under Letters Patent of the United States and other countries. Many of the basic patents on the principal machines owned and controlled by them were about to expire, and, in the ordinary course of events, the general public would have acquired, in the near future, the right to the free manufacture and use of such machines. *The lawful monopoly of such machines theretofore enjoyed by virtue of the patents would have come to an end,* and the system of demanding large royalties for their use would have been replaced by their general manufacture and outright sale under competing conditions.

The defendants, not being satisfied with the benefit *of the lawful monopolies and rights belonging to them under Letters Patent of the United States* and of other countries, *which they had enjoyed for many years, determined to acquire a complete monopoly of the manufacture, sale, and lease of shoe machinery,* and through unlawful combinations and agreements to exclude all others from said trade and commerce. For the accomplishment of this purpose *they conceived the idea of acquiring the ownership or control of all concerns engaged in manufacturing and dealing in any and all kinds of shoe machinery, and then to refuse to sell or lease any of the essential machines to the manufacturer of shoes except on condition that he buy or lease of them practically all other machinery of whatever kind necessary or useful to such manufacturer of shoes,* and thereby *to monopolize the trade and commerce therein* among the States and with foreign countries. The various contracts, combinations, conspiracies, and acts hereinafter described were steps in carrying out the above-mentioned unlawful project.

That the United Shoe Machinery Company was organized in February, 1899, and, by exchange, acquired the stock of the Goodyear Company, the Consolidated & McKay Lasting Machine Company, and McKay Shoe Machinery Company, and cash was provided to purchase the capital stock of the Eppler Company.

By the means above described the defendants acquired control of the greater portion of the manufacture and the trade and commerce in the machines included in the groups of machines above described.

Prior to the organization of the United Company, shoe manufacturers purchasing or leasing machines from one of the constituent companies were not compelled to use exclusively the machines of any other company. The defendants, *with the intent to acquire complete control of the business of manufacturing and selling or leasing shoe machinery, discontinued the sale to boot and shoe manufacturers of each and all of the machines included in said groups* of machines, and unlawfully adopted, and put into effect, arbitrary, oppressive, and unreasonable agreements, which boot and shoe manufacturers have been required to agree to in order to obtain from said defendants any of the machines included in said groups. These agreements contain provisions not found in their former agreements, *which compel boot and shoe manufacturers leasing any of such machines from defendants to agree to use exclusively one or more of the classes of machines included in said groups of machines owned and controlled by them*, upon penalty of having all the machines included in said groups so leased to them by defendants immediately taken away. These contracts further require boot and shoe manufacturers to take each of said machines for a period of not less than seventeen years, regardless of the terms of the patents relating thereto.

Lessees thereafter were also required to take duplicate parts at exorbitant prices; and the defendants have continually, persistently, and arbitrarily enforced the provisions of said leases.

The defendants, in pursuance of their general purpose, inserted in and made a part of each lease and license agreement, provisions reserving to themselves the right to forthwith terminate and cancel all existing lease and license agreements between them and the boot and shoe manufacturers, if the latter should fail or cease to use exclusively, and to their full capacity, machines leased or controlled by defendants.

The defendants have, by misrepresentation and threats, induced customers of their competitors to abandon them; have threatened that they would use their financial resources and power to secure the patronage of such competitors, and by threats have prevented others from entering into the business

with them; have acquired Letters Patent for valuable inventions, and have held the same for long periods of time without using them; have offered and granted rebates to shoe manufacturers who used exclusively one or more of the machines owned or controlled by them; have bought the business of competitors and paid exorbitant prices therefor.

In pursuance of their purpose to monopolize the shoe machinery industry, defendants have absorbed many competitors and driven others out of business, and have deterred and prevented others from entering the business, and thus made competition with themselves practically impossible. They have acquired some fifty-eight other businesses, and have taken from substantially all, covenants in writing not to engage for long terms in commerce in shoe machinery, and have required vendors to agree that, if they shall invent or patent machines for the manufacture of boots and shoes, they will assign all such inventions and patents to the defendants.

In April, 1905, the defendants organized the United Shoe Machinery Corporation, which acquired substantially all the stock of the United Shoe Machinery Company.

The result of the combinations, conspiracies, and monopolies described has been enormous and unreasonable profits.

That, by reason of the unlawful contracts and combinations above described, defendants control all the large and important establishments in the United States which were formerly engaged in the manufacture, sale, and lease of machines designed and used for attaching the bottoms to the uppers of shoes, and kindred and auxiliary machines, and have acquired a monopoly of interstate and foreign trade and commerce in shoe machinery.

The prayer of the petition is for dissolution and an injunction against the practices complained of.

Defendants' Answer.

The defendants denied the allegations of the petition, and further answering said (R. Vol. 1, p. 1044):—

That the organization of the defendant corporations and the acquisition of the businesses of the several constituent companies "was simply the fusion of several corporations owning noncompeting, complementary machines, covered by Letters Patent

of the United States, into one corporation, and was made with the expectation of an increase in business, economies in administration, and decrease in expenses, and cessation of patent litigation between the companies purchased, which had been expensive to them and annoying to shoe manufacturers; which results it was expected could be attained without increase of cost to the users of machinery . . . , and that better attention to the care of the machines and assistance to the users could be afforded. . . .

"That said organization and acquisition was nothing more than the combination of various elements of machinery all relating to the same art and the same school of manufactures, for the purpose of constructing economically and systematically, and of furnishing a lessee the whole or any part of a gradually developed system of machines for use in the manufacture of shoes, and was and is in strict and normal compliance with modern trade progress."

2. THE BASIC CHARGE OF THE PETITION.

The basic charge of the petition therefore is that

1. The constituent companies having lawful patent monopolies under which they did the greater part of the business of the country in the principal essential shoe machines, viz. (a) lasting machines, (b) welt-sewing and outsole stitching machines, (c) heeling machines, and (d) metallic-fastening machines, and finding these patents about to expire, planned to extend their monopolies unlawfully and to obtain a monopoly of all shoe machinery by

(A) Combining and acquiring all concerns engaged in the shoe machinery business, and then

(B) Refusing to sell or lease any of said so-called essential machines to a shoe manufacturer except on condition that he take from them practically all other machinery which he required and that

2. The United Company carried out said plan and thereby did acquire a monopoly of shoe machinery.

The various acts specified in the petition are alleged to be only "steps in carrying out" this unlawful project and are ma-

terial only if and in so far as they afford evidence of this plan and its accomplishment.

3. ATTEMPT OF THE UNITED STATES TO LIMIT SCOPE OF THE PETITION.

The United States During the Course of the Trial Admitted of Record That It Could Not Prove Its Charge of a Monopoly of all Shoe Machinery, and Attempted to Limit the Scope of the Petition to a Charge of Monopolizing Machines for Preparing and Attaching the Bottoms to the Uppers of Shoes, Eyeletting Machines and Clicking Machines.

The petition as stated above charges a monopoly of all shoe machinery, and the United States presented its direct case on this theory.

During the introduction of the Government's case in chief, statements were repeatedly made by counsel for the United States to the effect that the petition charged a general combination to obtain a monopoly of the entire field of shoe machinery; to illustrate:—

R. Vol. 1, p. 39, lines 4–8, Mr. Gregg, of counsel for the United States, said, referring to the so-called "acquisitions," which related not only to machinery of various kinds but to supplies and findings,—

> "Our position, if the court please, is that all of these acts of acquiring the business of other concerns were all part of a plan to monopolize the shoe machinery business.
> "PUTNAM, J. All; big and little?
> "Mr. GREGG. Big and little."

Again, Mr. Gregg said, R. Vol. 1, p. 52, lines 7–9:—

> ". . . We have alleged in the petition that each and every one of these acts, all taken together, was a part of a plan to monopolize."

Again, Mr. Gregg said, R. Vol. 1, p. 113, lines 16 ff.:—

> ". . . I suppose their defence will be: 'We didn't intend to get all the business.' . . . I assume that is what it will be: 'We didn't intend to monopolize the shoe machinery business, we were not making any attempt to get it all.' And I think

this conversation with the president of the Company is certainly competent to show that it was their intent at that time to monopolize the shoe machinery business, that they wanted to have it all, and that that was the very purpose of the tying clauses of the leases."

Again, R. Vol. 1, p. 202, lines 1–9, Mr. Fowler said:—

"Here is our position: this bill attacks this concern as being a monopoly, and it is alleged that they formed this combination back in 1899, and from 1899 up to the present time they have been doing various things for the purpose and with the intent of monopolizing. . . . This particular fact [a fact which Mr. Fowler urged leave to introduce in evidence] . . . . tends to show the purpose of the original organization."

As during the course of the trial the evidence presented by the United States showed that the defendants not only had no monopoly of certain large classes of machinery, but that the defendants did not even manufacture and had never attempted to manufacture many classes of important machinery, especially machinery used in sewing the uppers of shoes, and that there were scores of other machinery manufacturers greater in number and capacity than were in business when the United Company was formed, the United States undertook to limit the scope of the petition.

After the closing of the case of the United States in chief, and the opening of the defendants' case, Mr. Gregg, of counsel for the United States, made the following admission (R. Vol. 1, p. 414, lines 19 ff.):—

"If the court please, taking the whole bill together, the only charge that we make there and the only thing that we contend for is that they have monopolized machinery designed and adapted for use in the manufacture and attaching, preparation and attaching, bottoms to the uppers of shoes, the clicking machine and the eyeletting machine."

A little later, R. Vol. 1, p. 414, lines 31–33, Mr. Gregg said,—

"We make no contention that they designed or intended to monopolize machinery used for sewing the uppers to the shoe at all."

On R. Vol. 1, p. 435, lines 7–9, Mr. Fowler said,—

> "I never have understood that the purpose of this litigation was to go further than was stated by Mr. Gregg this morning."

And again, R. Vol. 1, p. 837, lines 40 ff., Mr. Fowler said:—

> "So far as the actual monopoly is concerned, it is limited to the machines fastening the soles and the uppers together, and to the clicking machines and the eyeletting machines. Mr. Gregg says he wants to state it.
>
> "Mr. GREGG. Machines for preparing and attaching the bottoms to the uppers of shoes, and eyeletting machines and dieing-out machines, otherwise known as clicking machines. Machines for preparing and attaching the bottoms to the uppers of shoes, eyeletting machines, and clicking machines."

A little later the following colloquy took place between the court and counsel for the United States, R. Vol. 1, p. 839, lines 9–22:—

> "PUTNAM, J. Do you admit that you don't claim a monopoly in trade and commerce, either in the United States or foreign countries, of anything except the bottoming machinery and the eyeletting machinery?
>
> "Mr. GREGG. Machines for preparing and attaching the bottoms to the uppers of boots and shoes, the eyeletting machines and the clicking machines, and, as I stated, when I opened the case for the Government—
>
> "PUTNAM, J. One moment. Do you admit that that is all you claim?
>
> "Mr. GREGG. Yes sir. We make no contention—
>
> "PUTNAM, J. Can that go in the record?
>
> "Mr. GREGG. Yes, sir; I am perfectly willing for that to go in the record."

Still later, and when the defendants had nearly completed their introduction of evidence, and just before the close of the case, the United States presented a request for leave to amend its petition (R. Vol. 1, p. 881; motion to amend, R. Vol. 1, p. 1101).

The proposed amendment charges only a combination to acquire a monopoly of shoe machinery used in adjusting and attaching the upper to the last, in preparing the bottom and the heel

and fastening them to the upper, and in finishing the bottom and the heel of the shoe after said operations had been performed, and the claim with respect to the extent of the monopoly actually achieved was of all the principal and auxiliary machines used for adjusting and attaching the upper to the last preparatory to attaching the upper to the bottom, for preparing the bottom and heel and attaching them to the upper, and machines for finishing the bottom and heel, and clicking and eyeletting machines.

This request for leave to amend was disallowed by the trial court (R. Vol. 1, p. 1109).

These various shifts of position made by the United States during the course of the trial show its complete failure to prove its charge as made by the petition, and its attempt to succeed by making a different case.

The defendants contended below, and still contend, that the United States was required to prove its case as charged; that the defendants' defence was directed against the charge of an attempt to monopolize and of a monopoly of all shoe machinery; and that the limitation of this charge to a charge of an intent to monopolize, and a monopoly of, only a portion of the field of shoe machinery, constituted a material variance not permissible during the course of the trial.

Without waiving this contention, the defendants submit

(1) The United States utterly failed to prove a combination to monopolize or a monopoly of all shoe machinery.

(2) The United States admitted of record that it claimed no monopoly of all shoe machinery, and is therefore debarred from making any such charge.

(3) The United States failed to prove a combination to monopolize or a monopoly of machines for preparing and attaching the bottoms to the uppers of shoes, eyeletting machines and clicking machines, to which the United States of record limited its charge (R. Vol. 1, p. 839, lines 9–22).

IV. PRELIMINARY STATEMENT.

Charge made by the Petition.

As stated above (*supra*, p. 10) the charge of the petition is,—

1. That the defendants planned to extend their lawful patent monopolies and acquire an unlawful monopoly of all shoe machinery by,—

(*a*) Combining and acquiring all concerns engaged in the shoe machinery business, and then

(*b*) Refusing to sell or lease any of said so-called essential machines to a shoe manufacturer except on condition that he take from them practically all other machinery which he required; and

2. That they carried out said plan and did thereby acquire a monopoly of shoe machinery.

The various acts set out in the petition are alleged to be only "steps in carrying out" this unlawful project.

The issue in the present case is whether or not this unlawful project was entered into by the defendants and carried out.

The record clearly establishes that the charge is entirely unfounded.

The record shows conclusively that the defendants did not attempt to acquire all concerns engaged in the shoe machinery industry. On the contrary, it shows that the United Company declined to purchase over 75 concerns offered to it for sale, many of them its largest competitors furnishing full lines of machines (*infra*, pp. 427–430). It also shows conclusively that the United Company did not attempt to acquire all concerns engaged in manufacturing machines used for preparing and attaching the soles to the uppers of shoes, eyeletting machines and clicking machines, to which the United States during the course of the trial attempted to limit its charge. Many of the concerns which the United Company refused to purchase were making machines of some of these classes and included the United Company's largest competitors. The shoe machinery concerns it did acquire were not competing, and were acquired to enable it to put out new machines, or to obtain patents necessary to perfect its own machines.

The United Company did not refuse to lease its so-called essential machines except on condition that the shoe manufacturer took practically all other machinery from it. On the contrary it continued to offer these machines on the same or better terms than were offered by the constituent companies prior to its formation (*infra*, pp. 358–359). The so-called restricted leases relied on by the United States in support of its charge were, in the first place, only alternative forms of lease, and in the second place, did not have the effect alleged (*infra*, pp. 346–357). The District Court found that there was no evidence whatsoever of any plan to deprive shoe manufacturers of the right to use some machines unless they would also use others, saying,—

> "As the leases prove no such plan, whether of the extent alleged or of less extent, and as the evidence proves the exact contrary of what is charged, we think the United Shoe Machinery Company is, upon the merits, entitled to a full clearance from this charge" (R. Vol. 1, pp. 1163–1164).

As then the record fails to show any such unlawful project as that alleged or any attempt to carry out any such project, it necessarily follows that the United Company has obtained no unlawful monopoly by means of any such unlawful plan or project. But further than this the record shows that the United Company has no unlawful monopoly obtained in any other way. The charge of the petition is that it has an unlawful monopoly of all shoe machinery. The record, however, shows that the United Company does not manufacture machines for sewing the uppers of shoes and certain other kinds of machines at all, and that it manufactures less than 50% of the machines required in an ordinary shoe factory (*infra*, pp. 557–559). The United States during the course of the trial attempted to limit the scope of the petition to a charge of monopolizing machines for preparing and attaching the bottoms to the uppers of shoes, eyeletting machines, and clicking machines. As to these classes of machines it was also shown that there were numerous competitors furnishing such machines (*infra*, pp. 562–567). It was further shown that while the United Company's machines are most desired by shoe manufacturers and, therefore, most in use, this is because its machines are the best machines made,

because they are patented and no other machines equally efficient have been invented, because they are adapted for use together, because the United Company furnishes a service with its machines which is vital to shoe manufacturers and which is furnished by no other company, because of the large sums it spends on its inventive department, the constant improvement of its machines, and the favorable terms it offers its lessees.

As we have stated, the evidence in the case is material only in so far as it bears on the issue above referred to which is the only issue raised by the petition. The United States, however, has not limited its contentions to this issue. But we submit that the record is barren of evidence justifying any other charge of an unlawful plan, or any unlawful monopoly under the Sherman Act, even if it be open to the United States to change the issue made by the petition.

The Present Case is Unique in Several Respects.

No case in any way resembling the present has heretofore been decided by this court with the exception of *United States* v. *Winslow*, 227 U. S. 202, in which it was held that the formation of the United Company was not only lawful, but so self-evidently a legitimate effort after a greater efficiency, and so inherently innocent that no intent on the part of its organizers could make it unlawful.

In the first place, the shoe machinery industry originated within recent years by reason of patented inventions, and it is entirely dominated by patents. As a result, no one can engage in the business successfully unless he does not infringe the patents of others, and holds patents which enable him to manufacture machines superior to or as good as those already on the market. In an unpatented industry, such as the tobacco, oil, cotton or woolen goods industries, competition is to be expected, and its absence raises a suspicion of an unlawful combination or of unlawful methods of competition. In a patented industry, like the shoe machinery industry, it is as natural that a company like the defendant United Shoe Machinery Company, which manufactures the best machines known to the art under patents so that its competitors can offer only inferior machines, should have a large share of the business, as it was natural that

the Telephone Company, as owner of the Bell Patent, lawfully dominated the telephone field.

In the second place, the United Company was a combination of non-competing concerns, each making different kinds of machines used for different purposes. The effort on the part of the United States to prove competition between a few of the machines put out by the constituent companies shows only a trivial and negligible overlapping of the fields of a few machines designed for making different types of shoes.

The formation of the United Company did not eliminate competitors previously in the field. The petition itself alleges, and the record establishes that the constituent companies had lawful patent monopolies under which they supplied the greater part of the machines used for the particular purposes for which the machines they manufactured were adapted. As a result, the United Company, in taking over these non-competing companies, acquired patents under which its constituent companies were doing, and under which it continued to do the greater part of the business of the country in these types of machines. It did not eliminate competitors formerly in the field; it did not create a monopoly. It merely continued a business which it is admitted was already lawfully existing. The monopoly charged in respect to the machines which had been put out by the constituent companies is the same monopoly which the petition avers, and the record establishes existed lawfully at the date the United Company was formed.

Findings of Fact by the District Court.

The decision of the District Court is based on the facts found by the court and set forth in the opinions. These facts, if accepted, completely dispose of the present case.

They establish not only that the contentions of the United States are utterly unfounded, but also that the development and success of the United Company's business has been due solely to the merits of its patented machines, which have been developed for use together as a unit, to the efficient service which it renders with its machines without cost to the shoe manufacturer, to the constant development and improvement of its machines by its inventive department, and to the favorable terms offered

shoe manufacturers under its lease system which enable them to equip their factories without initial cost, paying for the machines only a royalty based on their use. Quotations from the opinions of the District Court, showing the facts found by the District Court in respect to the principal allegations of the petition and the contentions of the United States, are set out below (*infra*, pp. 55–80).

The facts found by the District Court should be accepted so far as there is any testimony consistent with the findings (*infra*, pp. 81–87). Even in the ordinary equity case heard by the lower court on printed depositions prior to the adoption of the new equity rules, facts found by the lower court were treated as presumptively correct. In the present case there are the strongest possible reasons why the facts found by the District Court should be accepted.

The evidence, with the exception of certain technical testimony relating to patents, was heard orally in open court, and the District Court, therefore, had an opportunity to judge of the credibility of the witnesses.

Practically all of the oral testimony introduced by the United States which was material to the issue was disputed. The United States, as the District Court observed, made "efforts which may fairly be described as extraordinary" (R. Vol. 1, p. 1152) to bring before the court all persons who felt or expressed any grievance against the United Company. Practically all of the witnesses for the United States, except certain officials of the United Company, were hostile to the United Company, being competitors of the company, inventors or shoe machinery manufacturers who had endeavored to sell out to the United Company and whose offers had not been accepted, lessees who had violated their agreements with the United Company, or other persons with whom the United Company had had litigation or disputes, or members of the Shoe Manufacturers' Alliance, an association composed of large shoe manufacturers who desired on account of their size to obtain better rates from the United Company than their smaller competitors, who were themselves interested in a shoe machinery concern, and who showed a strong bias against the United Company. Such were the witnesses on whom the United States relied to sustain its charges. The credibility of their testimony and the

extent of their bias are questions which can best be determined by a trial court which hears the testimony and observes the witnesses.

The evidence relates to the details of the conduct of an immensely complicated business over a period of more than twelve years. Hundreds of transactions are involved. A determination of whether or not these transactions were undertaken in the normal and orderly development of the United Company's business, and of the motives and purposes of the defendants, is possible only if based upon a thorough understanding of this complicated business. The trial in open court occupied nearly three months, and the findings of the District Court are, therefore, based upon months of exhaustive and careful study of the entire situation.

Special Characteristics of the Shoe Machinery Industry.

The shoe machinery industry has special characteristics which differentiate it strikingly from any other industry in the country. These characteristics existed when the United Company was formed, and its methods of business were necessarily adapted to meet them. In considering whether the defendants' methods were "usual," "normal," and "orderly," whether they were entered into "with the legitimate purpose of reasonably forwarding personal interest and developing trade," or "on the contrary were of such a character as to give rise to the inference or presumption that they had been entered into or done" with unlawful intent (*Standard Oil Case*, 221 U. S. 1, 58), it is essential to bear in mind constantly the particular conditions with which the defendants dealt. The test in the present case is not what would be normal, reasonable and legitimate in the tobacco or cotton goods business, but solely what was normal, reasonable and legitimate in dealing with the conditions peculiar to the shoe machinery industry.

Some of the most striking characteristics of the shoe machinery industry are as follows:—

1. A great variety of different machines are used in the manufacture of each shoe. Thus on certain classes of shoes over 100 different operations are performed by different machines (Defs.' Ex. 235, R. Vol. 5, pp. 531–671).

There is also a great variety of types of shoes made, such as McKay sewed shoes, in which the upper is united to the sole by a seam running through both outsole and insole inside the shoe; the welt shoe, in which a narrow strip of welt is attached to the upper and innersole, and the outersole then attached to the welt so that the foot does not rest on the seams which attach the sole; the turn shoe, which has a single sole to which the upper is sewed while the shoe is inside out, the shoe being then turned during the process of manufacture; the pegged shoe, in which the sole is attached by wooden pegs; the nailed shoe in which it is attached by nails; the Standard Screw shoe, in which it is attached by screws; and also various modifications of these types, such as the mock welt. Each type of shoe requires to a large extent different machines.

In addition there are various styles of each type of shoe and new styles are constantly developing. Thus we have men's and women's shoes, low and high-heeled shoes, slippers, pumps, laced and button shoes, high-legged shoes and low shoes, bull-dog toes, shoes with different kinds of insoles, shoes made of different materials such as calf, kid, patent leather and canvas, and a great variety of other styles. Many of these styles require certain special machines for their manufacture.

The result is that a great variety of machines are required in the shoe trade. The United Company, which has specialized in bottoming machines and which does not manufacture any machines for sewing the uppers of shoes, and which manufactures and furnishes only from 30% to 50% of the total number of machines used in the ordinary factory, nevertheless makes over 300 different kinds of machines.

2. The shoe machinery business, as stated above, is of recent origin. Previously to 1850 or 1860 shoes were made almost entirely by hand. The development of shoe machinery began about 1863, the McKay Sewing Machine being the first important machine (R. Vol. 1, p. 521, lines 15–17). The various machines have been invented and developed gradually from that date. The Goodyear Welt Machines ran back to 1870 or 1868. They were greatly improved about 1888. However, in 1899, when the United Company was formed, welt shoes constituted only about 10% of the total number of shoes made. Since 1899 the United Company has greatly improved its welter

and stitcher, and has developed 22 new welt auxiliary machines and 6 new turn auxiliary machines (*infra*, p. 197). Lasting machines date practically from 1890. In 1899 they were only partially developed, and half the shoes made were still lasted by hand. The United Company, since its organization, has invented and put out 150 new machines (*infra*, p. 195).

Practically all of these machines have been at all times patented. In the continuous patent development of the industry the machines in use have given place to new and improved machines, which do better work and have greater capacity, and new machines to take the place of hand work have been developed with the result that the best machines available, the machines which manufacturers demand and use, have at all times been effectively protected by patents (*infra*, pp. 222-234).

3. From the very beginning of the industry the principal shoe machines have been leased and not sold, the lessor depending for his return on a royalty of a certain specified sum for each pair of shoes on which the leased machine was used. Originally an initial payment was also charged to cover the cost of installing the machines and instructing operatives, but this has since been eliminated largely by the United Company.

Under this lease system the entire industry of manufacturing shoes by machinery was created and developed. It was the system under which the constituent companies furnished all their machines, at the time the United Company was formed. It had been adopted because it was found most satisfactory to the shoe manufacturer, and best suited to increase the use of the machines, and, consequently, the return to the shoe machinery manufacturer; in other words, because it was best suited to the conditions of this particular industry.

Under this system the shoe manufacturer is not obliged to invest his capital in machinery. He is, therefore, able to do a far larger business on a limited amount of capital, and his money is not tied up in machinery, which depreciates rapidly, and on which, as the testimony shows, he cannot borrow money. The lease system further enables comparatively poor men of small capital to enter the business, and thus extends the use of the machinery manufacturer's machines. The royalty payments made by the shoe manufacturer, being based on the amount of use to which the machines are put, are adjusted to the amount of

business which the shoe manufacturer does. Owing to the rapid development of shoe machinery, the machines not infrequently become obsolete in a few years. If a shoe manufacturer purchased his machines outright, he might thus suffer a large loss. Under the lease system the machinery manufacturer takes this risk and not the shoe manufacturer. The principal shoe machines are extremely delicate and need constant adjustment and repairs. Under the lease system the machinery manufacturer owns the machines, and his return being based on their use, he is interested in maintaining them in proper adjustment and repair, and he is far better qualified to give this service than is the shoe manufacturer.

For a full statement of the reasons for the adoption of the lease system, see *infra*, pp. 252–257.

4. As we have stated, a large number of different machines are used in the manufacture of each shoe. In the economical management of a shoe factory the shoes flow from one machine to another in a continuous stream, and when an important machine in the line breaks down, it interrupts this flow and, therefore, not only stops work on that machine, but also stops work on all machines coming after it in the line, and as to continue operating machines preceding it in the line would merely accumulate uncompleted work which could not be finished, it likewise stops work on those preceding machines. The capacity of shoe machines is so large that most shoe manufacturers require only one machine of certain kinds. The predicament of a shoe manufacturer, one of whose machines breaks down, is obviously very serious, and his loss is heavy unless he can obtain prompt and efficient repairs. The production of his entire factory may cease, and he will be unable to keep his contracts to deliver shoes. Furthermore, his operatives, who work by the piece, will earn nothing, and the lessors of machinery, the use of which is thereby prevented, will get no royalty.

It is, therefore, of the utmost importance that each machine in the line be well constructed and well cared for, so that it will not break down or get out of adjustment, and it is furthermore of the utmost importance that a machine be repaired at once if it does break down or get out of adjustment, so that the work will be interrupted for as short a time as possible.

The advantages of a well-constructed line or series of machines

which receive proper repair service are especially pronounced in respect to the principal bottoming machines such as welters, stitchers, and lasting, metallic fastening and heeling machines, which perform delicate and difficult operations, handle material like thread, wire, and nails, and which themselves are necessarily delicate machines, having a large number of moving parts liable to get out of adjustment or repair.

Furthermore, the machines are so complicated, and the variety of machines so great that the ordinary shoe manufacturer, who does business on a comparatively small scale and even the large manufacturer, cannot afford to keep in his employ skilled mechanics acquainted with the intricacies of all his machines, nor can he afford to keep on hand the great variety of duplicate parts which may at any time be required for repairs and replacements. This repair service to be effective must be furnished by the shoe machinery manufacturer who can do it on a large scale, and who can maintain skilled mechanics and a stock of repair parts in or near the various shoe centers.

For a statement as to the importance of an efficient series of machines, and of an adequate service, see *infra*, pp. 179–194, 333–340.

5. Each machine in the line or series of machines must also be so organized as to operate efficiently upon the shoe in the condition in which it has been left by the preceding machine, and so as to leave the shoe in condition to be operated on by the succeeding machines. In other words, the important machines to work effectively must be adapted for use together. The machines all co-operate in a single continuous process and constitute for practical purposes parts of a single machine rather than distinct and independent machines. It is as important that each machine of the series be adapted to use with the other machines of the series, and be well constructed and maintained in proper repair, as it is that each part of a single machine be so adapted, constructed, and maintained. If an outside principal machine not adapted for use with the other principal machines of the series is interjected into the series, both the quality of the work and the speed of the machines are seriously interfered with (*infra*, pp. 335–338).

6. Most shoe manufacturers are men of comparatively small capital, who operate on a small scale. The United Company

in 1911 had over 1,000 lessees, about half of whom made less than 300 pairs of shoes per day (R. Vol. 1, pp. 454–455).

Formation of the United Company.

The United Company was organized February 7, 1899. It was a consolidation of the Goodyear Company, the Consolidated & McKay Lasting Machine Company, and the McKay Shoe Machinery Company, essentially non-competing companies, making different types of machines used for different purposes. After the formation of the United Company was agreed upon it was found that the Eppler Company could be purchased, and it was acquired in March, 1899.

The Goodyear Company manufactured the Goodyear Welter and Stitcher used in attaching the soles to the uppers of Goodyear Welt shoes. The welter was also used in the manufacture of Goodyear Turn shoes. The Goodyear Company also supplied 13 welt auxiliary machines and 3 turn auxiliary machines, machines developed to assist the work of the principal machines. The Goodyear Company also manufactured the Ideal Lasting Machine, designed for lasting women's welt shoes. This was purely incidental to i s main business of furnishing welt sewing and outsole stitching machines. Only 248 Ideal machines were outstanding out of approximately 4,300 lasting machines of all kinds in use.

The Consolidated & McKay Lasting Machine Company made three kinds of lasting machines: (1) the Chase; (2) the McKay and Copeland; and (3) the Hand Method McKay Machine.

The Chase Machine was designed and developed for lasting men's welt shoes and was used almost exclusively for this purpose.

The McKay and Copeland Machine was designed and adapted for lasting men's heavy brogans and was used exclusively for this purpose.

The Hand Method McKay machine was designed and adapted for lasting McKay shoes and was used exclusively for this purpose.

The company also had endeavored to develop a hand method machine for lasting welt shoes. Owing to the difference in structure between a welt and a McKay shoe, the Consolidated Company had not succeeded in making this machine a com-

mercial success. Only 34 machines had been placed in factories, and they were experimental and not commercially successful.

The Davey Pegging Machine Company, owned by the Consolidated Company, made machines for attaching soles by wooden pegs.

The McKay Shoe Machinery Company manufactured and leased machines for inserting metallic fastenings in shoes and heeling machines used for preparing and attaching heels.

These three companies had originated and developed under their patents the business of manufacturing these special types of machines and were furnishing practically all the machines of these types in use by shoe manufacturers.

The Eppler Company, the purchase of which was arranged after the formation of the United Company was agreed upon, manufactured a welter and stitcher and a few auxiliary machines for making the Eppler Welt shoe, a shoe constructed quite differently from the Goodyear Welt shoe. The Eppler Company used a method which had been abandoned many years before by the Goodyear Company. Its machines were definitely inferior to the Goodyear Company's machines and, furthermore, they infringed the Goodyear Company's patents, and various patent suits had been brought by the Goodyear Company which its counsel was confident would succeed. The Eppler Company was commercially unsuccessful and had only about 30 or 40 welters outstanding.

For a statement of the business done by the foregoing companies see *infra*, pp. 109–113.

Machines not Manufactured by the Constituent Companies.

The constituent companies which were consolidated into the United Company covered only a portion of the shoe machinery field. They manufactured no machines for sewing or preparing the uppers of shoes. They did not manufacture the McKay Sewing Machine, the principal machine used in bottoming more than half the shoes then made. They made no General Department Machines, of which the United Company now manufactures more than 170 different kinds.

Defendants' Exhibit 221 A (R. Vol. 5, p. 370 A) gives a list of 85 different dealers in shoe machinery and supplies, adver-

tising in the trade papers between 1899 and 1902, which the United Company neither acquired nor attempted to acquire. The list includes such important concerns as the Wheeler & Wilson Sewing Machine Company, which supplied 90% of the machines which sewed the uppers of shoes; the Reece Button Hole Company, which furnished probably every machine used for making button-holes in shoes and for finishing the button-holes; and the Stanley Company, which manufactured the McKay Sewing Machine (*infra*, p. 117).

In the organization of the United Company, therefore, the defendants obviously made no attempt to acquire all concerns engaged in the shoe machinery business.

The Formation of the United Company held Lawful in United States v. Winslow, 227 U. S. 202.

The formation of the United Company was before this court in *United States* v. *Winslow*, 227 U. S. 202. The indictment in that case sets forth almost precisely the same facts with reference to the organization of the company as the present petition. The only material difference is that it omits reference to the Eppler Company.

This court held in *United States* v. *Winslow*, supra, that the combination was on its face "simply an effort after greater efficiency," lawful under the Sherman Act, and that the allegation of unlawful intent could not make it unlawful. The court further said:—

> ". . . we can see no greater objection to one corporation manufacturing 70% of three non-competing groups of patented machines collectively used for making a single product than to three corporations making the same proportion of one group each. The disintegration aimed at by the statute does not extend to reducing all manufacture to isolated units of the lowest degree. It is as lawful for one corporation to make every part of a steam engine and to put the machine together as it would be for one to make the boilers and another to make the wheels."

The United States has attempted to differentiate the present case by contending that competition existed between certain of the constituent companies and arguing that the elimination of this competition was a wrongful motive for the combination.

It contends that the Ideal Lasting Machine of the Goodyear Company competed with the Chase Machine and the experimental Hand Method Welt Lasting Machine of the Consolidated Company, and that the welt machines of the Goodyear Company competed with the machines of the Eppler Company.

It is conceded that the McKay Company did not compete with any of the other companies.

While no reference was made in the indictment in *United States* v. *Winslow*, supra, to the acquisition of the Eppler Company, it should be noted that the indictment did allege that the Goodyear Company made 10% of all the lasting machines used, and that the Consolidated Company made over 60% of all the asting machines used.

Alleged Competition in Lasting Machines.

The Chase Lasting Machine of the Consolidated Company was designed to last men's welt shoes. It was not structurally adapted to last women's welt shoes, and there is no evidence that it was ever used for this purpose.

The Ideal Machine of the Goodyear Company was designed to last women's welt shoes. While it was possible to use it on men's welt shoes, it was not structurally adapted for such use. Men's shoes are heavier and larger than women's shoes and require a stronger machine of greater power than the Ideal Machine. Furthermore, the box toe on a man's shoe is heavier and stiffer, and the Ideal machine could not successfully wipe over such toes. For these reasons it was not commercially successful on men's shoes, and its use for such purpose was purely incidental and outside of the field for which it was designed. It offered no commercial competition outside of its own field.

The Goodyear Company had put out only 248 Ideal Machines. Of these nearly 200 were in factories where only women's shoes were made and only about 40 were in factories where men's shoes were made. A total of nearly 4,300 lasting machines were in use so that the number of Ideal Machines outstanding was only 5 or 6 per cent. of the total lasting machines in use. The total number of shoes lasted on the Ideal Machine in 1899 and on the Copeland Rapid Machine, which was an earlier type of machine put out by the Goodyear Company, was only

.77 of 1 per cent. of the shoes lasted by machines in that year. Not more than one-half of the total number of shoes made in 1899 were lasted by machines so that less than .40 of 1 per cent. of the shoes made were lasted on the Ideal. As it appears that not more than 40 of the Ideal machines were used on men's shoes, the total number of men's welt shoes on which the Ideal Machine was used did not exceed .07 of 1 per cent. of the total shoes made. This is the extent of the alleged competition claimed with the Chase Machine.

It may be added that both the Chase and Ideal Machines have become obsolete, having been superseded by new and much improved machines.

The Hand Method Welt Machine of the Consolidated Company was in an experimental stage in 1899. It was not of the bed type, and was entirely different in structure from the Ideal Machine, which was of the bed type. The Consolidated Company had been unable to develop the machine so that it would last the toes of welt shoes properly. Only 34 machines were under lease or .08 of 1 per cent. of the total lasting machines in use, and they had been taken experimentally and were being constantly returned. The record does not show a single instance of the use of these machines on women's welt shoes, the field of the Ideal. The machine was not commercially successful until a new device for wiring the toes was adopted in 1900, long after the formation of the United Company, a device not known or reasonably to be anticipated in 1899, when the United Company was formed.

This insignificant overlapping of the fields of use of the Ideal and the Chase Machines and the trivial use of the experimental Hand Method Machine on welt shoes can hardly be termed competition. If it did constitute an incidental and negligible competition, it certainly does not show that the United Company was formed to eliminate this competition. The primary business of the Goodyear Company was the manufacture of welt machines, and its manufacture of Ideal Machines was of insignificant proportions and purely incidental to its main business. It is obvious that the purpose in taking over the Goodyear Company was to acquire its welt machine business. The acquisition of the Ideal Machine was purely incidental.

Furthermore, the United Company was clearly entitled to ac-

quire the Ideal Machine even if it had been the only machine manufactured by the Goodyear Company. The Ideal Machine was the only machine then invented which could last women's welt shoes commercially. It was patented and only by acquiring the patents could the United Company manufacture it. To hold that the United Company could not acquire these patents would be to hold that the United Company could not furnish a machine for lasting women's welt shoes, because such machines could also be used incidentally, though not successfully, for lasting men's welt shoes for which the United Company had another machine.

The Hand Method Welt Machine in 1899 was an unsuccessful experimental machine. It is quite obvious that the purpose in taking over the Consolidated Company was to acquire its three successful machines which were in general commercial use. The acquisition of this experimental Hand Method Welt Machine was purely incidental and no actual competition was thereby eliminated.

For a detailed statement as to this alleged competition in asti ng machines, see *infra*, pp. 119–151.

Alleged Competition between the Goodyear Company and the Eppler Company.

The Eppler Company's machines were patented machines of a different type from the Goodyear machines and made a shoe which differed structurally from the Goodyear Welt shoe. The Eppler machine laid the bulky double chain of the chain stitch in a prepared channel in the innersole on which the foot rested, while the Goodyear machine laid it on the welt outside of the surface on which the foot rested.

The Eppler machines were far inferior to the Goodyear machines, and the Eppler Welt shoe which they made was also inferior to the Goodyear Welt shoe, as the seam laid in the innersole was likely to cause discomfort. Furthermore, the Eppler Company had no satisfactory set of auxiliary machines which were essential to the commercial success of the system.

The result was that, though the Eppler Company's machines had been on the market about seven years, only between 30 or 40 of its welters were outstanding, of which one-third were in

the factory of the president of the company. The Eppler Company was not a success and was inevitably doomed to failure. The Eppler method was only one method of attaching the soles of shoes, used on a wholly insignificant portion of the total shoes made. It offered insignificant competition, if any. The real competition met by the Goodyear Company was the McKay method of sewing the sole to the upper, by which method half the shoes made were manufactured.

Furthermore, such competition, if any existed, was unlawful, as the Eppler machines infringed the Goodyear Company's patents. Patent suits had been brought and counsel for the Goodyear Company had every expectation of success. In continuing these suits the United Company would have been obliged to bring suit against certain of its own customers who were using Eppler machines and also the United Company's lasting, heeling, and metallic machines. The purchase was made in order to terminate this litigation which would necessarily cause friction between the United Company and its customers. An incidental reason was to acquire the Eppler patents and thus enable the United Company to furnish machines to make shoes by the Eppler method if any one so desired. That the United Company was not formed to eliminate this insignificant competition of the Eppler Company is conclusively shown by the fact that the organization of the United Company was arranged before the acquisition of the Eppler Company was thought of.

For a detailed statement as to this alleged competition with the Eppler Company, see *infra*, pp. 152–170.

Purposes for which the United Company was Formed.

Mr. Winslow testified that the fundamental reasons for the formation of the United Company were (*infra*, p. 171),—

First: To increase the productive efficiency of the machines.

Second: To economize in the manufacture of the machinery by bringing that manufacture into one modern factory and standardizing the manufacture.

Third: To encourage and increase the manufacture of Goodyear Welt shoes by the development of new machines to assist in their manufacture, and new methods to lower the cost, to

aid and assist those manufacturers who were making those shoes and induce other manufacturers to enter into their manufacture. It was contemplated in this connection to lower the cost of installation of the Goodyear machines and instruct manufacturers in the manufacture of welt shoes.

Fourth: To develop a better service for the instruction of operatives in the use of machines and for maintenance of the machines and at the same time decrease the expense of that service by avoiding duplication of depots and men employed in that work.

A further reason was that the Goodyear Company was being managed by Mr. Elmer P. Howe, an eminent patent attorney in active practice, who desired to get rid of this burden, and that the McKay Company was managed by Mr. Brooks, who was seventy years old, able to devote only a few days a week to the business, and who wished to retire (*infra*, p. 172).

The defendants specifically denied any attempt to monopolize or any plan such as that alleged in the petition (*infra*, p. 174).

Extent to which Purposes for which the United Company was Formed have been Carried Out.

The extent to which the purposes for which the United Company was formed have been carried out is important in two respects: first, in confirming the testimony of the defendants as to the reasons for forming the Company, and, second, in accounting for the success of the Company.

Concentration in one Factory.

Immediately following the organization of the Company a committee of experts was selected to visit manufacturing plants throughout the United States and gather data as to the best methods of machinery manufacture. As a result of their work the company built a large concrete factory at Beverly, Massachusetts, the first of its kind in the United States. The manufacturing business of the three principal constituent companies was thereafter carried on at the new factory. The Consolidated Company's business had previously been carried on in leased premises at Beverly. The McKay factory had been

in Winchester, a place unsuited to manufacturing business, as there was no labor at hand. The Goodyear Company had been situated in Boston but had no room to develop its factory.

Immediately the work of standardizing the parts for the manufacture and repair of the various machines was accomplished, and the necessity for making and carrying an infinite variety of screws, bolts, castings, and other parts, with the attendant expense, delay, and inconvenience, was obviated (*infra*, pp. 176–179).

Organization and Improvement of Service.

We have shown above the vital importance to shoe manufacturers of service. Such service consists in furnishing skilled mechanics to repair and readjust machines, in maintaining at convenient places a stock of duplicate parts to replace any broken parts, in instructing operatives in the use of machines, and generally in acting as engineers for shoe manufacturers.

Prior to the formation of the United Company each of the constituent companies had attempted to furnish service with its machines, but no one of them was sufficiently large or did a sufficient business in any one factory to furnish a satisfactory service. One of the principal reasons for the formation of the United Company was the belief that a single company furnishing these different types of machines would be able to unify and reduce the cost of this service so that it could be made vastly more efficient. After the consolidation a single organization would be able to take care of all three sets of machines.

Immediately after the formation of the United Company attention was given to the unification and improvement of the service. The best man was put in charge of each district, and arrangements made to render the service from one office in each district. Depots were established in 27 shoe manufacturing centers in 13 different States from Maine to California, and at all these places stocks of repair parts were established and skilled men kept to repair or adjust machines and instruct operatives immediately when a shoe manufacturer requested such assistance. This service was rendered free of charge by the United Company. A charge was made for new parts to take the place of those which were broken, but for the salaries

and expenses of the hundreds of men employed to render this service—608 in 1911—no charge was made.

During 1911 the number of calls by shoe manufacturers for the services of these men was 192,524. The time occupied in the work was 1,110,593 hours. The number of new operatives instructed was 8,889. The cost to the United Company for the year was $1,196,494.86 (*infra*, pp. 186–187). The vital importance of this service to the efficient conduct of the shoe manufacturer's business was testified to by many shoe manufacturers.

For a full statement as to the necessity for this service, and the character of the service, see *infra*, pp. 179–194.

Inventions and Improvements.

Soon after the formation of the United Company the development of inventions and the improvement of machines was placed in charge of a committee composed of three or four inventors experienced in the art of shoe machinery invention. To that committee every new idea or invention was submitted, investigation was made by them, and they reported their findings to the head of the department which had charge of placing those machines in the field, and a conclusion was arrived at as a result of which either an inventor was placed at work to develop that idea or it was filed as not practicable or not of commercial value. This work has been carried on consistently and continuously to the present time.

A large organization has given its entire time and attention to the development of ideas of the company's own men, or ideas suggested to the company, and to the consideration of inventions offered to the company.

Everything that the company has known how to do to advance the art of making shoes by machinery has been done from the organization of the company to the present time, and as soon as a new or improved machine has been developed which performs an operation already performed by some machine outstanding in the hands of lessees, the new machine has been substituted for the old machine without charge, and the old machine has been taken back and scrapped.

In the five years from 1907 to 1911, inclusive, the company expended upon this Experimental Department $2,467,954.70.

During fifteen years the company has brought out an average of seven or eight *new* machines a year. It has developed 150 different new machines of various types which have been supplied to customers (Defs.' Ex. 246). It has acquired or devised and leased or sold at the option of the shoe manufacturer 172 different General Department machines (Defs.' Ex. 227).

For a statement as to the inventions made by the United Company, see *infra*, pp. 194–197.

Increased Efficiency of Machines.

By reason of the invention of new and improved machines and of the service rendered by the United Company with its machines, the efficiency of the United Company's principal machines has been enormously increased. For example each Goodyear welter, each Goodyear stitcher, and each heeler operated on 60% more shoes in 1910 than in 1899 (*infra*, pp. 197–198).

The direct saving to shoe manufacturers by reason of the increased efficiency of the machines amounts to more than the total royalties paid to the United Company (*infra*, pp. 198–202).

In addition the United Company has eliminated initial payments required by the constituent companies in 1899 and in various cases reduced the royalties. It has not increased either initial payments or royalties charged in 1899, although the cost of manufacturing the machines, as is well known, has greatly increased and the capacity of the machines, and the quality of their work has vastly improved, so that they are worth much more to-day than they were worth in 1899.

The shoe operatives are generally paid by the piece, and the increased efficiency of the machines has, therefore, added materially to their earnings, although in many instances the piece price has been actually reduced (*infra*, pp. 202–203).

Development of Goodyear Method of Making Shoes.

One of the purposes in forming the United Company was to encourage and increase the manufacture of Goodyear Welt shoes. By eliminating the initial payments charged in 1899 by the Goodyear Company, and by inventing new auxiliary machines to

assist the work of the principal machines, and by enormously increasing the capacity of the principal machines, the United Company has succeeded as planned in greatly encouraging and increasing the manufacture of Goodyear Welt shoes which are unquestionably the best type of shoe made. In 1899 only 22,700,000 pairs of welt shoes were made, while in 1910 86,231,000 pairs were made (*infra*, p. 203).

The Patents on the Constituent Companies' Machines were not About to Expire in 1899.

The petition alleges that early in 1899 many of the basic patents on the machines put out by the constituent companies were about to expire and the United States contends that this furnished a motive for the formation of the United Company, the intent being, by some method not made clear by the petition, to create a new and unlawful monopoly in these machines to take the place of the lawful monopoly held under the patents.

The United States utterly failed to substantiate its charge that the basic patents were about to expire. On the contrary, it was shown that at the date of the formation of the United Company the machines which the petitioner's patent expert selected to sustain its charge embodied patents which had more than fourteen years to run. The District Court found that the allegation was not proved and said:—

> "It seems obvious, therefore, that the allegations in question could not have been founded, when they were made, upon any adequate or complete investigation of the facts."
>
> . . . . . .
>
> . . . "I must regard the allegations here in question as not sufficiently supported by proof; and hold that no such motive is shown to have prompted either the organization of the United Company, or any of its subsequent doings" (R. Vol. 1, pp. 1133, 1134).

Furthermore, the defendants showed that owing to the continuous patented development of the shoe machinery art, and the development and the invention of new and improved machines to take the place of hand work, the machines of the United Company have at all times since 1899 been protected by strong patents, and at the date this suit was brought they were as strongly, or even more strongly, protected than ever before.

(For a discussion of the patents, see *infra*, pp. 204–237.)

The Lease System.

As we have stated above the method of marketing the principal shoe machines by leasing rather than selling was employed from the very beginning of the shoe machinery industry, and the entire business of manufacturing shoes by machinery had been created and developed under this system. The system had been originated and maintained because it best suited the conditions of the industry, and had been shown by experience to be the most satisfactory to shoe manufacturers.

The exact form of the leases has been the result of an historical development and growth extending over many years. The various provisions have, of course, from time to time been modified and amended as new conditions arose or experience showed just what provisions were necessary to provide a satisfactory system and at the same time protect the lessor.

At the date of the formation of the United Company this lease system had long been definitely established. The United Company necessarily continued it, not only because it was accepted as the most satisfactory method of marketing machines, but because the United Company could not have given up the system without demoralizing the entire shoe industry. Many manufacturers had embarked in business because they could get their machines without capital expenditure, and in the expectation that as their business increased they could get additional equipment on the same terms. Had the United Company at or after its formation required shoe manufacturers to purchase outright the machines they then held, and which they desired in the future, it would undoubtedly have ruined many shoe manufacturers of slender capital and would have caused great hardship to all of them.

The fundamental basis of the lease system, which makes it so satisfactory to the shoe manufacturer, is that the machinery manufacturer installs the machines in the lessee's factory without charge, or, in some cases, for a small initial payment, and depends for his return upon a royalty of a certain sum for each pair of shoes on which the machines are used. The United Company has some $40,000,000 in machines in lessees' factories on these terms.

Under such a system it is obvious that the leases of the ma-

chines must contain provisions carefully protecting the lessor in respect to the use and care of the machines and the return to be paid for them.

It will be found that the provisions of the leases were all adopted to enable the lessor to furnish machines under this unique system, so obviously favorable to shoe manufacturers, on the best possible terms, and at the same time fairly to protect itself.

As stated above, the United Company found the lease system established. It continued the system, making no modifications at all in the leases for more than a year, and thereafter making modifications only from time to time to enable it to offer its lessees better terms, or to meet new conditions, just as the constituent companies had from time to time modified their leases prior to the organization of the United Company.

These modifications have not changed the essentials of the system which was established at the time of the formation of the United Company. In a number of instances they have eliminated or relaxed protective clauses which the constituent companies had required and believed necessary for their benefit.

The charge made by the petition that the United Company upon its formation discontinued the sale of machines was absolutely unfounded. The constituent companies did not sell a single machine, while the United Company, on the contrary, sells over 170 different types of machines which it has developed since its organization. This allegation is only an illustration of the reckless character of the charges made by the United States, obviously without any investigation of the facts.

The provisions of the leases, to which the United States took exception, neither support the charge made by the petition, that the United Company refused to lease its essential machines defined as welt sewing, outsole stitching, lasting, metallic, and heeling machines, unless the shoe manufacturer took practically all other machinery of it, nor do they establish a foundation for any charge not made by the petition.

Before considering the clauses objected to by the United States, one further word of explanation as to the lease system employed by the United Company will be useful. The United Company, for convenience, has grouped its machines into different

departments. Thus the Goodyear welt and turn machines are in the Goodyear Department, the lasting machines in the Lasting Department, the metallic machines in the Metallic Department, the heeling machines in the Heeling Department, the eyeletting machines in the Eyeletting Department, the pulling-over machines in the Pulling-over Department, and various miscellaneous machines in the General Department.

There are separate forms of lease for each department which differ from each other according to the character of the machines and their use, and there are different forms used in each department, both alternative forms and forms for different machines.

It is impossible in this preliminary statement to describe in detail the various clauses recited in the petition to which the United States objects. A thorough study of their history, of the complications of leasing so many different kinds of machines adapted for use together, and used in making a great variety of different kinds of shoes, for royalties based on the actual use of the machines, is essential to an understanding of the reasons for the adoption of the various clauses and their necessity. The leases are discussed in detail *infra*, pp. 238–422, and at this point we give only a brief outline of the principal clauses to which the United States takes exception.

1. The Full Capacity Clause. This clause required the lessee to use the particular machine leased to full capacity so far as the lessee has work for it to perform, and on which it can be used without violating any other provisions of the lease.

This is the only clause contained in the leases of the United Company at the time suit was brought, or for some years previously, which requires the lessee to use the United Company's machines at all.

Its purpose is obvious. The lessee obtains the leased machine, agreeing to pay a royalty based on its use. Unless the lessee uses it, the lessor will receive no royalty. It is obvious that the lessor cannot manufacture and install an expensive machine on these terms, unless the lessee will agree to use it when he has work which it can perform.

That the clause is employed solely to provide an adequate amount of royalty to the lessor is conclusively shown by the fact that this clause is not used in leases of machines which do not provide for a royalty based on the use of the machine.

This clause was used in various leases of the constituent companies.

For a full discussion of this clause and its effect, see *infra*, pp. 306–311.

2. The Exclusive Use Cancellation Clause. This clause permits the lessor to withdraw its machines of a certain kind or department, when other machines of that same kind are used by the lessee. It is not an agreement on the part of the lessee, but merely the reservation of an optional right by the lessor. It does not forbid the use of such other machines by the lessee; it only reserves an option to the lessor to withdraw its own machines of this particular kind if he deems such action necessary for his protection.

When other machines of the same kind as those leased are used by the lessee in the same factory with the leased machines, experience has shown that the lessee may actually do most of his work on the lessor's machines, but carelessly or dishonestly report it as done on his other machines, or he may use the leased machines only on slow or difficult work, or only during his busy seasons, or use them as a threat to reduce the prices of hand labor. Under these conditions the lessor may not get a proper return on his machines, and the constituent companies, therefore, found it necessary to insert in most of their leases a clause known as the Additional Machinery Clause, requiring the lessee to take additional machines of the same kind from them if needed (that is, to use their machines of the kind leased exclusively), or a clause known as the Exclusive Use Cancellation Clause, giving the lessor an option to cancel its leases if the machines were not used exclusively. The United Company found that the Exclusive Use Cancellation Clause gave it sufficient protection against the abuses outlined above, and therefore employed this clause, discarding entirely after 1907 the use of the Additional Machinery Clause, which it had continued to use up to that time only to a limited extent. It thus eliminated from the lease system the only clause employed by the constituent companies requiring an exclusive use of any of their machines.

For a discussion of the Exclusive Use Cancellation Clause and its effect, see *infra*, pp. 311–323.

3. The Cancellation for Breach Clause. This clause permits the lessor to withdraw all its leased machines and cancel all

its leases if the lessee violates his agreements which he has obligated himself to perform.

It is obvious that the lessor who installs his own machines without charge in the lessee's factory, to be paid for only when used, must have a right to withdraw them if the lessee acts in bad faith and violates his agreements. A similar clause was contained in all the leases of the constituent companies.

For a discussion of this clause and its effect, see *infra*, pp. 326–330.

4. The Restricted Use Clause. This clause is used in leases of machines of certain departments, restricting their use to use on shoes operated on by certain principal machines of other departments. The leases containing this clause are alternative forms of lease offered lessees who wish to use a series or team of the United Company's machines. Where certain principal machines are so used as a team and each machine of the team is kept in repair by the United Company, each machine does more and better work and produces a larger royalty than if used with machines not adapted for use together, and not properly cared for and maintained in efficient working condition. Where a team of machines is used, the United Company can also furnish service at less cost for each machine than where only a part of the series is used. This clause, therefore, merely provides a wholesale rate where the lessee desires to use a team of machines as a unit, *i.e.*, in a wholesale manner. Where so used, as we have stated, each machine produces a larger royalty for the United Company, and this clause enables shoe manufacturers to benefit and share in the increased economies resulting from a use of a team of the United Company's machines (*infra*, pp. 333–340).

The clause has an extremely limited effect as it only restricts the use of certain principal machines, which the petition calls essential machines, to use with each other and of certain other machines to use with certain of such so-called essential machines. No machines are restricted to use with the majority of the machines manufactured by the United Company. For example, no machines are restricted to use with over 170 General Department machines, with the 43 Goodyear Auxiliary machines, or with the eyeletting, clicking, or McKay sewing machines (*infra*, pp. 366–373).

The United States relied wholly on this clause to prove its fundamental charge in the petition that the United Company refused to lease its essential machines except on condition that the lessee take all other machinery of it, but, as found by the District Court, the clause had no such effect. In the first place, leases containing this clause were only alternative forms of lease, and machines without these restrictions were offered lessees on terms as favorable or more favorable than were offered by the constituent companies prior to the formation of the United Company (*infra*, pp. 357–364).

In the second place, the machines defined by the United States as essential machines, which it was contended the United Company used to compel the taking of other machines, defined as non-essential, were not restricted to use with such other machines. The restrictions ran the other way; that is, with two minor exceptions the so-called essential machines were not restricted to use with any of the so-called non-essential machines, but on the contrary the restrictions were solely restrictions either restricting the so-called essential machines to use with other essential machines, or restricting the so-called non-essential machines to use with certain of the essential machines (*infra*, pp. 346–356).

These restrictive clauses were not adopted immediately upon the formation of the United Company, but only from time to time as conditions called for their use. No such clause was ever inserted in leases of the Goodyear welter and stitcher, the machines which the petitioner's patent expert testified were the only essential machines in making the Goodyear Welt shoe.

For a discussion of this clause and its effect, see *infra*, pp. 331-414.

5. The Auxiliary Restricted Use Clause was used to restrict the use of auxiliary machines to use with the principal machine or machines of the department. In every case the principal machine was first invented. Auxiliary machines to assist the work of the principal machine were developed later. It was the invariable practice to supply these new auxiliary machines, when developed, to lessees already having the principal machines without additional royalty charge, the lessor receiving his return indirectly through the increased use and capacity of the principal machines which resulted. But of course, when so furnished without additional royalty charge, it was necessary to restrict the use of the auxiliary machines to use with the prin-

cipal machine; otherwise the lessor would receive no return direct or indirect. The auxiliary machines put out by the constituent companies had always been so restricted and the United Company merely continued the practice.

For a discussion of this clause and its effect, see *infra*, pp. 373–377.

6. The Term of the Leases. The leases of the constituent companies ran in some cases for the life of the machine; in others for seventeen years and thereafter during the life of the patents at any time embodied in the machines; and in still others for the life of the patents then or thereafter embodied in the machines. Most of the machines embodied the inventions contained in pending patent applications, so that the leases in most instances ran for more than seventeen years. If new improvements were added they would run still longer. The United Company, to make its leases consistent, adopted the term of seventeen years for all its leases. This term rather decreased than increased the term of most of the leases.

A long term is essential. The shoe manufacturer who undertakes to build up a shoe business wishes an assurance that he may hold his machines for an extended term, and the lessor constructing machines for the lessee's use needs an assurance that they will be held for a sufficient time to insure an adequate return. An extended term is therefore mutually advantageous.

For a full discussion of this clause and its effect, see *infra*, pp. 302–306.

The record shows that the United Company treated its lessees with the utmost liberality, and that it enforced its leases only when essential to its protection (*infra*, pp. 414–419). During its entire existence it exercised its right to cancel its leases in only five cases apart from bankruptcy cases, and in each of these cases the lessee either flagrantly violated his agreements or had abandoned the use of his machines entirely (*infra*, pp. 417–418). An examination in detail of the history of the lease system, of the reasons for the adoption of the various provisions, and of the spirit in which the rights reserved to the lessor have been enforced, will establish conclusively that the various clauses have been adopted for proper, legitimate business reasons and not for the purpose of excluding competitors, and that these clauses, or clauses having the same effect, are essential to the

maintenance of this highly satisfactory system under which shoe manufacturers obtain machines without capital expenditure to be paid for only according to their use.

Acquisitions of other Businesses and Properties.

As was entirely natural, the United Company in dealing with shoe manufacturers in labor saving machinery and devices was led to extend its business. The United States charges that between 1899 and 1911 the company acquired sixty other concerns. As to one of these, the Boston Blacking Company, the United States abandoned the charge and dismissed the bill. The Thomas G. Plant purchase will later be considered by itself. Of the remaining fifty-eight transactions, eleven took place in 1899, eight in 1900, six each in 1901 and 1902, three each in 1903, 1906, and 1908, nine in 1904, one each in 1905, 1907, and 1909, five in 1910 and one in 1911. They were offered in evidence by the United States in support of its claim set out in the petition of a plan by the defendants, to obtain a monopoly of the entire field of shoe machinery. But this claim, as we have stated above, was utterly abandoned by the United States during the trial, and the ground of complaint was shifted to a claim of monopoly of machines for preparing and attaching the soles to the uppers of shoes, eyeletting machines, and clicking machines. This change of position renders most of the acquisitions of no importance, for few of them had any relation to machines of the kinds last above described. Of these fifty-eight so-called acquisitions, many were not acquisitions at all. They may be classified as follows:—

(1) Contracts of employment (three), contracts to commute obligations created before 1899 (two), purchases of patents only (three) and an exclusive license to sell sandpaper. No tangible property or business of any kind was acquired by any of these nine transactions.

(2) Purchases to add findings and supplies which are used by shoe manufacturers. These numbered fifteen. No shoe machinery was acquired by any of these transactions.

(3) Purchases of new machines which the United Company did not have before. These numbered twenty.

(4) Purchases of patented improvements or inventions for the purpose of enabling the United Company to supply

better machines than it had before. These numbered eleven.

(5) Of the three remaining transactions one was a purchase of experimental machines, which had never been put out, for the purpose of settling a great amount of litigation; another was a purchase of an insignificant foreign business for the purpose of settling litigation; and the third was a purchase of foreign patents on a machine for which the United Company had been agent abroad for years and which it had put out exclusively abroad.

None of the businesses acquired was in competition with the United Company, and in all cases competitors were left outstanding. Many of the concerns were not engaged in business at all, and of those engaged in business many were not engaged in the shoe machinery business, but made sandpaper, brushes, cement, eyelets, lacings, pegwood, needles, awls, rawhide mallets, nails, tacks, metallic heels and counters, or other supplies of use to shoe manufacturers who were customers of the United Company.

The company continued to produce all the supplies or machines acquired by it. None of the businesses was restricted or suppressed in any way.

During the same period the United Company had offered to it and, *refused to purchase*, the businesses of between seventy-five and eighty other concerns among which were some of the United Company's principal competitors; many of these were of great size and importance and manufactured essential machinery used by shoe manufacturers, especially machinery for preparing and attaching the soles to the uppers of shoes, and taken together they were making a complete line of shoe machinery including machines for making the uppers (*infra*, pp. 427–430).

In addition to these businesses offered to the United Company, there were between June, 1904, and December, 1911, offered to it 493 inventions for shoe machinery which it did not acquire (*infra*, pp. 429–430).

In 1911 when this suit was brought there were a very large number of concerns engaged in manufacturing shoe machines, such concerns being more numerous and larger than ever before.

For a full discussion of the acquisitions, see *infra*, pp. 423–465, and Appendix, pp. 1–87.

Covenants in Contracts of Purchase.

The petition charges that the United Company took from vendors and patentees covenants not to compete and to assign future inventions.

The covenants in question are of the usual character taken from the vendor of a business or from an inventor entering into a contract of employment or selling patent rights. Such agreements have been long recognized as essential to the protection of the vendee or employer. In the present case the covenants were in no instance shown to exceed what is usual, lawful, and necessary. They utterly fail to establish any intent to obligate either vendors or patentees unlawfully. The record shows that the officers of the company had no plan or design whatever with respect to these covenants, and that their form was left to the attorney who drew the papers.

In thirteen transactions there were no covenants as to competition or future inventions whatsoever. In most of the transactions where covenants were inserted particular pains were taken to limit the covenant strictly to the particular kind of machines or goods which were sold.

The petition seriously misstates the extent and scope of many of the covenants, although the documents themselves were in the possession of the United States for a long time prior to the bringing of the petition.

For a discussion of the covenants, see *infra*, pp. 466–475, and Appendix, pp. 82–87.

The Plant Purchase.

In September, 1910, the United Company purchased of Thomas G. Plant a large number of patented inventions, applications for patents relating to shoe machinery, and 60% of the stock of the Thomas G. Plant Company, which manufactured women's shoes, paying therefor $3,000,000 in cash and $1,500,000 in common stock of the United Company at par.

This purchase is largely relied on by the United States as showing an attempt by the United Company to obtain a monopoly

of shoe machinery. It is claimed that Plant was a competitor of the United Company and threatened to become formidable. This is not the fact. He was not a competitor and never intended or was able to compete, but he had developed valuable improvements on certain of the defendants' machines which were of great importance to the art of shoemaking and which could not be used by the defendants, because Plant had patented the inventions.

Plant had been a successful manufacturer of women's welt shoes, and a user of United Company machines for his manufacture. He had differences with the United Company and went to work to provide himself with machines of his own for making shoes. Taking the United Company machines as a basis, he made certain changes and some important and valuable improvements which he patented. This resulted in extensive patent litigation between him and the company because he was infringing its patents and they could not use his improvements without infringing his patents.

In May, 1910, he removed all the United Company machines from his factory and installed his own machines, and attempted to manufacture shoes with them. Prior to this he had offered to equip two other factories with his machines without requiring royalties for their use, but these offers had been declined. Plant had declared in 1909 that his intention was to equip these factories and his own and then sell out to the United Company.

He first approached Henry B. Endicott, a large shoe manufacturer, and offered him $250,000 if he could sell the Plant inventions and patents to the United Company. Mr. Winslow, president of the United Company, declined to consider the proposition without an opportunity to examine by experts Plant's machines and ascertain their value to the art of shoemaking. Plant declined to permit such examination unless the company put up $1,000,000 to be forfeited in case the United Company did not purchase. He was fearful of the patent litigation which might follow such an examination. Plant increased his offer to Endicott to $500,000 if he succeeded in bringing about a sale.

Finally an examination by certain shoe manufacturers who were directors in the United Company was arranged for. They saw Plant's machinery and a majority of them reported against a purchase at Plant's terms, which were then $6,500,000 for

his patents and inventions alone. Plant was notified that negotiations were at an end. Plant then tried another avenue of approach. He went to one H. W. Smith, a friend who had often urged upon him the advantages of selling out, and told him that if he, Smith, would bring him, Plant, in touch with Mr. Barbour, vice-president of the company, and Mr. Herrick, its counsel, whom Plant supposed to be the persons chiefly opposing the purchase of his inventions, so that he might overcome their opposition, he would pay Smith 5% on the price he sold for. At the same time he told Smith that he was determined to get entirely out of business and dispose of his interest in his shoe manufacturing company, which comprised 60% of its stock.

The shoe factory known as the Thomas G. Plant Company was a very successful business. It had an output of 12,000 pairs a day of a type of women's welt shoes which were very popular, and its annual net profits over a series of years ranged from $500,000 to $700,000. In one year they had reached $1,200,000. Plant authorized Smith to urge upon the United Company the advantages of owning this factory. Smith, accordingly, having persuaded Plant to waive his condition of payment of $1,000,000 for an examination of the machines, arranged meetings for Plant with Barbour and Herrick, and himself saw Winslow. Mr. Winslow and Mr. Howe and a committee of experts were permitted to make an exhaustive examination of the machinery. The experts were instructed by Mr. Winslow to examine solely with the purpose of ascertaining whether the machinery embodied inventions which if added to the United Company's machines would be of benefit to shoe manufacturers and advance the art of shoemaking. The experts reported that Plant's inventions and improvements comprised a number of important and valuable features which, added to the United Company's machines, would greatly increase the economy and efficiency of their operation, particularly of the welter and stitcher.

During all the negotiations the United Company never made Plant any offer for his properties. Finally, on September 20, 1910, Plant offered to accept $3,000,000 in cash and $1,500,000 ($25 par) in common stock of the United Company having a market value of $50 a share for all his patents and inventions and 60% of the stock of the Thomas G. Plant Company with

its very large earnings. The offer was accepted and the sale consummated, and Plant paid Smith his 5% commission, or $300,000.

Plant was not producing machines on any commercial basis. He had no factory to make them in. Such as he had had been built in a great many different machine shops and afterwards assembled. He had no selling organization. He had put out a catalogue and published advertisements threatening the United Company, but he had never sold a machine except to the factory he himself controlled. He declared repeatedly that he did not desire or intend to go into the shoe machinery business, and that his plan was to sell out to the United Company.

Though the inventions were very valuable, as we shall show, the machines themselves were mechanically defective and too lightly built to do the work. They were crude, merely experimental, constantly broke down, and caused a tremendous breakage of lasts, and made shoes by obsolete and very expensive methods, and so poorly that it was necessary to employ a large number of men to repair the shoes after the operation. So great was the expense of their operation that the profits of the shoe company were one-half less than they had been when the United Company's machines were used. After the purchase the management of the shoe factory was left entirely in the hands of Plant's former associates. These men, who were practical shoemakers of great experience, found it impracticable to continue the manufacture of shoes with Plant's machines for the reasons just stated, and of their own volition discontinued the use of the Plant machines and resumed the use of United Company machines.

Crude and unsatisfactory as Plant's machines were, he had embodied in them many extremely valuable inventions which represented important advances in the shoe machinery art and which were capable of being reorganized and incorporated in the United Company's superior machines. Plant had, however, patterned his machines after the United Company's machines, with the result that he infringed a great number of claims in approximately 100 of the United Company's patents. On the other hand, the United Company had learned that 15 of its machines infringed 20 patents owned by Plant. Also there were 23 interferences pending in the patent office between the United

Company's applications and applications owned by Plant. The record establishes that it was a realization of the great benefits which would result to the industry; first, by incorporating Plant's valuable inventions in the United Company's superior machines, and, second, by avoiding the intolerable conditions which would have resulted from the great amount of litigation, existing and threatening, on account of the infringements by each party of the other's patents, which led to the purchase by the United Company, and that those considerations were the sole reasons for the purchase.

The United Company immediately took up the Plant inventions and so far as possible added them to its machines. These resulted in great savings and increased efficiency. In the case of the welter and stitcher a saving of $800 a year per machine to the shoe manufacturer was effected. Operatives were enabled to earn more money at a less piece price. The cost of operation of the welter was reduced 25 to 30% and at the same time the wages the operative was able to earn were increased 36 to 56%. On the new stitcher the operative was able to earn 24% more, though the piece price was 40% more on the old machine. The new machine was more accurate in its operation and saved the operative's time and strength.

These improvements with their benefits to manufacturers and operatives were added to its machines as rapidly as possible by the United Company and given to the trade without extra charge.

The evidence showed conclusively that the only interest of the United Company was in making the Plant patents of benefit to its customers and the trade.

For a discussion of the Plant purchase, see *infra*, pp. 476–542.

Unfair and Monopolistic Acts.

In its petition and subsequently in a bill of particulars filed by order of the court during the trial, the United States charged the defendants with many alleged instances of conduct claimed to be oppressive, unfair, and tending to monopoly. Of many of these the United States offered no evidence whatever. Many others were entirely abandoned. Of those which the petitioner attempted to prove, the evidence was in some instances so

thoroughly discredited and in others so completely answered that nothing remained on which to justify any complaint.

For a discussion of these alleged acts, see *infra*, pp. 543–552, and Appendix, pp. 88–131.

CONCLUSION.

The history of the United Company during the twelve years of its existence has been the story of the development of an efficient, intelligently and ably managed enterprise which by normal methods has vastly improved and aided the manufacturers of certain types of shoes. Its managers perceived the needs of the trade and supplied them and created the demand for their own machines.

In a decade which has witnessed a most extraordinary increase in the cost of everything that contributes to manufactured products, the cost of machinery for making shoes alone has been lessened.

The company has invented new machines to take the place of hand work, improved and developed the art, enabled the factory operative to earn more with less effort, has treated every manufacturer alike and discriminated against none, and by its reduced costs for machinery has enabled hundreds to engage in the manufacture of shoes who would otherwise have been unable to do so.

During the same period, from 1899 to 1911, the United Company not only eliminated the necessity of paying initial premiums, but reduced the royalty charged for machines for making welt shoes three-fourths of a cent per pair. It reduced the royalty on women's and children's turn shoes 50%, while the improvements, new machines, and more efficient service of the United Company have reduced the cost of making a pair of welt shoes seven and one-half cents per pair.

Meantime, the number of other manufacturers of shoe machinery has increased, and there are many more and larger manufacturers of shoe machinery than there were in 1899 outside the three constituent companies.

No machines or businesses have been destroyed or suppressed, but everywhere waste has been eliminated, machines have been improved, made more efficient and multiplied, and the

cost of making shoes has been reduced by more than the entire royalty which the company receives for the use of its machines for making the highest priced pair of shoes. The royalties on none of its machines have ever been increased.

The United Company's royalty charges are ridiculously small. For the use of all its machines for making men's welt shoes that retail for $3 to $7 a pair it receives less than five and three-fourths cents per pair, and for this sum it furnishes the machines, keeps them in repair, supplies expert mechanical and engineering advice in arranging and planning factories, and instructs operatives. For the same machines and service for making women's and children's shoes the royalty is about one-half the sum above named. For the use of all its machines adapted for making the McKay shoe, upwards of 100,000,000 pairs of which are made annually, including the use of an improved McKay sewing machine, the company receives one and three-fourths cents per pair. Averaging all shoes made by the use of its machines, the company receives in royalty two and one-half cents per pair (R. Vol. 1, p. 503, lines 28–36; p. 866, lines 29–32).

Its success in the field in which it has specialized has been clearly due to the merits of its patented machines, its remarkable service furnished by no other shoe machinery manufacturer, its success in developing new machines, and the favorable terms it offers its lessees.

Those opposed to the United Company, from whom a large part of the testimony for the United States was obtained, consist in the main of a group of shoe manufacturers, grown rich and prosperous by the use of the machinery of the company, who have invested in a competing shoe machinery company, and have formed an alliance for the purpose, if possible, of discrediting and injuring the United Company and forcing it to give the large manufacturer more favorable terms than it gives the small ones.

Their principal spokesman, Charles H. Jones, testified that on May 24, 1906, before he joined the Alliance and when on good terms with the United Company, he gave an interview to a reporter of the Boston *Transcript*, at which time, among other things, he said as follows, referring to the United Shoe Machinery Company (R. Vol. 1, pp. 130–133; P.'s Ex. 147, R. Vol. 4, pp. 1072, 1074–7):—

"It has placed others [*i.e.*, machines] in our hands on a rental system that has saved us a very large investment of capital; it has certainly given more faithful care and attention to the running of the machines and keeping them in order; and in our country factories, where we employ a large proportion of inexperienced help, they have given us more constant and faithful attention in instructing new operators, and in the supervision of the machinery under trying conditions, than we ever obtained from any of the constituent companies. . . . As far as I recall them, the royalties demanded by the company are the same, exactly in amount, that we have always paid. It is only fair to add that they have supplied us with many additional machines to do the minor parts of the work, without any charge at all. These machines have been of considerable value to us, both in the saving of labor and increasing the uniformity of the goods, and are such machines as would undoubtedly have cost us a round sum if the United Shoe Machinery Company had not been in position to furnish them to us gratis. . . . If you wish to know whether the company is charging us an unfair price for tacks and nails, will say that this is entirely untrue. The royalty on some of their machines is derived from the price of the tacks and nails used on them; consequently, the price which they charge for the tacks and nails is certainly greater than the same thing could be bought in the market, for use by hand; but, as a matter of fact, the Shoe Machinery Company charges us no more for tacks to-day than they did many years ago, when tacks in the open market were much cheaper than to-day; in fact, my impression is that they have actually reduced the price of tacks between 25 and 30 per cent., while everyone knows that the cost of tacks and nails in the open market has advanced. . . . *I do not believe any manufacturer who has been honest and straightforward in his dealings with the company can show any clear grievance against the company, or can make out the slightest case of crowding or coercion.* On the contrary, I can say for ourselves, that the question of royalties and machinery, which was formerly one of the most vexatious and exacting departments of our business, has ceased to give us any concern at all. We were formerly obliged to examine new inventions, and were forced to make experiments with machines for months at a time, with the result that we obtained more or less bad work and were put to much useless expense, and the thought and attention of our best men was given to deciding between the merits of the old and new. We were obliged to dicker and trade with every different manufacturer of machinery all the time

with the moral certainty that somebody who had more time and attention to give to it would get a better bargain than we were able to obtain; and with it all there was an enormous and perpetual shrinkage on account of the changes made necessary by the introduction and adoption of machinery that was not thoroughly and satisfactorily developed before being placed on the market. To-day this is all changed. If we want a machine, we simply notify the company. Their agent confers with our foreman. The best machine known for doing the work is installed with little or no expense to us. We are obliged to pay a rental in some cases, which would amount to about the same as the yearly shrinkage in value of the machine if we had had to buy it, but the capital which we would formerly have been called upon to invest is still in our possession for use in our regular business. We are confident that we are getting the machine on as favorable terms as any competitor, and we are enabled to employ our own time and ability in the legitimate branches of our business, and we have not, up to this time, been obliged to pay as much for this privilege as we formerly paid, for the very much less satisfactory condition" (italics ours).

He further said that before a committee on judiciary of Congress in the winter of 1912 it was called to his attention by Mr. Higgins of the committee that he had said:—

"'The terms which the Machinery Company have recently offered their patrons on certain lines of machinery are so liberal that the outsiders cannot compete.'

"'Mr. JONES. That was right.

"'Mr. HIGGINS. Was that changed in 1907?

"'Mr. JONES. No, sir. It has not been changed up to date.

"'Mr. LITTLEFIELD. Hasn't been changed?

"'Mr. JONES. *It has not been changed up to date*'" (italics ours).

And Mr. Jones then said this statement was true so far as he knew (R. Vol. 1, p. 136, lines 2–13).

V. FINDINGS OF FACT BY THE DISTRICT COURT.

The facts as found by the District Court completely refute the charges made by the petition. These findings of fact are not only fully sustained by the evidence, but necessarily follow from the evidence. Upon the basis of these facts there are no doubtful questions of law. Unless, therefore, this court should decline to accept the facts so found, it can hardly be contended by the United States that the decree of the District Court dismissing the petition should not be confirmed.

1. THE DISTRICT COURT FOUND THAT DEFENDANTS DID NOT PLAN TO ACQUIRE A MONOPOLY OF ALL SHOE MACHINERY, AND TO REFUSE TO SELL OR LEASE ESSENTIAL MACHINES UNLESS PRACTICALLY ALL OTHER MACHINERY WAS TAKEN, WHICH IS THE CHARGE ON WHICH THE PETITION IS BASED.

We have shown (*supra*, pp. 6–10) that the charge of the petition is that the defendants having lawful patent monopolies under which they did the greater part of the business of the country in the principal essential shoe machines, viz., lasting machines, welt-sewing and outsole stitching machines, heeling machines and metallic fastening machines, and finding these patents about to expire, planned to extend their monopolies unlawfully, and to obtain an unlawful monopoly of all shoe machinery, by

(1) Acquiring all concerns engaged in the shoe machinery business, and then

(2) Refusing to sell or lease any of said so-called essential machines to a shoe manufacturer, except on condition that he take from them practically all other machinery which he required.

The various acts specified in the petition are alleged to be only steps in carrying out this unlawful project, and are material only in so far as they prove the existence of this project, and its carrying out by the defendants.

A. The District Court found that the Defendants did not plan to acquire all concerns engaged in the shoe machinery business.

As to this charge the District Court found:—

(R. Vol. 1, p. 1114.) "Referring to the allegation that the respondents 'conceived the idea of acquiring the ownership or control of all concerns engaged in manufacturing and dealing in any and all kinds of shoe machinery,' the utmost that the case can in any event be said to show is a purpose to acquire control of certain machinery connected with bottoming shoes, or later of certain clicking or eyeletting machines; and of this the United States became during the trial so far satisfied that it asked permission to amend the above allegation accordingly."

B. The District Court found that the Defendants did not plan to acquire all Concerns engaged in the Business of manufacturing Bottoming Machines, as to which the United States during the Trial limited its Charge of Monopoly.

As to this charge the District Court found:—

(R. Vol. 1, p. 1141.) "It further appears that, during the same period of time the cases wherein the business of a concern producing shoe machinery was offered to the United Company and refused by it were far more numerous than the cases of acquisition specified by the petitioner. As to several, at least, of these instances of refusal, the evidence warrants the belief that the business offered and refused much exceeded in importance to any such scheme of monopoly as now charged, any of the specified acquisitions. The cases in which inventions were offered and refused during the same period were many times more numerous than the patents or inventions acquired. If a monopoly of all machinery for attaching bottoms to uppers was really undertaken, it is hard to believe that opportunities would have been neglected, as they were, such as those for acquiring the Union lock-stitch machines or the welters and stitchers of the R. H. Long Company, all of them patented machines for use on welt shoes; or for acquiring a considerable business in producing McKay sewing machines, though these were unpatented and not capable of use on shoes of that kind."

C. The District Court found that the Defendants did not refuse to sell or lease Essential Machines unless practically all other Machines were Taken.

As to this charge the District Court found:—

> (R. Vol. 1, p. 1155.) "As to the allegation that the defendants contemplated a policy of refusal to lease except on condition that the lessee buy or lease of them 'practically all other machinery of whatever kind necessary or useful' to him as a manufacturer of shoes, it requires no further notice, now that the charge of restraint or monopoly in 'any and all kinds of shoe machinery' has been abandoned. The evidence abundantly shows that nothing of this kind was ever contemplated, attempted, or done, and that there was never any justification for the charge as made."

2. THE DISTRICT COURT FOUND THAT THE UNITED COMPANY WAS NOT FORMED TO ELIMINATE COMPETITION BETWEEN ITS CONSTITUENT COMPANIES AND THAT IT DID NOT ELIMINATE SUCH COMPETITION.

The United States charges that the United Company was formed to eliminate competition between its constituent companies or that the elimination of such competition made the formation of the United Company unlawful.

The only competition claimed by the United States was an alleged competition between the Ideal Lasting Machine of the Goodyear Company and the Chase machine and an experimental Hand Method Welt Lasting Machine of the Consolidated Company, and between the welt machines of the Goodyear Company and the machines of the Eppler Company.

The District Court found that the real motive for the formation of the United Company was an effort after greater efficiency, and that if any competition could be said to exist between the constituent companies, it was trivial and of no practical importance.

The District Court found as to the business of the constituent companies:—

> (R. Vol. 1, p. 1128.) "Up to the time of their union each constituent concern had been dealing, generally speaking, in a line of shoe machinery for the most part distinct from that dealt in by the others."

As to the alleged competition between the Chase and the Ideal machines, the District Court, after showing that the Chase machine was adapted and used for men's welt shoes, and that the Ideal machine was adapted and almost wholly used for women's welt shoes, concluded:—

> (R. Vol. 1, p. 1130.) "That there was any attempt to put either machine into the market as against the other does not appear. No competition between the two in the usual sense of the term is shown. . . . I am unable to consider it established that competition in any practical sense was destroyed when the United Company became owner of both machines."

As to the alleged competition between the Ideal machine and the experimental Hand Method Welt Lasting Machine the District Court said:—

> (R. Vol. 1, p. 1130.) "With still another laster with which the Consolidated Company was experimenting in 1899 for use on welt shoes, we are not here concerned, because, though this laster was afterward further improved, developed, and finally furnished to users by the United Company, it had not been made an article of commerce in any practical sense when that company was formed."

With reference to the alleged competition between the Goodyear Company and the Eppler Company, the District Court after referring to the differences between the machines of the two companies, and the differences in the character of shoes made by them respectively, and the insignificant business done by the Eppler Company, said:—

> (R. Vol. 1, p. 1131.) "The evidence leaves me unable to believe that the possible field of competition between the two machines was large enough, or any actual existing competition significant enough in amount to warrant the conclusion that the acquisition by the United Company of both machines involved such destruction of competition as rendered it unlawful."

The District Court found as to the reasons for the formation of the United Company as follows:—

> (R. Vol. 1, p. 1131.) "No reason appears for supposing that the real purpose for which the constituent companies were

brought together, as disclosed not only by the evidence regarding all the circumstances as they existed in 1899, but by the evidence as to the course of development thereafter pursued by the United Company, was other than that stated in a circular letter to the Goodyear stockholders issued February 8, 1899, the day following the organization of the United Company (Petitioner's Exhibit 152). This dwelt upon the advantages to be secured by putting into one control 'the most efficient types' of shoe machinery."

The District Court stated its conclusion as follows:—

(R. Vol. 1, p. 1132.) "For the reasons stated, I am unable to find the charge that the United Company was unlawfully formed because of competition which it destroyed sufficiently supported by the evidence. It would, in any case, be difficult to regard this as sufficient ground for a decree dissolving the company into its component parts under a bill not filed until more than twelve years had passed since the combination complained of was accomplished. During this period, as the evidence shows, investments of a very large amount had been made, not merely by the defendants but also by the outside public, in the extension and development of the company's united business, the component companies passed out of existence, and the machines as made by them in 1899 were so far developed, improved upon, or added to by the United Company as now all to have become obsolete. To put the parties or the public back into that state of the prior art which existed in 1899 is, of course, an impossibility."

3. THE DISTRICT COURT FOUND THAT THE "BASIC" PATENTS OF THE CONSTITUENT COMPANIES WERE NOT ABOUT TO EXPIRE.

The petition charged that the patents held by the constituent companies were about to expire in 1899. This was recited as a reason for the formation of the United Company.

The District Court held that this charge was not proved and that it was not a motive for the formation of the United Company.

(R. Vol. 1, p. 1133.) "At the final arguments, however, on June 2, 1914, the statement was made by petitioner's counsel that so many machines and patents were involved that examination of more than a very few had been impossible. It seems obvious, therefore, that the allegations in

question could not have been founded, when they were made, upon any adequate or complete investigation of the facts.

"Nor can it be said that they have been sustained by the evidence before the examiner. It seems unnecessary to spend time in considering what patents could and what could not properly be regarded as 'basic,' in view of the fact that, of the patents principally relied on as such by the petitioner, those protecting the welter and stitcher of the Goodyear Company, there were two, one upon its welter, the other upon its stitcher, which ran until 1908 and 1909, respectively. The petitioner's final position, indeed, as to what was proved by the evidence before the examiner, was by no means that taken in the allegations referred to, but was only that the two machines above mentioned, and others protected in 1899 by patents not insisted on as 'basic' patents, became free to anyone to make or use—without any of the patented improvements added to them by the United Company since 1899, but nevertheless capable of successful commercial use—before the filing of this petition in 1911. In view of all the above, I must regard the allegations here in question as not sufficiently supported by proof; and hold that no such motive is shown to have prompted either the organization of the United Company, or any of its subsequent doings."

The District Court further found that the machines of the United Company have always been patented.

(R. Vol. 1, p. 1115.) "At any rate it must be accepted that from the beginning the machinery offered by the respondent corporation was, in all its essential elements, protected by patents, and that there has been no proof to the contrary. So that, for the purposes of this case, the machinery has been mainly, if not entirely, of that character."

4. THE DISTRICT COURT FOUND THAT THE UNITED COMPANY DID NOT TAKE OVER THE CONSTITUENT COMPANIES AT EXCESSIVE PRICES.

The petition charged that the United Company took over its constituent companies "at values far in excess of real worth" (R. Vol. 1, p. 995).

The District Court found that no proof of any kind was offered in support of this charge.

(R. Vol. 1, p. 1128.) "To allegations found in the petition (p. 18) [p. 995] that the business and property of the

Goodyear Company, the Consolidated Company, and the McKay Company were taken over by the United Company 'at values far in excess of real worth,' reference is made at this point only in order to state that no proof of any kind was offered in support of them, it was not argued on the petitioners' behalf that they were true, and they therefore require no further notice for any purpose in the case. There can be no doubt that each concern had an established business already of great value and possessing great possibilities of development, or that each also owned patents and property of very great value in connection with its business."

5. THE LEASES.

A. The District Court found that the Leasing System was of Great Advantage to Shoe Manufacturers.

(R. Vol. 1, p. 1171.) "While in the early stages of the case there were some criticisms of any leasing system as opposed to a system of selling, the very great advantages to shoe manufacturers in general of being provided with machine equipment of the highest efficiency, and of being relieved of individual effort in that most costly and difficult part of manufacturing, and the general satisfaction with the system were so overwhelmingly proved, that all doubt that the leasing system in general is unimpeachable has been removed."

B. The District Court found that the United Company did not discontinue the Sale of Machines.

The petition charges that the United Company "discontinued the sale to boot and shoe manufacturers" of machines and devised arbitrary leases (R. Vol. 1, p. 997).

The District Court found that this charge was untrue and without justification.

(R. Vol. 1, p. 1153.) "None of the constituent companies were in 1899 selling outright the patented machines they manufactured. The bill alleges the contrary, and charges that one of the steps taken after 1899, in pursuance of the alleged scheme to restrain or monopolize, was to discontinue sales and compel leases. An attempt to support this charge by evidence wholly failed. Nothing of the kind was done, nor is it easy to see what grounds for making the charge could ever have been supposed to exist."

C. The District Court found that the Leases did not compel a Shoe Manufacturer taking Machines previously put out by one of the Constituent Companies to take Other Machines not previously put out by such Constituent Company.

The District Court found that the evidence completely disproved this charge.

> (R. Vol. 1, p. 1162.) "The alleged plan of a refusal of what before could be had separately, as a means of compelling the taking of other machines, was a principal ground for invoking the Sherman Act.
>
> "The leases in evidence, as documents, fail to substantiate the charges either as to the contrivance of such a plan or as to its execution. It appears that after the consolidation there was no refusal or imposition of conditions as alleged, but that the defendants continued to give manufacturers terms which were substantially the same as before and in some instances better than those offered by the constituent companies before the consolidation. This is shown not only by the exhibits of 'independent' leases but by the testimony of officers of the company."
>
> . . . . . .
>
> (R. Vol. 1, p. 1163.) "The restricted or prohibitive leases do not in themselves as documents prove the denial of the right to procure, as before, independent leases for individual machines. As matter of fact, independent leases which did give the right to use the machines with machines of other kinds, made by other machinery manufacturers, were always procurable. This was the general rule, and if there were any exceptions they were, so far as appears, inconsiderable.
>
> "It is a result of the consolidation that the United Company offers more attractive contracts for a group of machines of different kinds than for machines of one kind only; but as it still offers the contract for machines of one kind on as good terms as before it is difficult to see how that is detrimental to the shoe manufacturers.
>
> "The charge of this supposed scheme to deprive former customers of the right to use some machines unless they would also use others seems to have originated either in the erroneous assumption that a prohibitive lease was the only kind procurable, and that the former customer had no choice, or in disregard of the fact that it was merely an

alternative form of lease. As the leases prove no such plan, whether of the extent alleged or of less extent, and as the evidence proves the exact contrary of what is charged, we think that the United Shoe Machinery Company is, upon the merits, entitled to a full clearance from this charge."

D. The District Court found that the Provisions in the Leases were not adopted by the United Company for the Purpose of Monopolizing or Excluding the Use of Competitors' Machines.

The District Court found that the United Company made no changes in the leases as used by the constituent companies in pursuance of any arbitrary plan, but, on the contrary, the changes in each case were made because special circumstances had come to render it desirable; that the changes made in general tended to relax previous restrictions and to reduce the cost to lessees of installing the machines (R. Vol. 1, p. 1158); that the provisions were obviously prompted by the purpose of developing the company's business by offering the machines on terms more advantageous to users and were not intended to accomplish an arbitrary exclusion of competitors' machines. The District Court further found that the provisions in the leases were auxiliary to asserting rights unquestionably belonging to the lessor. It also found that there were sound mechanical and business reasons for grouping together machinery as it is grouped by the defendants' leases.

The following are a few extracts from the court's findings on this subject:—

(R. Vol. 1, p. 1159.) "Considering the clauses objected to in the light of what preceded them, and of the circumstances attending their adoption by the defendants, the petitioner has not, in my opinion, proved that the defendants' object in adopting them was the prevention of competition by others. Such prevention might, indeed, follow from the more favorable terms offered lessees, but modifications made in the existing system for the direct purpose of otherwise better adapting it to exclude competitors, would have been different in character from the modifications represented by these clauses.

"Not only would it have been unreasonable, as has been said, to expect the defendants to substitute a wholly different system from the leasing system which they found in use, but the evidence affords no reason to believe that anything

of the kind was desired by manufacturers in general. The advantages to them of not having to tie up capital in patented machines, and of paying for the privilege of their use only according to the amount of use, were advantages which they cannot be supposed desirous of surrendering.

"Modifications in the contracts offered them tending, as these are shown to have done, to enable the company, through provisions adapted to increase the number of shoes worked on by each machine, to lessen the royalty charged per pair, and to diminish or dispense with the initial payment before required, were so obviously prompted by the purpose of developing the company's business through the perfectly legitimate method of offering them on terms more advantageous to users, that it would be unjust to treat them, on evidence no stronger than that here presented, as really intended to accomplish an arbitrary exclusion of users from any dealings with others.

"If it were made to appear that the leases containing these clauses accomplished in and of themselves an unlawful restraint of trade, or necessarily secured to the defendants an unlawful monopoly, the intent to accomplish these results would, of course, be imputed to the defendants without regard to their actual purpose in adopting and using them. But the evidence seems to me insufficient for the conclusion that such results are so accomplished. The contention that they are fails, in my opinion, to take into account the defendants' rights in the field lawfully secured to them in the various patented improvements they had lawfully controlled and combined; and fails also to concede them proper scope for the rights properly incidental to their control of said improvements, to make such agreements with their lessees as would best promote the efficiency in combined operation of the machines leased, and thereby best enhance and safeguard their just return therefrom in the form of royalties."

. . . . . .

(R. Vol. 1, p. 1187.) "The clauses objected to are all subordinate and auxiliary to maintaining rights which unquestionably belong to the defendants; to charge their own prices and to choose as customers those who will pay those prices.

"The attack of the United States is not upon these rights, but upon the particular mode in which they have sought to exercise them. Other modes, such as the requirement of arbitrary payment for the full period of the patents, would escape all such attacks. The attack arises from the attempt

to adjust the payments to the amount of use which particular manufacturers may have for the patented inventions."

. . . . . .

(R. Vol. 1, p. 1184.) "If leases for machines for use as a group are offered and accepted for sound business reasons, and if, because of the greater productivity of a group and of the less cost of maintenance, better prices can be made, the defendants and the shoe manufacturers need not forego the making of such contracts for the sake of possible competitors who may have only single machines to offer. Contracts for large equipments of machinery, furniture, and other articles are too common to be condemned for such reason. . . .

"The grouping of machines in order that some may aid others in turning out a product affords a sufficient mechanical reason for installing them as groups and a sufficient business reason for dealing with them as groups.

"That there are sound mechanical and business reasons for grouping together machinery as it is grouped by a series of prohibitive leases is abundantly established. The United States fails to show that the grouping of the machines is in fact made merely as an unlawful artifice and not because of sound mechanical and business reasons. It has referred to certain leases in which there appears to be no necessary mechanical relation between some of the machines grouped. Thus to a limited extent it may be true that the grouping is for the purpose of trade or of contract rather than because of the close relation of the machines in process of manufacture; but this is insufficient to show that the principal purpose was not, as is contended by the defendants, to secure by efficient co-operation of machines a larger production of shoes."

E. The District Court found that the Leases did not result in the Arbitrary Exclusion of Competitors' Machines whatever the Intent with which they were Adopted.

The District Court found that the defendants' machines were used because of their merits and not to any substantial extent because of the lease clauses.

(R. Vol. 1, p. 1187.) "It is impossible to believe that the defendants' equipment is in so many shoe factories for any other substantial reason than the merits of what they have had to offer. To say that this is due, in any substantial degree, to the fact that its leases run beyond the terms of pat-

ents, or because of the exclusive use, prohibitive or cancellation clauses, rests largely, if not entirely, upon assumption. But that the business of these defendants rests upon the lease provisions objected to in such a substantial amount as to constitute any factor of independent force in securing or maintaining a monopoly does not appear."

F. The District Court found that the United Company did not exact Exorbitant Prices for Duplicate Parts and Exorbitant Return Charges.

The petition charges that the United Company's leases required lessees to obtain duplicate parts used in repairing the United Company's machines from the United Company and exacted "exorbitant prices" for such parts. It also charged that the leases required payment of return charges upon the termination of the lease which in some cases amounted to approximately the original cost of building the machines (R. Vol. 1, p. 997).

The District Court held there was no evidence justifying these charges.

> (R. Vol. 1, p. 1155.) "The evidence failed to show that lessees from the United Company had ever been compelled to pay exorbitant charges for repair parts, etc., or to pay any unreasonable return charges on leased machines."

G. The District Court found that the Leases have not been Arbitrarily Enforced.

The petition charges that the leases were continually, persistently, and arbitrarily enforced (R. Vol. 1, p. 997).

The District Court found that there was no proof of this charge and that, on the contrary, it appeared that the United Company had been moderate with respect to such enforcement.

> (R. Vol. 1, p. 1114.) "There is no proof that the United Shoe Company has enforced its leases in any arbitrary or unreasonable manner. On the whole, it seems to have been moderate with reference to such enforcements, and the number of cases in which anything in the way of a forfeiture has been demanded has been so small that, on looking over the great mass of the operations of the United Shoe

Company, such enforcements have been so few as to be practically negligible; and there is no evidence that the duplicate parts, extras, and other incidentals furnished by the United Shoe Company have been sold at exorbitant prices fixed by it, or that the cost involved in the return of machinery has, in any way, approximated its original cost, unless, possibly, in some exceptional instances which have not caught the eye of the court. We do not think the case as developed has turned on these particular allegations."

6. THE DISTRICT COURT FOUND THAT THE UNITED COMPANY DID NOT MAKE ACQUISITIONS OF COMPETING CONCERNS WITH INTENT TO MONOPOLIZE.

The petition charges that the defendants in pursuance of their purpose to monopolize the shoe machinery industry absorbed many competitors. A list of 59 such acquisitions is set forth in the petition.

The District Court considered the purchase of the patents from Thomas G. Plant separately. As to the 58 other acquisitions it found that the greater part of them were acquisitions of concerns dealing in supplies or machines not made by the United Company and, therefore, not competing with the United Company, and that as to the few remaining acquisitions it was not shown in any case that actual competition existed between the device or machine acquired and any machine then being produced or experimented with by the United Company of such consequence as justifies either the conclusion that the acquisition was for the purpose of suppressing competition or the conclusion that a material restraint of trade was thereby accomplished, or that such acquisition contributed anything essentially important to the success obtained by the United Company.

The court after dismissing as immaterial a number of unimportant acquisitions because not related to the classes of machines to which the United States now limits its claim of monopoly or because no foundation for a charge of competition with the United Company existed, said:—

(R. Vol. 1, p. 1139.) "The instances then remaining in which the United Company was at the time producing or trying to develop for production a patented machine for doing work

more or less similar to that for which the invention of the machine acquired was intended, are the only ones capable of being regarded as of any possible significance for the purposes of the petitioner's case. In all such cases it appears that the acquisitions made were of patented improvements, whether or not embodied in an actual machine, enabling the United Company to increase the efficiency of its own machines, or to complete the development of others with which it was then experimenting or had not yet succeeding[ed] in rendering commercially successful.

"No case, however, is found among the acquisitions of the character last described wherein it has fairly been made to appear that actual competition existed between the device or machine acquired and any machine then being produced or experimented with by the United Company, of such consequence as justifies either the conclusion that the acquisition was for the purpose of suppressing such competition, or the conclusion that a material restraint of trade was thereby accomplished. In most of the cases of this sort the machine or device acquired was claimed to infringe patents belonging to the United Company, or the patent acquired was one which some machine belonging to it was claimed to infringe, or the application acquired was in interference with applications of its own; and the object of the acquisition is shown to have been the avoidance or compromise of pending or threatened litigation. In such cases it is still less possible to say that any wrongful absorption of a 'competitor's' business has been proved.

"The acquisitions above regarded as the only ones of any possible significance in the case were made at various separated times during the period of eleven years or thereabouts above referred to. It can not be said that the later ones were in contemplation when the earlier acquisitions were made, because there is nothing to show that the circumstances attending any of them were such as could have been anticipated as likely to occur at the time of the preceding acquisitions. The most that can be said is, that as, in the progress of events, the needs of the United Company became manifest and these opportunities presented themselves, they were availed of.

"Taken together, the acquisitions of this class are, in importance and amount, only of a consequence relatively small in proportion to the entire field then lawfully belonging to the United Company. It does not appear that they contributed anything essentially important to that degree of commercial success obtained by the company as above. If they assisted in obtaining it, it was by assisting the

development of the machines to whose ultimate efficiency it was due. It can hardly be said as to any of them that they afforded anything more than a basis whereon to build. Speaking of them generally, it may be said that the invention or machine obtained required further development in the company's hands before it could be properly used."

7. THE DISTRICT COURT FOUND THAT THE PURCHASE FROM THOMAS G. PLANT WAS NOT MADE IN PURSUANCE OF THE ALLEGED SCHEME TO MONOPOLIZE.

The District Court found that the purchase of patents from Thomas G. Plant in 1910 was made by the United Company to obtain the benefit of Plant's inventions and to settle and avoid serious patent litigation, and not for the purpose of suppressing competition.

(R. Vol. 1, p. 1142.) "The evidence does not show Plant to have been a competitor in the ordinary sense. He was not carrying on any going business in shoe machinery. He was neither producing his machines nor supplying them to users upon any commercial scale, nor was he prepared so to supply them, though he had issued an illustrated catalogue of them. The petition alleges that he had been inventing and patenting his improvements for at least two years before 1910. In one factory only were machines embodying them being operated; this belonged to the Thomas G. Plant Company, whereof he owned a majority of the stock. He installed them there in May, 1910, displacing the United Company's machines previously used there in order to do so. Before he installed them there, he had offered to equip two other factories with them without requiring royalties for their use, but these offers had been declined."

. . . . . .

(R. Vol. 1, p. 1143.) "The evidence regarding Plant's negotiations with the defendants sufficiently proves that they were never sought by the defendants and that there was never any attempt on their part to get Plant to sell them his inventions or machines or anything else; but that, on the contrary, all the efforts toward such a purchase were made by him. The first overtures toward it came from him; he began them soon after he had put his machines into the Plant factory; they led to interviews, all of which he sought and at which his proposals were declined without encouragement to renew them. Nowhere in the evidence is any

indication found that before Plant's overtures were thus made any purchase whatever from him had been suggested to or considered by the defendants.

"Whatever the merit of Plant's inventions, these machines in which he had first embodied them are not shown by the evidence to have been commercially successful in September, 1910, or to have been capable of such success in their then stage of development. They are shown to have been lightly built, not adapted to produce men's shoes, and by no means satisfactory in making women's shoes, the kind of work to which the Plant factory was devoted. The evidence is uncontradicted that, while operated there, they fell behind the United Company's machines, which they had supplanted, in efficiency—that breaking down and defective work was more frequent with them—and the cost per pair of making shoes with them distinctly greater. Though some of them, as later developed and improved by the United Company, proved to have merit, the most that can be fairly said of them in 1910, on the evidence, is that they were more or less promising experimental machines. There was no complete set of them for combined operation; for that purpose several important machines were yet to be developed. In the state in which the United Company took them over, they were not found capable of profitable use. Nothing is found in the evidence which affords reasonable support for the petitioner's contention that they were 'right at the threshold of extensive competition with the United Company.'"

. . . . . .

(R. Vol. 1, p. 1144.) "The terms finally agreed on with Plant were so much more favorable to the United Company than any he offered when he first approached them, and so inconsistent with his previous attitude toward them, as to leave no reasonable ground for believing that the defendants had ever sought, expected, or planned for the transaction as carried out. And in what they were thus unexpectedly enabled to acquire from him, there was included so much that was plainly of far greater consequence to them than could have been the avoidance of such competition as they can reasonably be supposed to have apprehended from his incomplete and undeveloped line of inventions—patents and machines also included—as to leave no sufficient ground for believing that avoidance of competition was their principal motive in accepting the opportunity offered. The normal, natural, and obvious business reasons, of wholly different kinds, why they should accept instead of refusing it, appear to have been so complete and sufficient as to

render the conclusion unreasonable that it was accepted in order to escape competition."

. . . . . .

(R. Vol. 1, p. 1145.) "The evidence that among these patented improvements obtained from Plant there were enough of sufficient value, in the defendants' hands and used as they only could have used them in further developing and perfecting the machines they were then producing or trying to produce, to make this part of the total acquisition extremely profitable to the United Company, was not met by any sufficient proof to the contrary. The agreement to take the patents and inventions was not made until after a careful examination and report as to their merits. The belief thereon founded that, used as above, they would be worth acquiring upon the terms proposed, is shown to have been justified by the result, and the acquisition can not be criticised so far as it was occasioned by that belief. As developed and added to its own machines by the United Company, some of the inventions acquired have proved to be of a value such as fairly justifies their claim that the patents acquired were the controlling feature of the purchase.

"The evidence shows also, without serious contradiction, that one result of the bargain made with Plant was to relieve the United Company from an amount of litigation, then pending or in prospect, which would otherwise have burdened and hindered it to an extent far greater than it had ever had reason to apprehend from any litigation with which it had before been concerned."

. . . . . .

(R. Vol. 1, p. 1145.) "It was part of the bargain with Plant, or followed from it as a result, that the above controversies were settled or avoided. That the prospect of accomplishing this result was a further normal, natural, and powerful inducement to the agreement made with him can not be reasonably doubted. In so far as the agreement was thus intended, no criticism of it can be valid.

"The above reasons, none of them open to any charge of illegality, seem to me to have been the really operative reasons which must have induced the defendants to enter into the Plant bargain upon the terms which he finally offered them. They appear so adequate as legitimate business reasons for doing this as in my opinion to leave no reasonable ground for holding, against the defendants' denial, that it was really a purchase to suppress competition. No such competition or prospect of competition at the time is proved as would justify such a conclusion. The competi-

tion threatened by Plant and his efforts to induce the defendants, in order to avoid it, to buy his machines and patents by themselves were wholly ineffectual. They met with nothing but refusal on the defendants' part to consider his proposals. It was not until he offered, through the intermediary he last employed (Smith), the shoe manufacturing business of the Plant Company as well that the defendants consented to deal with him.

"While it may have been his plan to realize a profit by threatening competition, it was not until this proposition, based upon tangible property of substantial value and of patent rights, was made, that any sale was effected. The property acquired being proved to have been worth the amount paid, the argument that the defendants were so anxious to hold a monopoly as to be willing to pay $6,000,000, or any other large sum, in order to get rid of a competitor, or that this was done in pursuance of a general plan conceived in 1899, fails completely."

8. THE DISTRICT COURT FOUND THAT THE ACQUISITIONS WERE NOT MADE AT EXORBITANT PRICES.

The District Court held that this charge was not established.

(R. Vol. 1, p. 1147.) "The charge that competitors have been bought out at 'exorbitant prices' is found not established in the case of the Plant acquisition, as has just been stated. Nor is evidence found sufficient to establish it in the case of any one of the numerous minor acquisitions specified in the petition. It has not been insisted on in argument that this charge is proved as to any one of them."

9. THE DISTRICT COURT FOUND THAT UNLAWFUL COVENANTS WERE NOT TAKEN FROM THOSE WHOSE BUSINESS WAS PURCHASED OBLIGATING THEM NOT TO COMPETE AND TO ASSIGN INVENTIONS TO UNITED COMPANY.

The District Court held that these covenants did not exceed what the law sanctions as necessary to protect the parties.

(R. Vol. 1, p. 1141.) "The petition charges generally that covenants in writing were taken from substantially all those whose business was acquired as specified, (1) not to engage for long terms of years in competition with the

defendants in commerce in shoe machinery, (2) to convey all inventions or patents in shoe machinery which they might make or acquire during such terms to the defendants.

"These charges are not justified by the documents themselves, which have been produced. They are by no means uniform in their terms, there was no generally prescribed form for them, nor were they all the work of the same hands. Each was framed according to the circumstances of the particular transaction. In many cases, at least, the agreements required only that there should be no competition in the line of business involved in the particular transaction, or that all patents or inventions thereafter made in the particular line to which the acquired invention belonged should be transferred. There are enough of the agreements in these cases which are without covenants of the kind described, to leave the allegation unjustified that such covenants were required in substantially all. And of the instances wherein covenants are found in any degree answering the alleged description, it may be said generally that none are clearly shown to have exceeded what the law permits. Still less reasonable would it be to regard what is found in them as indicating a consistent purpose on the defendants' part to exclude all those with whom the agreements were made from all possible future competition with the United Company."

10. THE DISTRICT COURT FOUND THAT THE UNITED COMPANY DID NOT COMMIT OTHER UNFAIR, MONOPOLISTIC AND OPPRESSIVE ACTS.

In paragraph VI of the petition (R. Vol. 1, p. 999) the defendants are charged with committing various other acts described as "unfair, oppressive," and "monopolistic." These acts are not specified in the petition. A bill of particulars setting forth such alleged acts relied on by the United States was filed during the trial (R. Vol. 1, p. 1075). As to the majority of acts so specified in the bill of particulars no evidence whatsoever was introduced by the United States. As to those acts in support of which the United States attempted to introduce evidence, comparatively few were relied upon in the argument before the District Court or in the brief of the petitioner filed in the District Court (R. Vol. 1, pp. 1146–1147).

The District Court sets forth in its opinion the facts in respect to those transactions which were relied upon by the United

States at R. Vol. 1, pages 1147–1152. It then summarizes its findings in respect to these charges as follows:—

> (R. Vol. 1, p. 1152.) "The history of the proceedings in this case indicates that efforts which may fairly be described as extraordinary have been made to bring before the court, so far as possible, all sayings or doings of any of the numerous defendants or their representatives, during the period beginning with 1899 and ending with 1911, which might afford ground for charging them with oppressive, coercive, or like unfair conduct toward competitors of the United Company or the public. In view of the long period and wide fields thus searched, the numerous abandoned attempts to prove something of the kind above indicated, and the insignificant result of the evidence actually offered and finally relied on, the conclusion seems fully justified that the policy and methods pursued by the defendants and by the United Company have been, in general, above reproach in any of these respects."

II. THE DISTRICT COURT FOUND THAT THE UNITED COMPANY DID NOT MAKE ENORMOUS AND UNREASONABLE PROFITS.

The petition charges that the United Company made "enormous and unreasonable profits" as a result of the alleged unlawful acts charged in the petition (R. Vol. 1, p. 1026).

The District Court held that this charge was not established:—

> (R. Vol. 1, p. 1135.) "No support is found in the evidence, for the charge in the petition (Par. X) that 'enormous and unreasonable profits' have been made. This allegation is made in connection with and apparently depends upon the allegation of which, as above stated, there is no proof, that the properties combined in 1899 were taken over at excessive valuations. Nothing shown by the evidence warrants the conclusion that profits unreasonably out of proportion to the extremely large cost at which the business has been developed and is maintained, the great investment of capital it has required, and the enterprise, inventive skill, and business ability devoted to it, have been realized. Nor has it been made to appear that the charges made for the privilege of using the machines are exorbitant or unreasonable; especially in view of the great benefit to manufacturers using them, in lessening their cost of production."

12. THE DISTRICT COURT FOUND THAT THE DEFENDANTS DID NOT HAVE AN UNLAWFUL PLAN AND PURPOSE.

The petition charges an unlawful plan to monopolize shoe machinery (R. Vol. 1, p. 994). The United States contended in the District Court that, even if all the acts and transactions as to which evidence was introduced were lawful if considered singly, the unlawful plan in pursuance of which it was alleged they were carried out made them unlawful.

The District Court held that there was no direct evidence of such unlawful plan, that whether it existed must be judged by "the necessary results of all the steps proved to have been taken by them [the defendants] as a whole" (R. Vol. 1, p. 1133), and that the evidence disclosed no unlawful purpose.

> (R. Vol. 1, p. 1133.) "Of their actual intent in forming it and in taking the various steps which they have taken as above in connection with it, there is no direct proof overcoming their denial that it was such as the petition charges, and no way of judging except from the necessary results of all the steps proved to have been taken by them, as a whole."
>
> . . . . . .
>
> (R. Vol. 1, p. 1119.) "Nevertheless, we fail to find in the development of the United Shoe Machinery Company, and its operations, any support for the alleged charges in the bill of intended oppression, arbitrary conduct, or anything of that nature, especially so far as any allegations cover any attempts to destroy or cripple competitors. Looking at the great mass of facts proven in the case, and the immense number of transactions of the United Shoe Machinery Company, the evidence offered in that direction is so ineffectual that its weakness furnishes of itself satisfactory proof against what was intended to be established thereby. We find no evidence of what was shown especially in the Tobacco Company cases, namely, a purpose to destroy what could not be acquired by straightforward methods. The fact that the United Shoe Company has acquired so large a percentage of the business of the country to which it devoted itself comes so largely from the use of extraordinarily competent methods as to shut out from the eyes of the impartial investigator suggestions of other methods. So we lay aside that part of the case, and deal only with the proven facts, and the legitimate results of those facts, with

little consideration, however, for any charges in this connection, or elsewhere, of intended oppression or unreasonable course of procedure, or of results which can be attributed to any unworthy motive."

13. THE DISTRICT COURT FOUND THAT THE UNITED COMPANY HAS NOT OBTAINED AN UNLAWFUL MONOPOLY.

A. The District Court found that the United Company has no Monopoly of all Shoe Machinery.

The petition charges a plan to monopolize all shoe machinery and that such monopoly has been obtained. As we have stated above, the United States has abandoned this charge during the course of the trial. The District Court said:—

(R. Vol. 1, p. 1127.) "The restraint or monopoly alleged in the petition is restraint or monopoly of interstate commerce in 'any and all kinds of shoe machinery,' *i.e.*, in shoe machinery generally.

"But it appeared early in the trial that no such charge could be proved, because neither the business of the component companies in 1899 nor that of the United Shoe Company from its beginning until the bill was filed related to 'all kinds of shoe machinery.' Both were always limited to certain kinds only. This was finally conceded, and the field of trade in shoe machinery with which this case is concerned limited by concession of the complainant's counsel to machines of the following kinds: (1) Lasting or 'pulling-over' machines, used for adjusting and attaching the upper of a shoe in process to a last; (2) machines for preparing bottoms and heels and fastening them to uppers; (3) machines for finishing bottoms and heels after they have been so fastened; (4) eyeletting machines for inserting eyelets in uppers; (5) 'clicking machines' for cutting out uppers. The 'shoe machinery' as to which restraint or monopoly is charged, therefore, includes machines of the above kinds only, for the purposes of all questions hereinafter considered. It is to be noted that such machines are insufficient for the making of a complete shoe, and that no attempt to control machines for stitching uppers is charged."

B. The District Court found that the United Company has no Monopoly of Bottoming Machines to which the United States limited its Charge during the Trial.

The District Court found on this point:—

> (R. Vol. 1, p. 1135.) "It is nevertheless true that, considering the whole field of machinery for stitching together the bottoms and uppers of shoes, there has all the time been free competition. The use of other machinery to accomplish the purpose has always been open to shoe manufacturers. In that part of the field of trade in shoe machinery to which the case is now limited as above, the defendants have been not monopolists but competitors. Their only means for holding the field have been legitimate means—better machines. Their specialization in machines for bottoming shoes, and not a monopoly of such machines, has been the cause of their success."

C. The District Court found that the United Company's Success has been due solely to the Merits of its Patented Machines and the Service it renders with Them.

The District Court found that the success of the United Company's machines was due to the merits of the machines themselves and the service rendered with them, and that the "proof is complete" that such success "has been in fact reached by the use of methods entirely lawful" (R. Vol. 1, p. 1136).

> (R. Vol. 1, p. 1187.) "It is impossible to believe that the defendants' equipment is in so many shoe factories for any other substantial reason than the merits of what they have had to offer."
>
> . . . . . .
>
> (R. Vol. 1, p. 1134.) "The combined business of the component companies as conducted and developed since 1899 by the United Company, related most largely to the machines used in producing welt shoes. The use of such machines (and thereby the production of and demand for such shoes) is shown to have been very greatly promoted by patented improvements made upon the machines of 1899 by that company, greatly increasing their efficiency and capacity, and by improvements effected by that company since 1899 in the methods of manufacturing them. It appears that the

total number of welt shoes produced in this country in 1899 was about 17 million pairs; in 1910 about 86 million; the total production of all kinds of shoes increasing during the same period from about 175 to about 280 million; the Goodyear welt shoe being all this time in direct competition with the McKay sewed shoe.

"It is further shown that the above improvements in the machines and their manufacture were accomplished by means of constant investigation, experiment, testing, and invention by competent experts employed by this company, involving a very large expenditure on its part. These efforts were directed not only toward making each machine as efficient as possible by itself, but also toward increasing its efficiency for so performing its own operation upon a shoe as best to combine it with the work upon the same shoe by the numerous other machines required for performing the remaining necessary operations, in order that all the many successive operations performed should cooperate toward the most economical and efficient accomplishment of the best final result in product. And besides thus developing and improving the machines of 1899, the company kept pace with the requirements of manufacturers by the invention and production of many other machines or improvements, unknown in 1899, as the need for them became apparent.

"There is no question that the above-described development of the United Company's business has resulted in a very great commercial success. Its machines, as was the case with those produced by the component companies in 1899, have ever since been those which shoe manufacturers in general can use to the best advantage and therefore prefer. The increase in the number of its machines in the hands of users has been very large. Nor is there any question that of all the machines, of the kinds to which this case relates, in use when the petition was filed, those of the United Company constituted all but a very small proportion.

. . . . . .

(R. Vol. 1, p. 1135.) "If there is any sense in which the result attained as above can be called a 'monopoly,' it does not follow, in view of the circumstances shown, that the defendants have either restrained trade or been guilty of monopolizing or attempting to monopolize within the meaning of the act. Nor can I regard the case as one in which any presumption arises, from the fact that so large a proportion of the users of these machines use the defendants'— that the defendants have committed any of the above forbidden acts in accomplishing the above result. The proof is too complete that it has been in fact reached by the use

of methods entirely lawful, the leading features whereof are below indicated. As has been said, the field they have occupied is a special field, and the product for which their machinery is adapted is of higher price and quality than the product of the machinery of others.

"The business which the defendants have developed and established is not, and has never been, one in which everybody might freely engage. No one else could lawfully make or use machines containing improvements covered by the defendants' patents. Nor can it be said that the demand for such machines which they have supplied existed independently of the defendants; on the contrary, they have created it by the new methods of shoe manufacture which their improvements have educated and enabled manufacturers to follow. It cannot justly be said that the case is one in which a field of commerce normally belonging to all has been captured by a single concern. The principles applying in such cases can not justly be applied here. In so far as the defendants' occupation of the field has been due to the greater desirability of their patented machines and to the superiority of their methods of making and supplying users with such machines, no reason appears for holding it unlawful, whatever its extent.

"Supplementing the production and development of its various patented machines, methods introduced by the United Company for keeping them in efficient operating condition while in the hands of their various users throughout the country have most effectively aided the development of its business. It has undertaken not only to train operatives in the proper use of the machines and to secure the prompt repair of any machine disabled in use, but also to supply each user from time to time with the latest improvements, either by adding them to the machines or by substituting improved for superseded machines, without extra cost to the user. This service it has furnished by maintaining at central points bodies of competent employees who attend to the above matters whenever and wherever they are notified by users that such attention is desired.

"A system of standardization, introduced since 1899, whereby corresponding parts of the various machines have been so constructed as to be interchangeable whenever possible, has, in connection with the service furnished as above, effected a great reduction in the time lost by machines in waiting for repair. The introduction of such a system could not have been effected by the component companies because each carried on the manufacture of its machines at a different place. While each of them rendered

to its users some service of the character described, this was done to a limited extent only; and the maintenance of any such system of rendering it as the United Company has pursued would have been impossible to them because of the heavy outlay involved.

"The service secured to users of the machines by the system just described has been furnished to users without charge in addition to the royalties paid by them under the leases of their machines. For duplicate parts, extras, etc., required in operation, repair, or renewal, the terms of the leases required payment. Allegations in the petition that exorbitant prices were charged for such duplicate parts, etc., were not sustained by the evidence, and have not been insisted on in argument.

"That the degree of success attained and the preponderance in number of users supplied which the United Company has secured are fully accounted for by the superior efficiency it has developed in its patented machines for work in combination with each other, together with the superior facilities it affords as above for their most efficient use, must be regarded as shown beyond question. It is not disputed that, when the petition was filed, its machines represented, in number and amount, the highest development ever reached in the art to which they belong; or that they are most in demand by manufacturers of the higher grades of shoes for that reason."

VI. THIS CASE WAS HEARD ORALLY, ALL MATERIAL TESTIMONY INTRODUCED BY THE UNITED STATES WAS CONTRADICTED BY THE DEFENDANTS' TESTIMONY, THE RECORD IS BEFORE THIS COURT IN A CONDENSED FORM, AND THE FINDINGS OF FACT BY THE DISTRICT COURT WHICH HEARD THE WITNESSES SHOULD BE ACCEPTED BY THIS COURT UNLESS MANIFESTLY WRONG.

I. THE LAW.

While an equity appeal brings to the Appellate Court questions both of law and of fact, the general principle has nearly always been recognized in equity appeals, whether the evidence was taken in the court of first instance by deposition or by oral testimony, that the findings on matters of fact of the lower court are presumptively correct and should not be reversed on appeal unless manifestly wrong.

Dade v. *Irwin*, 2 How. 383, 391, per Story, J.
Hewitt v. *Campbell*, 109 U. S. 103.
Lawson v. *U. S. Mining Co.*, 207 U. S. 1, 11, 12.
United States v. *Marshall*, 210 Fed. 595, 597 (C. C. A., 8th Circ.).
Tobey v. *Kilbourne*, 222 Fed. 760, 763 (C. C. A., 9th Circ.).
American Rotary Valve Co. v. *Moorehead*, 226 Fed. 202 (C. C. A., 7th Circ.).
Hartley v. *Richardson*, 91 Me. 424.
Barnes & Jessup Co. v. *Putnam*, 64 Fla. 190, 200.
Compare *Colonial Securities Trust Co.* v. *Massey*, (1896) 1 Q. B. 38.

There are two obvious reasons why this should be so, even when the evidence was not heard orally, and the Appellate Court has all the evidence before it in the same form in which it was presented to the trial court. In the first place, the burden of proving error is on the appellant, and where the Appellate Court is

wholly in doubt where the truth lies it must necessarily sustain the finding below on the ground that the appellant has not sustained his burden. But beyond this there is the consideration that the hearing of the case in the trial court would be little more than an empty form if its conclusions were given no weight in the court above, and the findings of a chancellor or trial judge who had carefully weighed and considered all the evidence were not accepted as at least highly persuasive in the Appellate Court. As pointed out in the Marshall Case, *supra*, to give such findings no weight would be in effect to make the Appellate Court a court of first instance. "The District Court is not in such matters a mere conduit. It, not this court, is the trial court. Our functions are simply to guard against manifest error on its part, and this is true whether such arises upon hearing witnesses or upon reading a record."

Since the establishment of the Circuit Courts of Appeals, equity appeals have generally come before this court after the decision of two courts below, and the rule has long been established that the concurrent findings of two courts on questions of fact would not be reversed in this court except in a case of manifest error.

Dun v. *Lumbermen's Credit Asso.*, 209 U. S. 20, 24, and cases cited.
First National Bank v. *Littlefield*, 226 U. S. 110.

The attitude of this court, under the old rules, when findings of only one lower court were before it, is shown by the cases above cited.

The adoption of the new equity rules, making it the general practice to hear evidence in equity cases orally in open court, has materially changed the situation, and greatly increased the force of the presumption in favor of the trial court's findings of fact. Authorities everywhere are agreed that where the testimony in an equity case is given by witnesses in open court, with the consequent opportunity for the trial judge to see and hear the witnesses and judge of their character, bias, and credibility, this circumstance, at least on any point on which there was conflicting testimony, adds greatly to the weight which should be given to the findings of the trial judge; and many

strong courts have held expressly or in effect that, whether or not the upper court would have reached the same conclusion from the printed record, findings of the trial court made under such circumstances should not be set aside on appeal if there was any evidence to justify the finding.

Espenschied v. *Baum*, 115 Fed. 793 (C. C. A., 7th Circ.).
Finlayson v. *Barrows*, 221 Fed. 936 (C. C. A., 5th Circ.).
Tobey v. *Kilbourne*, 222 Fed. 760 (C. C. A., 9th Circ.).
Nichols v. *Elken*, 225 Fed. 689 (C. C. A., 8th Circ.).
Brookheim v. *Greenbaum*, 225 Fed. 763 (C. C. A., 2d Circ.).
Gibson v. *American Graphophone Co.*, 234 Fed. 633 (C. C. A., 2d Circ.).
Gutlon v. *Marcus*, 165 Mass. 335 (per Holmes, J.).
Dickinson v. *Todd*, 172 Mass. 183.
Elmstedt v. *Nicholson*, 186 Ill. 580, 584.
Nichols v. *Hoxie*, 33 R. I. 77, 78, 81.
Shepard v. *Shepard*, 164 Mich. 183, 198.
Protzman's Executor v. *Joseph*, 65 W. Va. 788, 789.
Khoo Sit Hoh v. *Lim Thean Tong*, (1912) A. C. 323, 325.
Smith v. *Land, etc., Corporation*, 28 Ch. Div. 7.
In re *Wagstaff*, 77 L. J. Ch. 190, 192.
Duffin v. *Duffin*, 44 Ch. Div. 76, 83.

In *Dickinson* v. *Todd*, supra, the court said (p. 184):—

"An appeal in equity brings to the appellate court questions of fact which arise upon the record, as well as questions of law. But the practice which has long prevailed in Massachusetts of presenting the testimony in suits in equity orally instead of in writing has materially changed the effect of appeals in such suits upon questions of fact. Under the old practice of presenting all the testimony by deposition, the appellate tribunal had before it the evidence in the same form as when it was considered by the lower court. But under the present system the judge who sees and hears the witnesses has a great advantage in the search for truth over those who can only read their written

or printed words. For this reason the rule has long been established that upon an appeal from a decree of a judge in equity upon questions of fact arising on oral testimony heard before him, his decision will not be reversed unless it is plainly wrong."

In *Brookheim* v. *Greenbaum*, supra, the court said (p. 763):—

"The judge had the witnesses before him and is much better able to judge of their credibility than a court which sees only their statements on paper. We should not reverse his finding upon a pure question of fact, where the evidence justifies the finding, even if we might have reached a different conclusion upon the evidence."

In *Tobey* v. *Kilbourne*, supra, the court said (p. 763):—

"It is the established rule that the findings of the trial court in a suit in equity must be taken as presumptively correct, and that unless an obvious error has intervened in the application of the law, or some serious or important mistake has been made in the consideration of the evidence, the findings will not be disturbed by the appellate court. This rule is especially applicable in a case in which, as here, the testimony was taken in open court, where the trial court had the opportunity to observe the demeanor of the witnesses and their manner of testifying, and the appellate court has before it only a condensed printed statement of the evidence as it is presented under the new equity rule. Thorndyke v. Alaska Perseverance Mining Co., 164 Fed. 657, 90 C. C. A. 473; Brandt v. United States, 198 Fed. 449, 117 C. C. A. 208; Harper v. Taylor, 193 Fed. 944, 113 C. C. A. 572."

In *Smith* v. *Land, etc., Corporation*, supra, Fry, L. J., said (p. 17):—

"The second question is whether the purchasers purchased on the faith of that representation. The learned Judge has found that they did. On that question I feel the same difficulty as Lord Justice Bowen, and on the evidence as read before us I should have felt inclined to come to the conclusion that the contract was not induced by that representation; but as Mr. Justice Denman, who saw and heard Alderman Knight, was satisfied with his evidence, I cannot give my voice for reversing his decision."

In *Gutlon* v. *Marcus*, supra, the court said (p. 335):—

> "The ground of the bill is a fraudulent conspiracy. For proof it depends wholly upon oral testimony, and the judge who heard and saw the witnesses was not convinced by them. On the well known rule by which this court is governed in dealing with such evidence on appeal, we hardly need to go further to show that the plaintiff cannot prevail."

Presumably one of the most important objects sought to be secured by the change in the usual method of hearing equity cases, which was introduced by the new equity rules, was this very advantage in getting at the truth which would result from affording the trial court an opportunity to see and hear the witnesses on contested issues of fact and judge from their appearance and demeanor what weight and value should be given to their testimony. It was undoubtedly assumed that under this practice and in accordance with the well-established rule in other courts the Federal Appellate Courts would give due weight to the advantage thus afforded to the trial judge and would not undertake to reverse his findings on conflicting testimony unless clearly unwarranted by the evidence before him. This is indicated by the provision in Rule 75 that the "evidence to be included in the record shall not be set forth in full, but shall be stated in simple and condensed form," and that as a general rule the testimony of witnesses shall be stated only in narrative form. This provision is plainly adapted to simplify very greatly the labors of the Appellate Court, provided its inquiry is in general to be limited to the question whether there was evidence to justify the findings and to the questions of law arising on the facts found; but it would place the Appellate Court at a further disadvantage as compared with the trial court if the Appellate Court were expected to try all the facts *de novo* without the strongest possible presumption in favor of the findings of the court below. It is impossible to escape the conclusion that this rule was adopted in recognition of the fact that it would serve no useful purpose to set forth all the evidence in full, for the very reason that the findings of the judge who heard the witnesses ought not to be set aside if there was evidence adequate to support these findings. The following comments of this court in a case arising out of a hearing before the Interstate Commerce Commission strongly support the above conclusions:—

"The facts involved have been so fully stated by the Commission (28 I. C. C. 533) and by the court below (216 Fed. Rep. 672) that it is unnecessary here to repeat them. The Railroad Companies did not offer all of the evidence which was considered by the Commission; and on this appeal they do not include in the record all of the hundreds of pages of testimony which had been submitted to the Commission, but—conceding that the evidence was conflicting and tended to support the findings of the Commission—they insist that the facts found were insufficient in law to sustain the orders which were made. This most commendable practice not only saved the expense of printing many volumes of testimony, but saved the substantial points in the case from being submerged in a flood of testimony—much of which was explanatory before the Commission and most of which was wholly immaterial in an Appellate Court which cannot reverse findings when supported by substantial—though conflicting—evidence. The practice is also in compliance with the spirit of the new Equity Rules (75, 76, 77) which call for just such a winnowing out of the useless; the presentation of only the relevant parts of exhibits, documents, tables, and reports; the elimination of all reduplications in written and oral testimony and a condensation into narrative form of what is material to the then issue before the court."

Louisville & Nashville R.R. Co. v. *U. S.*, 238 U. S. 1, 10.

Where an equity case is tried in the District Court on oral testimony the situation in an appellate court is substantially the same as where a case is heard before a master, not under the usual order merely to take and report testimony, but by consent of the parties to hear the evidence and report his findings of fact to the court. In such a case it was held in

Kimberly v. *Arms*, 129 U. S. 512, 524, 525,

and again in

Davis v. *Schwartz*, 155 U. S. 631, 636, 637,

that the master's findings, unless shown to be unsupported by the evidence, should be treated as conclusive. And this was put upon the analogy of the master's report to the findings of a lower court, on the ground that "where the parties select and agree upon a special tribunal for the settlement of their controversy, there is no reason why the decision of such tribunal, with respect to the facts, should be treated as of less weight than that

of the court itself, where the parties expressly waive a jury, or the law declares that the appellate court shall act upon the finding of a subordinate court." And accordingly it was said in the case last cited that the finding of the master,—

> "so far as it involves questions of fact, is attended by a presumption of correctness similar to that in the case of a finding by a referee, the special verdict of a jury, the findings of a Circuit Court in a case tried by the court under Rev. Stat. Sec. 649, or in an admiralty case appealed to this court."

See also on the same point,

> *Crawford* v. *Neal*, 144 U. S. 585, 596.
> *Furrer* v. *Ferris*, 145 U. S. 132.

It hardly needs demonstration that the findings of the District Court itself on oral evidence heard before it are entitled to at least equal weight with those of a master appointed by that court, even though by consent of the parties; and the rule has been expressly applied to such findings in a recent decision of this court. In

> *Adamson* v. *Gilliland*, U. S. Adv. Ops. 1916, p. 169,

a patent case heard by the District Judge on oral testimony, "the practical rule," which this court applied, was said to be (quoting from *Davis* v. *Schwartz*, supra), that

> "so far as the finding of the master or judge who saw the witnesses 'depends upon conflicting testimony or upon the credibility of witnesses, *or so far as there is any testimony consistent with the finding*, it must be treated as unassailable.'"

2. STRONGEST POSSIBLE REASONS IN PRESENT CASE FOR ACCEPTING FINDINGS OF FACT BY DISTRICT COURT UNLESS WHOLLY UNWARRANTED.

In the present case there are the strongest possible reasons why the findings of fact of the District Court should be accepted as decisive unless shown to be wholly unwarranted by the evidence.

Testimony Heard Orally.

1. All of the testimony was heard in open court with the exception of certain technical testimony relating to patents. The District Court, therefore, had a full opportunity to judge of the credibility of the witnesses.

Testimony Disputed and Witnesses Biassed.

2. Every issue material to the present case as to which the United States introduced testimony was disputed by the defendants. The witnesses for the United States whose testimony was material to these issues, outside of certain officials of the United Company, were practically all hostile to the United Company. The extent of their prejudice or bias, the credibility of their testimony, and the weight, if any, to be given to it, are questions which can far better be determined by the District Court which heard the testimony and observed the witnesses than it can be by the Appellate Court upon a consideration of a condensed printed record.

The United States, as the District Court observed, made "efforts which may fairly be described as extraordinary" (R. Vol. 1, p. 1152) to bring before the court all persons who felt or expressed any grievance against the United Company. Thus, the witnesses for the United States consist principally of the following classes:—

(*a*) Competitors of the United Company. These include R. H. Long, who manufactures a complete set of shoe machinery; J. J. Doidge, manager of Long's Company; C. A. Hamel, who puts out a complete line of machines; Edwin A. Webster of the Haverhill Shoe Machinery Company, which puts out a complete line of machines; George W. Maloy, Charles S. Johnson, and John Cavanaugh of the Boylston Manufacturing Company, a competitor of the United Company; Frank W. Merrick, president, and Clarence S. Luitweiler, treasurer, of the Union Lockstitch Company; Lorenze Muther of the Peerless Machinery Company, which manufactures eyeletting machines, tip press and tip perforating machines, cementing machines, folding machines, and others; Nelson H. Seelye, who manufactures dieing-out machines; Solomon M. Cutter, who was general manager, and James

N. Darrah, director and chairman of the executive committee, of the Standard Shoe Machinery Company, which manufactured a full line of bottoming machinery until it went out of business in 1901; Charles H. Morse, of the Fifield Shoe Machinery Company, which manufactured some fifty shoe machines; Alex Stone, export manager for the Atlas Works, of Leipzig, Germany, which makes a complete line of shoe machinery; William F. Donovan, president of the Atlas Tack Company, manufacturers of eyelets; all of which concerns were competitors of the United Company.

(*b*) Inventors or shoe machinery manufacturers who had endeavored to sell or entered into negotiations to sell out to the United Company and whose offers had been declined. These include Harry E. Cilley, George H. Clark, Zotique Beaudry, and Joshua S. Holt; also the following-named under paragraph (*a*), —R. H. Long, Frank W. Merrick, Clarence S. Luitweiler.

(*c*) Lessees who had violated their agreements with the United Company, or other persons with whom the United Company had had litigation or disputes. These include George R. Harsh; John E. Williams; William A. Hogan; S. Burton McNamara; Peter Tessier; Frank R. Hilliard; Ernest Bottomley; Irving A. Hadley; George A. Learned; Frank Morrison; Charles G. Ross; Abram Sochat; Herbert E. Chase; Frederick W. Herrick; Ira J. Webster; Thomas H. Shinn; Frederick W. Curtis.

(*d*) Members of the Shoe Manufacturers' Alliance, an organization of large shoe manufacturers opposed to the United Shoe Machinery Company. This Alliance consisted of Jackson Johnson of the Roberts, Johnson & Rand Shoe Company; A. D. Brown of the Hamilton-Brown Shoe Company; George Brown of the Brown Shoe Company; Henry N. Peters of the Peters Shoe Company; Milton S. Florsheim of the Florsheim Shoe Company; Emanuel F. Selz of the Selz, Schwab Shoe Company; C. H. Jones of the Commonwealth Shoe & Leather Company (R. Vol. 1, pp. 119, 114–115); and Pearl E. Selby of the Selby Shoe Company (R. Vol. 1, p. 213). Practically all of the members of this Alliance testified for the United States against the defendants.

Since 1910 the members of this Alliance have been active in agitating against the United Company. Jones and others have

appeared before Committees of Congress attacking the Company (R. Vol. 1, pp. 121–122). Their counsel has appeared before one or more Committees of Congress for the same purpose (R. Vol. 1, p. 122). Its members have been to the Department of Justice with respect to the United Company (R. Vol. 1, p. 121).

All of them are financially interested in the Boylston Manufacturing Company, which is a shoe machinery company with a capital of $500,000 or $600,000 (R. Vol. 1, p. 122).

The members of this Alliance showed in their testimony a strong bias against the United Company, due apparently to two causes: first, a desire to obtain, on account of their size, better rates of royalty than were granted to other manufacturers; and second, a desire to engage themselves in the manufacture of shoe machinery.

The change in Mr. Jones's attitude is well illustrated by the interview given by him to the Boston *Transcript* in 1906 in which he expressed the greatest satisfaction with the United Company (R. Vol. 1, pp. 130–133, *supra*, pp. 53, 54). At that time Jones said the only persons who could be behind attacks on the United Company must be people who wanted to manufacture machinery.

Jonathan Brown testified that Jones said to him in the summer of 1911, "It is time we big manufacturers should pay less royalty than the smaller ones" (R. Vol. 1, p. 733, lines 28–32). James W. Hitchings was present at the time and testified to the same effect (R. Vol. 1, p. 735, lines 32–37).

Immediately after the purchase by the United Company of the patents and inventions of Thomas G. Plant, Jackson Johnson, and Milton S. Florsheim, members of the Alliance, called upon Mr. Winslow, president of the United Company, and suggested that they would like to furnish the $3,000,000 that the United Company had paid Plant and that in return the United Company should give them its stock at $25 a share, the stock being worth $50 a share. In other words, their proposition was to obtain stock of the United Company worth $6,000,000 for a cash payment of $3,000,000. The substance of the talk was that some means should be found for giving the manufacturers whom they represented a large interest in the United Company, and it was said in a way that made Mr. Winslow understand that if he didn't there would be trouble (R. Vol. 1, p. 493).

Testimony as to Motives.

3. The question of the purposes and motives which actuated the transactions in question in this suit is of the utmost materiality. Mr. Winslow, president of the United Company, Mr. Howe, one of the executive committee and its counsel, and other officials testified fully as to the intent and purposes with which the various transactions were undertaken. The District Court, which heard and observed them, was in a position to judge of their credibility.

District Court's Findings Based on over Three Months' Investigation.

4. The transactions in question in this suit involve the detailed conduct of an extremely complicated business over a period of more than twelve years, including an examination of the situation existing at the time of the formation of the United Company, the objects and purposes of the company, and the extent to which such objects and purposes have been carried out, the origin and reasons for the lease system and the causes for the modifications made therein, the reasons for the purchase of various patents, contracts with inventors and other acquisitions, and the dealings of the United Company with over 1,000 lessees. Hundreds of transactions are involved, and an understanding of most of them is only possible upon a detailed examination of the facts relating to them. An understanding of the real purposes and motives of the company and its officials, of the greater efficiency resulting from the formation of the United Company, and of the necessity for the lease provisions and the various acquisitions is only possible when based upon a thorough understanding of the shoe machinery industry and the difficulties involved in developing patented machines and in furnishing a vast variety of machines adapted for different uses upon a lease system.

The District Court, composed of three judges, devoted many months to this task. They heard evidence in open court for nearly three months. Their conclusion as to the intent and

purposes of the United Company, the situation of the industry, and the necessity for and effect of the leases and acquisitions and of the other transactions involved in the suit, arrived at after months of study, should not be disturbed unless this court is clearly satisfied that it cannot be sustained upon the evidence.

VII. GENERAL APPLICATION OF THE SHERMAN ACT TO THE PRESENT CASE.

Only such transactions are condemned by the Sherman Act as prejudice the public interests because by their inherent nature they materially and unduly restrict competition or obstruct the course of trade, or because by reason of the intent with which they are done they accomplish this result.

Transactions which are normal and usual, which seek to further trade by normal or reasonable methods, or which are entered into and performed for the legitimate purpose of reasonably forwarding personal interest and developing trade are not within the act.

In *Standard Oil Company* v. *United States*, 221 U. S. 1, the court said (pp. 58, 62):—

> "Without going into detail and but very briefly surveying the whole field, it may be with accuracy said that the dread of enhancement of prices and of other wrongs which it was thought would flow from the undue limitation on competitive conditions caused by contracts or other acts of individuals or corporations, led, as a matter of public policy, to the prohibition or treating as illegal all contracts or acts which were unreasonably restrictive of competitive conditions, either from the nature or character of the contract or act or where the surrounding circumstances were such as to justify the conclusion that they had not been entered into or performed with the legitimate purpose of reasonably forwarding personal interest and developing trade, but on the contrary were of such a character as to give rise to the inference or presumption that they had been entered into or done with the intent to do wrong to the general public and to limit the right of individuals, thus restraining the free flow of commerce and tending to bring about the evils, such as enhancement of prices, which were considered to be against public policy."
>
> " . . . And it is worthy of observation, as we have previously remarked concerning the common law, that although the statute by the comprehensiveness of the enumerations embodied in both the first and second sections makes it certain that its purpose was to prevent undue restraints of every kind or nature, nevertheless by the omission of any direct prohibition against monopoly in the concrete it indicates a consciousness that the freedom of the individual right to contract when not unduly or improperly exercised

was the most efficient means for the prevention of monopoly, since the operation of the centrifugal and centripetal forces resulting from the right to freely contract was the means by which monopoly would be inevitably prevented if no extraneous or sovereign power imposed it and no right to make unlawful contracts having a monopolistic tendency were permitted. In other words that freedom to contract was the essence of freedom from undue restraint on the right to contract."

In *United States* v. *American Tobacco Co.*, 221 U. S. 106, the court said (p. 179):—

> "Applying the rule of reason to the construction of the statute, it was held in the *Standard Oil Case* that as the words 'restraint of trade' at common law and in the law of this country at the time of the adoption of the Anti-trust Act only embraced acts or contracts or agreements or combinations which operated to the prejudice of the public interests by unduly restricting competition or unduly obstructing the due course of trade or which, either because of their inherent nature or effect or because of the evident purpose of the acts, etc., injuriously restrained trade, that the words as used in the statute were designed to have and did have but a like significance. It was therefore pointed out that the statute did not forbid or restrain the power to make normal and usual contracts to further trade by resorting to all normal methods, whether by agreement or otherwise, to accomplish such purpose."

In *Nash* v. *United States*, 229 U. S. 373, the court, referring to the Standard Oil and Tobacco Cases, said (p. 376),—

> "Those cases may be taken to have established that only such contracts and combinations are within the act as, by reason of intent or the inherent nature of the contemplated acts, prejudice the public interests by unduly restricting competition or unduly obstructing the course of trade."

In *Eastern States Lumber Ass'n* v. *United States*, 234 U. S. 600, the court said (pp. 609–610),—

> "It [the Sherman Act] broadly condemns all combinations and conspiracies which restrain the free and natural flow of trade in the channels of interstate commerce. It is true that this court held in the *Standard Oil* and *Tobacco Cases, supra*, and in the subsequent cases following them,

that in its proper construction the act was not intended to reach normal and usual contracts incident to lawful purposes and intended to further legitimate trade. . . ."

Public Interest must be Prejudiced.

It is essential that the public interest be prejudiced. A restraint which is not of such a character as to prejudice the public interests is not covered by the statute.

In *Wilder Mfg. Co.* v. *Corn Products Co.*, 236 U. S. 165, the court said (p. 174),—

> "In other words, founded upon broad conceptions of public policy, the prohibitions of the statute were enacted to prevent not the mere injury to an individual which would arise from the doing of the prohibited acts, but the harm to the general public which would be occasioned by the evils which it was contemplated would be prevented, and hence not only the prohibitions of the statute but the remedies which it provided were co-extensive with such conceptions."

Sherman Act must be Interpreted to Carry out its Purpose.

The statute is general in its terms and as held in the Standard Oil and Tobacco Cases must be interpreted so as to carry out the public policy which it manifests. In the Tobacco Case the court said (p. 181),—

> ". . . it was pointed out [in the Standard Oil Case] that the generic designation of the first and second sections of the law, when taken together, embraced every conceivable act which could possibly come within the spirit or purpose of the prohibitions of the law, without regard to the garb in which such acts were clothed. That is to say, it was held that in view of the general language of the statute and the public policy which it manifested, there was no possibility of frustrating that policy by resorting to any disguise or subterfuge of form, since resort to reason rendered it impossible to escape by any indirection the prohibitions of the statute."

For the same reason it follows that no transactions whatever their garb and whether new or old in character are condemned unless they are prohibited by the spirit or purpose of the statute. In other words, the particular circumstances of each case must be examined to determine the character of the acts.

Incidental Restraints not Unlawful.

All restraints are not covered by the act. Those that are incidental to a legitimate purpose, which are the result of reasonable normal or usual transactions entered into for the legitimate purpose of furthering trade or personal interests, are permissible. As said in *United States* v. *Joint Traffic Asso.*, 171 U. S. 505 (p. 568):—

> ". . . to treat the act as condemning all agreements under which, as a result, the cost of conducting an interstate commercial business may be increased, would enlarge the application of the act far beyond the fair meaning of the language used. The effect upon interstate commerce must not be indirect or incidental only. An agreement entered into for the purpose of promoting the legitimate business of an individual or corporation, with no purpose to thereby affect or restrain interstate commerce, and which does not directly restrain such commerce, is not, as we think, covered by the act, although the agreement may indirectly and remotely affect that commerce."

Importance of Intent.

Certain acts by their very nature are of such a character as necessarily to prejudice the public interests and unduly restrain trade or create a monopoly. In such instances the intent to violate the statute may be conclusive.

In all other instances the intent to accomplish the unlawful purpose must be shown either directly or inferentially from the circumstances of the case.

Thus where the acts alone might not produce the unlawful result such intent is required.

Swift & Co. v. *United States*, 196 U. S. 375.

Where the transaction is of a doubtful character, that is, where the transaction might be entered into for the purpose of prejudicing the public and wrongfully restraining trade or excluding others from the business or might be undertaken for the legitimate purpose of fostering trade, the intent as shown by direct evidence or by inference from the circumstances of the case may determine the legality of the transaction.

Thus in *United States* v. *Reading Co.*, 226 U. S. 324 (p. 370), the court said:—

> "Whether a particular act, contract or agreement was a reasonable and normal method in furtherance of trade and commerce may, in doubtful cases, turn upon the intent to be inferred from the extent of the control thereby secured over the commerce affected, as well as by the method which was used. Of course, if the necessary result is materially to restrain trade between the States, the intent with which the thing was done is of no consequence. But when there is only a probability, the intent to produce the consequences may become important. *United States* v. *St. Louis Terminal Association*, 224 U. S. 383, 394; *Swift & Co.* v. *United States*, 196 U. S. 375."

The Standard Oil Case and the Tobacco Case also show the importance of intent.

In the Standard Oil Case it appeared that the Standard Oil Company had acquired by purchase and combination a large and controlling portion of the oil business of the country and eliminated competition between the companies acquired. This alone, however, was not held to constitute an illegal restraint of trade or monopoly. The court held that these circumstances gave rise in and of themselves, "in the absence of countervailing circumstances, to say the least, to the *prima facie* presumption of intent and purpose to maintain the dominancy over the oil industry, not as a result of normal methods of industrial development . . ." (221 U. S. 75), and that this "*prima facie* presumption of intent to restrain trade, to monopolize and to bring about monopolization" was "made conclusive by considering" the conduct of the persons and corporations, the proof as to what was done under the various agreements and the modes in which the power vested in the Standard Oil Company was exerted and the results arising from them (221 U. S. 75). It was held that the transactions prior to the formation of the trust agreements of 1879 and 1882, including those agreements showed

> "an intent and purpose to exclude others which was frequently manifested by acts and dealings wholly inconsistent with the theory that they were made with the single conception of advancing the development of business power by usual methods, but which on the contrary necessarily

> involved the intent to drive others from the field and to exclude them from their right to trade and thus accomplish the mastery which was the end in view" (221 U. S. 76).

The transactions up to the time of the formation of the New Jersey Corporation were held to make manifest "the continued existence of the intent," and the exercise of the power of the corporation was likewise held to show this purpose and intent (221 U. S. 76, 77).

In the American Tobacco Case the American Tobacco Company had by purchase and combination acquired a dominating control of the tobacco industry. Here again the court reached the conclusion of wrongful purpose. It said (221 U. S. 182):—

> "We say these conclusions are inevitable, not because of the vast amount of property aggregated by the combination, not because alone of the many corporations which the proof shows were united by resort to one device or another. Again, not alone because of the dominion and control over the tobacco trade which actually exists, but because we think the conclusion of wrongful purpose and illegal combination is overwhelmingly established by the following considerations:"

The court then goes on to recite the circumstances showing an "ever-present manifestation . . . of the purpose to restrain others and to monopolize . . . trade" (221 U. S. 182).

VIII. SPECIAL CONSIDERATIONS APPLICABLE TO THE PRESENT CASE.

In determining the questions involved in the present case the following considerations must be borne in mind:—

1. PRESENT CASE UNIQUE IN THAT (A) SHOE MACHINERY BUSINESS IS DOMINATED BY PATENTS, AND (B) NO COMPETITION PREVIOUSLY EXISTING WAS ELIMINATED.

The present case is unique in two important particulars: no case resembling it has ever before been decided by this court under the Sherman Act, except the case of *United States* v. *Winslow*, 227 U. S. 202, in which the formation of the present United Company was considered and held lawful. (*A*) In the first place, in every case heretofore decided in which a monopoly has been charged the business has been one in which any one having sufficient capital might freely engage on equal terms. In the present case the product which the defendant is accused of monopolizing is protected by dominating patents which restrict competitors to the marketing of machines of a different and inferior type. (*B*) In the second place, in every other case in which a monopoly has been charged the defendant has obtained a large or dominating share of the business previously carried on by various competitors. In the present case at the time the United Company was formed, the constituent companies each did the greater portion of the business in its particular field, under lawful patent monopolies, and the United Company merely took over and continued this business.

Industry Dominated by Patents.

A. In the present case the machines which the defendant is accused of monopolizing are protected by dominating patents so that competitors cannot manufacture them. There is a natural presumption that the general use of the defendants' patented machines and their success is due to their superiority

over other types of machines if such exist, and not to any illegal restraint of trade. As said of these machines by the court in *United States* v. *Winslow*, 227 U. S. 202 (p. 217),—

> "The machines are patented, making them is a monopoly in any case, the exclusion of competitors from the use of them is of the very essence of the right conferred by the patents, *Paper Bag Patent Case*, 210 U. S. 405, 429, **and it may be assumed that the success of the several groups was due to their patents having been the best.**" (Black letters ours.)

The shoe machinery industry is not one in which any person may normally engage on equal terms. It is of very recent origin. The machines do work until recently done by hand. These machines have been originated and created and are now manufactured under the protection of lawful patent monopolies. No one can enter or engage in this business successfully unless he holds patents enabling him to make machines superior to or as good as those already in the market. In such an industry no competition on equal terms is possible. The machines offered by two different manufacturers must necessarily differ, as neither can manufacture machines of the type made by the other, and inevitably one manufacturer will have an advantage due to the superiority of the patented inventions under which his machines are manufactured. It is, therefore, natural and to be expected that in such an industry the machines of one manufacturer will be superior to other machines and will be generally used by shoe manufacturers. That one manufacturer will have most, if not all, of the business is as natural as it was that the Bell Telephone Company, after the invention of the telephone, was the only company manufacturing telephones.

No Previous Competition Eliminated.

B. In the present case we do not find that previously to the formation of the United Company there were numerous competitors engaged in furnishing machines in competition to shoe manufacturers and that upon the formation of the United Company these competitors were eliminated and the United Company took over their business. In such a case there might be a natural presumption of unlawful purpose or that unlawful

methods were used to acquire the monopoly which would require proof to the contrary. In the present case, however, the petition itself alleges and the record establishes that the constituent companies were essentially non-competing, and that they had lawful patent monopolies under which they did the greater part of the business of the country in the machines which they manufactured. The United Company in taking over these non-competing companies therefore lawfully acquired patent monopolies under which it did the greater part of the business of the country in these machines. It did not eliminate competitors formerly in the field; it did not create a monopoly. It merely continued a business already lawfully existing. The monopoly charged in respect to these machines is the same monopoly which the petition alleges and the record establishes was lawfully held by the constituent companies at the time of the formation of the United Company. Indeed, far from showing that the United Company has acquired a monopoly in shoe machinery, the record shows that on December 12, 1911, when the petition was filed there were more and larger shoe machinery manufacturers engaged in business in competition with the United Company than existed in 1899 outside the constituent companies.

2. CONDITIONS PECULIAR TO THE INDUSTRY MUST BE CONSIDERED.

It is necessary in determining whether or not the various acts and transactions of the defendants prejudiced the public interest or were entered into with the legitimate purpose of forwarding personal interest and developing trade and were normal and usual, to bear in mind the peculiar character of the shoe machinery business. In this business we find, among other things, a great variety of machines used in making each shoe; we find the entire industry based upon patents; we find that the principal machines are of such a delicate character that they require constant attention and care in order to give satisfactory service; we find a system of leasing machines for a royalty based upon the extent of the use which had grown up with the industry, which had proved itself of great benefit to shoe manufacturers, and which a shoe machinery manufacturer was obliged to follow in order to furnish shoe manufacturers machines on terms satis-

factory to them. This combination of conditions is peculiar to this particular business and exists in no other business in the country.

These were the conditions with which the defendants were dealing, and the various transactions must be judged in view of these particular conditions. What would be legitimate or normal in some other business—for instance, the cotton machine business or the steel business—would not be a test of what was legitimate or normal in the shoe machinery business.

3. TRANSACTIONS ARE MATERIAL ONLY IF THEY PROVE THE CHARGE OF THE UNITED STATES.

The petition charges a plan formed in 1899 and carried out by a series of steps or acts extending over a period of twelve years. An immense number of transactions covering the defendants' conduct of its business and the acts of its officers and agents during this entire period have been put in evidence. We believe the record is barren of any wrongful incident. However, if the record showed that during this extended period there were sporadic instances in which some agent or officer of the defendant company exceeded his rights or some agreement was entered into not necessary for the protection of the company's rights or the development of its business, such sporadic instances would not be sufficient to show a plan to monopolize such as is charged by the petition, nor would such acts by themselves be sufficient to accomplish a wrongful monopoly as charged by the bill.

In other words these various transactions are material only in so far as they prove the charge of the petition, viz., that they were steps in carrying out the alleged plan

(1) to acquire all concerns engaged in the shoe machinery business, and then

(2) to refuse to sell or lease any so-called essential machinery to a shoe manufacturer except on condition that he take from them practically all other machinery which he required.

PART TWO.

FACTS AND ARGUMENT.

I.

FORMATION OF THE UNITED COMPANY.

1. THE CONSOLIDATION OF THE GOODYEAR SHOE MACHINERY COMPANY AND ITS SUBSIDIARY COMPANIES WITH THE CONSOLIDATED & MCKAY LASTING MACHINE COMPANY AND THE MCKAY SHOE MACHINERY COMPANY INTO THE UNITED COMPANY IS THE SAME CONSOLIDATION HELD LAWFUL AND VALID AND NOT CONTRARY TO THE SHERMAN ACT IN UNITED STATES v. WINSLOW, 227 U. S. 202.

In *United States* v. *Winslow*, supra, the indictment charged that for twenty-five years last past practically all the shoes worn by people of the United States were manufactured by the aid of several different kinds of machines, namely,

lasting machines,
welt sewing machines,
outsole stitching machines,
heeling machines,
metallic fastening machines;

that the Goodyear Shoe Machinery Company manufactured 80% of all the welt sewing and outsole stitching machines, and 10% of all the lasting machines; that the Consolidated & McKay Lasting Machine Company manufactured 60% of all the lasting machines, and the McKay Shoe Machinery Company manufactured 70% of all the heeling machines and 80% of all the metallic fastening machines, and that these companies manufactured their machines under United States patents, that they were combined into the United Company in pursuance of a conspiracy to extend the defendants' monopolies and rights unlawfully, to oppress shoe manufacturers and restrain trade, and that their combination in the United Shoe Machinery Company was an unlawful combination in violation of the Sherman Act.

In the present case the petition charges almost in the language of the indictment that for twenty-five years all boots and shoes worn by people of the United States had been manufactured by the aid of machinery; that the principal machines so used are lasting machines, welt sewing machines and outsole stitching machines, heeling machines and metallic fastening machines; that some of such shoe machinery is manufactured under letters patent; that prior to February, 1899, a large number of persons and corporations were engaged in the manufacture of shoe machinery in competition with each other; that the principal concerns so engaged were the Goodyear Shoe Machinery Company and its subsidiaries, manufacturing 80% of welt sewing and outsole stitching machines and 10% of the lasting machines, the Consolidated & McKay Lasting Machine Company, manufacturing 60% of all the lasting machines, and the McKay Shoe Machinery Company, manufacturing 70% of all heeling machines and 80% of all metallic fastening machines, and the Eppler Welt Machine Company, manufacturing 10% of the welt sewing and outsole stitching machines, and the Davey Pegging Machine Company, manufacturing 75% of the pegging machines, and that all the above-named companies manufactured their machines under letters patent of the United States; that many of the "basic" patents were about to expire and the lawful monopoly of such machines about to come to an end; and the individual defendants as owners of the above-mentioned companies, not being satisfied with the benefit of the lawful monopolies and rights belonging to them under letters patent, combined and conspired to acquire a monopoly in the manufacture of shoe machinery.

There is no allegation in the petition that the companies that were combined in the United Shoe Machinery Company were in competition with each other, and the only difference between the two cases so far as the organization of the United Shoe Machinery Company is concerned is that the petition adds the name of the Eppler Welt Machine Company, which it is claimed manufactured 10% of the welt sewing and outsole stitching machines, and the Davey Pegging Machine Company, which manufactured 75% of the pegging machines and which on the face of the petition was not in competition with any of the other companies. (This last-named company at the time of the con-

solidation and for a long time prior thereto was wholly owned by the Consolidated & McKay Lasting Machine Company and it did not compete with any of the other companies.—R. Vol. 1, p. 32, line 30.)

In *United States v. Winslow*, supra, the court said, page 217:—

> "On the face of it the combination was simply an effort after greater efficiency. The business of the several groups that combined, as it existed before the combination, is assumed to have been legal. . . . The disintegration aimed at by the statute does not extend to reducing all manufacture to isolated units of the lowest degree. It is as lawful for one corporation to make every part of a steam engine and to put the machine together as it would be for one to make the boilers and another to make the wheels. Until the one intent is nearer accomplishment than it is by such a juxtaposition alone, no intent could raise the conduct to the dignity of an attempt."
>
> (*Ib.* p. 217.) "The machines are patented, making them is a monopoly in any case, the exclusion of competitors from the use of them is of the very essence of the right conferred by the patents, *Paper Bag Patent Case*, 210 U. S. 405, 429, and it may be assumed that the success of the several groups was due to their patents having been the best. . . . It is said that from seventy to eighty per cent of all the shoe machinery business was put into a single hand. This is inaccurate, since the machines in question are not alleged to be types of all the machines used in making shoes, and since the defendants' share in commerce among the states does not appear. But taking it as true we can see no greater objection to one corporation manufacturing seventy per cent. of three non-competing groups of patented machines collectively used for making a single product than to three corporations making the same proportion of one group each."

The United States now seeks to differentiate the petition in the case at bar from the indictment by claiming that there was competition between the Eppler Company, making 10% of the welting and outsole stitching machines, and the Goodyear Company, manufacturing 80% of welting and outsole stitching machines; and also by making a very much belated claim that there was competition between the Ideal Laster of the Goodyear Company and the Chase Laster of the Consolidated & McKay Company, and that elimination of this competition was the motive for the consolidation of these companies into the United Shoe Machinery Company.

Upon this point the District Court, which saw and heard the witnesses and is the best judge of their credibility, said, by Dodge, J. (R. Vol. 1, p. 1130):—

"(1) As to the alleged competition in lasting machines, it is not claimed that there was any, so far as two of the three kinds made by the Consolidated Company are concerned. These are the 'McKay-Copeland' laster for lasting heavy metallic fastened or pegged shoes or brogans and the 'hand method McKay' laster for McKay sewed shoes; and neither of them could be used to last welt shoes, for which purpose alone the Goodyear Company's 'Ideal' laster was adapted. The only question here is whether the latter machine can be regarded as competing with the remaining laster of the Consolidated Company (the 'Chase'). With still another laster with which the Consolidated Company was experimenting in 1899, for use on welt shoes, we are not here concerned, because, though this laster was afterward further improved, developed, and finally furnished to users by the United Company, it had not been made an article of commerce in any practical sense when that company was formed.

"There is no proof of any actual use of the 'Chase' laster otherwise than for its intended purpose of lasting men's welt shoes. It could not work well for use with the lighter leather whereof women's shoes are made. The 'Ideal' laster, used almost exclusively for its intended purpose of lasting women's welt shoes, could not be relied on to work well with the heavier leather whereof men's shoes are made. The proof relied on to show that it competed with the 'Chase' went no further than to show that a number of 'Ideal' machines, small in proportion to the total number then in use, were being used in a few factories on men's shoes, notwithstanding their want of adaptation to such use. That there was any attempt to put either machine into the market as against the other, does not appear. No competition between the two in the usual sense of the term is shown. After the consolidation, by the addition of a patented 'hold down attachment' added by the United Company to the 'Ideal' in 1901 or 1902, some of the defects referred to were removed, but not until then can it be said to have been commercially successful for work on men's shoes. Before this improvement, it possessed at most a limited possibility of such use. I am unable to consider it established that competition in any practical sense was destroyed when the United Company became owner of both machines.

"(2) As to the alleged competition in welt-sewing ma-

chines, the question is to what extent the Eppler welting machinery can be regarded as competing with the Goodyear welting machinery. Outside of that produced by these two concerns, no other welting machinery appears to have been on the market at the time.

"The Eppler machines were adapted to produce men's thick-soled welt shoes only. They could not produce women's welt shoes (except perhaps those having the thickest soles), nor turn shoes of any kind, nor Goodyear welt shoes, either men's or women's, because of the difference between the respective machines in the character and position of the seam left in the inner sole of the shoe. The Goodyear machines could produce shoes of all the above kinds. The differences referred to resulted from differences in the character and operation of the machinery belonging to the different systems. These differences in character and in possible field of use had resulted when the United Company was formed in 1899 in the fact that over 2,500 Goodyear welting machines were in use, as against thirty or forty Eppler machines, one-third of these being used in the factory of the president of the Eppler Company. The evidence leaves me unable to believe that the possible field of competition between the two machines was large enough, or any actual existing competition significant enough in amount to warrant the conclusion that the acquisition by the United Company of both machines involved such destruction of competition as rendered it unlawful. The Eppler machines were not suppressed by the United Company. It continued to supply them until the progress of improvement in such machinery superseded them. The patents covering them have long since expired, and it is open to anyone to make and use such machines if he desires. There is no present monopoly in them, and no action taken by the court could restore them to the field of competition, or encourage or create competition by them.

"Nor, if such competition as is shown to have existed between the 'Chase' and the 'Ideal' laster be taken together with that shown to have existed between the Eppler welting machinery and the Goodyear welting machinery, I find it credible that the avoidance of both amounted to a consideration of any substantial importance, so far as the formation of the United Company was concerned. No reason appears for supposing that the real purpose for which the constituent companies were brought together, as disclosed not only by the evidence regarding all the circumstances as they existed in 1899, but by the evidence as to the course of development thereafter pursued by the United

Company, was other than that stated in a circular letter to the Goodyear stockholders issued February 8, 1899, the day following the organization of the United Company. (Petitioner's Exhibit 152.) This dwelt upon the advantages to be secured by putting into one control 'the most efficient types' of shoe machinery. In *U. S.* v. *Winslow*, above cited, which was decided more than a year after the present bill was filed, it was said that the combination here in question was, on its face, 'simply an effort after greater efficiency,' and the legality of combination for such a purpose is fully recognized.

"Under their respective patents upon the 'Chase' and the 'Ideal' lasters there was litigation pending in 1899 between the Consolidated Company and the Goodyear Company, each claiming that the other's machine infringed its patents. Also under the patents covering their welt-sewing machines there was similar litigation pending between the Eppler Company and the Goodyear Company. A result sought to be attained by both parties to these controversies, and accomplished by them through the acquisition of all the patents by the United Company, was the termination of all this litigation. Reference is made below to other later acquisitions by the United Company, an important feature of which was that litigation, troublesome and expensive on both sides, was avoided or terminated. In so far as any of the defendants' transactions were in order to accomplish results of this kind, it can not be said that their purpose was unlawful.

"For the reasons stated, I am unable to find the charge that the United Company was unlawfully formed because of competition which it destroyed sufficiently supported by the evidence. It would, in any case, be difficult to regard this as sufficient ground for a decree dissolving the company into its component parts under a bill not filed until more than twelve years had passed since the combination complained of was accomplished. During this period, as the evidence shows, investments of a very large amount had been made, not merely by the defendants but also by the outside public, in the extension and development of the company's united business, the component companies passed out of existence, and the machines as made by them in 1899 were so far developed, improved upon, or added to by the United Company as now all to have become obsolete. To put the parties or the public back into that state of the prior art which existed in 1899 is, of course, an impossibility."

To Aid the Court in an Examination of the Issue thus Decided by the District Court, We Shall Consider Below:—

The Business Done by the Constituent Companies;

The Organization of the United Company;

The Evidence Relating to the Alleged Competition Between the Constituent Companies;

The Purposes for Which the United Company was Formed, and the Manner in Which These Purposes have been Carried Out.

2. BUSINESS DONE BY THE CONSTITUENT COMPANIES.

A. The Goodyear Company.

The Goodyear Company manufactured and leased machines for attaching the welt to the upper and the outsole to the welt of Goodyear Welt shoes. It had two principal machines—the Goodyear Welt and Turn Machine (called the welter) for attaching the welt to the upper, and the Goodyear Outsole Rapid Lockstitch Machine (the stitcher) for attaching the outsole to the welt. The welter was used also in the manufacture of Goodyear Turn shoes. The Goodyear Company had also thirteen auxiliary machines used in connection with its welter and stitcher in the manufacture of Goodyear Welt shoes, and three auxiliary machines used in connection with its welter in the manufacture of Goodyear Turn shoes (R. Vol. 5, Defs.' Ex. 242, p. 681; Defs.' Ex. 244, p. 683).

The Goodyear Company also manufactured and leased the Ideal Lasting Machine. The Ideal was designed and adapted for lasting women's welt shoes, which no machine in the market at the time it was developed could do successfully (R. Vol. 1, p. 397, lines 41–43; p. 626, lines 44–45). It was not adapted for lasting men's welt shoes commercially (R. Vol. 1, p. 398, line 32). The Ideal Machine had a comparatively small use. Only 248 Ideal Machines were outstanding out of a total of 4,300 lasting machines of all kinds outstanding, and only 0.77 of 1% of the shoes lasted on machines in 1899 were lasted on the Ideal (R. Vol. 1, p. 975, lines 36–41).

The Goodyear system for welt and turn shoes ran back to 1870 or 1868 (R. Vol. 1, p. 625, line 20).

Prior to the development of the Goodyear System there was no system for making welt shoes by machinery. The machines of the Goodyear Company, including the auxiliary machines, were adapted to making welt shoes only and could not be used on any other kind of shoes (R. Vol. 1, p. 625, lines 17–19), except that the welter was used on turn shoes and three of the auxiliaries were designed for use on turn shoes, and except that the Hadaway Stitch Separator, an auxiliary machine, could be used also in pricking imitation stitches on mock welts and McKay shoes (R. Vol. 1, p. 625, lines 15–17).

The auxiliary machines were designed and adapted to assist the work of the principal machines, the welter and stitcher, by preparing the work for the operation of these machines or finishing it afterwards (R. Vol. 1, pp. 624–625).

Prior to the invention of the Goodyear Welt System welt shoes were made by hand. The Goodyear System imitated the exact process by which a hand workman made a welted shoe (R. Vol. 1, p. 626, lines 3–8).

The Goodyear Company owned as trademarks the names "Goodyear Welt" and "Goodyear Turn" as applied to shoes made by its machines. Its lessees of shoe machinery were given the right to use that trademark on shoes made by the Goodyear machines (R. Vol. 1, p. 625, line 44; p. 626, line 2).

Shortly after 1888 the Goodyear Welter and Stitcher were both greatly improved and the Goodyear Company's business developed rapidly (R. Vol. 1, pp. 691–692). The Goodyear Welt shoe was a better grade of shoe than the McKay, pegged or Standard Screw shoes, which were the classes of shoes generally made by machines, but the Goodyear Welt shoe was more expensive to manufacture. It gradually proved its merit, but in 1899 only 22,700,000 pairs of welt shoes were made out of a total production in the country of 172,786, 000 pairs of shoes of all kinds, of which 82,457,000 were McKays (R. Vol. 5, Defs.' Ex. 215, p. 322). In 1898, just prior to the formation of the United Company, only about 17,000,000 pairs of welt shoes were made (R. Vol. 1, p. 414, lines 36–37).

The Goodyear Company, therefore, occupied a comparatively limited and special field which it had itself created and which

it lawfully controlled by reason of its patents. The process of making Goodyear Welts is only one of a number of methods of attaching the soles to the uppers of shoes by machinery, and this method was used in 1898 on only about 10% of the total shoes manufactured in that year.

B. The Consolidated & McKay Lasting Machine Company.

This company manufactured and leased three kinds of lasting machines, namely, the Chase, the McKay & Copeland, and the Hand Method McKay Machine.

The Chase Machine was especially adapted to and was developed for lasting men's welt shoes (R. Vol. 1, p. 397, lines 39–40).

The McKay & Copeland Machine was commercially adapted only for lasting heavy brogans (R. Vol. 1, p. 399, lines 13–14), that is, very heavy coarse shoes (R. Vol. 1, p. 397, line 14).

The Hand Method McKay Machine was designed and adapted for lasting McKay sewed shoes (R. Vol. 1, p. 399, line 22). It could not be used for lasting welt shoes (R. Vol. 1, pp. 399–400).

The Consolidated Company in 1899 had been endeavoring to develop a hand method welt lasting machine. This machine had been developed to a point where it could last the heel, shank and ball of the shoe satisfactorily, but it could not last the toes satisfactorily (R. Vol. 1, p. 400, lines 27–32). Thirty-four machines had been placed in factories, but they were experimental and not successful commercially (R. Vol. 1, p. 969, lines 1–6).

The Consolidated Company also furnished a few minor auxiliary machines (R. Vol. 1, p. 400, line 40).

The use of machines for lasting shoes was of a very recent development. In 1890 very few shoes were lasted by machinery, except heavy shoes lasted on the McKay and Copeland machine. Manufacturers and operatives were at that time sceptical as to the possibility of developing a machine which would last shoes. Lasting was a real handicraft operation requiring great skill. There was also considerable difficulty in introducing lasting machines, due to the opposition of the operatives. After machines were introduced and the operatives instructed in their use the operatives would strike or agree to last by hand for a reduction in pay and the machines would be stopped (R. Vol. 1, pp. 401–402). The result was that by 1899

only about one-half the shoes made were lasted by machine (R. Vol. 1, p. 402, lines 14–18).

The Davey Pegging Machine Company, which was owned by the Consolidated Company, made machines for attaching the soles of shoes by wooden pegs (R. Vol. 1, p. 415, lines 18–20; p. 534, lines 45–46).

C. The McKay Shoe Machinery Company.

This company manufactured and leased metallic fastening machines, used to insert metallic fastenings, and heeling machines, used for the preparation and attaching of heels. It operated through the McKay-Bigelow Heeling Machine Association and the McKay Metallic Fastening Association, both of which it owned (R. Vol. 1, p. 4, lines 23–36).

D. The Eppler Welt Machine Company.

This company, hereafter called the "Eppler Company," was not one of the constituent companies but was acquired after the formation of the United Company (R. Vol. 1, p. 530, lines 22–26; pp. 675–676). It manufactured and leased a welter, a stitcher, and a few auxiliary machines used in connection therewith. These machines were used for the manufacture of Eppler Welt shoes, and the leases under which they were put out limited their use to this purpose (R. Vol. 3, P.'s Ex. 59, p. 507).

The Eppler Welt shoe was of an entirely different construction from the Goodyear Welt shoe made by the Goodyear machines. It differed almost as radically as the McKay sewed shoe. This difference was due to a difference in the construction of the two welters put out by the respective companies. The Eppler machine placed the chain of the stitch used in attaching the welt in the channel made in the innersole. The Goodyear Machine laid the chain of the stitch on the welt so that the foot did not rest upon it (R. Vol. 1, p. 415, lines 26–43).

The Eppler Company had outstanding only between thirty and forty welt machines, one-third of which were in the factory of the president of the company (R. Vol. 1, p. 389, lines 6–9). The Goodyear Company had outstanding on March 1, 1900 (the nearest date to the formation of the United Company in evi-

POOR COPY

dence), 2,531 welters and stitchers (R. Vol. 5, Defs.' Ex. 226, p. 424).

The Eppler machines could not be used for turned shoes or for women's welt shoes and were unsatisfactory for use on men's shoes (R. Vol. 1, pp. 169–170, 531, lines 4–5).

The Eppler machines, therefore, occupied a small and very limited field.

E. The Machines manufactured by the Constituent Companies were protected by Patents, were the best Machines made, and, therefore, were used principally by Shoe Manufacturers for the Purposes for which they were Adapted.

The petition alleges,

> "Early in 1899 the companies above mentioned and described were manufacturing their machines, and parts thereof, under letters patent of the United States and of other countries" (R. Vol. 1, p. 993).

The petition further alleges that the principal concerns engaged in the business were the constituent companies (R. Vol. 1, p. 992), and that the United Company by the acquisition of the constituent companies "acquired control of the greater portion of the manufacture of, and trade and commerce in, the machines included in each and all of the groups of machines mentioned" (R. Vol. 1, p. 996).

A full discussion of the strong patents covering the machines is given at pages 204–237 of the Brief.

The machines put out by the constituent companies had been gradually developed by them or their predecessors in accordance with patents covering the machines. Each company had a lawful monopoly granted by the patent law covering the manufacture of its own machines, and of course no one else could manufacture these machines.

The shoe machinery industry was of very recent origin, all the work on shoes having previously been done by hand. The trade in machines of the kind manufactured by the constituent companies had been created by reason of and under the inventions for which the constituent companies held patents. No one else

had invented other types of machines which could do equally good work, and the machines put out by the constituent companies were, therefore, the best machines in the market (R. Vol. 1, p. 532, lines 16–18, 29–32). As a result, at the time of the formation of the United Company the Goodyear Company's machines were doing practically all the welt sewing and outsole stitching, the Consolidated Company's machines were doing practically all the lasting, and the McKay Company's machines were doing practically all the metallic fastening that was being done in the United States (R. Vol. 1, p. 537, lines 32–37). The McKay Company was also putting out all of the heeling machines that were being made in the United States at that time (R. Vol. 1, p. 851, lines 27–30).

3. ORGANIZATION OF THE UNITED COMPANY.

The United Company was organized on February 7, 1899.

The preliminary arrangements were made by Mr. Winslow, who was a member of the Executive Committee of the Consolidated Company (R. Vol. 1, p. 406, line 25), and Mr. Howe, who was vice-president of the Goodyear Company and in general charge of its business (R. Vol. 1, p. 466, lines 32–39).

Some time about July, 1898, they first discussed consolidating the businesses of the Goodyear Company and the Consolidated Company (R. Vol. 1, p. 629, line 19). This consolidation was agreed upon some time in January, 1899 (R.Vol. 1, p. 629, line 34). It was not originally planned to take over the McKay Company, and this question was only taken up after the formation of the United Company and the acquisition by it of the Goodyear and Consolidated Companies had been arranged (R. Vol. 1, p. 406, lines 36–40). It was not until the United Company had been agreed upon and about the time that it was organized that it was found the Eppler Company could be purchased and arrangements were made for its acquisition (R. Vol. 1, p. 633, line 5).

The United Company was organized with $25,000,000 authorized capital stock, of which $12,500,000 was preferred and $12,500,000 was common (R. Vol. 3, P.'s Ex. 1, p. 4).

The United Company at once took over the stock and later the properties of the Goodyear Company, the Consolidated Company, and the McKay Company, and likewise the International Goodyear Company, the Goodyear Company of Canada, and the Davey Pegging Machine Company, which were affiliated with the three principal companies. In March it took over the Eppler Company and the International Eppler Company.

The Goodyear Company, Consolidated Company, and the McKay Company, and such stock of the International Goodyear Company as was not owned by the Goodyear Company itself were paid for in stock of the United Company. In addition stockholders of the Consolidated Company received a small cash payment to adjust dividends. $2,395,435 of stock was issued for cash which was used to pay the expenses of organization, the floating debts of all the constituent companies, the

purchase of the capital stock of the Eppler Company, the International Eppler Company, and the Goodyear Company of Canada, and to provide $500,000 working capital for the United Company (R. Vol. 1, pp. 31–33).

The stock of the United Company was issued as follows:—

For $3,000,000 stock of the Goodyear Company .	$4,631,560
For minority stock of the International Goodyear Company not owned by the Goodyear Company	287,105
For $2,850,000 stock of the Consolidated Company	4,432,900
For $5,000,000 stock of the McKay Company .	5,500,000
To Syndicate for cash at par used to purchase Eppler Company, International Eppler Company, Goodyear Company of Canada, for payments of debts, organization expenses, and $500,000 working capital	2,395,435
Total,	$17,247,000

A. No Watered Stock was Issued.

The petition alleges that the constituent companies were taken over "at values far in excess of real worth" (R. Vol. 1, p. 995). This charge is absolutely unfounded.

The stock of the United Company was issued for value and was not watered (R. Vol. 1, p. 533, lines 31–32). The book values of the Goodyear and McKay companies, so far as could be judged, were far in excess of the prices paid by the United Company (R. Vol. 1, pp. 629–630). The stock of both companies had sold above par for a long time (R. Vol. 1, p. 533, lines 38–40). The McKay Company stock had sold at $8 or $9, but it was worth at least $11 a share, on which basis it was taken in (R. Vol. 1, p. 533, line 40–p. 534, line 4; p. 633, line 41–44). The stock issued to the syndicate was paid for in cash at par (R. Vol. 1, p. 32, lines 1–4).

The first statement of the United Company, issued in 1901, shows that it carried no item of good-will, and that it carried its valuable patents at only $745,269.27, and that the company had a substantial surplus (R. Vol. 4, P.'s Ex. 180, p. 1225).

B. Machines not Manufactured by the Constituent Companies.

The machines manufactured by the constituent companies which were acquired by the United Company covered only a portion of the shoe machinery field, and, as we have stated above, each had its own particular field which it had developed under its own patent monopolies. The constituent companies did not even manufacture all the machines used in bottoming shoes. Thus they did not manufacture the McKay Sewing Machine used to attach the soles to McKay shoes, which constituted substantially one-half the total number of shoes manufactured in 1899. They manufactured no machinery for cutting out or stitching or making uppers. They made no General Department machines, of which a large number were then manufactured, and of which the United Company now manufactures over one hundred and seventy different kinds.

Defendants' Exhibit 221A (R. Vol. 5, p. 370A) gives a list of eighty-five different dealers in machinery findings and supplies advertising in the trade papers in the years 1899 to 1902, which the United Company did not purchase and made no attempt to purchase. This list includes such important companies as the Wheeler & Wilson Sewing Machine Company, which supplied probably 90% of the machines which united the parts of the upper of the shoe (R. Vol. 1, p. 415, lines 12–14), and the Reece Button Hole Machine Company, which furnished probably every machine used for making buttonholes in shoes and for finishing the buttonholes (R. Vol. 1, p. 415, lines 15–17). The United Company also did not take over the Stanley Manufacturing Company, which put out the McKay Sewing Machine used to attach the soles of about one-half the shoes made (R. Vol. 1, p. 415, lines 4–12).

The fact that the United Company took over companies occupying only a portion of the shoe machinery field and made no attempt to acquire these other important companies establishes conclusively that the United Company was not formed to obtain a monopoly of all shoe machinery as charged in the petition.

4. ALLEGED COMPETITION BETWEEN CONSTITUENT COMPANIES.

The Government contends that there was competition between certain of the constituent companies of the United Company which made the formation of the United Company unlawful.

The brief statement given above of the business conducted by the constituent companies shows the unsubstantial character of this contention. However, as the United States has claimed that there was competition, we will consider it in detail.

The competition which the United States contends existed was (1) between the Ideal Lasting Machine made by the Goodyear Company and the lasting machines of the Consolidated Company, and (2) the welt machines of the Goodyear Company and the welt machines of the Eppler Company.

It is admitted that the McKay Company did not compete with any of the other companies.

A. ALLEGED LASTING MACHINE COMPETITION BETWEEN THE GOODYEAR COMPANY AND THE CONSOLIDATED & McKAY LASTING MACHINE COMPANY.

(I) INTRODUCTORY STATEMENT.

The only claim of competition in 1899 between the Consolidated & McKay Company and the Goodyear Company is the petitioner's claim that there was competition between lasting machines of these companies. It is admitted that the great bulk of the business of the Goodyear Company was in welt sewing and outsole stitching machines and their auxiliaries, and that the sole business of the Consolidated & McKay Company was in lasting machines. Indeed, so comparatively insignificant was the lasting machine business of the Goodyear Company that, as Mr. Howe testified, it treated its lasting machine "as an auxiliary to its welt and turn machine and its outsole stitcher" (R. Vol. 1, p. 626, lines 42–43).

The Consolidated Company in 1899 was putting out three different lasting machines:—

The McKay & Copeland Machine;
The Chase Machine;
The Hand Method McKay Machine.

It was also experimenting on a hand method welt machine.

The Goodyear Company was putting out the Ideal lasting machine.

All of these machines were patented (R. Vol. 2, pp. 2365, 2383, 2387–9, 2391–3, 2400–2).

The McKay & Copeland machine was designed and adapted for men's heavy standard screw, pegged and loose nailed shoes (R. Vol. 1, p. 523). The hand method McKay machine was designed and adapted for McKay sewed shoes (R. Vol. 1, p. 524, lines 1–3; Vol. 2, p. 2399). It is admitted that the use of each of these machines was confined to the particular field for which it was designed and that neither competed with the Ideal

machine of the Goodyear Company. *The only contention of the United States*, therefore, is that there was competition between the Ideal machine of the Goodyear Company and the Chase machine of the Consolidated Company, and that the Ideal machine also competed with the hand method welt machine on which the Consolidated Company was experimenting.

In considering petitioner's contention that there was competition between lasting machines of the Consolidated & McKay Company and the Ideal lasting machine of the Goodyear Company, the court will, of course, bear in mind that this case relates to a highly specialized industry in which hundreds of entirely different machines are used on the various types of shoes, and that each kind of shoe requires for its successful manufacture machines designed *particularly just for that kind of shoe*. Nothing is more thoroughly established by the record than these vital and fundamental facts.

Petitioner's case on this issue depends primarily on the assumption that merely because two different machines were called lasting machines and were used in lasting shoes, each of them as a matter of course could be used in lasting any kind of shoes, despite the fact that one was designed for use on one particular and peculiar type of shoes and the other for use on another particular and peculiar type of shoes. This is hardly more reasonable than it would be to contend that the welt sewing and outsole stitching machines of the United Company compete or could compete with the upper stitching machines of the Singer Sewing Machine Company, because all of these machines sew together parts of boots and shoes.

Obviously, to establish that in February, 1899, there was existing or potential lasting machine competition between the Goodyear Company and the Consolidated & McKay Company, it must be clearly proved that a lasting machine of one of those companies was actually used in 1899, or at that time plainly could be used, to do with commercial success the work of a lasting machine of the other company, or that such competing use was then imminent or threatened.

That the alleged lasting machine competition was utterly trivial and insignificant will be shown by reviewing evidence, proving that the overlapping use in 1899 of the Chase and Ideal machines could not at the most have exceeded .13 of 1% of all

the shoes lasted by machines, or .07 of 1% of all the shoes made in 1899, and that the number of hand method welt lasting machines out in 1899 was less than .8 of 1% of all lasting machines in use in 1899.

Since the indictment which was before the court in *United States* v. *Winslow* charged that the Consolidated & McKay Company made 60% of all the lasting machines made in the United States and that the Goodyear Company made 10% of all the lasting machines, it would seem a waste of time to argue about alleged competition so trivial and insignificant as we have indicated; but in view of petitioner's contention on this issue, and since the court is entitled to assistance in reviewing the considerable amount of evidence of more or less technical character, it seems to be necessary to review and correlate this evidence.

It is proposed to discuss first the alleged competition between the Ideal lasting machine and the Chase lasting machine.

(2) THE EVIDENCE AFFORDS NO FOUNDATION FOR PETITIONER'S CLAIM THAT THERE WAS ANY COMPETITION BETWEEN THE IDEAL LASTING MACHINE OF THE GOODYEAR COMPANY AND THE CHASE LASTING MACHINE OF THE CONSOLIDATED & McKAY COMPANY.

(a) Introductory Statement.

With regard to the field of the Ideal lasting machine in 1899, Mr. Winslow testified:—

> "The Ideal was developed for the express purpose of lasting women's welt shoes, there being at that time no machine in the market which was adapted to that purpose" (R. Vol. 2, p. 2909, Int. 18).

Mr. Howe testified:—

> "The Ideal laster was adapted to work on women's welts, light leather which no machine in the market at that time would do successfully. . . . The machine was designed and almost wholly used for lasting women's welts" (R. Vol. 1, p. 626, lines 44–45; p. 627, lines 1–3).

Mr. Howard testified:—

> "It was especially designed for the lasting of women's welt shoes and in February, 1899, substantially all women's welt shoes which were lasted by machine were being lasted on the Ideal lasting machine" (R. Vol. 2, p. 2387).
>
> "That machine practically had the women's welt shoe field to itself" (R. Vol. 1, p. 966, lines 22–23).

Mr. Donham testified:—

> "It [the Goodyear Company] also had a specially designed lasting machine, which it had originated for the purpose of enabling women's Goodyear welt shoes to be lasted by machine, there being at that time no other lasting machine adapted for lasting that class of work" (R. Vol. 1, p. 2, lines 19–22).

The Chase lasting machine was primarily adapted and used almost exclusively for lasting men's welt shoes.

Mr. Winslow testified that—

> "the Chase machine was especially adapted to and was developed for the lasting of men's welt shoes" (R. Vol. 2, p. 2909, Int. 17).

Martin E. Welch, a witness for the defendants, who manufactured women's shoes, testified:—

> "We did not use the Chase lasting machine; we don't use it on women's work" (R. Vol. 1, p. 711, lines 32–33).

Mr. Howe testified:—

> "The Chase machine was designed for and used almost exclusively on men's welts" (R. Vol. 1, p. 627, lines 12–13).

It is not disputed that the Ideal lasting machine was developed, especially designed, and principally used for lasting women's welt shoes. It is also not disputed that the Chase lasting machine was developed, especially adapted, and principally used for lasting men's welt shoes.

The petitioner claims, however, that the Chase was also used in the field of the Ideal and that, conversely, the Ideal was also used in the field of the Chase.

That the petitioner's claim of competition between the Chase and Ideal lasting machines was not taken seriously even by petitioner is at least indicated by the belated attempt of petitioner to prove such competition. Throughout its direct case petitioner offered no evidence showing any use of either of these machines in the field of the other.

In its rebuttal case, petitioner made an effort to show some use of each of these lasting machines in the field of the other. It called three witnesses to establish use of the Chase machine in the field of the Ideal machine, O'Keefe, Lemay and Springer (R. Vol. 1, pp. 934, 947). We shall show that none of these witnesses testified that the Chase machine was used on women's *welt* shoes, the field of the Ideal, and that at the most they merely expressed opinions that it could be so used, and such opinions, in the light of strong evidence that it was not adapted for such use, obviously have no probative value.

In its rebuttal case petitioner also called nine witnesses, Snow (R. Vol. 1, p. 895), Worsencroft (R. Vol. 1, p. 913), Whitman (R. Vol. 1, p. 915), Heffernan (R. Vol. 1, p. 917), Jordan (R. Vol. 1, p. 932), Murphy (R. Vol. 1, p. 933), O'Keefe (R. Vol. 1, p. 934), Florsheim (R. Vol. 1, p. 935), Fletcher (R. Vol. 1, p. 937), in the effort to show use of the Ideal machine in the field of the Chase on men's welt shoes, but much of their testimony either related to use of the machine *after 1899*,—that is, after the United Company was formed,—with the addition of improvements which better adapted the machine for men's welt shoes, and upon a new shape of shoe which was introduced after 1899; or it related only to use of the Copeland Rapid laster, which was practically obsolete before the United Company was formed and which the Goodyear Company was not putting out at all. This evidence in no way refutes the testimony of defendants' witnesses, corroborated by several of petitioner's witnesses, that the Ideal machine was developed and designed and chiefly used for lasting women's welt shoes, and that while it actually was used to a small extent on men's welt shoes, it was not adapted for that use and such use was utterly insignificant.

(b) The Chase Lasting Machine was Neither Adapted nor Used for Lasting Women's Welt Shoes and therefore was not Used at all in the Field of the Ideal Lasting Machine.

There is absolutely no proof in the record that the Chase lasting machine was ever used for lasting women's *welt* shoes.

On the contrary, such slight use of the Chase lasting machine on women's shoes as the record shows was altogether on women's *McKay-sewed shoes*, and *there is no evidence in the record and no claim is made that the Ideal lasting machine was ever used on women's McKay shoes.*

The petitioner relies upon three witnesses to establish alleged use of the Chase machine in the field of the Ideal lasting machine.

Petitioner's witness O'Keefe, after naming four different factories in each of which he testified he had used Chase lasting machines for lasting *men's welt shoes*, testified that in one only of those factories were Chase lasting machines used on women's work. That use was "for a short time" only (R. Vol. 1, p. 934, lines 36–40; p. 935, lines 8–9, 18–20). There is no intimation in O'Keefe's testimony that those women's shoes were *welt shoes*. Petitioner's witness Lemay testified:—

> "I know of no reason why the Chase machine could not be used successfully in lasting women's shoes" (R. Vol. 1, p. 947, lines 37–39).

But that mere statement of opinion does not in the least discriminate between women's *welt* and women's *McKay* shoes, and further such statement of mere opinion on the part of a witness who, so far as the record shows, *never even saw a woman's shoe of any sort lasted on a Chase machine* is obviously entitled to no weight. Furthermore, it is answered by that witness's own testimony that the only women's shoes made in any factory where he worked were McKays and were lasted on the hand method McKay lasting machine (R. Vol. 1, p. 947, lines 25–36).

The only use of the Chase lasting machine on women's work testified to by petitioner's witness Springer was also use in lasting women's *McKay-sewed* shoes. The shoes made in that factory were mostly men's McKays, and the making of women's

McKays was an experiment and was confined to a year. They only made a few thousand pairs and used the same machines they had (R. Vol. 1, p. 948, lines 42–44; p. 949, lines 5–6, 18–24, 32-33).

The only testimony Springer gave with regard to use of the Chase lasting machine on *women's welts* was a bare statement of opinion:—

> "*Q.* Do you know of any reason why it cannot be used on women's welt shoes the same as on men's?
> "*A.* No, sir" (R. Vol. 1, p. 948, lines 17–19).

This statement of opinion, like that given by Lemay, obviously has absolutely no probative value. Indeed on cross-examination Springer testified:—

> "I am not undertaking to give any very well-studied opinion as to the various uses that the Chase machines may be commercially put to successfully" (R. Vol. 1, p. 949, lines 24–26).

Thus, not only did petitioner's witnesses fail to establish any use of the Chase lasting machine in the field of the Ideal either in 1899 or since 1899, but the testimony of those witnesses supplements defendants' evidence establishing that the Chase machine was neither used nor adapted for use in lasting women's welt shoes.

Mr. Winslow testified on cross-examination that the Chase lasting machine was *not used* on women's welt shoes:—

> "*A.* No; it wasn't used on women's welts.
> "*Q.* Was it used at all on women's welts?
> "*A.* I don't know of a single factory or a single machine that was being used to last women's welt shoes" (R. Vol. 1, p. 525, lines 15–18).

Mr. Howard testified:—

> "So far as I can learn the Chase lasting machine was never used, either before or after 1899, in lasting women's welt shoes. There was not one Chase lasting machine in Lynn, the great women's shoe center, in January, 1899. So far as I know, there has never been one there" (R. Vol. 1, p. 971, lines 10–14).

Not only did petitioner fail entirely to prove any *use* of the Chase lasting machine for lasting women's welt shoes, but the evidence is that the Chase lasting machine was *structurally not adapted* for that work. Mr. Winslow testified:—

> "The Chase machine was not adapted for lasting women's welt shoes. The reason why it was not is that it is a practical impossibility up to the present time to last the leather that is used in the manufacture of women's shoes over the toe by any bed machine that does not previously wipe it up over the toe before coming in over the last. . . . The Chase machine . . . did not have that function" (R. Vol. 1, p. 398, lines 41–44; p. 399, lines 1–3).

Another structural difficulty in the use of the Chase lasting machine for women's welt shoes arose from the use in that machine of a retarder which, as explained by Mr. Howard,—

> "worked satisfactorily on the heavier leathers of men's shoes, but on the lighter leathers of women's shoes it would pull the stock along the centre of the shoe and would result in bowing or bending the tip seam forwardly, which of course was bad shoemaking and spoiled the shoe" (R. Vol. 1, p. 968, lines 36–40).

Petitioner's counsel also read into the record an advertisement of the Chase Lasting Machine Company advertising the Chase machine for use on women's shoes (R. Vol. 1, p. 960). But this advertisement does not even purport to claim that the Chase machine could be used on women's *welt* shoes, that is, in the field of the Ideal. There was evidence that the Chase machine was used to a very slight extent on women's McKay shoes, and presumably the advertisement had reference to such use, that is, to use in the field of the Hand Method McKay machine.

Furthermore, even if this advertisement had been intended to state that the Chase machine could be used on women's welt shoes it merely shows an attempt to introduce the machine in this field, and the fact that it was never used in this field in spite of the attempt merely confirms the defendants' testimony that it was structurally unfitted for such use.

There is, therefore, no evidence that the Chase machine was ever used on women's welt shoes and there is evidence that it was not so used and that for structural reasons it could not be so used commer-

cially. The record, therefore, establishes clearly that the Chase machine did not compete with the Ideal machine in the lasting of women's welt shoes.

(c) The Evidence also Refutes Petitioner's Claim that the Ideal Machine was Competing with the Chase Machine in the Field of the Chase, that is, in Lasting Men's Welt Shoes.

Petitioner contends that the Ideal machine could be used and actually was used on men's welt shoes, and, therefore, that it did compete with the Chase machine. That it was possible so to use it, and that it was so used to a slight extent, is not disputed by the defendants. Their contention is that it was not adapted for such use and could not be so used successfully in a commercial sense and that such overlapping of use as existed was negligible and did not constitute competition in any true sense.

Mr. Winslow testified that the Ideal machine was not adapted for lasting men's welt shoes successfully, except possibly some shoes made of very light leather (R. Vol. 1, p. 398, lines 32–40).

Mr. Howe testified that the Ideal machine might as a feat be used on men's welts, particularly if they were made of thin leather, but the machine was designed and almost wholly used for lasting women's welts (R. Vol. 1, p. 627, lines 1–3).

> "As a feat you could use the Ideal laster, which was designed for women's welts, on men's shoes, but that no one would think of doing so unless they were forced to" (R. Vol. 1, p. 679, lines 34–37.)

Robert P. Hazzard, a witness for the defendants, who manufactured men's Goodyear welts exclusively, 5,000 pairs a day (R. Vol. p. 641, line 10), testified on cross-examination:—

> "Before the United Company was formed we lasted welt work on the Chase machine and by hand. I never used an Ideal machine. I don't know what kind of work the Ideal did. I always assumed it was used more for women's work. That is, it was always considered that the Ideal machine was for women's work. I never tried, and never saw an effort made, to use it on men's work" (R. Vol. 1, p. 649, lines 40–43; p. 650, lines 1–3).

There were Fundamental Structural Characteristics of the Ideal Lasting Machine which Rendered it Unadapted for Use with Commercial Success on Men's Welt Shoes.

Mr. Howard explained the characteristic organization of the Ideal machine by reference to a patent showing its construction, and testified that on account of its peculiar organization the machine was *not strong enough* to last men's shoes and *frequently broke* when it was used on men's shoes. Mr. Howard further testified:—

> "It was this characteristic of the organization of the machine which constituted its weakness in its use on men's shoes. Owing to the fact that the wipers were supported so far from their acting edges, and that there was lack of support for the toe-lasting head directly under the wipers, the wipers sprung so that they would not seat the upper materials properly against the lip of the insole, and owing to the strain there was frequent breakage.
>
> "That weakness in the organization of the machine which I have described didn't affect its successful operation in operating on women's shoes. The strain is so much less than that which the machine encounters in lasting men's shoes that the machine was strong enough for its operation upon women's shoes. But when it came to deal with the heavier leather of men's shoes, then the difficulty disclosed itself" (R. Vol. 1, p. 968, lines 13–27).

On cross-examination Mr. Howard further explained that the Ideal lasting machine could not be used successfully on men's shoes—

> "because the dimensions of a man's shoe and a woman's shoe are substantially different. The power required for lasting a man's shoe is much greater than that required for lasting a woman's shoe" (R. Vol. 1, p. 972, lines 43–44; p. 973, lines 1–2).

Mr. Howard also testified that another important difference between men's shoes and women's shoes, which added to the difficulties encountered in attempting to use the Ideal machine on men's shoes, was that in a man's shoe the box toe must be heavier and stiffer, because it has so much more to do. Practically all men's shoes have box toes; if they didn't they would fall in at the toe (R. Vol. 1, p. 973, lines 16–31).

Petitioner's witness Snow testified:—

> "The Ideal machine could not be used successfully in lasting men's heavy shoes, because in wiping over the toe, the shoe lifted from the toe piece" (R. Vol. 1, p. 896, lines 12–14).
>
> "When we wiped up over the toe of the shoe the toe would lift off the toe-rest" (R. Vol. 1, p. 896, lines 36–37).
>
> "*Q.* That was the defect with the Ideal when it worked on anything except very light leather?
>
> "*A.* Yes" (R. Vol. 1, p. 897, lines 4–6).

In 1901 or 1902 Mr. Snow made two important improvements in the Ideal machine (R. Vol. 1, pp. 896–898, 900) about which he testified:—

> "I think it was these two improvements that changed the machine from an unsuccessful machine into a successful one" (R. Vol. 1, p. 900, lines 11–12).

Petitioner's witness Fletcher testified that he knew about Snow's putting one of his improvements, the hold-down, on Ideal machines, and that—

> "without the hold down the Ideal machine continually allowed the toe to rise, which caused the tip to pull ahead and to bow" (R. Vol. 1, p. 939, lines 1–6).

But it should be noted that these improvements merely improved the *mode of operation* of the Ideal Machine on men's shoes, as we shall show (*infra*, pp. 133–136); they did not in any way remedy the *structural weaknesses* which were explained by Mr. Howard (*supra*, p. 128).

Much of the Evidence introduced by Petitioner to show Use of the Ideal on Men's Shoes is not directed to the Ideal at all, but relates to the Copeland Rapid Laster, a radically Different Machine which was practically Obsolete in 1899.

Petitioner has very much confused this issue by introducing considerable testimony which does not relate at all to the Ideal lasting machine, but deals only with the Copeland Rapid lasting machine, which was an old machine formerly put out by the Goodyear Company, but which was obsolete in 1899. The Copeland machine became out of date with the revolution in styles and shapes of lasts about 1895, at which time the new

high-speed Chase lasting machine and the Ideal lasting machine were produced. The Ideal was the only lasting machine which the Goodyear Company was putting out immediately before the United Company was organized (R. Vol. 1, p. 972, lines 19–38; R. Vol. 2, pp. 2366–7, 2387).

Petitioner's witness Florsheim gave no testimony whatsoever in relation to use of the Ideal lasting machine, but testified only that, "in 1899 we were using three *Copeland rapid lasters*" (italics ours) (R. Vol. 1, p. 158, line 22).

A large part of the testimony of petitioner's witnesses Worsencroft, Jordan and Murphy relates to the Copeland machine (R. Vol. 1, p. 913, lines 40–44; p. 914, lines 9–11, 27–34; p. 932, lines 35–36, 40–41; p. 931, lines 1–2; p. 933, lines 37–42).

It is true that some of petitioner's witnesses testified that there was not much difference between the Copeland machine and the Ideal machine; but their testimony is discredited by their own admissions.

Petitioner's witness Worsencroft admitted on cross-examination that he had had only a limited experience with lasting machines incidental to his principal business of operating welt-sewing machines (R. Vol. 1, p. 914, lines 40–44; p. 915, lines 10–13, 21–23, 33–37).

Petitioner's witness Heffernan admitted a substantial structural difference between the Copeland Rapid laster and the Ideal (R. Vol. 1, p. 918, lines 3–4).

Petitioner's witness Jones, after testifying that the Copeland Rapid laster and the Ideal were two modifications of the same machine, or "adaptions of the same machine for slightly different classes of work," brought out strikingly the radically different uses of the two machines by explaining that by "slightly different classes of work" he meant—

> "that the Copeland Rapid was used for men's and the Ideal for women's."

And by then testifying:—

> "*Q.* Well, could either machine do the work of the other; that is, could one machine be used for both men's and women's shoes?
>
> "*A.* I wouldn't answer that at this moment from my knowledge. My recollection isn't clear enough" (R. Vol. 1, p. 107, lines 39–43; p. 108, lines 23–33).

The irrelevance of testimony relating to the Copeland Rapid laster and the absurdity of the claim of identity between the Copeland Rapid laster and the Ideal are further proved by Mr. Howard's testimony:—

> "*Q.* Was there any difference between the Copeland Rapid and the Ideal?
> "*A.* There was a great deal of difference.
> "*Q.* What was it?
> "*A. Practically the only similarity was the fact that both machines were organized for the upward wipe at the toe, and the constructions by which that effect was obtained were substantially different, radically different in the two machines. In all other respects the machines were substantially different; in most respects radically different*" (italics ours) (R. Vol. 1, p. 972, lines 22–31).

Moreover, Mr. Howard testified that the Copeland Rapid laster "was practically obsolete in 1899" and that—

> "The Copeland had practically been killed by the new high speed Chase lasting machine, which was introduced in 1895" (R. Vol. 1, p. 972, lines 20–21, 36–38).

Since the Copeland Rapid lasting machine was out of date and obsolete and had been discarded by the Goodyear Company, which in 1899 and for some time previously had been putting out the Ideal machine exclusively, it is clear that any testimony as to use of some Copeland machines which were still out at that time is not in any way pertinent to the issue and is immaterial.

Nearly all of the Evidence introduced by Petitioner to show Use of the Ideal on Men's Shoes relates to alleged Use of the Ideal after February, 1899.

It should be noted that there is much confusion in petitioner's case between conditions *before 1899* and conditions *after 1899*, whereas it is obviously important that they be kept separate. *Overlapping of the fields of the lasting machines of the Goodyear Company and the Consolidated & McKay Company after 1899 clearly has no bearing upon this issue in the absence of evidence that there was good reason "early in 1899" to anticipate that there might later be such overlapping.*

Of the witnesses put on by petitioner in its attempt to show

use of the Ideal in the field of the Chase, Snow (R. Vol. 1, p. 895 *et seq.*) and O'Keefe (R. Vol. 1, p. 934 *et seq.*) did not testify *at all* as to use of the Ideal on men's work *prior to February, 1899.* Testimony of petitioner's witnesses Heffernan (R. Vol. 1, p. 917 *et seq.*), Fletcher (R. Vol. 1, p. 937 *et seq.*), Jordan (R. Vol. 1, p. 932 *et seq.*) and Worsencroft (R. Vol. 1, p. 913 *et seq.*), dealt largely or almost entirely with conditions *after 1899.* The testimony of both Whitman (R. Vol. 1, p. 915 *et seq.*) and Heffernan relates to one factory only, the Whitman & Keith factory, as does also much of the testimony of Worsencroft, Jordan and Murphy (R. Vol. 1, p. 933 *et seq.*). It does not appear whether Murphy's testimony as to the Ideal machine relates to conditions before or after 1899.

After the formation of the United Company there was a slightly greater use of Ideal machines on men's welt shoes, but that use was due, first, to a change in styles of shoes and, secondly, to the invention of improvements which remedied the defects in the organization of the Ideal machine that had rendered it unadapted for men's shoes. It cannot be assumed that defendants had any reason in February, 1899, to anticipate this change in the styles of shoes and much less can it be assumed that they had any reason to believe that inventions would be made which would better adapt the Ideal machine for men's work.

The slightly increased Use of the Ideal Lasting Machine after 1899 was due to the introduction of the High Toed Last and to Inventions which better Adapted the Ideal Machine for Men's Work.

The slightly increased use of Ideal machines on men's shoes after 1899 was due to a radical change in the styles of shoes—the introduction of the so-called bull-dog toe which was made on a high-toed last. This is explained in the testimony of George E. Keith, a shoe manufacturer at Brockton:—

> "I did not have an Ideal lasting machine in my factory before the organization of the United Company in February, 1899. I put in the first Ideal machine in my factory in November 1899.
>
> "The occasion for my taking any Ideal machines at that time was that that was about the time of a radical change in the style of shoes; it was the era of what they call the bull-dog toe. The bull-dog toe originated in Brockton,

and so far as I know there was no manufacturer in Brockton ahead of me in the introduction of the high-toed last.

"The idea of getting the Ideal machine to try on the high-toed last was because it wiped up on the side of the last better than the Chase and then with the adjustable head helped us to overcome the height and width of the toe. That was the reason that led me to take and try the Ideal" (R. Vol. 1, p. 964, lines 31–44).

But Even for this Special Work on Men's Shoes the Ideal Lasting Machine was not Successful until Patented Improvements were Embodied in the Machine long after February, 1899.

Mr. Keith further testified:—

"When we first used the Ideal laster on men's shoes we couldn't get the result that we expected or wanted. The difficulty was that the machine being so light the last would lift as you came up on the sides of the toe. . . . It would rise, so that it was impossible to do the work. . . . As it came up over the sides of the last the last would spring up. As a result, we could not complete the job. This required the operator to keep repeating the operation a number of times and that slowed him down, and it creased fine leather or patent leather so that the shoe would be almost ruined" (R. Vol. 1, p. 965, lines 1–29).

Petitioner's witness Snow testified emphatically to the same effect:—

"*Q.* By going over it two or three times, it was done all right?

"*A.* No; it wasn't done all right then. The more you wipe up a toe the worse it is" (R. Vol. 1, p. 899, lines 38–40).

Petitioner's witness Snow further testified that in 1901 or 1902 he invented a hold-down which was put on the Ideal machines in the Keith and Douglas factories in Brockton and which prevented the shoe from being lifted off the toe rest (R. Vol. 1, p. 896, lines 27–44; p. 897, lines 1–13).

Mr. Keith testified as to this hold-down:—

"A device was developed in my factory to be attached to the Ideal machine to help it in lasting men's shoes.

This was an attachment that could be swung around to hold the last down in its place so that the work could be performed better and so that the last could not rise. . . .

"Until that was done, in my opinion, the Ideal machine would not be commercially a success, under the conditions that were on the market at that time. Before we put on the hold down the trouble was with bringing the upper smoothly on a last that had a wide edge—to bring that up smooth before it was wiped over" (R. Vol. 1, p. 965, lines 8–24).

Petitioner's witness Whitman testified:—

"*Q.* And it is a problem with the old-fashioned Ideal laster to last those high-toed shoes without the lasts slipping up?

"*A.* Yes, sir.

"*Q.* Unless you have this hold-down?

"*A.* Yes, sir.

"*Q.* And without the hold-down you can't last those high-toed shoes as a good shoemaker wants to have it?

"*A.* *Not satisfactorily; no, sir*" (italics ours) (R. Vol. 1, p. 917, lines 7–14).

With regard to the difficulties encountered in the Whitman & Keith factory in the use of the Ideal lasting machine on men's shoes *before* the invention of the hold-down, petitioner's witness Heffernan testified that the hold-down was applied "because of the bowing of the tips and flattening of the heels."

Heffernan also testified:—

"*Q.* What does 'bowing of the tips' mean?

"*A.* Pulling up the tip of the shoe, pulling that cap line out of true. . . .

"*Q.* What happens to the heel?

"*A.* It flattens the back of the heel—flattens it in."

"I had to keep after the operators all the time, regulate the machines myself, put pressure on the heel pads to see that I could hold them down there and make them press on the shoe while they were trying to last the toe" (R. Vol. 1, p. 918, lines 35–43; p. 919, lines 1–5, 43–44; p. 920, lines 1–2).

Heffernan further testified that since this hold-down was applied to the machines in the Whitman & Keith factory—

"I don't have one tip bowed in a month now, whereas before I would get a dozen shoes in a case" (R. Vol. 1, p. 920, lines 8–9).

A case of men's shoes is *24* pairs (R. Vol. 1, p. 193, line 14).

Petitioner's witness Snow also testified:—

"*Q.* Did you also invent something else that held or that brought the wipers in around the counter?
"*A.* Yes, sir" (R. Vol. 1, p. 897, lines 14–16).

Snow also made another improvement on the Ideal machine, the patent on which is Defendants' Exhibit 338. He testified that before this improvement was added to the Ideal machine—

"the heel band would not bring the corners of the counters in.
"*Q.* The heel band of the Ideal machine?
"*A.* Yes; would not bring the end of the counters in. I made a something that would bring them in" (R. Vol. 1, p. 897, lines 30–34).
"*Q.* Now, it was with these two devices and improvements attached that Mr. Douglas used the Ideal laster on men's shoes?
"*A.* Successfully; yes.
"*Q.* And without those the Ideal would not last men's shoes successfully, would it?
"*A.* No, sir" (R. Vol. 1, p. 898, lines 35–40).

Heffernan testified that they had had the heel band improvement on the machines in the Whitman & Keith factory "for over twelve years" (R. Vol. 1, p. 918, lines 19–23).

We submit that this limited use of the Ideal machine *after 1899* which was occasioned by a radically new style of shoes that was not made in February, 1899, and which was made possible only by embodying in the machine inventions made long after that date, has no bearing upon this case. No one can reasonably anticipate today that a given patentable invention will be made to-morrow; that invention may not be made for ten years; it may never be made. If the record had shown, as it does not, that officials of the Consolidated & McKay and Goodyear companies had had reason to anticipate the introduction of high toes for men's shoes, by no possibility could it have been shown that they

had any reason to believe that inventions would be made several years later which would adapt the Ideal lasting machine for that development in the industry.

In February, 1899, there was only the most Trivial and Incidental Overlapping of the Ideal and Chase Machines through Use of the Ideal in the Field of the Chase, and that Overlapping Use was Absolutely Insignificant and Utterly Negligible.

Prior to the organization of the United Company the Goodyear Company had put out only 248 Ideal machines. Of these nearly two hundred were in factories where only women's shoes were made, and only about forty were in factories where men's shoes only were made (R. Vol. 1, p. 966). Of the 40 machines in factories where men's shoes only were made, Douglas had 17; Whitman & Keith, 7; Cushman, 6; Banister, 6, and the Duquesne factory at Pittsburgh had several (R. Vol. 1, p. 914, lines 5–8; p. 915, lines 7–8; p. 972, lines 9–13). There is evidence that the machines in the Whitman & Keith, Cushman, and Duquesne factories, 18 at the most, were being used before 1899. For all that the record shows the others may have been entirely idle. (O'Keefe did not work at Banister's before 1902 (R. Vol. 1, p. 934, lines 24–29).) This is certainly a meager showing of competition by a machine which had been on the market for nearly four years (R. Vol. 2, p. 2387).

The total number of lasting machines of all kinds out on January 1, 1899, was between 4,200 and 4,300. The Ideal machines, therefore, constituted about 5 or 6% of all lasting machines outstanding (R. Vol. 1, p. 975, lines 42–45). The total number of shoes operated on in 1899 by both the Ideal and the Copeland Rapid was .77 of 1% of all shoes lasted by machines (R. Vol. 1, p. 975, lines 35–41). Not more than one-half of the total number of shoes made in 1899 were lasted by machines (R. Vol. 1, p. 402, lines 14–18), so that less than .40 of 1% of all shoes made in 1899 were lasted on both the Copeland Rapid and the Ideal. As it appears that at the most not more than one-sixth of the Ideal machines were used on men's welt shoes, the total number of men's welt shoes on which the Ideal machine operated was less than .07 of 1% of all the shoes made in 1899.

With regard to the extent of this field which was occupied by the Ideal lasting machine it will not be forgotten that the bulk of women's shoes were lasted by hand in 1899, comparatively few being lasted by machine (R. Vol. 1, p. 525, lines 42–45).

(d) In the Normal and Natural Development of the Industry both the Chase Lasting Machine and the Ideal Lasting Machine have been superseded and have become obsolete. Accordingly any Question of their Possible Competition has become a Moot Point.

As a result of the development of the modern shapes of shoes, made on "crooked lasts," which is reviewed and explained by Mr. Howard, a few years after 1899 the Ideal and Chase machines both proved entirely inadequate for satisfactory work in lasting shoes made upon modern lasts (R. Vol. 2, pp. 2372–7, 2389–90). This situation was recognized by the United Company, and it met the demand for a machine which would successfully last shoes made upon these modern lasts by the development of a greatly improved lasting machine of radically different organization from either the Ideal or the Chase machine. The work of that new machine, the "No. 5," was so far superior and its capacity so much greater that it immediately superseded both the Chase and the Ideal machines, and there was no longer any demand for those machines. Mr. Howard testified:—

> "The Ideal machine, like the Chase machine, was not adapted for satisfactory work in lasting shoes made upon modern lasts such as have been used in the past eight or ten years" (R. Vol. 2, p. 2389).
>
> "After the No. 5 lasting machine was developed the demand from shoe manufacturers for Ideal machines ceased altogether and most of them have been returned in exchange for No. 5 machines. It was just the same in the case of the Chase machine" (R. Vol. 1, p. 971, lines 5–8).

Mr. Howard further testified:—

> "After manufacturers became acquainted with this No. 5 lasting machine the company was overwhelmed with orders. In February, 1911, the company was over 400 machines behind in its orders for No. 5 lasting machines, although it was building and shipping machines as fast as

> the facilities of its manufacturing plant would admit. For example, in April, 1911, the company shipped 208 machines. At no time since the machine was introduced has the company been able to catch up with its orders, and even as late as August, 1913, which is the date of the last report I have, the company was 82 machines behind in filling its orders. On that date 4,204 of these No. 5 lasting machines had been shipped. On December 1, 1911, over 3,000 of these machines were in use in shoe factories.
>
> "From the beginning, the No. 5 lasting machine has been adapted for lasting either men's or women's welt shoes. It has superseded the Ideal lasting machine as well as the Chase lasting machine and is now the standard commercial bed lasting machine supplied to manufacturers by the United Shoe Machinery Company" (R. Vol. 2, pp. 2380-1).

The ridiculous contention of petitioner's witnesses Heffernan, Whitman and Murphy that the Ideal machine had as great capacity as the No. 5 lasting machine was completely answered by Mr. Howard's testimony as to actual conditions in the Whitman & Keith factory, to which the testimony of those witnesses relates. He testified that several of the Ideal machines in that factory had been entirely idle, while they had been using the No. 5 machines all the time, and that the royalty returns giving the actual output of both types of machines showed that the average output of the No. 5 machine in that factory was much greater than that of the Ideal machine (R. Vol. 1, p. 967, lines 1-31). Mr. Howard concluded:—

> "For several years, and since some time prior to the beginning of this suit, it has been an accepted fact in the industry that the No. 5 machine did better work and more of it than the Ideal" (R. Vol. 1, p. 970, lines 5-8).

The absurd contention that the Ideal machine was as good as the No. 5 machine was further answered by petitioner's own witnesses. Cunningham said of the No. 5 machine: "It is a better machine." Fletcher said: "The No. 5 is superior to the Ideal" (R. Vol. 1, p. 289, lines 42-43; p. 938, line 21).

It thus appears that both the Ideal and Chase machines have become obsolete, and any question of their possible competition has become a moot point. No decree of this court could restore such competition if it ever existed.

(e) The Finding of the District Court as to Competition between the Chase and the Ideal Machines.

The District Court found in its opinion as follows:—

> "There is no proof of any actual use of the 'Chase' laster otherwise than for its intended purpose of lasting men's welt shoes. It could not work well for use with the lighter leather whereof women's shoes are made. The 'Ideal' laster, used almost exclusively for its intended purpose of lasting women's welt shoes, could not be relied on to work well with the heavier leather whereof men's shoes are made. The proof relied on to show that it competed with the 'Chase' went no further than to show that a number of 'Ideal' machines, small in proportion to the total number then in use, were being used in a few factories on men's shoes, notwithstanding their want of adaptation to such use. That there was any attempt to put either machine into the market as against the other does not appear. No competition between the two in the usual sense of the term is shown. After the consolidation, by the addition of a patented 'hold down attachment' added by the United Company to the 'Ideal' in 1901 or 1902, some of the defects referred to were removed, but not until then can it be said to have been commercially successful for work on men's shoes. Before this improvement, it possessed at most a limited possibility of such use. I am unable to consider it established that competition in any practical sense was destroyed when the United Company became owner of both machines" (Dodge, J., R. Vol. 1, p. 1130).

(3) THE EVIDENCE AFFORDS NO FOUNDATION WHATEVER FOR PETITIONER'S CLAIM THAT THERE WAS COMPETITION IN 1899 BETWEEN THE IDEAL LASTING MACHINE OF THE GOODYEAR COMPANY AND THE HAND METHOD WELT LASTING MACHINE OF THE CONSOLIDATED & McKAY COMPANY.

(a) Introductory Statement.

The Chase and Ideal lasting machines and the hand method lasting machine were of radically different types. The Chase and Ideal were of the "bed" type, in which the last and shoe are supported by a heel support and a toe rest, and the upper materials are worked over into lasted position at the heel and toe

by "wipers." This type also includes a "heel band" for forcing the upper materials, including the stiff "counter," around the heel end of the last. In this type of machine the tacks which secure the upper in lasted position are driven by a "hand tacker" except around the toes of welt shoes where the upper is secured by wire (R. Vol. 2, pp. 2362–3).

In the "hand method" type the upper is worked over the last and automatically tacked in a step-by-step operation, and the operator holds the shoe in his hands while the machine is operating upon it (R. Vol. 2, p. 2363).

When the United Company was formed the Consolidated & McKay Company was putting out the hand method McKay lasting machine. That machine could not be used for the lasting of welt shoes owing to the radical differences between McKay shoes and welt shoes, as explained by Mr. Howard:—

> "The lasting of welt shoes is a very different operation from the lasting of McKay shoes. . . . The insole of a McKay sewed shoe is flat, and in the lasting of such a shoe it is only necessary that the upper stock be worked properly over the edge of the last, laid down upon the flat insole, and tacked. The insole of a welt shoe, on the other hand, is formed with a channel lip or rib extending all the way around the shank, forepart and toe. The narrow strip between this lip or rib and the edge of the sole is known as the 'feather edge.' . . . In order that the shoe may be in proper condition for the welt-sewing operation, the upper must, in the lasting operation, be forced into the angle formed by the feather edge and the upturned lip, and must be secured in that position. The hand method lasting machine supplied for the lasting of McKay sewed shoes had no provision whatever for getting the upper into this angle between the feather edge and the lip, and for securing it in that position snugly against the lip. Not only was the hand method lasting machine for McKay work unsuited for the lasting of welt shoes satisfactorily, but in fact it could not possibly be used commercially for that work" (R. Vol. 2, pp. 2399–2400).

For some time prior to 1899 the Consolidated Company had been endeavoring to construct a hand method machine which would last welt shoes and it—

> "had developed that machine to a point where it could last the heel, shank and ball, but could not last the toes satisfactorily" (Winslow, R. Vol. 1, p. 400, lines 27–32).

Mr. Howard testified that prior to the organization of the United Company there were under lease only thirty-four hand method welt lasting machines. The manufacturers wouldn't take them. "The machines were being knocked about from pillar to post. They didn't stick. They would be sent out on trial and they wouldn't stay" (R. Vol. 1, p. 969, lines 4–6).

Mr. Winslow testified:—

> "And while it is true that we had machines out it is true that they were not being accepted by the manufacturers and they were being sent out and coming back. We were trying all the time to keep them going. . . . We were trying to hold them in the field, but we knew that they were not commercially successful" (R. Vol. 1, p. 978, lines 2–5, 11–13).

The petitioner read into the record certain advertisements of the Consolidated Company in a trade paper dated December 3, 17, and 31, 1898, advertising the hand method lasting machine for lasting welt shoes (R. Vol. 1, p. 960, lines 25–28).

These advertisements do not state that the machine is intended for women's welt shoes, the field of the Ideal machine. But apart from this, they merely show an attempt by the Consolidated Company to introduce the machine. They in no wise refute the testimony referred to above, showing that this attempt of the Consolidated Company had failed, and that the machine was not commercially successful.

The hand method welt machine was not a commercial success in 1899 principally because, as stated by Mr. Winslow, "it would not last the toes of the welt shoes properly" (R. Vol. 1, p. 524, lines 10–11).

Mr. Winslow explained why the machine could not be successfully used on a welt shoe:—

> "The inner sole is channeled, as shown in Defendants' Exhibit 145, and in lasting the upper has to be forced against the shoulder of the channel. In order to do this some form of wiper must be used and in the hand-method machine there was no wiper which would push the upper in up to the shoulder of the inner sole. The years of experimentation which we carried on were for the purpose of producing a wiper which would do that" (R. Vol. 1, p. 399, lines 34–41).

Mr. Winslow further testified that early in 1898 in the lasting of welt shoes by the bed machines the taping of the toes was adopted, thereby doing away entirely with the use of tacks to hold the toe, which is a great advantage to the welt sewing operation. The result of this was that the hand method welt machine became even less desirable by comparison with the bed machines (R. Vol. 1, p. 977, lines 40–45; p. 978, line 1).

Mr. Howard testified:—

> "In order to last a toe properly it was frequently desirable to give several pulls upon the same portion of the stock at the toe by the pinchers, and that could not be done, because since the machine drove a tack at every operation of the pinchers, the tacks would be driven one upon another. If they attempted to take hold of a portion of the stock near that or closely adjacent to that just acted upon, the tacks would be driven so close together that they would cut the stock and spoil the leather. Then, of course, the presence of some of those lasting tacks or of stay tacks, if they were driven to take their places, interfered seriously with the operation of the welting machine. The needles would break.
>
> "And more than that, until this wiring attachment was placed upon the machine the machine would not force the upper properly against the rib of the inner sole, and it was necessary to perform a subsequent hand operation upon the shoe by means of what was known as a 'banging iron,' one of which is Defendants' Exhibit 340. . . . That was a subsequent additional hand operation for which operators were paid two and one-half cents per dozen" (R. Vol. 1, p. 969, lines 13–30, 36–38).

(b) The Hand Method Welt Lasting Machine did not become Commercially Successful until a New Wiring Device was Invented and Incorporated in it after the Formation of the United Company.

Mr. Howard testified:—

> "The attachment for placing wire instead of tacks around the toe was first adopted and applied to the hand method welt lasting machine in January, 1900, in its original form. The wire attachment was improved a year later, but the machine really reached a point of commercial success with the adoption of the first wire attachment" (R. Vol. 1, p. 969, lines 41–44; p. 970, lines 1–2).

This wiring device performed the same function which the taping device performed on the bed machine (R. Vol. 1, p. 978, lines 6–8). It obviated the difficulties which had made the hand method machine previously unsatisfactory.

(c) There is no Evidence Whatever that the Thirty-four Experimental Hand Method Welt Lasting Machines which were out were ever used in the Field of the Ideal Machine, that is, on Women's Welt Shoes.

The record is absolutely silent as to the kinds of shoes on which the thirty-four experimental hand method welt lasting machines, which were out in February, 1899, were used, so far as they were being used. The petitioner did not attempt to show that there was any actual use of the machines on women's welt shoes.

With respect, therefore, to the claim of petitioner as to competition involving the hand method welt lasting machine, the record shows that the following state of facts existed at the time of the formation of the United Company:—

Only thirty-four hand method welt machines had been put out up to February, 1899, a trifling number compared with between 4,200 and 4,300 lasting machines of all kinds then in use; these thirty-four lasting machines were really only experimental and their use amounted to nothing more than affording thorough shoe-factory trials of the machine. In spite of continuous and aggressive attempts for several years on the part of the Consolidated & McKay Company to make the hand method welt machine successful, in February, 1899, that machine was a flat failure because it could not satisfactorily last the toes of welt shoes; at that time not only was the hand method welt machine in a state of experimental development only and a commercial failure, but there was absolutely nothing in sight upon which even to hazard a reasonable guess that the hand method welt machine *ever would become a success*. The toe-wiring mechanism to which the hand method welt machine owed its entire commercial success, first applied to the machine in 1900, was a radically new departure not even dreamed of in February, 1899. No one could then reasonably anticipate that mechanism would be invented which could be incorporated in that highly organized

automatic machine and would successfully apply wire around the toe during the step-by-step operation of the machine. If those inventions—and there were two of them before a successful organization was produced (R. Vol. 2, p. 2403)—had not been made, the hand method lasting machine for welt work would never have been heard of in this suit.

It is absolutely clear, therefore, if anything is clear from the record, that in February, 1899, the hand method welt machine did not offer either existing or potential competition worthy of the slightest notice.

(d) Even after the Hand Method Welt Lasting Machine became Commercially successful in 1900 It had a Field of its own distinct from the Field of the Bed Lasting Machines, such as the Ideal.

Furthermore, owing to the very radical differences between the hand method type of lasting machine and the bed type of lasting machine such as the Ideal, the hand method welt machine, after it became commercially successful, naturally found a field of its own distinct from the bed lasting machine field, manufacturers who preferred speed to quality employing the hand method welt machine and manufacturers who preferred quality to speed employing a bed machine. As explained by Mr. Howard:—

> "There is a difference of opinion among shoe manufacturers as to the desirability of using the hand method machine or the bed type of lasting machine for welt shoes. Those manufacturers who believe that they can secure better lasting upon the bed type of lasting machine prefer, and are supplied with, Lasting Machine No. 5, USMC, the United Company's standard commercial bed lasting machine, which was introduced in 1908. Other manufacturers who are satisfied with the quality of the work done on the hand method lasting machine for welt work prefer that machine because they can get twice the amount of work from it as from the bed type of lasting machine. Either type is supplied to the manufacturer by the United Company, according to his preference" (R. Vol. 2, pp. 2406, 2407).

As stated by Mr. Winslow:—

> "Wherever they can last a welt shoe satisfactorily by the hand method machine they use that in preference, because it is a speedier machine for lasting than any of the other machines, but the quality of work which can be done by that machine, especially around the toe, is not considered by the manufacturers so high grade as when you can use the bed machine" (R. Vol. 1, p. 526, lines 16–22).
>
> "Manufacturers prefer to use the hand method welt lasting machine on women's welt shoes or any welt shoes where quality is not the first consideration, because it is a faster and more economical machine" (R. Vol. 1, p. 527, lines 21–24).

The testimony of petitioner's witnesses also showed that the hand method machine and the bed machines had different fields. For example, petitioner's witness Selz testified:—

> "We use the Consolidated machine . . . for McKay work in men's shoes and both McKay and welt work in women's shoes. . . .
>
> "*Q.* And while it is true that you could possibly physically last almost any kind of a shoe on the hand-method machine, there are some kinds of shoes which it does very much more economical work upon than others?
>
> "*A.* Yes, that is true" (R. Vol. 1, p. 149, lines 4–7, 27–31).
>
> "The Chase machine is better on welt work than the Consolidated" (R. Vol. 1, p. 157, lines 21–22).

Petitioner's witness Fletcher testified that Douglas used the hand method machine on the cheapest grade of men's welt shoes (R. Vol. 1, p. 938, lines 12–16).

Petitioner's witness McElroy testified that the No. 5 lasting machine "is better adapted for men's welts" (R. Vol. 1, p. 192, line 37).

The high degree of specialization in lasting machines which is required by the industry is further illustrated by the fact that the United Company manufactures and puts out five different types of hand method lasting machines, each of which is designed for a particular use upon a particular kind of shoe, and none of which is adapted to be used successfully, if at all, upon the kind of work for which any of the other types is designed and adapted, as is fully explained in the record (R. Vol. 2, pp. 2390–2416).

(e) Finding of the District Court as to Competition between the Ideal and Hand Method Welt Machines.

The District Court held with respect to this alleged competition (Dodge, J.) (R. Vol. 1, p. 1130):—

> "With still another laster with which the Consolidated Company was experimenting in 1899 for use on welt shoes, we are not here concerned, because, though this laster was afterward further improved, developed, and finally furnished to users by the United Company, it had not been made an article of commerce in any practical sense when that company was formed."

(f) Such Insignificant and Incidental Lasting Machine Competition, if Any, as Existed in February, 1899, Involved Infringement by Each Company of the Other's Patents and Accordingly was at Least Prima Facie Unlawful.

Serious patent litigation between the Consolidated Company and the Goodyear Company was pending at the time of the formation of the United Company. This patent litigation involved important features common to the machines of both companies. Numerous infringement suits had been brought, in some of which one and some of which the other company was the defendant. Suits were also pending against users of the different machines who were largely the customers of both companies (R. Vol. 1, p. 632, lines 14–41).

(4) GENERAL STATEMENT OF THE SITUATION IN RESPECT TO THE ALLEGED LASTING MACHINE COMPETITION.

The true situation as to the lasting machine conditions in February, 1899, with respect to the Ideal lasting machine and the lasting machines of the Consolidated & McKay Company was thus stated by Mr. Howe:—

> "Whatever competition there was was due to their respective fields lapping over" (R. Vol. 1, p. 629, lines 14–15).
>
> "They really occupied separate fields. It was competi-

tion which might be described as incidental or as negligible" (R. Vol. 1, p. 629, lines 17–18).

"Each had its separate field for which it was designed, but in the cases of all machines of a genus the specific varieties will overlap" (R. Vol. 1, p. 627, lines 17–19).

As stated by Mr. Winslow:—

"Very soon after a given machine had been introduced they settled into their natural positions" (R. Vol. 1, p. 404, lines 37–38).

"These machines have the fields which I have described and they naturally belong to them. No manufacturer to-day would think of using them outside of those fields" (R. Vol. 1, p. 405, lines 3–6).

(5) SUMMARY OF THE EVIDENCE AS TO THE ALLEGED LASTING MACHINE COMPETITION.

1. Neither the McKay & Copeland machine nor the hand method McKay machine (both put out by the Consolidated Company) could be used on welt shoes, so that neither competed or could compete with the Ideal machine of the Goodyear Company. This has not been denied.

2. The Chase machine put out by the Consolidated Company was adapted for use and was used almost exclusively for lasting men's welt shoes.

Such slight use as was made of that machine in lasting women's shoes was on women's *McKay* shoes. The evidence shows that the Chase machine was structurally not adapted for use on women's welt shoes, and there is not a bit of evidence that it was ever used in lasting women's *welt* shoes. It, therefore, did not compete with the Ideal machine of the Goodyear Company in lasting women's welt shoes, which was the field of the Ideal machine.

3. The Ideal machine of the Goodyear Company was adapted to and developed for the purpose of lasting women's welt shoes. It was possible to use it on men's welt shoes, but it was not commercially practicable for such use.

The insignificant use of the Ideal machine on men's welt shoes did not show that there was competition between the Ideal machine and the Chase machine, but only showed an incidental

overlapping of the fields of the two machines which were primarily intended, adapted, and used in different and distinct fields.

In 1899 the Ideal machines constituted only 5 or 6% of all the lasting machines in use. The machines lasted only .77 of 1% of all shoes lasted by machines in 1899. At the most only about one-sixth of the shoes lasted on the Ideal machines were men's welt shoes. The alleged competition by the Ideal machine, therefore, was in lasting approximately .13 of 1% of the shoes lasted by machines in 1899. As only about one-half the shoes made in 1899 were lasted by machines, the actual use of the Ideal machine in alleged competition with the Chase machine is reduced to the use of the machine on less than .07 of 1% of all the shoes made in 1899.

It is obvious that the alleged competition was entirely insignificant.

4. The slightly increased use of the Ideal machine on men's welt shoes after 1899 was made possible by new inventions made long after the formation of the United Company which overcame some of the practical difficulties in using the machine on men's welt shoes, and the occasion for that use was the introduction of a radically new style of shoe which was made upon a new type of last.

5. The hand method welt machine of the Consolidated Company was only in an experimental stage in 1899. Only thirty-four machines were under lease, or about .08 of 1% of the total number of lasting machines in use, and these few machines were being constantly returned. Even as to these machines there is no evidence that they were used on women's welt shoes, the field of the Ideal machine. The machine did not become a commercial success until 1900, when a new mechanism was adopted which had not been invented and could not have been foreseen in 1899.

The machine, therefore, did not offer any actual competition to the Ideal machine in 1899 or any prospective competition which could have been foreseen.

6. Even after the hand method welt machine became commercially successful in 1900, it had a field of its own. Manufacturers preferring speed to quality used the hand method machine, and those preferring quality to speed used the Ideal

machine or the Chase machine, according to the character of their work.

7. The patent litigation between the Goodyear Company and the Consolidated Company shows that if a trivial and insignificant competition may be said to have existed, it involved infringement by each company of the patents owned by the other and accordingly it was at least *prima facie* unlawful.

8. In the natural and normal development of the industry both the Ideal machine and the Chase machine have become obsolete. If any competition ever existed it could not be recreated.

(6) THE ACQUIRING OF BOTH THE IDEAL MACHINE OF THE GOODYEAR COMPANY AND THE LASTING MACHINES OF THE CONSOLIDATED COMPANY DID NOT MAKE THE ORGANIZATION OF THE UNITED COMPANY UNLAWFUL NOR DID IT SHOW ANY WRONGFUL INTENT.

The acquisition by the United Company of the Ideal machine of the Goodyear Company and the Chase machine and the experimental hand method welt machine of the Consolidated Company could not make the formation of the United Company unlawful, unless by its necessary effect or by reason of the intent with which it was done it prejudiced the public interest by unduly restraining trade or creating a monopoly.

As we have shown, there is no evidence of anything which could be dignified by the name of competition between the machines of the two companies. So far as the Ideal and Chase machines are concerned there was only a slight overlapping of the fields of use of two machines adapted for different purposes. The slight experimental use of the hand method welt machine was negligible.

It cannot be seriously contended that this slight overlapping of the fields of the Ideal and Chase machines and the insignificant use of the experimental hand method lasting machine necessarily created an unlawful restraint of trade and made the formation of the United Company inherently unlawful.

Nor does this acquisition show any intent by the parties to eliminate competition. The manufacture of the Ideal machine

was a negligible part of the business of the Goodyear Company. It is self-evident that its acquisition by the United Company was purely incidental to its acquisition of the machines for making welt and turn shoes, the manufacture of which constituted the principal business of that company. There is absolutely no justification for contending that the elimination of this trivial competition, if indeed any actual competition did exist, was an actuating motive in the formation of the United Company.

The real purpose of the parties was to create a more efficient organization and to combine the Goodyear welt machines with the machines of the other companies. An incidental elimination of an almost insignificant competition between two different types of patented machines would not be sufficient to make unlawful the consummation of this lawful purpose.

Moreover, even if the Ideal machine had been the only machine owned by the Goodyear Company, so that its acquisition had been, not an incidental result of acquiring the Goodyear Company's welt machines, but the direct purpose of the acquisition, it would have been lawful.

The United Company naturally and properly desired to furnish the best and most efficient types of lasting machines. It obtained, through the Consolidated Company, the patents on, and therefore the right to supply the Chase machine, the McKay & Copeland and the Hand Method machines. No one of these, however, lasted women's welt shoes successfully. It naturally desired to furnish a machine for lasting women's welt shoes, and the Ideal machine was the only machine of the kind on the market. The Ideal was patented, and the United Company, therefore, could not furnish the Ideal unless it acquired the patents which the machine embodied. Until it acquired these patents it was absolutely restrained from furnishing this type of machine, and as the Ideal machine was the only machine then invented which could last women's welt shoes, the United Company was absolutely restrained from furnishing any machine for this purpose. It was, therefore, normal and strictly in furtherance of its legitimate business for the United Company to acquire these patents. To hold otherwise would be to hold that the United Company could not furnish a machine for lasting women's welt shoes, merely because such machine could also be used, or was used to a slight extent, for lasting men's welt shoes.

Furthermore, the settlement of the infringement suits between the parties justified the combination of the patents covering them. If, for example, the Goodyear Company had lost these suits, it might have been compelled to abandon the Ideal machine entirely. It was entitled by combination with the Consolidated Company to avoid infringement suits brought against users of this machine. An acquisition of both sets of patents for this purpose would have been a legitimate normal transaction not forbidden by the Sherman Act.

B. ALLEGED COMPETITION BETWEEN THE GOODYEAR COMPANY AND THE EPPLER COMPANY.

(1) INTRODUCTORY STATEMENT.

The welt shoe differs from other kinds of shoes in the method by which the sole is attached to the upper. In pegged and metallic fastened shoes the sole is attached to the upper by wooden pegs or nails. In McKay shoes the sole is attached by a seam which runs through the outersole and innersole so that it appears on the inside surface of the shoe. In the case of pegged, nailed, and McKay shoes, as the fastening material or seam appears on the inside of the innersole it comes in contact with the sole of the foot and may cause annoyance and discomfort.

In the welt shoe, a welt or narrow strip of leather is attached to the outside of the upper and to the insole, and the outsole is sewed to this welt.

In the manufacture of the Goodyear Welt shoe the Goodyear Welter first sews together the upper, the welt, and the inner sole. This seam, instead of being sewed through the inner sole, is sewed sideways by a curved needle in a prepared channel in the exterior of the innersole. A light single thread lies in this channel, and the double thread or chain is laid on the welt outside the surface on which the foot rests. The outsole is then sewed to the welt by the Goodyear Stitcher. As a result, neither the chain of the stitch which attaches the welt to the upper nor the seam which attaches the outsole to the welt appears on the inside of the shoe or under the portion of the innersole on which the foot rests.

In the manufacture of the Eppler Welt shoe the bulky double thread of the chain-stitch was laid in the prepared channel in the bottom of the innersole underneath the surface on which the foot rests and not on the welt, as in the Goodyear method.

This difference in the construction of the shoe, as we show below, made it impossible to use the Eppler machine on women's shoes or turn shoes, and made it much inferior to the Goodyear machines on men's shoes.

The Goodyear System was the first system ever used for making welt shoes by machinery (R. Vol. 1, p. 626, lines 3–8). The Goodyear method ran back to 1870 or 1868 (R. Vol. 1, p.

625, line 20). The Goodyear Company, however, revolutionized its machines about 1890 by the use of new inventions (R. Vol. 1, p. 678, lines 6–9). In 1899 its machines were recognized as superior to any others in use; it had under lease approximately 2,500 welters and stitchers (R. Vol. 5, p. 424, Defs.' Ex. 226).

The Eppler Company, which first put out its machines in the early nineties (R. Vol. 1, p. 679, line 7), used a method which had been tried and abandoned years before by the Goodyear Company (R. Vol. 1, p. 625, lines 21–28). The Eppler Company had been unsuccessful in putting out its machines, having only between thirty and forty welters outstanding in 1899, of which about one-third were in the factory of the president of the company (R. Vol. 1, p. 389, lines 6–9).

(2) PURPOSE OF THE ACQUISITION OF THE EPPLER COMPANY.

Mr. Winslow testified that the reason for acquiring the Eppler Company was to get rid of the litigation between the Goodyear and Eppler companies in the starting out of the new company, and that it was acquired for no other purpose (R. Vol. 1, p. 416, lines 25–29; p. 531, lines 34–35).

Mr. Howe testified that the Eppler Company was acquired principally to get rid of this litigation (R. Vol. 1, p. 633, lines 15–17). Another subsidiary reason in Mr. Howe's mind was that the Eppler Company made a different kind of machine for making a different kind of shoe (R. Vol. 1, p. 633, lines 13–14). He felt it would be desirable to be able to furnish this machine if any customers desired it.

The machines of the Eppler Company infringed the Goodyear Company's patents, and, as we shall show later, a considerable number of patent suits brought by the Goodyear Company were pending. In conducting this litigation suits were brought against shoe manufacturers using the Eppler machines. The defendants in such suits were also lessees of lasting, heeling, and metallic machines taken over by the United Company, which was thus placed in the disagreeable position of being obliged to sue its own customers if the litigation against the Eppler Company were continued (R. Vol. 1, p. 417, lines 1–8; p. 633, lines 18–26). As Mr. Howe testified, "this made very unpleasant relations" (R. Vol. 1, p. 633, lines 25–26).

(3) THE PURCHASE OF THE EPPLER COMPANY WAS NOT CONSIDERED UNTIL AFTER THE FORMATION OF THE UNITED COMPANY WAS AGREED UPON.

The Eppler Company was acquired out of the proceeds of the funds supplied by the syndicate which took stock in the United Company (R. Vol. 1, p. 32, lines 6–7). It was actually acquired in March, 1899 (R. Vol. 1, p. 17, lines 12–13), a month after the United Company was organized.

Both Mr. Winslow and Mr. Howe testified that there was no discussion of the Eppler Company until after the arrangements between the Goodyear Company and the Consolidated Company to unite had all been settled (R. Vol. 1, p. 529, lines 12–15; p. 530, lines 22–25; p. 633, lines 5–7; p. 675, lines 34–35).

The United States apparently contends that elimination of competition between the Eppler Company and the Goodyear Company was one of the motives for the formation of the United Company. As this acquisition was not discussed or thought of until after the formation of the United Company was agreed to, it follows that the acquisition of the Eppler Company and the elimination of this alleged competition could not have been a motive for the formation of the United Company as charged by the United States.

(4) PATENT LITIGATION BETWEEN GOODYEAR AND EPPLER COMPANIES ON ACCOUNT OF WHICH THE EPPLER COMPANY WAS ACQUIRED.

George E. Keith, who had been the president of the Eppler Company, testified that there was patent litigation affecting all the machines of the Eppler Company from the time it first started business (R. Vol. 1, p. 392, lines 13–24).

Mr. Howe testified:—

> "There was extensive litigation between the Goodyear Company and the Eppler Company prior to 1899. . . . Broadly speaking the outsole stitcher and such auxiliary machines as the Eppler Company made and tried to lease infringed patents owned by the Goodyear Company" (R. Vol. 1, p. 470, lines 11–15).

> "As to the prospects of the ultimate result, on my side I thought we should succeed in all our cases" (R. Vol. 1, p. 470, lines 21–22).

In 1899 there were pending eight patent suits brought by the Goodyear Company against the Eppler Company or users of its machines for infringement of Goodyear patents (R. Vol. 1, pp. 471, 673, 674).

In one suit the Goodyear Company charged the Eppler Company's welt machine with infringing the Briggs patent for forming chain-stitches, which was owned by the Goodyear Company (R. Vol. 1, p. 673, lines 34–37). In another suit the Goodyear Company charged that the Eppler outsole stitcher infringed the French and Meyer patent owned by the Goodyear Company (R. Vol. 1, p. 674, lines 9–14). Two other suits against users of the stitching machine were also brought (R. Vol. 1, p. 674, lines 15–21). In another suit the Goodyear Company charged infringement of a patent belonging to it by the Eppler rounding and channeling machine, and in two others the Goodyear Company charged infringement upon its Hadaway patent by a stitch separating and indenting machine leased by the Eppler Company (R. Vol. 1, p. 674, lines 23–32). In still another, infringement was charged by the Goodyear Company by the Eppler welt beating machine (R. Vol. 1, p. 673, lines 17–33). There were a half dozen suits in nearly all of which testimony was being taken (R. Vol. 1, pp. 673–4). Mr. Howe examined the Eppler machines (R. Vol. 1, p. 677, lines 7–8).

The United States has endeavored to belittle the infringement of the Briggs patent by the Eppler welter and has attempted to distort the testimony of Mr. Howe that in his opinion—

> "the infringing devices were very material in the construction of the Eppler Company's machines, except the welt sewing machine" (R. Vol. 1, p. 623, lines 31–33).

In this effort the United States lost sight of the fact that Mr. Howe was testifying specifically about "infringing *devices*" and that this testimony has no bearing at all upon the infringement by the Eppler welter of the Briggs *method* patent. His testimony as to that was as follows:—

> "The Eppler welter infringed the Briggs method patent on an invention which accomplished the sewing of a tight

seam. That method patent and a machine patent revolutionized the Goodyear Company's business about 1890, and rendered the old Goodyear machines out of date. Everybody wanted the new machine embodying the invention of the Briggs patent" (R. Vol. 1, p. 678, lines 5–10).

The United States offered no testimony whatever controverting defendants' evidence as to any of the infringements above set forth.

This patent litigation was a serious embarrassment to the United Company, as, if it was continued against the Eppler Company, the United Company would be obliged, as explained above, to sue its own customers, such as Mr. Keith. To avoid this litigation was a normal and natural reason for the acquisition of the Eppler Company. Its acquisition can give rise to no inference of an unlawful intent to eliminate competition.

(5) IF ANY COMPETITION EXISTED BETWEEN THE EPPLER COMPANY AND THE GOODYEAR COMPANY, SUCH COMPETITION WAS TRIVIAL AND NEGLIGIBLE.

Field of Competition.

The Goodyear machines made Goodyear Welt shoes, the Eppler machines made Eppler Welt shoes (R. Vol. 1, p. 417, lines 5–21). The upper and innersole were differently attached in the two shoes, and, therefore, the machines did a different class of work. The Eppler machines were restricted by the leases of that company to use in the manufacture of the "Eppler Welt Shoes" (R. Vol. 3, P.'s Ex. 59, p. 512).

So the Eppler machines could not make Goodyear shoes and the Goodyear machines could not make Eppler shoes (R. Vol. 1, p. 417, lines 20–21).

The United States apparently contends that both machines made welt shoes; that the Goodyear Company did most of the welt machine business in the United States; and that by the acquisition of the Eppler Company, even though it did a very small business, some possible competition was eliminated.

The welt method was only one method of attaching the soles to the uppers of shoes. Until the Goodyear method was devised no welt shoes were made except by hand. Among other methods

of attaching the soles were pegging, nailing, and McKay sewing. Also there were other kinds of welt shoes than the Goodyear and Eppler, such as the mock welt shoe and the McKay welt shoe (R. Vol. 1, p. 199, line 26; p. 214, line 11; p. 698, line 8; p. 824, lines 28–31). In making a McKay welt shoe the welt was sewed to the upper and innersole on the McKay sewing machine (R. Vol. 1, p. 206, lines 22–24; p. 225, lines 14–18; p. 249, lines 7–17), but in this case the seam appeared on the inside of the innersole next to the foot and, as above explained, it was the distinguishing characteristic of the Goodyear welt shoe that there was no seam next to the foot. In 1899 only about 12% of the shoes made had their soles attached by the welt method, while nearly half were sewed on McKay machines (R. Vol. 1, p. 414, lines 42–45; p. 415, lines 1–6). So far, then, as any competition can be said to exist between machines making different kinds of shoes the real competition of the Goodyear machines was with the McKay machines. In acquiring both the Goodyear Company and the Eppler Company, therefore, the United Company acquired patents on machines which by two distinct methods attached the soles of only a small proportion of the total shoes made in the country.

The Eppler Machines were Distinctly Inferior to the Goodyear Machines, Offered No Real Competition, and were Certain to Succumb to the Goodyear in the Survival of the Fittest.

In the late eighties Andrew Eppler, who had at one time worked for the Goodyear Company, took up a method of making a double chain-stitch which had been abandoned by the Goodyear Company and applied it to a machine for welting men's shoes (R. Vol. 1, p. 625, lines 20–28).

At first the Eppler Company had no outsole stitching machine, but outsoles for its shoes were attached by a harness machine or by hand stitching (R. Vol. 1, p. 625, lines 29–34).

The Eppler Company developed a few auxiliary machines inferior in design and quality of work to the Goodyear auxiliaries (R. Vol. 1, p. 631, lines 9–15).

The Eppler Company at the date of the formation of the United Company had been putting out its machines for seven

years or more and had only succeeded in disposing of between thirty and forty welt machines, of which about one-third were in the factory of the president of the company, Mr. George E. Keith (R. Vol. 1, p. 389, lines 6–12). The Eppler machines were not commercially successful as profit-makers (R. Vol. 1, p. 392, lines 9–12). The Goodyear Company, on the contrary, had outstanding 2,531 welters and stitchers on March 1, 1900, the nearest date in evidence (R. Vol. 5, Defs.' Ex. 226, p. 424). The reason is clearly established by the Record: the Eppler machines were decidedly inferior.

As explained above, the Eppler machine laid a double chain-stitch in the channel of the insole under the portion thereof on which the foot rested, while the Goodyear machine laid a light single thread in the channel so that the double thread of the chain-stitch seam was not under the portion of the insole on which the foot rested (R. Vol. 1, p. 415, lines 26–36). The importance of this distinction in the construction of the Goodyear and Eppler shoes runs through the successful progress of the Goodyear System and the failure and final elimination of the Eppler System.

Mr. Keith, the president of the Eppler Company, testified that this double stitch on the inside of the sole "had a tendency to raise a ridge or lump around the inside of the sole against the foot, which had the effect both of lessening the durability of the shoe and of making it uncomfortable" (R. Vol. 1, p. 391, lines 10–17).

Charles S. Smith, a witness for the United States, testified that the chain-stitch of the Eppler machine, "being larger and more bulky than the single stitch, occupied more room and was likely to leave a ridge around the inside of the shoe, which would come against the foot" (R. Vol. 1, p. 353, lines 6–9).

The Eppler machine could not be used on turn shoes, in which the sole must be thin in order that the shoe may be turned after sewing (R. Vol. 1, p. 415, line 44; p. 416, line 5; p. 469, line 42; p. 470, line 4). The Goodyear Welt machine, on the other hand, was used to make both welt and turn shoes (R. Vol. 1, p. 470, lines 5–7). For the same reason, the Eppler machine could not be used successfully on women's welts, which usually have a thin sole. Mr. Winslow testified that he did not know of any women's welt shoes made by Eppler machines (R. Vol. 1, p. 531,

lines 4–5). Mr. McElroy testified that he believed the Eppler machine could be used on women's welts, but he never used an Eppler machine and merely examined it once (R. Vol. 1, p. 187, lines 30–38). There was no evidence that it ever had been so used. The Goodyear Welter was used on both men's and women's welts with equal success.

The fact that the Eppler machine could not be used for turn shoes and was not adapted and never used for women's welt shoes was a serious disadvantage, especially in those factories constituting more than one-half the factories in the country whose production required only a single machine of this character.

Furthermore, the necessity of using an unnecessarily thick and expensive innersole on an Eppler shoe merely to prevent the seam from hurting the foot added greatly to the expense of making Eppler Welt shoes, and this thick innersole did not add to the value or wear of the shoe. Light substitutes for insoles, or canvas reinforced insoles, could not be used on Eppler shoes (R. Vol. 1, p. 415, lines 36–43).

The Eppler machines were also inferior in construction to the Goodyear machines (R. Vol. 1, p. 677, lines 17–21).

Furthermore, the Eppler Company did not have a complete or satisfactory set of auxiliary machines. George E. Keith, the president of the Eppler Company, testified that the company did not manufacture a full set of machines for making welt shoes. The rough rounder was not a satisfactory machine (R. Vol. 1, p. 389, lines 19–20). The company did not have a satisfactory stitch separator (R. Vol. 1, p. 391, lines 39–41). This operation is necessary to make the shoe "complete in appearance" (R. Vol. 1, p. 391, lines 34–38).

Auxiliary machines are essential to the successful manufacture of welt shoes. As an illustration of their importance, the stitch separator, the rough rounder and channeler, and the automatic leveling machine were included in the limited number of machines which the Patent Counsel for the United States selected for discussion before the Patent Examiner on the issue of "basic" patents (R. Vol. 2, pp. 2201–08). The invention of the rough rounder of the Goodyear Company has revolutionized the manufacture of welt shoes (R. Vol. 1, p. 793, lines 23–33). The Eppler Company had no leveling machine of its own (R. Vol. 1, p. 416, line 38). The Eppler Company, therefore, lacked very

important auxiliary machines supplied by the Goodyear Company and essential to the commercial success of the welt process.

For the various reasons outlined above the Eppler machines were not satisfactory.

George E. Keith, the president of the Eppler Company, testified that he had a Goodyear machine in his factory at the same time he was using the Eppler machine, and that the Goodyear machine did decidedly the better work (R. Vol. 1, p. 392, lines 2–8).

James H. Cunningham, a witness for the United States, testified that "everything about the Goodyear was better" (R. Vol. 1, p. 289, line 19). He substituted the Goodyear System for the Eppler System "because it was more complete and did the work better" (R. Vol. 1, p. 289, lines 22–23).

Edward W. Burt, a shoe manufacturer, had an Eppler Welter and an Eppler Stitcher when he started business. He tried them out for about a year and found them inefficient for making high-grade shoes: "They were not anywhere near as satisfactory as the United Company machines." The soles of the shoes made on the Eppler machines "ripped off continuously." He changed to Goodyear machines because he "could not afford to have the shoes wear out on account of imperfect construction." The change was his "own idea" because he "wanted the best machines" he could get (R. Vol. 1, p. 739, lines 17–33).

Ira E. Fletcher, a witness for the United States, and a factory superintendent at the Douglas factory, testified that Douglas had a number of Eppler machines in 1902 (R. Vol. 1, p. 937, lines 38–43). These machines were changed for Goodyear machines "because with the Eppler machine there was trouble with the loose seam."

"It would make a bad shoe. That was the particular reason for changing over from the Eppler to the Goodyear. That change was the result of the business judgment of the men who were responsible, because we thought the Goodyears were the better machines" (R. Vol. 1, p. 939, lines 15–22).

George Strong, a shoe manufacturer and a witness for the United States, testified that he used Eppler Welters and Stitchers from about 1895 to about 1900. "I think the Goodyear machines do better work than the Eppler machines" (R. Vol. 1, p. 932, lines 21–22).

William P. Whitman, a shoe manufacturer and witness for the United States, testified that he used an Eppler machine for several years along with the Goodyear and then exchanged it for a Goodyear. "I consider the Goodyear Welt System the best system: it did better work on the shoe" (R. Vol. 1, p. 916, lines 11–18).

Mr. Winslow testified that personally he had no doubt that the Goodyear System was better and would survive (R. Vol. 1, p. 417, lines 9–11).

The evidence relied on by the United States to show the amount of use of the Eppler machines and to show that they were satisfactory is briefly as follows:—

Emanuel F. Selz testified that there was no material difference in the rapidity of the machines or quality of the work, though there was a difference in the character of the shoe made (R. Vol. 1, p. 143, lines 18–32). He admitted, on cross-examination, that he tried the Eppler for less than a year prior to 1896 and abandoned it. "We gave up the Epplers because we were sewing razor toes at that time and the Eppler would not sew the razor toes as well as the Goodyear. We never reinstated the Eppler" (R. Vol. 1, p. 152, lines 38–44).

Milton S. Florsheim, a shoe manufacturer, testified that he used the Eppler only to a "very slight extent." He was merely trying them out and had only one set (R. Vol. 1, p. 159, lines 8–12). The Eppler made as good shoes as were made (R. Vol. 1, p. 935, lines 41–42). He traded in his Eppler machines, after the formation of the United Company, and while he testified he tried to obtain the Epplers for a lower royalty, he evidently preferred the Goodyear machines at the same royalty (R. Vol. 1, p. 159; lines 16–30).

Warren F. McElroy, a shoe manufacturer, examined an Eppler machine at Keith's factory. It seemed to him to be doing as good work as the Goodyear machines, but he never used the Eppler or attempted to get one (R. Vol. 1, p. 187, lines 32–40).

Richard H. Long used Epplers and testified that he gave them up after the formation of the United Company because he could not get new parts (R. Vol. 1, p. 226, lines 3–12). This evidence as to his reason for giving up the use of his Eppler machines was untrue (*infra*, p. 164).

Selz and Florsheim were both members of the Manufact-

urers' Alliance, opposed to the United Company, and Long is a rival shoe machinery manufacturer whose testimony was shown to be thoroughly unreliable.

The only person who used Eppler machines for any length of time and found them satisfactory was Fred F. Field. He obtained his machines from the United Company in 1902, three years after its formation (R. Vol. 1, p. 930, line 28). He, however, used only Eppler Welters and in connection with the welters used Goodyear Stitchers and Goodyear Auxiliaries (R. Vol. 1, p. 931, lines 17–27, lines 39–40). In other words, Mr. Field used only one of the Eppler machines and made no comparison between the Eppler set and the Goodyear set, which was a proper basis of comparison if competition between the companies is to be considered.

Mr. Field changed to Goodyear machines a few years ago, because he felt the Goodyear machines were superior to the Epplers (R. Vol. 1, p. 931, lines 27–31).

It thus appears that out of over one thousand shoe manufacturers only one used the Eppler machines for any considerable length of time and found them as satisfactory as the Goodyear machines, and this single manufacturer started to use them three years after the United Company was formed, and used only the welter in connection with which he used a Goodyear Stitcher and Goodyear Auxiliaries, and even he finally gave up the use of the Eppler.

Thus it appears that the Eppler machines were decidedly inferior to the Goodyear machines and the Eppler shoe was inferior to the Goodyear shoe, and that in consequence the Eppler machines were used to an insignificant extent and presented no real competition, present or prospective, to the Goodyear Company.

(6) IF ANY COMPETITION EXISTED BETWEEN THE EPPLER COMPANY AND THE GOODYEAR COMPANY, IT WAS ILLEGAL ON THE PART OF THE EPPLER COMPANY AND COULD PROPERLY BE ELIMINATED BY THE UNITED COMPANY.

We have shown above that the Goodyear Company had brought suits for infringement against the Eppler Company on its welter and its stitcher and its three principal auxiliary machines (*supra*, pp. 154–156). Mr. Howe expected the Goodyear Company would succeed in all these cases (R. Vol. 1, p. 470, lines 21–22).

The Eppler Welter infringed the Briggs Method patent on an invention which accomplished the sewing of a tight seam (R. Vol. 1, p. 678, lines 5–6). The Stitcher, the Welt-beater, the Stitch-separator, and the Rounder and Channeler, which also infringed Goodyear Patents (R. Vol. 1, p. 677, lines 17–21), were essential to the success of the Eppler Company.

It thus appears that such slight use as was made of Eppler machines was made possible only by the fact that they infringed Goodyear patents. If, therefore, the Eppler machines presented any competition, it was an illegal competition in violation of the Goodyear Company's rights and could be lawfully stopped by the Goodyear Company or by the United Company.

(7) THE UNITED COMPANY CONTINUED TO PUT OUT THE EPPLER MACHINES SO FAR AS SHOE MANUFACTURERS DESIRED THEM.

Whenever a call was made for an Eppler machine of any kind the United Company supplied it, and it also supplied all calls and demands for machines, parts, and service as soon as possible (King, R. Vol. 1, p. 696, lines 38–41; Winslow, R. Vol. 1, p. 417, lines 22–28).

The United Company, during the five or six years after it was formed, put out more than forty Eppler Welters and more than twenty Eppler Stitchers (R. Vol. 1, p. 702, lines 9–10).

Mr. Field obtained his Eppler machines from the United Company in 1902 and continued to use them up to a few years

ago (R. Vol. 1, p. 930, lines 27–29; p. 931, lines 6–7). He testified that the United Company furnished him whichever machines he chose and treated him just as well in respect to the Epplers as when he had the Goodyears (R. Vol. 1, p. 931, lines 7–11).

The United States sought to prove by Richard H. Long that the United Company suppressed the use of the Eppler machines by failing to provide parts for them. Mr. Long is a rival manufacturer, making a full set of machinery. His evidence is not merely inaccurate; it is untrue and distorted by exaggeration and bias.

He testified that Mr. King of the United Company told him the company had decided not to put out any more Eppler machines, and that he gave up his Eppler machines because he could not get parts for them (R. Vol. 1, pp. 226, 227, lines 30–31). Mr. King denied having so informed Mr. Long and testified that Long "was promptly supplied with parts and with service whenever he called for it" (R. Vol. 1, p. 699, lines 19–21). Mr. Long used Eppler machines for a year and a half after the United Company was formed (R. Vol. 1, p. 699, lines 17–19), although he testified his conversation with Mr. King took place shortly after the formation of the United Company (R. Vol. 1, p. 226, lines 24–31). Mr. King further testified that Mr. Long gave up his Epplers entirely of his own accord (R. Vol. 1, p. 699, lines 34–38). Eppler machines were supplied to others long after Mr. Long gave his up (R. Vol. 1, p. 699, lines 39–41).)

On cross-examination Long admitted he remembered no specific instance of failure to get parts (R. Vol. 1, p. 252, lines 42–45). His testimony as to failure to get parts is disproved by his own admissions with respect to requests for parts (R. Vol. 1, pp. 253–259), and the testimony of Mrs. Hewitt, who kept the record of service rendered on Eppler machines and testified specifically as to the service rendered Long in reply to his requests, giving the dates on which such service was requested and rendered (R. Vol. 1, pp. 693–4); and by Walter S. Batchelder, who previously kept a record of parts supplied for Eppler machines, and who testified from the records specifically as to the dates on which requests for parts were made by Mr. Long and the dates on which the parts were sent (R. Vol. 1, pp. 694–696).

The reliance to be placed on Long's testimony is illustrated further by his testimony relative to Chase machines. He

stated that shortly after the United Company was formed it refused to let him have any more Chase lasting machines (R. Vol. 1, p. 228, lines 1–26), yet on cross-examination he admitted obtaining about eleven Chase machines after this date (R. Vol. 1, pp. 263–267; Defs.' Ex. 70 C, R. Vol. 5, pp. 105, 106).

(8) THE EPPLER MACHINES WERE PATENTED MACHINES OF A DIFFERENT KIND FROM THE GOODYEAR MACHINES AND MADE A DIFFERENT KIND OF SHOE. THE UNITED COMPANY WAS ENTITLED TO ACQUIRE THE PATENTS ON THE EPPLER MACHINES.

The petition itself (R. Vol. 1, pp. 993, 996) and the Record (R. Vol. 1, p. 634, lines 36–43) show that the Eppler machines were patented. While they infringed the Goodyear patents, they also differed in structure from the Goodyear machines. As we have shown, they also made a shoe of a different structure from the Goodyear Welt shoe made by the Goodyear machines. "The Goodyear machines could not make an Eppler welt and the Eppler machines could not make a Goodyear welt" (R. Vol. 1, p. 417, lines 20–21).

A secondary reason in Mr. Howe's mind for acquiring the Eppler Company was to enable the United Company to furnish Eppler machines for making Eppler welts to those shoe manufacturers, if any, who wanted to make Eppler welt shoes (R. Vol. 1, p. 630, lines 32–34). The United Company could not do this, unless it acquired the Eppler patents, without infringing those patents. A manufacturer has the right to acquire patents covering another machine, even if such machine can be used for a purpose similar to that for which he already has a machine. To hold otherwise would be to hold that a manufacturer could not furnish all types of machines and thus engage in the business without restraint. In the present case it would mean that the United Company could not furnish machines for making other styles of welt shoes even though its customers desired to make such shoes.

It is not without importance to note that, while the Eppler machines proved themselves of little value and have become obsolete, some of the Eppler patents proved to be of great value

when combined with other patents owned by the United Company. Thus Patent 613,228 issued to the Eppler Company in 1898 (Defs.' Physical Ex. 198) covered an important invention which proved the basis not only of one of the United Company's own machines later developed (R. Vol. 2, p. 2645), but also of the Plant Heel Seat Dinker (Defs.' Ex. 273, R. Vol. 5, p. 740). Another of the patents some years after its acquisition by the United Company was embodied in a new welter (R. Vol. 2, pp. 2252, 2766).

(9) OTHER EVIDENCE SUBMITTED BY THE UNITED STATES IN RESPECT TO THE EPPLER PURCHASE.

The Price.

The United States sought to prove that an exorbitant price had been paid for the Eppler Company, apparently for the purpose of showing the importance attached to the purchase. There was, however, no direct evidence as to the price paid.

The stock of the Eppler Company was acquired by the United Company, as shown above, through cash supplied by a syndicate, together with other property, but the officers of the United Company were unable to divide up the lump sum paid among the several items (R. Vol. 1, p. 33, lines 2–4).

William B. Arnold testified that about the time of the organization of the United Company his impression was that he sold one hundred shares of Eppler stock at $6 a share either to Mr. Brown or Mr. Hurd, vice-presidents of the United Company, but he would not be positive. He could not fix the date, however, within a year (R. Vol. 1, p. 952, lines 21–31). Both Mr. Brown and Mr. Hurd denied making the purchase (R. Vol. 1, p. 961, lines 9–16, 21–29).

Willard G. Brackett testified that February 15, 1899, he sold six hundred shares for $6.50 a share. He did not remember to whom. The par value was $10 a share (R. Vol. 1, p. 949, lines 38–42).

Mr. Keith testified he got $20,000 for his stock, but did not remember how much he had (R. Vol. 1, p. 385, line 32–p. 386, line 10).

Mr. Winslow had no recollection how much the Eppler stock-

holders were paid. He had no doubt it was as much as $100,000, but could not state whether it was as much as $200,000 (R. Vol. 1, p. 531, lines 37–41).

There is, then, no direct evidence as to the amount paid, and it does not appear in any event that the amount was exorbitant for the purpose of settling extensive litigation which would have been troublesome to the United Company's customers, for the acquisition of machines for doing a different kind of work if the United Company's customers should desire them and for patents which proved of very considerable value for other purposes.

The Papers offered by the United States Exhibits B, C and D, for Identification (see R. Vol. 4, pp. 1200 to 1212) were properly excluded by the District Court and should not be considered as Evidence.

The United States claimed that these "Certificates of Condition," which purported to show the assets and liabilities of the Eppler Company, were copies of papers on file in the office of the Massachusetts Commissioner of Corporations. But they were not properly authenticated.

> See Revised Laws of Mass., Ch. 175, Sect. 74.
> And *Commonwealth* v. *Corkery*, 175 Mass. 460.

The papers were not certified as true copies by the Commissioner of Corporations and the genuineness of the signature of the Commissioner was not attested by the Secretary of State.

The customary form for such attestation is well known in Massachusetts,

> See *Commonwealth* v. *Corkery*, supra,

and these papers were not attested according to that or any lawful form.

But even if admitted in evidence, these certificates do not specify the number of machines outstanding or in any way contradict the testimony referred to above, showing that only a few machines were outstanding and that the machines were unsuccessful.

Royalties Rebated by Eppler Company.

The United States also showed that, while the regular royalty charged for Eppler machines was the same as for Goodyear machines, the Eppler Company in certain instances granted a rebate of 25% (R. Vol. 1, p. 227, line 3; p. 250, lines 24–29, 36–38; Vol. 5, Defs.' Ex. 44, p. 57). These instances were sporadic (R. Vol. 1, p. 417, lines 29–35). The leases as printed expressly called for the same royalty as the Goodyear (P.'s Ex. 59, R. Vol. 3, pp. 509–510). The fact that the Eppler Company felt required to grant a rebate from its regular price in certain instances in an attempt to place its machines shows the inferiority of these machines and not their strength. The granting of these rebates had not enabled the Eppler Company to place its machines successfully or to prosper financially.

Nor does the fact that the United Company, after it had acquired the Eppler Company, maintained the regular Eppler royalty rate, granting no discounts to favored individuals, show any intent to suppress the Eppler machines. The policy of the United Company has always been to maintain the same rates for all customers, and its maintenance of the regular Eppler rate on all Eppler machines was merely "to make the rate uniform among all users and gives no special advantages to anybody" (R. Vol. 1, p. 417, lines 44–45).

10. FINDING OF THE DISTRICT COURT AS TO THE EPPLER ACQUISITION.

The District Court said with reference to the acquisition of the Eppler Company (R. Vol. 1, p. 1131):—

> "The Eppler machines were adapted to produce men's thick-soled welt shoes only. They could not produce women's welt shoes (except perhaps those having the thickest soles), nor turn shoes of any kind, nor Goodyear welt shoes, either men's or women's, because of the difference between the respective machines in the character and position of the seam left in the inner sole of the shoe. The Goodyear machines could produce shoes of all the above kinds. The differences referred to resulted from differences in the character and operation of the machinery belonging to the different systems. These differences in

character and in possible field of use had resulted when the United Company was formed in 1899 in the fact that over 2,500 Goodyear welting machines were in use, as against thirty or forty Eppler machines, one-third of these being used in the factory of the president of the Eppler Company. The evidence leaves me unable to believe that the possible field of competition between the two machines was large enough, or any actual existing competition significant enough in amount to warrant the conclusion that the acquisition by the United Company of both machines involved such destruction of competition as rendered it unlawful. The Eppler machines were not suppressed by the United Company. It continued to supply them until the progress of improvement in such machinery superseded them. The patents covering them have long since expired, and it is open to anyone to make and use such machines if he desires. There is no present monopoly in them, and no action taken by the court could restore them to the field of competition, or encourage or create competition by them."

(11) CONCLUSION AS TO ACQUISITION OF THE EPPLER COMPANY.

We submit that the record establishes:—

1. The machines made by the Eppler Company were decidedly inferior to the Goodyear machines, and the Eppler Company had no complete or satisfactory system of auxiliary machines; that the Eppler shoe was inferior to the Goodyear shoe; that the Eppler Company after seven years was commercially unsuccessful and had placed an insignificant number of machines, both when compared to the number of Goodyear machines outstanding and to the total number of machines used to attach the soles to the uppers of shoes, including the McKay machines; and that if any competition existed between the Goodyear and Eppler companies it was insignificant in amount and did not make the acquisition of the Eppler Company inherently unlawful.

2. That the Goodyear Company had brought patent suits against the Eppler Company and its lessees for infringement of Goodyear patents by the principal machines of the Eppler Company, and believed it would succeed in this litigation; that the primary reason for acquiring the Eppler Company was to get rid

of this litigation, which would have proved troublesome to the United Company's customers and therefore would most certainly have created friction between them and the United Company.

3. That the Eppler machines were patented and made a shoe of a different character from that made by the Goodyear machines; that a secondary purpose in acquiring the Eppler Company was to enable the United Company to furnish machines for making this different class of shoe, and that the United Company was entitled to acquire the Eppler Company for this purpose.

4. That the United Company did not suppress the Eppler machines, but continued to furnish them to all shoe manufacturers desiring them until they became obsolete due to the superiority of the Goodyear machines.

5. That the acquisition of the Eppler Company was first proposed after the formation of the United Company was agreed upon, and its acquisition was not a motive for the formation of the United Company.

6. That Eppler Company's machines infringed the Goodyear patents, and if the Eppler machines competed with the Goodyear machines, such competition was unlawful.

7. That the Eppler machines have become obsolete and no manufacturer to-day would use them, so that the question of their possible competition has become a moot point.

We, therefore, submit that the purchase of the Eppler Company was not inherently unlawful; that it was acquired for normal and legitimate reasons; and that the transaction is barren of any incident which can give rise to an inference of unlawful purpose or intent to monopolize or exclude others unlawfully.

5. THE PURPOSES FOR WHICH THE UNITED COMPANY WAS FORMED, AND THE MANNER IN WHICH SUCH PURPOSES HAVE BEEN ACCOMPLISHED.

A. REASONS FOR FORMATION OF UNITED COMPANY AS TESTIFIED TO BY MR. WINSLOW AND MR. HOWE.

The fundamental reasons for the formation of the United Company by the proposed union of the Goodyear and Consolidated Companies were stated as follows by Mr. Winslow:—

> "The first was to increase the productive efficiency of the machines that were in the hands of shoe manufacturers. Second, to economize in the manufacture of the machinery itself by bringing that manufacture into one modern factory and standardizing the manufacture. Third, to encourage and increase the manufacture of Goodyear Welt shoes by the development of new machines to assist in that manufacture and new methods to lower the cost, to aid and assist those manufacturers who were making those shoes, and induce other manufacturers who were not making welt shoes to enter into their manufacture. It was contemplated in this connection to lower the cost of installation of the Goodyear machines and instruct manufacturers in the manufacture of welt shoes. And fourth, to develop a better service for the instruction of operatives in the use of machines and service for maintenance of the machines in condition to operate regularly, and at the same time decrease the proportionate expense of that service by avoiding the duplication of the depots and men who were employed in that work" (R. Vol. 1, p. 407, lines 18–36).

Mr. Howe testified as follows as to the purposes for which the United Company was formed:—

> "Well, we had many conferences, . . . and . . . they related entirely to the economies which we could get if the two complementary machines were handled by the same company—the economies, first, in the administration of the two companies; the economies due to manufacturing the machines themselves and the parts and the auxiliary machines in one factory where we could get a modern up-

> to-date factory; the economies that could be attained by consolidating our service. . . . I thought, particularly . . . that if we could in some way bring about a harmonious arrangement between the Lasting Machine Company and the Goodyear Company we could make a great saving and give the service with greater efficiency in all the branch offices and also, as I have said, in the manufacture of machines and the running of a factory. Proportionately to the amount of business done there would be less overhead charges" (R. Vol. 1, p. 628, line 21–p. 629, line 1).

Another reason for the formation of the United Company was that Mr. Howe, who was the real manager of the Goodyear Company, and Mr. Brooks, who managed the McKay Company, could not devote much of their time to the business and wished to withdraw. By combining these businesses with the Consolidated Company the services of the men active in that company were obtained.

Mr. Howe testified that the management of the Goodyear Company's business fell largely on him, but he was practising law (R. Vol. 1, p. 466, lines 34–40) and wished to get out (R. Vol. 1, p. 629, line 2). He further knew that Mr. Winslow and Mr. Brown of the Consolidated Company, who could give their whole time to the business, would secure a far better and more efficient management than the Goodyear Company then had (R. Vol. 1, p. 629, lines 3–7). Mr. Winslow and Mr. Brown were well known as efficient managers for the Consolidated Company (R. Vol. 1, p. 629, lines 8–11).

Mr. Brooks, who was the head of the McKay Company, was seventy years old and was anxious to retire from business and spend all his time at his country home. He only devoted one or two days a week to the business (R. Vol. 1, p. 467, lines 8–13).

B. REASONS FOR FORMATION OF THE UNITED COMPANY AS STATED IN CIRCULARS TO STOCKHOLDERS.

The directors of the three principal constituent companies sent out circulars to their stockholders announcing the formation of the United Company and recommending the exchange of stock. All the circulars stated that Winslow would be president and Brown treasurer of the United Company, and the board of directors included Gordon McKay, Louis D. Brandeis

and other well-known names. The McKay circular was signed by James W. Brooks, Louis D. Brandeis and other directors (R. Vol. 4, P.'s Ex. 151, pp. 1094–6). The Consolidated Company's circular, signed by Winslow, Brown, and other directors, contained the following statement:—

> "The undersigned Directors of the Consolidated & McKay Lasting Machine Company believe that the United Shoe Machinery Company will show much larger net earnings than the aggregate net earnings of the several companies whose stock is to be acquired, by reason of increase in business, economies in administration and decrease in expenses, and cessation of patent litigation between the Companies, which has been expensive to them and annoying to shoe manufacturers; and believe that these results can be attained without increase of cost to the users of machinery made by the Company, and that better attention to the care of machines and greater assistance to the users can be afforded" (R. Vol. 4, P.'s Ex. 175, pp. 1198–1200).

The Goodyear Company's circular, signed by Howe, Barbour and other directors, contained the same statement (R. Vol. 4, P.'s Ex. 152, pp. 1097–1100).

The Goodyear circular also contained the following statement:—

> "The great advantages to be secured by the control in one corporation, both in the United States and in foreign countries, of the most efficient types of shoe machinery, have been for several years recognized by the officers of the principal shoe machinery companies" (p. 1097).
>
> "The United Company will also from time to time acquire other shoe machinery properties, either by direct ownership or by purchase of shares of their stock" (p. 1098).

This statement the United States contends shows an unlawful attempt to monopolize. But it was in truth and fact, as was said in *United States* v. *Winslow*, supra, only "an effort after greater efficiency" and so the District Court found (R. Vol. 1, p. 1132). It must be remembered that there was a large field of shoe machinery, partly developed and partly undeveloped, which was not occupied by the constituent companies which were taken over by the United Company, and the Goodyear Company's circular merely shows an intention, if opportunity offered, to put out other machines not manufactured by the constituent companies.

Mr. Howe, who drew the Goodyear circular, testified that he had in mind in drawing this clause that if the United Company was a success it would naturally take on new machines and go into other fields which would supplement the business of the constituent companies. This was proper and lawful just as it was proper and lawful to acquire lasting, metallic, heeling, and welting machines in one company. Indeed, as held in *United States* v. *Winslow*, supra, no intent could make such acquisition unlawful. The probability which Mr. Howe had in mind, therefore, can give rise to no inference of unlawful intent as contended by the United States.*

C. SPECIFIC DENIALS OF INTENT TO MONOPOLIZE SHOE MACHINERY AS CHARGED IN THE PETITION.

Mr. Winslow testified that there had never been any intent on his part to acquire complete control of the shoe machinery business as charged in the bill, and that no such project was "ever discussed or considered by any persons interested" (R. Vol. 1, p. 407, lines 3–12). He further testified that he had no intent to exclude all others from the shoe machinery business, and that there was no discussion among any of the persons interested in the organization of the company directed towards such a purpose (R. Vol. 1, pp. 407–8). He denied any intent as charged in the bill to enhance the value of shoe machinery at

* The United States also contends that a certain recital in the contract between Peabody & Co. of Australia and the United Company, dated September 11, 1899, shows an intent to monopolize existing shortly after the formation of the United Company (R. Vol. 4, P.'s Ex. 189, p. 1250). This contract appointed Peabody & Co. the United Company's brokers or commission agents in Australia for the sale of the United Company's machines and findings. The preamble clause recited that the United Company had acquired certain specified companies and then recited that the United Company "contemplates acquiring the control of other lines of . . . boot and shoe findings." Mr. Winslow was abroad when the contract was made. Mr. Howe testified that Peabody & Co. wanted an assurance that the United Company would give them enough business to warrant them entering into a contract; that the United Company then had in mind purchasing some other lines of shoe machinery and findings, especially blackings, cement, and stains which Peabody & Co. had difficulty in supplying themselves with, and so this recital was inserted (R. Vol. 1, p. 672, line 35–p. 673, line 3).

The attempt of the United States to distort this recital into a statement of wrongful intent to eliminate competing concerns and monopolize shoe machinery shows the utter lack of evidence to support its claims with which the United States was confronted.

the expense of shoe manufacturers and the public, to use the same as a means for unlawfully controlling interstate commerce, or to acquire a complete monopoly of shoe machinery and destroy existing competition (R. Vol. 1, p. 414, lines 1–18).

Mr. Howe denied any intent to acquire complete control of the shoe machinery business and to exclude others. There was no discussion of obtaining control of the entire field of shoe machinery (R. Vol. 1, p. 631, lines 29–42; R. Vol. 1, p. 634, lines 18–31).

D. METHODS BY WHICH AND EXTENT TO WHICH UNITED COMPANY CARRIED OUT AND REALIZED THE PURPOSES FOR WHICH IT WAS ORGANIZED.

It is important at the outset to show the methods by which and the extent to which the United Company carried out and realized the purposes for which it was organized.

The peculiar character of the shoe machinery business permitted the United Company to effect not only great economies but also a vast improvement in the character of the service and the machines furnished customers which would probably not have been possible in any other business in the country.

The opportunities for improvement in machines, service, and economies made possible by the formation of the United Company and the success of the United Company in improving these opportunities show conclusively that the United Company was organized for the purpose of "greater efficiency," as this court, in *United States* v. *Winslow*, supra, held appeared on its face, and as the defendants Mr. Winslow and Mr. Howe testified.

Furthermore, it shows that the excellence of the United Company's patented machines and the efficient service it has rendered its customers fully account for its success and exclude any inference that such success was attained by wrongful means. In 1899, when the United Company was formed, the constituent companies furnished the greater part of the machines used in the particular fields for which their machines were adapted, because such machines were the best machines made and because they were patented so that others could not furnish them. The shoe machinery business was a comparatively new business, and the business done by the constituent companies had been

created by them through the excellence of their patented machines.

The evidence shows that the vast improvement in the character of the service rendered users of its machines, the improvement of its machines, and the invention of new machines fully account for the continuance of its success, and exclude the inference that the continuance of this success has been due to unlawful means.

As said by Judge Dodge (R. Vol. 1, p. 1137):—

> "That the degree of success attained and the preponderance in number of users supplied which the United Company has secured are fully accounted for by the superior efficiency it has developed in its patented machines for work in combination with each other, together with the superior facilities it affords as above for their most efficient use, must be regarded as shown beyond question. It is not disputed that, when the petition was filed, its machines represented, in number and amount, the highest development ever reached in the art to which they belong; or that they are most in demand by manufacturers of the higher grades of shoes for that reason.
>
> "So little room for doubt does the evidence leave that the success and preponderance referred to are the natural and legitimate result of the intrinsic merit of the patented machinery and service furnished as to require clear and convincing proof of any assertion that they are due to causes other than these."

(1) CONCENTRATION IN ONE FACTORY AND STANDARDIZATION.

WINSLOW testified:—

> "Another reason which I stated for the formation of the United Company was to economize in the manufacture of machinery by bringing that manufacture into one modern factory and standardizing the methods of manufacture.
>
> "Prior to 1899 the Goodyear Company was manufacturing in a factory on Albany Street, in Boston; the Lasting Machine Company at Beverly, Mass., and the McKay Company at Winchester, Mass. The Goodyear Company was employing less than 200 men; about 300 were employed at Beverly, and about 500 at Winchester; in all about 1000 men in 1899.

"In the manufacture of the machines of these three companies there were many parts in common, but they could not be interchanged. Screws, for example, might be used on ten different machines where the same strength was required, but the screw made for one machine would not fit any of the others. This is only an illustration of what was true of a great many parts which could be standardized and made interchangeable, and have been. This resulted in a very large saving in the number of parts to be carried in different places. The bringing together of these factories also enabled us to establish our own foundry. Since the United Company was formed, for the first time in the history of shoe machinery iron patterns for casting have been developed and are almost universally used now, reducing the cost of manufacture.

"It was intended and expected that the consolidation would effect a very large saving in the management expenses and it so resulted. There were three superintendents at that time in the factories. The time of two of those superintendents is available today for the development of the art of making machinery. They are not used as superintendents of manufacturing. While, broadly speaking, we made no saving by discharging men, their time became available in other directions, so that their productivity was availed of to economize and develop the business" (R. Vol. 1, p. 412, line 41–p. 413, line 30).

Again WINSLOW testified:—

"In carrying out our purpose of consolidating the manufacturing of the machines in one modern factory and standardizing the methods of manufacturing, about January, 1900, a committee of our manufacturing men was appointed to visit the various manufacturing plants throughout the United States and gather data as to the best methods of manufacture, the most efficient machines, the most efficient arrangement for carrying on the manufacture from one department to another, and the best character of factory for the operatives. After that committee had worked about a year we began to build a large factory at Beverly, Massachusetts.

"To avoid any possibility of the tools for duplicating parts of machines being subject to destruction by fire we built the factory of concrete, and I think at the time that was the largest concrete building in the world. A great deal of care and thought was put into the arrangement of the floors and rooms to eliminate waste in carrying machines from one part of the factory to another for different opera-

tions. In factories that had been built up to that time for the manufacture of shoe machinery nothing of that sort had been gone into; while the buildings were modern in construction, they were not modern in their arrangements of the parts of the factory with reference to the economy of production. The Beverly factory has been added to from time to time.

"The facilities for manufacturing the different kinds of machines were transferred to that plant successively from the old factory at Beverly, from the Winchester factory, and from the Goodyear factory. None of the three factories of the constituent companies prior to 1899 was adequate for the occupation of all of them, and there was no land connected with any of them, except possibly Winchester. The Beverly factory was not owned by the Lasting Machine Company, there wasn't room to develop the Goodyear plant, and Winchester was a poor place to manufacture on account of the lack of labor. It was not a manufacturing community. Labor had to be developed there. Beverly has about 75,000 people within a five-cent fare.

"At the new plant in Beverly we continued to manufacture all of the machines which we had been marketing before and we employed more labor from time to time. About 1,000 men were employed in 1899, and at the beginning of this suit there were over 4,000 men employed at the Beverly factory. There has been a gradual increase right along" (R. Vol. 1, p. 423, lines 5–46).

WINSLOW further testified:—

"There are wings connecting the three buildings which go to the full height of the building and contain the lavatories, wash rooms and tool rooms. The fourth building, which is separate from these buildings, is the foundry, and that was less than half its present size in 1903.

"When we built these buildings we prepared for a capacity about twenty-five per cent. more than the capacity of the three factories of the old constituent companies. We supposed that that would take care of our wants for a great many years, but we have made additions from time to time until we now have a factory twice as large as we contemplated in 1903. This is all concrete construction from the roof to the bottom floor."

"Defendants' Exhibit 255 is a photograph of the Beverly plant as it is to-day. . . . Defendants' Exhibit 256 is a photograph showing the same building with the employees included. Practically all of the 4,000 employees are there. Defendants' Exhibit 257 . . . contains some views of the in-

terior of the factory . . . including the hospital, operating room, an industrial training school for the operators' children, club house, play grounds and a boat club" (R. Vol. 1, p. 519, lines 23–35, lines 18–19, lines 36–46).

(2) INAUGURATION AND MAINTENANCE OF AN EFFICIENT REPAIR SERVICE WITH ITS MACHINES.

(a) NECESSITY FOR THE SERVICE.

The service rendered by the United Company in connection with its machines is of the utmost importance, not only to the shoe manufacturer, but also to the operative and the United Company. In no other industry are so many different machines of so delicate a character used in the manufacture of a single product, and, therefore, in no other industry is service of this nature of such vital consequence. Its importance must be emphasized and explained at some length because its necessity underlies the methods of marketing machines which have prevailed and proved themselves most satisfactory in the shoe machinery industry, and because the need of perfecting this service was one of the principal motives for the formation of the United Company, and because the excellence of the service rendered by the United Company accounts in considerable part for its success. This service can be rendered only by a company like the United, which furnishes a large number of different machines. It was impossible for the constituent companies prior to the formation of the United Company to furnish a satisfactory service.

The service rendered by the United Company consists in maintaining experienced mechanics at convenient places to repair machines and replace worn parts immediately upon request of the shoe manufacturer and to adjust the machines frequently to keep them in the highest state of efficiency; in maintaining depots of extra parts at convenient places so that they may be immediately available, and in instructing operatives in the use of machines. The United Company, as part of this service also, acts as engineers for the shoe manufacturer, advising and assisting him in the laying out of his plant.

The importance of this service is due to causes peculiar to the

shoe machinery industry. The principal machines furnished by the United Company are extremely delicate. They need constant adjustment by a skilled mechanic to maintain them in proper working order. The wearing parts also require frequent replacement. This necessitates not only having a stock of extra parts near at hand, but also the services of a skilled mechanic to insert and adjust the new parts. The ordinary shoe manufacturer could not afford to maintain skilled mechanics for this purpose, nor the large stock of parts which would be required to guard against his needs. If such service and new parts are not immediately available in case of need, the machines do imperfect work or cannot be used at all.

The importance of maintaining the machines in efficient condition is multiplied many fold by the fact that a great many different machines are used on each shoe manufactured. The work in the shoe factory is planned to travel from one room to another in fixed quantities. A certain number of pairs of shoes are started each day and an equal number are finished each day. In other words, there is a regular flow of shoes through the factory from one machine to another machine. No large number of shoes are kept prepared ready for the operation of each machine. The cost of doing so would be prohibitive, as it would necessitate having a large amount of capital invested in material and in lasts and would require too much space to store the partially prepared shoes. Furthermore, shoes in process of manufacture must be in "temper," that is, the soles and heel must be artificially moistened for the operations involved in lasting and in preparing and attaching them to the upper. Once in "temper" the shoe ought to be completed as rapidly as possible. Therefore, shoe factories, so far as possible, are run on the basis of having shoes in the process of manufacture travel from machine to machine without any substantial interruption. Only so can economical work be done.

When one machine breaks down, it, therefore, not only stops the work on that particular machine, but it also stops the work on all machines coming after it; and since, as explained above, it does not pay to prepare a large number of shoes which cannot be finished, it also stops the work on machines which come before it. Thus the effect of a single machine getting out of order is not confined to stopping work on that particular machine but

the effect is to stop the work on the entire line of machines of which that particular machine forms a part. Where there is only one machine of the kind in the factory, the entire production of the factory ceases.

Not only does the shoe manufacturer suffer when the machine breaks down, but his operatives and the United Company, which leases the machines, suffer also. The operatives are paid by piece work; when, therefore, they cannot work their compensation ceases. The United Company derives its income from royalties received for the use of its machines; this income ceases when the machines are not operated.

The daily capacity of many of the important machines furnished by the United Company is very large. As most of the shoe factories in the country have a comparatively small production, many, if not most of them, require only one machine of certain kinds. Thus nearly one-fourth of the 1150 shoe factories in the country in 1911 made 100 pairs or less per day; 637 or more than one-half made 500 or less pairs per day, and only 169 made more than 1,500 pairs per day (R. Vol. 1, p. 455, lines 1–19). In a factory making only 450 pairs per day, only 1 Pulling-over Machine, 1 Heeling Machine, 1 Slugging Machine, and 1 Loose Nailing Machine are required (R. Vol. 5, Defs.' Ex. 230, p. 442). If one of these machines should break down in a factory of this size, the entire production of the factory would stop. Only 1 Slugging Machine, 1 Loose Nailing Machine, and 1 Heel Pricking Machine, are required in a factory having a total production of 1,200 pairs of turn shoes per day (R. Vol. 5, Defs.' Ex. 249, p. 693).

The constant need of service is illustrated by its use. In 1911 shoe manufacturers called upon the United Company for repair service 192,524 times and 1,110,593 hours of its road men's time were occupied in this work (R.Vol. 5, Defs.' Ex. 214, p. 311). Its importance is further emphasized by the fact that such service, costing, in 1911, $1,196,494.86 (R. Vol. 1, p. 974, line 22), was rendered free of charge by the United Company (R. Vol. 1, p. 421, lines 18–23) because of its importance in increasing the reputation and productive efficiency of its machines and the consequent return to the United Company in the way of royalties.

Referring to the necessity for this service, Mr. WINSLOW testified (R. Vol. 1, pp. 410–11, lines 41–14):—

"This factor of service is at the very base of the successful operation of a shoe factory. The work is planned to travel from one room to another in fixed quantities. So many pair go in in the morning—so many pair come out at night. The operatives are dependent upon that work traveling along regularly to them. The breaking down of some of these machines will in many of the factories block the entire flow of the work. Of course, in any factory it will throw out of regularity the production of the factory and throw out of work many times the operator that follows the particular operator on the machine that has broken down or got out of adjustment. Of course, the operators in shoe factories are paid by the piece almost entirely. From the standpoint of the shoe machinery manufacturer and the shoe manufacturer and the operative, the ability of the factory as a whole to turn out its work right along regularly as if it were going through one machine is vital. Factory space is economized; the earning capacity of the investment in the machinery is vitally affected; the operatives' pay has as its foundation, of course, the regularity of the work."

FREDERICK W. CURTIS, president of the Curtis & Jones Company shoe manufacturers at Reading Pennsylvania, testified, as a witness for the United States (R. Vol. 1, p. 377, lines 27–28; p. 379, line 12; p. 382, lines 26–45):—

"The question of repairing and furnishing parts is an important consideration to the shoe manufacturer. We want to keep the volume of product moving steadily through our factory without any interruption. If an important machine, like a stitcher or welt-sewing machine, breaks down it stops the flow of the product, keeps the machines behind it idle, dams up the product right there at that point, to the general disarrangement of our factory, as well as throwing men who are on machines behind the disabled one out of work.

"The margin of profit in making shoes is such that it is very essential that our machinery should work smoothly, regularly, and with continuity, and economies in the manufacture of shoes often make the difference between a successful manufacturer and one who is not successful. One of the most important economies is to have our machinery working with continuity and with the highest efficiency and turning out our product with the utmost regularity day after day, just as we want to get it, so that there won't be any hitch anywhere in the flow of product through our factory."

The instruction of operators is also of great importance to shoe manufacturers. Just as the breaking down of one machine may stop all work in the factory, or work on an entire line of machines, so the lack of a single operator,—say a laster or a welter—may stop all work on an entire line of machines. Again, the character of the work done on the machines depends on the skill of the operator. Again, the already skilled operators must be instructed in the use of new or improved machines as they are put out. In consequence the Service Department of the United Company, by instructing operators for shoe manufacturers, and by furnishing one or more of its own men in an emergency to operate a machine, is of the greatest value to shoe manufacturers and greatly increases the productive efficiency of the machines. The value of this service is shown by the fact that a total of 8,889 operators were taught by the United Company in the year 1911 alone (R. Vol. 5, Defs.' Ex. 214, p. 312).

(b) INADEQUATE SERVICE RENDERED BY CONSTITUENT COMPANIES PRIOR TO THE FORMATION OF THE UNITED COMPANY.

The absolute necessity of service for shoe machinery of the character produced by the constituent companies, if such machinery was to prove satisfactory, had led the constituent companies, prior to the formation of the United Company, to institute such service as was possible under the circumstances.

The Consolidated Company was furnishing men to instruct operatives how to use its machines and men to keep the machines in adjustment so far as it could within its financial resources. It had no offices, however, except in Boston and Brockton. In Philadelphia, Cincinnati, Chicago, Haverhill, and Lynn there were concerns who carried parts for the Consolidated Company's machines and received notice of calls for service. The Consolidated Company's men called at these places to receive such notices (R. Vol. 1, p. 408).

The McKay Company furnished about the same amount of service as the Consolidated Company. In Chicago, Cincinnati, Haverhill and Lynn parts were carried for its machines by the same concerns which acted as agents for the Consolidated Company. In New York and Brockton it had some arrangements with agents (R. Vol. 1, pp. 408–409).

The Goodyear Company furnished the best service of the three companies. It had its own offices in Auburn, Maine, Lynn, Haverhill, Brockton, Worcester, New York, Philadelphia, Burlington, N.J., Cincinnati, Chicago, St. Louis, New Orleans and Rochester, N.Y. It carried its own parts and had its own men located in each of these offices and also had a system of traveling men to instruct operatives and keep the machines in adjustment (R. Vol. 1, p. 408). However, neither one of the companies gave a good service (R. Vol. 1, p. 409, line 37). Moreover, since the effective use of the machines of any one of the companies was dependent upon the efficiency of the machines of the other companies (since, as explained above, the machines of one company could not be used unless the machines of the other companies were in use) the efficiency of the service rendered by the three companies was regulated by the company which rendered the worst service. As Mr. WINSLOW testified:

> "In other words, the entire continuity of operation, the regularity of operation of the factory, was dependent upon that service that was rendered by that one of three companies that gave the least efficient service" (R. Vol. 1, p. 409, lines 38–41).

Furthermore, there was an unnecessary duplication of expense involved in the maintenance of this service.

> "Each of these three companies was employing its own traveling mechanics and instructors, who in many instances were traveling to the same places, visiting the same factories, and carrying parts to the same places, but each set working on their own particular machines" (Winslow, R. Vol. 1, p. 409, lines 14–18).

The unsatisfactory condition of this service and the increased efficiency in productiveness which would result from more efficient service, was, as stated, one of the main purposes for the formation of the United Company. Thus Mr. WINSLOW testified:

> "Both Mr. Howe and myself recognized that condition, and it seemed that by bringing our two companies together we could get a uniform service that would produce a great deal higher percentage of efficiency of the machines than

if a given factory was dependent upon an independent call to us and an independent call to their office. If the service was brought into one office, if the entire service was unified, a call coming in there would be attended to at once, no matter upon what machine it was needed. The regularity and continuous operation of the machines is dependent upon what may be termed instantaneous service" (R. Vol. 1, pp. 409–410, lines 41–8).

"Another reason which I gave for the consolidation was our purpose to increase the productive efficiency of the machines in shoe factories. In speaking of the productive efficiency of the machines I had in mind the amount of shoes upon which the machine would operate in a given day or week or year; in other words, the productiveness of the machine in the work that could be done upon it. A machine might have a capacity to do a thousand pairs a day, but for some reason other than the ability of the machine to do the work it would not produce its work. The operative himself might not be efficient. The way in which the work came to that particular machine might not be right. The machine itself might be broken down. The manufacturer might have only one machine, and that operative might be out, in which case we frequently found him a man. The many ways in which this service has been used had led to the conclusion on the part of some of the men who were familiar with the practical side of the business that a service could be furnished which would very materially increase the productivity of the machines daily, so that less machines would be needed, less floor space, a given investment in the machines would earn more money, the operatives themselves could earn better wages, and the result of that is productive efficiency; in other words, we did produce an ability on the part of the machines to increase the number of shoes that would go through them" (R. Vol. 1, p. 412, lines 17–40).

FREDERICK ALLEN, president of the Allen, Foster, Willett Company of Lynn, testified:—

"I can remember ten years ago, twelve years ago, when we did have some machines from the independent companies—some of the Bresnahan machinery, I believe—it would sometimes take us three or four days, if a machine broke down, before we could get it fixed up and repaired. At the present time there is a corps of experts in Lynn there who are efficient on each and every machine that we have, and if it is necessary within half an hour I can have

a man over there and the machine fixed up right away, and with one machine being dependent upon the running of another—that is, one machine breaking down will throw out the entire line—that is a very big advantage" (R. Vol. 1, p. 722, lines 23–33).

JONATHAN BROWN, Jr., a manufacturer of Salem, Mass., making 7,500 pairs of shoes a day, testified:—

"We have had experience with that situation, and it is a matter of record that everyone knows who has been connected with manufacturing shoes for a number of years that before the United Shoe Machinery Company was formed, where we would have machines from these different individual companies, a machine, the capacity of which may have been five, six, or seven hundred pair a day, would break down and we would send for some one to have the machine repaired, and it might be three days, four days, a week or ten days before we would get anyone to put that machine in order. The consequence was that all the operations beyond that machine which were waiting for that 500, 600, or 700 pair of shoes were simply lying idle" (R. Vol. 1, p. 731, lines 13–24).

(c) IMPROVEMENTS OF SERVICE BY UNITED COMPANY.

Almost immediately after the formation of the United Company the plans with reference to the improvements of the service commenced to be put into effect. Each territory was studied and the best man put in charge of that district (R. Vol. 1, p. 418, lines 22–31). Where previously the service had been rendered from different offices, these were amalgamated into a single office.

In 1911 the United Company had 18 offices situated in the following places: Auburn, Maine; Haverhill, Mass.; Lynn, Mass.; Manchester, New Hampshire; Marlboro, Mass.; Brockton, Mass.; New York City, New York; Rochester, New York; Lestershire, New York; Philadelphia, Pennsylvania; Harrisburg, Pennsylvania; Cincinnati, Ohio; Chicago, Illinois; Milwaukee, Wisconsin; St. Paul, Minnesota; St. Louis, Missouri; New Orleans, Louisiana; San Francisco, California.

It had also sub-stations at—Augusta, Maine; Gardiner, Maine; Rochester, New Hampshire; Nashua, New Hampshire;

Derry, New Hampshire; Newburyport, Mass.; Auburn, New York; Baltimore, Maryland, and Lancaster, Ohio.

This makes a total of 27 stations in 13 different states. At each of these places men were stationed to repair machines and instruct operators (R. Vol. 1, p. 974, lines 4–20). These men answer calls for service from shoe manufacturers situated in their district, immediately traveling to the shoe manufacturer's factory. In some instances they have to go several hundred miles (R. Vol. 1, pp. 420–1).

There is a stock of parts in each of these depots for practically every machine which the United Company produces, so that the men are in a position to repair any machine immediately (R. Vol. 1, p. 421, lines 35–39). The investment in parts carried by the United Company in 1911 was $1,415,474.49 (R. Vol. 1, p. 974, line 23).

The number of roadmen employed in this service increased from 237, employed by the United Company in 1899, to 689 employed in 1913, and the number of branch office managers and assistants increased from 12 to 31 (R. Vol. 5, Defs.' Ex. 211, p. 293). The total calls answered in the year 1911 were 192,524, and including calls for instruction to operatives 201,413. The time of the roadmen occupied in this work consumed 1,365,384 hours (R. Vol. 5, Defs.' Ex. 214, pp. 311–2).

The number of operatives taught during 1911 was as follows:

Goodyear operators taught	2,209
Metallic operators taught	956
Heeling operators taught	1,006
Lasting operators taught	1,359
Pulling-over operators taught	956
Eyelet and general operators taught	2,403
Total operators taught	8,889

Defendants' Exhibit 214 (R. Vol. 5, p. 311) shows in detail the number of calls made by each office, the number of operatives taught through each office, and the number of hours consumed in this service.*

*Defs.' Ex. 212 (R. Vol. 5, p. 294) shows in detail the calls for service made by E. W. Burt & Co. Shoe Manufacturers for 1911, and Defs'. Ex. 213 (R. Vol. 5, p. 298) shows the calls made for service by L. A. Crossett Co. for the period July 1, 1911, to January 1, 1912. E. W. Burt & Co., a small manufacturer averaging 123 pairs per day received in 1911 the services of the United Company 102 times. L. A. Crossett, Inc., for the year 1911 received the service of the United Company, 1,150 times.

The foregoing service is rendered absolutely without charge to shoe manufacturers. The shoe manufacturer is not even charged with the traveling expenses of the roadmen. All he pays is the cost of new parts (R. Vol. 1, p. 421, lines 18–23). This service cost for the year 1911, $1,196,494.86 (R. Vol. 1, p. 974, line 22).

The United Company is practically the only shoe machinery company which furnishes service (R. Vol. 1, p. 423, lines 1–4).

As to the character of the service and its improvements since 1899, Mr. WINSLOW testified as follows:—

> "As to the development of the service for shoe manufacturers since 1899, the service is now so far ahead of what existed in 1899 that there is really no comparison. At each depot is a general manager and a body of men who are experts in the adjustment and repair of all the machines. These men are at the call of the manufacturers by telephone at any moment of the day and are at their service nights, if necessary, to rearrange their factories or readjust their machines. There are men to teach new operatives how to run the machines and how to take care of them. That service is complete in each shoe manufacturing district in the country.
>
> "In addition we have men who are treated by the manufacturers as their engineers and who act in an advisory capacity as to the re-arrangement of factories and the improved processes of manufacture. We send these men around to the factories to call the attention of manufacturers to opportunities to improve their methods of manufacture. This service always includes the instruction of operatives. There is also a service in continually supervising and watching the operation of the machines by our experts, and in order for the manufacturer to keep a given set of machines in constant operation these men have to be acquainted with the manufacture of the particular kind of shoes made in each factory because the requirements as to the work of the same machines may be very different in one factory from the requirements in another factory.
>
> "These men have to know how to run the machines themselves, how to adjust them, repair them, take them apart and put in parts" (R. Vol. 1, p. 420, line 35–p. 421, line 17).

(d) TESTIMONY OF SHOE MANUFACTURERS AS TO IMPORTANCE OF THE SERVICE RENDERED BY THE UNITED COMPANY.

ALANSON C. BROWN, president of the Hamilton-Brown Shoe Company, of St. Louis, manufacturer of 25,000 pairs of shoes a day, testified:—

> "The service furnished by the United Company has helped us to educate our workmen and teach them how to run the machines. If a machine breaks down they send a man at any time to repair it or fix it up and keep us running, and they have furnished parts so that we didn't have to keep any supply of parts.
>
> "The United Company has instructed a good many operators for us. They instruct operators for us right along without any charge to us. As to the importance of that to us, the operatives struck in five of our factories a little over a year ago and we had to get practically all new operatives in all of those factories. Those operatives were instructed by the United Company's men without charge. The company also keeps our machines running. If one of the machines should be out of order it would clog up and congest that department until we got the machine running again. As fast as the United Company gets up a new machine which we think is an improvement over the old machine, we try to get them to install it in our factory and take out the old one. They have done this in every case without charge to us, except the freight" (R. Vol. 1, pp. 617–8, lines 32–8).
>
> "The United Company is helping us instruct operators almost daily. We have green help in our factories right along and they send an instructor who helps instruct these operators. During our labor trouble we tried the system of having some teachers ourselves. We didn't have enough instructors from the United Company and had one or two of our foremen try it. As to whether they could instruct all right, it would be a big expense to us if we had to do that. We never adopted a system of keeping our own instructors on hand and instructing new operators as they came in. This United Company system of instructing operators is a good thing all the time. We employ it practically all the time" (R. Vol. 1, p. 619, lines 19–30).

ROBERT P. HAZZARD, a shoe manufacturer of Gardiner, Maine, making about 5,000 pairs of welt shoes a day, testified:—

"The United Company's service is one of the greatest necessities for the economical running of a modern shoe factory. That service consists of men who specialize on certain classes of machines and who are located conveniently to the manufacturing centres. We are served to a certain extent from the Auburn, Maine, office, but there are several resident United Company men in Gardiner who are under the jurisdiction of the Auburn office, but who are located in Gardiner so as to be more available when we need them. If those men are busy at one of the other factories, or if there is anything that they cannot handle, we telephone Auburn and inside of an hour and a half we have a man from Auburn. Those men do anything that seems desirable in putting the machines in shape to do the maximum amount of work of good quality.

". . . The failure of a company to give efficient service is detrimental both to one's nervous system and to the smooth running of the factory.

"As to the importance of efficient service, the shoe business is peculiar because it is dependent on succeeding operations . . . and because an even production in all operations all the time is absolutely necessary for efficiency. That efficiency wants intelligent action and it wants it quick and may be compared to the fire department in case of fire.

"When manufacturers get that service it not only means bigger wages for the employees, but it means better results for the manufacturer and cheaper shoes for the consumer. In my judgment, with the United Company's service the consumer is buying shoes cheaper than he could if the royalty were done away with and efficient service were not furnished" (R. Vol. 1, p. 643, line 16–p. 644, line 3).

Mr. Hazzard has between $50,000 and $60,000 invested in lasts. A last is in a shoe about 5 days. It is of the utmost importance to get the shoes through the factory quickly so that too much money will not be tied up in lasts (R. Vol. 1, p. 644, lines 4–10). He further testified that operators were not allowed to have a large accumulation of shoes on any operation, because it would tie up too much money in lasts and stock and there would not be room to make the shoes, so that "every man is working right from rack to rack to the man ahead of him. These shoes are moved in racks of 24 pairs, and when one machine shuts down it is like breaking a link in a chain" (R. Vol. 1, p. 644, lines 17–23).

FREDERICK ALLEN of Lynn, who has been manufacturing shoes for about 17 years (R. Vol. 1, p. 721, lines 36–7) and whose

factory has a capacity of about 6,000 pairs a day (R. Vol. 1, p. 724, line 1), testified that 10 or 12 years ago when he had some machines from other companies, "it would sometimes take us three or four days, if a machine broke down, before we could get it fixed up and repaired" (R. Vol. 1, p. 722, lines 23–27).

> "At the present time there is a corps of experts in Lynn there who are efficient on each and every machine that we have, and if it is necessary within half an hour I can have a man over there and the machine fixed up right away, and with one machine being dependent upon the running of another—that is, one machine breaking down will throw out the entire line—that is a very big advantage" (R. Vol. 1, p. 722, lines 27–33).

JONATHAN BROWN, Jr., a manufacturer of Salem, Massachusetts, making about 7,500 pairs a day, testified:—

> ". . . If we had our choice in the matter, we wish that every machine we had in our establishment was under the control of the United Shoe Machinery Company. That is because we get such excellent service; we get it promptly; we get it cheap, and it allows us to go ahead with our production and figure down to a minimum cost for our shoes and go ahead and manufacture them without having the delays that we are subjected to whenever we have other machines.
>
> "We have had experience with that situation, and it is a matter of record that everyone knows who has been connected with manufacturing shoes for a number of years that before the United Shoe Machinery Company was formed where we would have machines from these different individual companies, a machine, the capacity of which may have been five, six, or seven hundred pair a day, would break down and we would send for someone to have the machine repaired, and it might be three days, four days, a week, or ten days before we would get any one to put that machine in order. The consequence was that all the operations beyond that machine which were waiting for that five hundred, six hundred, or seven hundred pair of shoes were simply lying idle. Today, if any of our machines break down, that is, any of the United Shoe Machinery Company's machines—we telephone over there, and inside of three minutes we have someone to put it in order. The consequence is we can figure on our production at the lowest minimum cost" (R. Vol. 1, p. 731, lines 4–29).

"To my knowledge no other company which supplies machinery to shoe manufacturers furnishes any service in any way comparable to that of the United Company. Assuming that machines were of equal merit, this factor of service would be an important element in deciding which company to trade with. There would be no question. You would simply go to the United Company because of the service. It certainly is as vital as that" (R. Vol. 1, p. 732, line 40–p. 733, line 3).

EDWARD W. BURT, a shoe manufacturer of Lynn, testified as follows:—

"As to how large a factor the service which they give is in the successful manufacture of shoes, personally I believe that one of the chief things that a manufacturer should consider in the making of shoes is the service given in keeping the machines in continuous operation" (R. Vol. 1, p. 739, lines 11–15).

"The United Company has furnished prompt and excellent service. That is absolutely important to the successful manufacture of shoes. We must have it. If our machine breaks down, every hour means so many shoes piled up behind that machine" (R. Vol. 1, p. 740, lines 42–45).

JOHN STROOTMAN, a shoe manufacturer of Buffalo, New York, making from 800 to 1,200 pairs per day (R. Vol. 1, p. 742, lines 41–3), testified:—

"The service which the United Company gives us is excellent, and it is an all-important factor in the manufacture of shoes. We could not run a factory without the Company's skilled men to keep the machines in order and keep them running. So far as I know, no other company furnishing shoe machines gives service of that kind" (R. Vol. 1, p. 744, lines 12–17).

CHARLES A. EATON of Brockton, making 2,400 pairs a day (R. Vol. 1, p. 751, lines 18–20), testified:—

"The service which we have received from the United Company has been very satisfactory indeed. All manufacturers depend very largely upon it, and in our own case we have considered it of vital importance" (R. Vol. 1, p. 753, lines 23–26).

He further testified that there were continually little annoying problems which the United Company solved for him by putting

him in touch with some method used in another factory (R. Vol. 1, p. 753, lines 27–34).

FRANK C. RAND, of St. Louis, vice-president of the International Shoe Company and a director of the Boylston Shoe Machinery Company, testified, as a witness for the United States (R. Vol. 1, p. 178, lines 19–20; p. 183, lines 18–19; p. 186, lines 31–34):—

> "They teach our operatives without charge, and furnish them in times of strikes without charge, at our request. It was a mutual proposition—if we didn't run the machines we didn't get any shoes and they didn't get any royalty."

C. WILLIS BENNETT, a shoe manufacturer of Fitchburg, Mass., making from 800 to 1,400 pairs a day, testified:—

> "As to my experience with them with reference to service, why, their service has been, I might say, indispensable. I don't know what I should do without their service. Whenever I have a machine break down, I immediately telephone to their branch office at Marlboro, and they have a man come up there from Marlboro, who is an expert on that particular machine, to put the machine in order, and they do all this without any expense to me, aside, of course, from the cost of the broken part of the machine, if there are any parts broken" (R. Vol. 1, p. 758, lines 36–44).

He further testified that when he started business in Fitchburg there was only one shoe factory there and there were no operatives outside of that factory, and consequently, he had to teach a good many operatives. The United Company furnished agents and expert instructors to instruct these operatives, making no charge for their services (R. Vol. 1, p. 759, lines 1–5). He also testified that the United Company's agents assisted him as to improved methods of manufacture by telling him of such methods seen in other factories (R. Vol. 1, p. 759, lines 5–8).

As to the services of the United Company in acting as engineers in laying out his plant, he testified as follows:—

> ". . . I went to the United Shoe Machinery Company to see if they would give me a line of machines, and they stated they would, and I had a few samples made down in Lynn and went on the road and sold some shoes. During my absence the United Shoe Machinery Company had their

expert mechanics there laying out my factory and setting up the machines, and when I returned . . . with orders for shoes, they had my factory all equipped ready for me to start; and all those who visit my factory say that I have one of the best equipped and up-to-date factories in the state, and I want to say also that they did this without any expense to me.

"As to how detailed the work of their experts was in laying out my factory, in the first place, they had an expert come there who thoroughly understood laying out a factory, and told me what sized shafting I would require, what sized pulleys I would require for running different machines. They chalked out on the floor the location of the different machines that would make my work go along in the best manner from one operation to another, and, as I say, when the whole factory was completed I had a thoroughly equipped factory.

"I was free to exercise my own judgment in the selection of machines, as to taking their machines or the machines of others, and I did so. Whatever machines I took I found had been arranged for and set up by the United Company, and they had my factory ready to run" (R. Vol. 1, p. 758, lines 10–35).

CHARLES H. JONES, a prominent witness for the United States, under cross-examination, admitted that he had said of the service of the United Company:—

"It has certainly given more faithful care and attention to the running of the machines and keeping them in order; and in our country factories, where we employ a large proportion of inexperienced help, they have given us more constant and faithful attention in instructing new operators, and in the supervision of the machinery under trying conditions, than we ever obtained from any of the constituent companies" (R. Vol. 1, p. 131, lines 14–21; Vol. 4, p. 1075).

(3) INVENTIONS AND IMPROVEMENTS IN MACHINES MADE BY THE UNITED COMPANY.

Mr. WINSLOW testified:—

"Soon after the formation of the [United] Company the development of inventions and improvements of machines was placed in the hands of a committee comprising three or four of the inventors experienced in shoe machinery invent-

ing. Every new idea or suggestion was submitted to that committee, who made an investigation and reported their findings to the heads of the respective departments; and a decision was made according to which a man was put at work to develop the idea, or it was filed as not being practicable" (R. Vol. 1, p. 424, line 40–p. 425, line 3).

In this experimental work the United Company has expended very large sums of money. For example, from 1907 to 1911, a total of $2,267,954.70 was spent, an average of $453,590.94 per year (R. Vol. 1, p. 426, lines 25–39).

Defendants' Exhibit 217 (R. Vol. 5, pp. 323–51) is a typical report showing the experimental work done during the month of October, 1911. It shows that experimental work was done on 61 different machines or parts of machines. The report sets out in detail each of the machines on which work was done and the expenditure on each.

In addition to conducting its own Experimental Department the company has purchased from others any inventions which it was thought would improve its machines.

The result of this effort and expenditure of money has been a remarkable development in the art of shoe machinery.

The United Company has, since 1899, brought out at least an average of 7 or 8 new machines a year (R. Vol. 1, p. 427, lines 12–13).

Mr. Winslow testified that since 1899 the United Company has invented and put out to its customers 150 new machines. These are shown in a list—Defendants' Exhibit 246. The list comprises five machines in the Eyeletting Department; 41 in the Goodyear Department; 11 in the Heeling Department; 4 in the Lasting Department; 7 in the Metallic Department; 15 in the Pulling-over Department; 64 in the General Department and 3 in the Fitting Room Department. These machines have all been offered to the public by the United Company by sale or lease (R. Vol. 1, p. 503, lines 7–23). 39 of these machines do work previously done by hand. (Defs.' Ex. 247).

Again Mr. WINSLOW testified:—

"That work has been carried on consistently and continuously, until now there is a very large organization that gives its entire time and attention to the development of

ideas of our own men, or ideas that are suggested to us, or to consideration of inventions which are submitted to us.

"From almost the beginning of the company to the present time we have done everything we know how to do to advance the art of making shoes by machinery.

"As soon as we had developed a new machine which performed an operation then being done by machines in the shoe factories, that machine was built in a wholesale way and was placed in the hands of the manufacturers without any charge whatever for the improvements or for the new machines, and the old machines were taken back and scrapped. No charge was made for substituting the new machine and taking out the old one. If the improvement was an attachment, that was added to the manufacturer's machines without any charge to him" (R. Vol. 1, p. 425, lines 4–20).

Among the striking illustrations of new machines which the company has invented and given to the trade is the Rex Pulling-over Machine and the auxiliary machines used with it. The Pulling-over Machine does the work formerly done by the hand operator in preparing the shoe for the lasting machine. It draws the upper over the last at the center and at each side of the toe and attaches it temporarily to the innersole, all at one operation, so that the operator can bring the seam of the tip in a right line across the toe and locate the heel seam directly in the center of the heel. Unless these two lines are made correct the shoes will not be salable (R. Vol. 1, p. 425, lines 21–34). The auxiliaries of the pulling-over system assemble the upper, innersole, counter and last (R. Vol. 1, p. 425, lines 35–40).

The clicking machine, developed by the United Company, enables the manufacturer to cut his uppers accurately with the least loss of stock. It saves every bit of the waste that was caused by the hand knife cutting and increases the product of the workman by at least twofold. The quality of the work is infinitely better. At the same time it cuts the parts of the uppers it makes marks to facilitate the assembling of the parts. Before this machine was invented manufacturers used a pattern of zinc or leatherboard which the cutter placed upon the stock and then cut around it with a hand knife. The knife always cut by the corners of the pattern and where the leather had been cut by the knife passing the corners the stock could not be used and was wasted (R. Vol. 1, p. 426, lines 2–10). It saves

more money to the manufacturer than any other machine which has been produced (R. Vol. 1, p. 426, lines 1–2).

Another illustration is the stapling machine, which saves the manufacturer the cost of a great many needles and a lot of cost for damage caused to machines when needles break (R. Vol. 1, p. 427, lines 20–23).

In the Goodyear Department nearly all the machines have been replaced by new and improved machines (R. Vol. 1, p. 430, lines 32–5). In addition a large number of new auxiliary machines have been developed. Thus in 1899 the United Company supplied 13 Auxiliary Machines for use in making welt shoes, while in 1911 it supplied 35 such Auxiliary Machines. In 1899 it supplied 3 Goodyear Auxiliary Machines for use in making turn shoes, while in 1911 it supplied 9 such Auxiliary Machines (R. Vol. 5, Defs.' Exs. 242–5, pp. 681–3).

The United Company has also developed a large line of so-called General Department Machines which it leased or sold at the option of the shoe manufacturer until 1911, after which time it has sold them only. A list of 172 such machines is set out in Defendant's Exhibit 227 (R. Vol. 5, p. 425).

(4) INCREASED EFFICIENCY OF MACHINES RESULTING FROM INVENTIONS AND SERVICE FURNISHED BY UNITED COMPANY.

The improvement in the defendants' machines, the addition of new machines to assist in the work of the principal machines and the service which the United Company has been able to render in connection with its machines have resulted in a remarkable increase in their efficiency. The result has been that each machine has been able to turn out a greatly increased number of shoes.

For example, each Goodyear Welt Sewing Machine in 1910 sewed 66.7 per cent. more shoes than in 1899; each Goodyear Outsole Stitching Machine sewed 69.5 per cent. more shoes in 1910 than in 1899; each Goodyear Welt Sewing Machine used for turn sewing sewed 54.3 per cent. more shoes in 1910 than in 1899; each Heel-Attaching Machine attached 62.3 per cent. more shoes in 1910 than in 1899; each Lasting Machine lasted 24 per cent. more shoes in 1910 than in 1899 (R. Vol. 1, pp. 428–29).

The difficulty of lasting high-toed shoes now in use has reduced the increased efficiency of the Lasting Machines. Prior to the introduction of this new style of shoe these machines showed a higher percentage of efficiency compared with the machines of 1899 than that stated above (R. Vol. 1, p. 429, lines 7–20).

(5) SAVINGS OF SHOE MANUFACTURERS FROM INCREASED EFFICIENCY OF MACHINES AND FROM DECREASE OF ROYALTIES AND INSTALLATION CHARGES.

Shoe manufacturers have benefited from the increased efficiency of the United Company's machines and from the development of new machines, both directly and indirectly. They have benefited directly because of the saving in material and cost of manufacture which has resulted, and also because of the reduction in royalties and other charges which the United Company has made. They have benefited indirectly because, owing to the constant service rendered by the United Company, the machines have been maintained in an efficient condition capable of working without interruption and because the increased efficiency of the machines has, as shown above, materially reduced the number of machines required to do a specified amount of work. The value of these indirect benefits, as testified to by shoe manufacturers, has been referred to above. The saving it has effected in reducing the amount of capital required to conduct the business by reducing the amount of space required for manufacturing purposes, and thus the rental paid by the shoe manufacturer, and by avoiding interruption to the operation of the factories, cannot, of course, be estimated exactly, but it is unquestionably very large.

The direct savings are also large. Mr. Winslow testified that the machines produced by the Experimental Department of the United Company alone had reduced the cost of manufacturing the welt shoe more than the total royalty the United Company receives from its machines used in manufacturing such shoes (R. Vol. 1, p. 427, lines 26–29).

Mr. WINSLOW testified:—

> "The savings effected, as between 1899 and 1911, in the cost of manufacture of the Goodyear welt shoe by increased

efficiency of the machines and by decrease in royalties . . . amounted to eight and one-quarter cents per pair. Of this saving the decrease in royalties amounted to three-quarters of a cent, comprising a quarter of a cent that had been paid to the company making the sole-laying machine and one-half a cent which had been paid to the Gem insole company for the use of its machines; that was before we acquired those companies. After we acquired those machines we credited the royalty to the manufacturers, so that there was a direct reduction of three-quarters of a cent per pair on the welt shoes made by the use of those machines" (R. Vol. 1, p. 430, lines 4–17).

"On turn shoes there has also been a direct reduction of three-quarters of a cent on women's shoes and one-half a cent on children's shoes, amounting to 50 per cent. of the royalty. That reduction was in 1900" (R. Vol. 1, p. 430, lines 18–21).

"On Goodyear welt shoes the saving in cost of manufacture, resulting from the introduction of new machines and improvements in other machines that existed in 1899 and which we improved after the formation of the company, amounts to about seven and a half cents" (R. Vol. 1, p. 430, lines 27–31).

"The improved machines have resulted in savings in the cost of operation, or in the material used, or in the cost of maintenance and the reduction of equipment required, or in the improved quality of the work" (R. Vol. 1, p. 430, lines 36–39).

"Of the saving, a cent and three-quarters per pair in the cost of manufacture is effected by the group of machines comprising the new welter, new stitcher, new rough rounder, new power grooving and beveling machine, the new Universal channeling machine, tack puller and resetter, new welt beating and slashing machine, the welt indenting and burnishing machine, the impression stitch burnishing machine No. 2, and the Goodyear jointing machine. The savings by these machines result from the increased speed of operation of the new welter, the new stitcher, and the new rough rounder, and from the pulling of tacks and resetting of tacks on the tack pulling and resetting machine, always before done by hand. These savings include the savings accomplished by the Plant improvements on the welter. Without the Plant improvements the savings would be somewhere between three-eighths of a cent and a half a cent less than that.

"It is entirely untrue that the modern welter and stitcher do not operate any faster than the old machines. They

are at least 50 per cent. faster in average speed than the old machines; that is, they will sew 50 per cent. more stitches in a minute than the old ones would.

"The next group of machines which effected a saving in the manufacture of welt shoes are the Ideal clicking machine, the Duplex eyeletting machine, the Ensign lacing machine, the lining cementing machine, and the improved skiving machine. I have credited three cents per pair saving as effected by those machines, but that is less than the manufacturers of welt shoes have said their saving was in leather by the use of the Ideal clicking machine alone. Three cents is well within the actual saving effected by those machines.

"A saving of two cents is effected by the group of machines comprising the insole heel seat rounder, the insole tacking machine, the Rex pulling-over machine, the Rex assembling machine, the Rex pounding machine, the upper trimming machine, and the No. 5 lasting machine" (R. Vol. 1, p. 430, line 40–p. 431, line 30).

"It is almost impossible to calculate the amount of savings effected by these machines on high-toed shoes. On those shoes probably the saving in lasting alone by the No. 5 lasting machine was two cents a pair, without reckoning the savings for the other machines" (R. Vol. 1, p. 431, lines 31–35).

"A quarter of a cent saving has been effected by the hand method lasting machine which we have furnished for lasting the sides of shoes the toes and heels of which are lasted on the No. 5 Lasting Machine" (R. Vol. 1, p. 431, line 42–p. 432, line 1).

"I have allotted a quarter of a cent saving to the Crest heel blacking machine, the channel cementing machine, and the tip scouring machine.

"All of the machines in these groups are new machines which the company has invented and brought out and the savings effected by them amount to a total of seven and one-half cents. Adding our reduction in royalties, the sum is eight and one-quarter cents" (R. Vol. 1, p. 432, lines 7–14).

Mr. WINSLOW also testified:—

"The amounts paid per pair of shoes for the use of all the principal royalty machines furnished by the United Company, when accounts are paid within thirty days, are for Goodyear welts, men's work, 5.694 cents; for Goodyear welts, women's work, 4.694 cents; for Goodyear Turn shoes, women's and misses', 1.972 cents; for children's Goodyear Turn shoes, half a cent; for men's and women's McKay

shoes, 1.746 cents; for children's McKay sewed shoes, 1.391 cents (R. Vol. 1, p. 503, lines 29–36).

"The average royalty paid by a shoe manufacturer for the use of all machines furnished by the United Company for the manufacture of all types and grades of shoes is less than two and two-thirds cents per pair" (R. Vol. 1, p. 866, lines 29–32).

"The United Company has suppressed absolutely no machines, no inventions and no improvements.

"In no instance when an initial premium is charged has that been increased over what was charged prior to 1899 and in no instance has the royalty charged on any machine been increased over that charged in 1899" (R. Vol. 1, p. 433, lines 27–32).

"Throughout our business dealings our prices, service, and forms of lease have been the same to everyone; we have made no price for any royalty or for any material or in any way that was not open to every lessee the day it was made" (R. Vol. 1, p. 439, lines 39–42).

"Our royalties have been the same to all, whether they used a thousand machines or one; they are charged by the pair and the service is exactly the same. No lease or modification of lease is adopted at any time that is not open to all lessees at the date of its adoption" (R. Vol. 1, p. 440, lines 2–6).

"As an illustration of the reductions made in prices of articles furnished by the United Company, I have had compiled the reductions made in the prices of the forepart and edge cutters acquired from the Boston Shoe Tool Company and the Globe Shoe Tool Company (defendants' Exhibit 239, Record, p. [678]). The prices charged by those companies compared with prices subsequently charged by us are as follows:

"The price of the heel cutter with blades in January, 1899, was $3.25; we reduced the price on March 1, 1900, to $2.25. In January, 1899, the price of the blades alone was $2; on March 1, 1900, we reduced the price for the blades alone to $1. The price of forepart and shank cutters in January, 1899, was thirty-five cents each, in small quantities, and twenty-five cents each in quantities of 100; on March 1, 1900, we reduced the price to twenty-five cents each in any quantity. The price of edge irons in January 1899, was fifty cents; on March 1, 1900, we reduced the price to twenty-five cents" (R. Vol. 1, p. 479, lines 3–19).

The United Company has put out many of its new and improved machines without charging any additional royalty.

Thus, for example, the shoe manufacturer of to-day gets the use of the Welter and Stitcher of the Goodyear Department and the 36 Auxiliary Machines without initial payment and for exactly the same royalty as was charged in 1899 for the use of a far less efficient Welter and Stitcher, and only 13 Welt Auxiliary Machines. For turn shoes he gets the Stitcher and 9 auxiliaries without initial payment and for one-half the royalty charged in 1899 for a much less efficient Welter and 3 Auxiliaries. Certain machines acquired from others for which the shoe manufacturer previously paid a substantial charge have been added to the Goodyear Auxiliary set without increasing the royalty. Thus the Company owning the Sole-laying Machine, previous to its acquisition by the United Company, charged a royalty of one-quarter cent per pair.

The United Company acquired this machine and included it in its Auxiliary Goodyear Set without any additional royalty. So in the case of the Gem Insole Machine on which the charge had been one-half cent per pair (R. Vol. 1, p. 430, lines 10–13).

The United Company has reduced or eliminated the initial charges made in 1899, thus reducing materially the cost to the shoe manufacturer of his machinery. The initial charge for an equipment of machines to manufacture 300 pairs of Goodyear Welt shoes per day was in 1899, $6,930.50. In 1911 the improved machines of the same character and 18 additional Auxiliary or General Department machines were furnished by the United Company for $1,430, a saving to the manufacturer of $5,500.50. The initial charge for an equipment to make 1,000 pairs of shoes per day was, in 1899, $11,300.50. Prior to 1911 the United Company had reduced the charge to $2,467.50, a saving to the manufacturer of $8,833 (R. Vol. 1, pp. 432–3). More than 50 per cent. of the manufacturers make 300 pairs or less per day (R. Vol. 1, pp. 454–5).

(6) BENEFITS TO SHOE OPERATIVES, RESULTING FROM INVENTIONS AND SERVICE OF UNITED COMPANY.

Shoe operatives are generally paid by the piece, that is, a certain amount for each pair of shoes operated on by them. Any increase in the efficiency of the machines tending to a larger production per machine thus increases the number of shoes

worked on by each operative. The increased efficiency of the United Company's machines has resulted in an increase in the compensation paid operatives, although shoe manufacturers have in many instances actually reduced the piece price.

Thus the testimony shows that the average output of Model K Welter is 40 dozen pairs a day instead of about 25 dozen pairs on the old machine and that an operative as a result can earn 20 per cent. to 36 per cent. more on the new welter, although the piece price on the old welter was one-third more than on the new (R. Vol. 1, pp. 646–8, .658–60, 710, 723, 753). On the Model M Stitcher the operatives can earn 24 to 45 per cent. more than on the old stitcher, although the piece price is 40 per cent. less than on the old stitcher (R. Vol. 1, pp. 647, 753).

(7) THE DEVELOPMENT BY UNITED COMPANY OF GOODYEAR METHOD OF MAKING SHOES.

One of the purposes in forming the United Company, as testified to by Mr. Winslow, was to encourage and increase the manufacture of Goodyear Welt shoes. This was to be done by the development of new machines to assist in that manufacture, by lowering the cost of installation of the Goodyear machines and by instructing operators in their use (R. Vol. 1, p. 407, lines 22–30). The United Company has constantly carried out this purpose and may be said to have specialized in machinery for making the Goodyear Welt shoes.

It has, in the first place, enormously increased the efficiency of its Welter and Stitcher, the two principal machines used in this process. As we have shown above, it has greatly increased the number of Auxiliary Machines furnished with its Welter and Stitcher (*supra*, p. 197). It has eliminated the initial charges made in 1899 on its principal machines, resulting in a large saving to the shoe manufacturer (*supra*, p. 202).

There has resulted a great increase in the production of Goodyear Welt shoes. In 1899, 22,700,000 pairs of welt shoes were made out of a total of 172,786,000. In 1910, 86,231,000 pairs of welt shoes were made out of a total of 278,916,000 (R. Vol. 1, p. 424, lines 24–35).

II.

THE EVIDENCE REGARDING DEFENDANTS' PATENTS.

I. INTRODUCTORY STATEMENT.

The petition alleges (R. Vol. 1, pp. 992–4) that early in 1899 the principal companies engaged in the manufacture of shoe machinery were manufacturing their machines under patents; that many of the "basic" patents on the principal machines were about to expire and the manufacture and use of such machines would have become open to the public in the near future; and that the owners and officers of those companies, designing and intending unlawfully to extend and perpetuate the monopolies which previously they had lawfully enjoyed under said patents, determined to acquire a complete monopoly of the manufacture, sale, and lease of shoe machinery.

In effect the allegation of the petition is that in 1899 the important patents on the principal machines were about to expire and that the defendants, knowing this, contrived a plan by which they could in effect create a new and unlawful monopoly to take the place of the lawful monopoly which they had previously enjoyed by virtue of the patents and which they were about to lose through expiration of the patents; and this is what petitioner expected and undertook to prove. Consistent assertions were made by its counsel several times during the trial. For example:—

> "BROWN, J. Well, you allege in substance that here was a clear unpatented field in which people would be dealing as free agents.
>
> "Mr. FOWLER. As to the basic patents on the essential machines" (R. Vol. 1, p. 982, lines 13–17).

In the following pages we shall show how entirely unsuccessful were petitioner's efforts to establish this allegation and how absolutely it was at variance with the facts. It will appear that petitioner's own evidence completely failed to support the allegation, in any respect or to any extent; while defendants' testimony completely answered and disproved it. The record shows that:—

(1) Petitioner completely failed to prove the allegation of the petition that early in 1899 "many of the basic patents on the principal machines" were "about to expire" (R. Vol. 1, p. 993). On the contrary,—

(2) *Petitioner's* testimony proved, as to machines of its own selection, that early in 1899 "basic" patents were *not* about to expire, and that there were patents on those machines which did not expire for more than ten years after the United Company was formed.

(3) Defendants proved that of the important patents "early in 1899" on the "principal machines" selected by petitioner's patent expert the latest patent on each of those machines had *more than fourteen years to run;* and that, in general, the machines of the companies which combined in February, 1899, to form the United Company were protected by strong patents having considerably over half their terms to run.

(4) While in nearly every instance the machines of those patents were not the first machines in the industry for performing the respective operations and while the patents on those first machines had expired before 1899, the patents which covered the 1899 machines were important and valuable because those machines were so much better than the machines of the expired patents that "early in 1899" they were used and demanded by manufacturers; but—

(5) The patents on the 1899 machines represented only the 1899 stage in the continuous and continuously patented development of the industry; and—

(6) In the rapid development of the industry since 1899 the machines of that day have in turn given place to superior, modern machines which do better work and have greater capacity, and these modern machines are protected by strong and valuable patents of recent date; so that—

(7) When this suit was begun and now, as at every stage in the development of shoe machinery, the best machines available, the machines which manufacturers demand and use, were and are effectively protected by patents.

(8) Moreover, the period since February, 1899, has been a period of more important and more rapid development than any corresponding period in the history of shoe machinery. A great number of new patented machines have been developed

and supplied to manufacturers, and the patents on thirty-nine of these machines which perform operations performed by hand or not at all in 1899 may fairly be termed pioneer patents.

(9) Accordingly, the machines which the United Company was putting out when this suit was begun, the machines which shoe manufacturers demand and use, are protected by strong and valuable patents of recent date.

2. PETITIONER'S EVIDENCE IN SUPPORT OF THE ALLEGATION OF THE PETITION THAT EARLY IN 1899 MANY OF THE BASIC PATENTS ON THE PRINCIPAL MACHINES WERE ABOUT TO EXPIRE.

The petition sets forth that the companies which came together to form the United Company were early in 1899 manufacturing their machines under patents. Then follows the allegation that

> "*many of the basic patents on the principal machines* owned and controlled by them *were about to expire*, and, in the ordinary course of events, the general public would have acquired *in the near future* the right to the free manufacture and use of such machines, the lawful monopoly of such machines theretofore enjoyed by virtue of the patents would have come to an end, . . . " (italics ours) (R. Vol. 1, p. 993).

Testimony with respect to these allegations of the petition was taken before a special examiner under the order of June 27, 1913 (R. Vol. 1, p. 1090), and is contained in Volume 2 of the Record.

That order provided for the taking of testimony—

> "with respect to the allegations of the petition set forth in the paragraph beginning at the bottom of page 15 [R. Vol. 1, p. 993] *and ending at the beginning of Section IV*. on page 16 [994], of the printed petition in the above-entitled cause" (italics ours) (R. Vol. 1, p. 1090).

The allegations of the petition referred to in this order, in addition to that above quoted, comprise the following:—

> "and the system of demanding large royalties for their use would have been replaced by their general manufacture and outright sale under competitive conditions. Furthermore, under the conditions then existing, new patents were being constantly taken out by others, and new and

improved machines for performing the principal operations in the manufacture of boots and shoes by the aid and use of machinery were being placed upon the market, either upon a smaller royalty than had theretofore been charged for machines doing similar work or for sale outright to boot and shoe manufacturers" (R. Vol. 1, pp. 993–4).

There is in the testimony no attempt whatever to support these latter allegations, so that they require no discussion.

A. Petitioner's Claim that Early in 1899 Many of the "Basic" Patents were About to Expire is Disproved by its Own Patent Expert.

In its *prima facie* case in support of this allegation the petitioner's patent expert, Mr. Chapman, mentioned patents on four machines only. The machines and the patents which he testified claimed improvements incorporated in the machines are as follows:—

Shoe Machine: Goodyear Welt and Turn ("Welter") (R. Vol. 2, pp. 2141–44):—

No. 412,704, Oct. 8, 1889 (expiring Oct. 8, 1906*).
No. 461,793, Oct. 20, 1891 (Method) (expiring Oct. 20, 1908*).
No. 488,505, Dec. 20, 1892 (expiring Dec. 20, 1909).
No. 518,911, Apr. 24, 1894 (*expiring Apr. 24, 1911*).

Lockstitch Machine: Goodyear Outsole Rapid ("Stitcher") (R. Vol. 2, pp. 2145–6):—

No. 473,874, Apr. 26, 1892 (expiring Apr. 26, 1909).
No. 474,774, May 10, 1892 (*expiring May 10, 1909*).

Lasting Machine: Chase (R. Vol. 2, pp. 2199–2201):—

No. 340,860, Apr. 27, 1886 (expiring Apr. 27, 1903).
No. 364,088, May 31, 1887 (expiring May 31, 1904).
No. 376,368, Jan. 10, 1888 (expiring Jan. 10, 1905).
No. 483,375, Sept. 27, 1892 (*expiring Sept. 27, 1909*).

Rounding and Channeling Machine: Goodyear Universal (R. Vol. 2, pp. 2201–4):—

No. 463,982, Nov. 24, 1891 (expiring Nov. 24, 1908).
No. 599,602, Feb. 22, 1898 (expiring Feb. 22, 1915†).
No. 600,883, Mar. 22, 1898 (*expiring Mar. 22, 1915*†).

*As to Mr. Chapman's contention that these patents expired prematurely because of the expiration of a British patent, see *infra*, pp. 218-220

†As to Mr. Chapman's contention that these patents expired in 1910 with a British patent, see *infra*, pp. 220-221.

At the conclusion of his testimony regarding the welter and the stitcher Mr. Chapman expressed his views as to the character of the patents on those machines which he had discussed and which are enumerated above, as follows:—

> "*Int.* 13. Should you say, from your knowledge, study and experience, that the patents to which you have referred in your deposition might properly be termed 'basic patents' early in 1899, in reference to the machines in question, welters and stitchers? . . .
>
> "*Ans.* Yes, with the exception of a few detailed claims contained in some of the patents examined by me" . . . (R. Vol. 2, pp. 2146–7).

As to the Chase lasting machine and the rounding and channeling machine Mr. Chapman in his *prima facie* testimony drew no distinctions as to the "basic" character of the patents on those machines. On rebuttal he testified that *none* of the patents on those machines early in 1899 was "basic."

In addition to the four machines listed above, Mr. Chapman discussed six other machines, but in those discussions he *mentioned no patents*, so that obviously his testimony regarding those six other machines cannot possibly be helpful on this issue and may be entirely disregarded.

Thus petitioner's *prima facie* case in support of the allegation of the petition that early in 1899 basic patents were about to expire established (1) that of the patents, alleged to be "basic," on two machines, the welter and the stitcher, the latest patent expired on April 24, 1911, and May 10, 1909, respectively; and (2) that patents, *not* "basic," on the Chase lasting machine and the rounding and channeling machine expired more than ten years after February, 1899.

The welter and stitcher were both put out "early in 1899" by the Goodyear Company, the Chase lasting machine was one of the three lasting machines being put out early in 1899 by the Consolidated & McKay Lasting Machine Company, and the rounding and channeling machine was an auxiliary machine being put out by the Goodyear Company (R. Vol. 1, p. 2, lines 12–18; p. 3, lines 15–39; p. 625, lines 38–39); no machine put out by the McKay Shoe Machinery Company was even mentioned by petitioner's patent expert.

The proposition that patents which in February, 1899, had

over ten years to run,—much more than half their terms,—were "about to expire" is too ridiculous for discussion. But this extraordinary position was not taken by petitioner without due warning of its unreasonableness. On the first day of the taking of testimony before the examiner on this issue, a week before Mr. Chapman began to testify, a discussion was precipitated by the following interrogatory propounded by petitioner's patent counsel to defendants' patent expert Howard, then a witness for petitioner:—

> "*Int.* 4. Kindly read to the magistrate the number, title, date and name of inventor of each patent on the Chase lasting machine, which patents *expired prior to the filing of the petition in this case*" (italics ours) (R. Vol. 2, p. 2102).

Defendants' counsel objected to this question "as not within the scope of this order," adding:—

> "But your order does not entitle you to make any such inquiry. It is limited to proof of Letters Patent under which the defendants were manufacturing their machines in 1899, and proof that many of those patents were about to expire. . . . The bill suggests a certain situation: that in 1899 the patents which had existed were about to expire, and that that was the occasion for doing something, which something was a conspiracy and combination which the bill charges. It does not seem to us that that opens to you the opportunity for an inquiry as to what patents expired *all the way from 1899 up to 1911*" (italics ours) (R. Vol. 2, pp. 2102–3).

B. Petitioner's Final Position as to Expiration of Basic Patents.

In its rebuttal evidence,—

Petitioner definitely limited its claim that early in 1899 many of the basic patents on the principal machines were about to expire to two machines, both put out by one company only, the Goodyear Shoe Machinery Company, and then only as employed on welt shoes, constituting less than 10 per cent. of the shoes made in 1898.

Petitioner's expert Chapman was asked what machines were "essential or necessary for the bottoming of *welt shoes* in the

commercial manufacture of shoes by machinery under the Goodyear process" (italics ours). Mr. Chapman's answer was:—

> "There are but two absolutely essential or indispensable machines necessary to the production of a Goodyear welt and turn shoe made in accordance with the so-called Goodyear process. Those machines are the machine which is familiarly known as welt and turn machine and out-sole rapid stitcher" (R. Vol. 2, p. 2794, Int. 2).

This statement was later referred to by petitioner's patent counsel as:—

> "your statement that welters and stitchers are the only indispensable machines required for the commercial bottoming of shoes by machinery" (R. Vol. 2, p. 2808, Int. 10).

The position thus taken by the petitioner was emphasized as follows (R. Vol. 2, p. 2809):—

> (Mr. WEBSTER): "*Int.* 11. In the commercial manufacture of shoes by machinery, what machines are of secondary importance in the bottoming of shoes?"
>
> (Mr. CHAPMAN): "*Ans.* *The machines of secondary importance* are a machine for insole channeling, *a machine for lasting*, a machine for sole laying, a machine for rough rounding and channeling, *a machine for heel-seat nailing* and *such machines as are ordinarily employed in the heeling operation* generically considered, a machine for edge trimming."
>
> (Mr. WEBSTER): "*Int.* 12. I notice you omit from the list machines for leveling or beating soles. Are they properly included in the list of secondary machines?"
>
> (Mr. CHAPMAN): "*Ans.* They may be considered of secondary importance" (italics ours).

Machines for lasting were all that the Consolidated & McKay Company was putting out early in 1899; and "a machine for heel seat nailing" (the loose nailing machine), and "such machines as are ordinarily employed in the heeling operation" were principal machines which the McKay Shoe Machinery Company was putting out (R. Vol. 1, p. 4, lines 19–21, 23–27).

Machines of "secondary importance" cannot of course be included with the "principal machines" referred to in the allegation of the petition now under discussion. Accordingly,—

Petitioner limited its claim that early in 1899 many of the basic patents on the principal machines were about to expire to TWO MACHINES, *both put out by one company only, the* GOODYEAR COMPANY, *and expressly excludes from its case* (1) *all machines* put out by the CONSOLIDATED & MCKAY COMPANY, (2) *all machines* put out by the MCKAY SHOE MACHINERY COMPANY, (3) *all machines*, other than the welter and stitcher, put out by the GOODYEAR COMPANY, and (4) *all machines of all kinds used in the manufacture of over ninety per cent. of all shoes made, i.e.*, all kinds of shoes other than Goodyear welt shoes. Less than 10 per cent. of the shoes made in the United States in 1898 were Goodyear Welt shoes (R. Vol. 1, p. 414, lines 36–40).

The petitioner having proved defendants' case they might well be content to submit this issue on petitioner's showing; but their case is even stronger than that which petitioner has established, as petitioner's patent counsel, Mr. Webster, doubtless anticipated when he said,—

> "I would like to show by Mr. Howard, unless we can agree upon it, what patents were owned by the United Company and its associate companies, which patents expired prior to the filing of the petition in this case. . . . I simply care for those which have expired. *I don't care for those which were alive at the time of the filing of the bill*" (italics ours) (R. Vol. 2, pp. 2093–97).

Consistently with this frank statement Mr. Webster, in examining defendants' patent expert Howard, called as a witness for the petitioner, requested him to produce lists of patents owned by the United Company on specified machines, "*which patents expired prior to the filing of the petition in this case*" (italics ours) (R. Vol. 2, pp. 2101–9).

3. DEFENDANTS' EVIDENCE AS TO THE PATENTS EARLY IN 1899 ON THE MACHINES DISCUSSED BY PETITIONER'S EXPERT.

Defendants' testimony showed that "early in 1899" there were important patents on the four machines discussed by petitioner's expert *which had more than fourteen years to run* and did not expire *until after this suit was begun in December, 1911*. Mr. Howard, defendants' patent expert, who has been

head of the United Company's patent Department since the company was organized (R. Vol. 2, pp. 2239–41), testified that there were patents on those machines when the United Company was formed, *in addition to those enumerated by Mr. Chapman* (*supra*, p. 207), as follows:—

Shoe Machine: Goodyear Welt and Turn ("Welter") (R. Vol. 2, p. 2249, Int. 10; p. 2722, Int. 240; p. 2723, Ints. 241, 242; p. 2726, Ints. 256, 258):

No. 495,452, Apr. 11, 1893 (expiring Apr. 11, 1910).
No. 561,386, June 2, 1896 (*expiring June 2, 1913*).

Lockstitch Machine: Goodyear Outsole Rapid ("Stitcher") (R. Vol. 2, p. 2279; p. 2284, Int. 25):—

Re. No. 11,578, reissued Dec. 8, 1896 (original patent No. 549,124, Nov. 5, 1895, expiring Nov. 5, 1912).
No. 563,471, July 7, 1896 (expiring July 7, 1913).
No. 563,472, July 7, 1896 (expiring July 7, 1913).
No. 582,510, May 11, 1897 (*expiring May 11, 1914*).
(*Also* No. 675,783, June 4, 1901, application pending in February, 1899 (*will expire June 4, 1918*);
No. 704,457, July 8, 1902, application pending in February, 1899 (*will expire July 8, 1919*).)

Lasting Machine: Chase (R. Vol. 2, pp. 2365–72):—

No. 545,052, Aug. 27, 1895 (expiring Aug. 27, 1912).
No. 566,831, Sept. 1, 1896 (expiring Sept. 1, 1913).
No. 569,182, Oct. 13, 1896 (expiring Oct. 13, 1913).
No. 569,231, Oct. 13, 1896 (expiring Oct. 13, 1913).
No. 571,339, Nov. 17, 1896 (expiring Nov. 17, 1913).
No. 571,404, Nov. 17, 1896 (expiring Nov. 17, 1913).
No. 571,429, Nov. 17, 1896 (*expiring Nov. 17, 1913*).

Rounding and Channeling Machine: Goodyear Universal (R. Vol. 2, pp. 2304–6):—

No. 595,764, Dec. 21, 1897 (expiring Dec. 21, 1914).
No. 625,633, May 23, 1899 (expiring May 23, 1916).
No. 630,339, Aug. 8, 1899 (*expiring Aug. 8, 1916*).

As we have stated (*supra*, p. 208), Mr. Chapman in petitioner's *prima facie* case discussed six other machines but did not refer to any patents on those machines, so that his testimony regarding those machines is of course not pertinent to this issue. It

may interest the Court, however, to know what the patents on those machines were "early in 1899." They were:—

Channeling Machine: Goodyear (insole and turn) (R. Vol. 2, pp. 2318–22):—

No. 550,402, Nov. 26, 1895 (*expiring Nov. 26, 1912*).

Leveling Machine: Goodyear Automatic Sole (R. Vol. 2, pp. 2332–5):—

No. 540,222, May 28, 1895 (expiring May 28, 1912).
No. 540,223, May 28, 1895 (expiring May 28, 1912).
No. 541,988, July 2, 1895 (expiring July 2, 1912).
No. 546,211, Sept. 10, 1895 (expiring Sept. 10, 1912).
No. 555,548, Mar. 3, 1896 (expiring Mar. 3, 1913).
No. 580,746, Apr. 13, 1897 (expiring Apr. 13, 1914).
No. 610,314, Sept. 6, 1898 (*expiring Sept. 6, 1915*).

Pegging Machine: Davey (R. Vol. 2, pp. 2351–2):—

No. 581,066, Apr. 20, 1897 (*expiring Apr. 20, 1914*).

Separating Machine: Hadaway Stitch (R. Vol. 2, pp. 2339–42):—

Re. No. 11,538, reissued May 12, 1896 (original patent 521,978, June 26, 1894) (expiring June 26, 1911).
No. 537,823, Apr. 23, 1895 (expiring Apr. 23, 1912).
No. 543,012, July 23, 1895 (*expiring July 23, 1912*).

Skiving Machine: Amazeen (R. Vol. 2, pp. 2356–9):—

No. 518,774, Apr. 24, 1894 (expiring Apr. 24, 1911).
No. 609,868, Aug. 30, 1898 (expiring Aug. 30, 1915).
No. 632,984, Sept. 12, 1899 (expiring Sept. 12, 1916).
No. 636,942, Nov. 14, 1899 (*expiring Nov. 14, 1916*).
(The applications for the last two patents were filed before February, 1899 (Defs.' Ex. 130).)

Channeling Machine: Goodyear Outsole, is omitted from the above list because that machine became obsolete when the rounding and channeling machine went into use, several years before 1899 (R. Vol. 2, p. 2330, Int. 40; p. 2764, Int. 375).

4. PETITIONER'S ATTEMPT TO BELITTLE THE IMPORTANCE OF THE LATER PATENTS ON THE WELTER AND STITCHER "EARLY IN 1899."

Before referring to Mr. Chapman's efforts in his rebuttal testimony to show that the later patents, which Mr. Howard testified claimed important improvements embodied in the welter and stitcher "early in 1899," were of comparatively little importance, attention should be called to Mr. Chapman's admissions as to the character of his work in preparation for giving his testimony.

At the outset of his discussion of the stitcher Mr. Chapman said:—

> "Since the testimony of Mr. Howard closed it has been a physical and mental impossibility for me or for counsel to go into the various patents with a view to determining their bearing on the questions at issue. . . ." (R. Vol. 2, p. 2798).

Also, when asked whether the structures of any of the claims of outsole stitcher patents which he had just been discussing were "necessary to the successful operation" of the stitcher of 1899, he said:—

> "I cannot answer that question with reference to all the claims of all the patents referred to, for the reason that I have been unable to go through the patents in detail sufficiently to give a comprehensive answer. . . ." (R. Vol. 2, p. 2802, Int. 7).

And again:—

> "As heretofore stated, I have had very little opportunity to study or go into the prior state of the art having reference to or bearing upon those patents to which Mr. Howard has made reference. . . ." (R. Vol. 2, p. 2810).

These statements were made by Mr. Chapman on the first day of his rebuttal deposition, November 12, 1913 (R. Vol. 2, p. 2793), nearly four months after Mr. Howard, as witness for petitioner, read into the record on July 23, 1913, lists of the patents on the welter and stitcher (R. Vol. 2, pp. 2116–9), and five weeks after Mr. Howard, as witness for defendants,

testified in detail regarding those patents on October 6 and 7, 1913 (R. Vol. 2, pp. 2247–2302).

If any doubt remains as to the superficial character of Mr. Chapman's work on this case, attention is called to the discussion of his misstatements of fact in his testimony regarding the Plant purchase (*infra*, pp. 536–538).

(a) *The Later Patents on the Welter "Early in 1899."*

As we have seen, Mr. Chapman testified in petitioner's *prima facie* case that "early in 1899" there were four "basic" patents on the welter (*supra*, pp. 207–208). In his rebuttal testimony, without a word to explain his inconsistency, he testified that only two of those patents were basic, viz., No. 412,704, October 8, 1889, and No. 461,793, October 20, 1891 (R. Vol. 2, pp. 2794–5, Ints. 3, 4), and he stated that later patents on the welter, including two which he had previously characterized as "basic," No. 488,505 and No. 518,911, and also including No. 561,386, June 2, 1896, which Mr. Howard had testified about, "relate to and cover by claim mere details of construction" (R. Vol. 2, p. 2795).

But the record does not support this contention.

Mr. Howard testified:—

> "I have never seen a welt and turn machine of 1899 which did not embody in its organization the mechanisms set forth in the LaChapelle patent No. 488,505, Briggs patent No. 518,911 and French patent No. 561,386. I know that the mechanisms set forth in those later patents are very useful in the machine and I am certain that no customer of the United Company would have accepted at any time since February, 1899, the welt and turn machine of 1899 which did not embody in its organization the improvements of those patents" (R. Vol. 2, p. 2725, Int. 249).

He also testified that the machine was never commercially used until it incorporated the mechanisms claimed in those patents (R. Vol. 2, p. 2723, Int. 245).

Further, as to patent No. 488,505 Mr. Howard testified that he considered,—

> "That the mechanism of the LaChapelle patent No. 488,505 is important to the commercial success of the welt and turn machine of 1899" (R. Vol. 2, p. 2725, Int. 252).

In regard to patent No. 518,911, petitioner's witness Bannican testified on cross-examination that the "auxiliary take-up" of that patent keeps the thread from dropping off the needle and prevents the machine from skipping stitches, which would make imperfect work (R. Vol. 2, pp. 2830–1, Ints. 57–63).

Mr. Howard explained in detail the advantages of the improvement of patent No. 561,386, June 2, 1896 (R. Vol. 2, p. 2249, Int. 10), and stated that in a machine not provided with the mechanism of that patent there would be frequent breakage of the thread, and on cross-examination he said,—

> "The improvement of patent No. 561,386, June 2, 1896, French, contributed substantially to the successful commercial operation of the welt and turn machine of 1899 and overcame serious difficulties which had been experienced in the commercial use of welt-sewing machines before this improvement was made" (R. Vol. 2, p. 2727, Int. 260).

(*b*) *The Later Patents on the Stitcher "Early in 1899."*

In his rebuttal deposition Mr. Chapman adhered to his original position that two "basic" patents on the stitcher expired in April and May, 1909. Then, after making the statement above quoted to the effect that it had been an "impossibility" for him to examine the patents "with a view to determining their bearing upon the questions at issue" (R. Vol. 2, p. 2798), Mr. Chapman attempted to decry the importance of the four patents on the extension edge organization of the 1899 stitcher, No. 563,471, No. 563,472, No. 582,510 and No. 675,783, expiring respectively in 1913, 1914 and 1918 (*supra*, p. 212) (R. Vol. 2, p. 2799).

But the record establishes beyond any doubt that the inventions of those patents were extremely important.

In his discussion of the improvements of those patents Mr. Howard explained that nearly all welt shoes have extension edges, that prior to 1895 extension edge shoes had been made by hand because up to that time there were no machines which were organized to sew the outsoles of shoes provided with extension edges, and that the four patents in question claimed improvements which for the first time adapted an outsole stitcher for attaching the soles of extension edge shoes. Mr. Howard also explained the practical advantages of the extension edge sole and the character of the organization which adapted the

1899 stitcher for making extension edge shoes, and he concluded his extended discussion (R. Vol. 2, pp. 2279–83) with the following statement:—

> "Finally, as to the importance and value of an organization in an outsole stitching machine which will enable it to attach the soles of extension edge shoes, I should state that in my opinion it is quite as important that the machine should be able to handle the shoe properly in such manner as to locate the line of stitching where good shoemaking requires that it should be located, as it is that the machine should properly form the stitch; and I regard the extension edge organization as important and as essential a part of an outsole stitching machine under modern conditions as are the needle and awl."

Mr. Warren testified to the same effect (R. Vol. 1, p. 794, lines 41–44; p. 795, lines 1–11).

It is submitted that the broadest of these patents, which will not expire until 1918 (R. Vol. 2, p. 2282), may fairly be characterized as a pioneer patent.

In regard to the improvement claimed in reissued patent No. 11,578 and in patent No. 704,457 (application filed June 3, 1898; Defs.' Ex. 113), expiring respectively November 5, 1912, and July 8, 1919, which improvement was made in the outsole stitcher "just prior to 1899" (R. Vol. 2, p. 2284, Int. 25), Mr. Chapman testified that that organization "while probably convenient, is not essential to the fundamental organization" of the 1899 stitcher (R. Vol. 2, p. 2799).

Mr. Howard testified that the embodiment in the outsole stitcher of this improvement adapted the machine to,—

> "Perform the welt beveling and the stitching operation simultaneously, thus obviating the necessity on such work of performing the welt beveling operation subsequently, either by hand or by another machine operation" (R. Vol. 2, p. 2284, Int. 25).

5. PETITIONER'S CONTENTION THAT CERTAIN PATENTS ON THE WELTER AND THE ROUNDING AND CHANNELING MACHINE EXPIRED PREMATURELY OR WERE ANTICIPATED.

Defendants are confident that it will be accepted without question that the patents which the United Company acquired from its component companies were, for the purposes of this suit, valid and in force for their full seventeen year terms. It does not appear that any of them had been held to be invalid or that any of them had been held to have expired before the end of its full term. Accordingly those patents were *prima facie* valid for their full terms, and defendants had a right to assume that they were valid and would be in force to the ends of their terms. That any of those patents was, years after the United Company was formed, held to be invalid or to have expired prematurely, or that a patent expert expressed an opinion, fourteen years after, that any of those patents was anticipated or had expired prematurely, is not of the slightest consequence. We anticipate, therefore, that petitioner's efforts to show such a situation in regard to two machines will be dismissed as of no importance whatever.

So far, however, as petitioner raised the issue of the validity of defendants' patents it may interest the court to know what defendants' position is.

Petitioner contended that patents No. 412,704 and No. 461,793 on the welter expired on September 17, 1902, with British patent No. 13,366, September 17, 1888 (R. Vol. 2, pp. 2144, 2145, 2197, 2198).

Defendants' position as to this contention is as follows:—

A. Petitioner's statement that patent No. 412,704, October 8, 1889, was held, in an opinion of the Circuit Court of Appeals for the First Circuit rendered *August 2, 1907*, in a suit *begun December 21, 1903* (P.'s Ex. 219, R. Vol. 4, p. 1277), to have expired on September 17, 1902, with British patent No. 13,366 of September 17, 1888, French & Meyer, defendants do not deny. BUT, *in the absence of the slightest indication on the record that prior to the organization of the United Company on February 7, 1899, any of the officials of the predecessor companies had any knowledge, or even any suspicion, that the term of this patent, No.*

412,704, was limited by that British patent, petitioner has absolutely failed to show that the fact that this patent expired on September 17, 1902, is of any consequence whatever in this suit. It is clear that for the purposes of this case this patent did not expire until October 8, 1906.

B. Defendants most vigorously deny petitioner's claim that patent No. 461,793, October 20, 1891, expired with British patent No. 13,366, September 17, 1888.

(1) Patent No. 461,793 was granted October 20, 1891, to the Goodyear Shoe Machinery Company as assignee of Henry Briggs, and British patent No. 13,366, dated September 17, 1888, was granted to Zachary Taylor French and William Cristian Meyer. Thus it appears from the patents themselves that *they were issued to different inventors*, and the record contains no suggestion that the British patent was "obtained by the American patentee or with his consent" (*Hobbs* v. *Beach*, 180 U. S. 383, 397). Accordingly, petitioner's contention is answered by the patents themselves.

(2) Mr. Chapman's assertion that the subject-matter of claims four and five of the French & Meyer British patent is "substantially that of the United States Briggs patent" (R. Vol. 2, p. 2198, Int. 50) was completely answered by Mr. Howard (R. Vol. 2, pp. 2273–4, Int. 17), who first pointed out that the Briggs method, as stated in its title, is a "method of forming chain stitches," while the method set forth in claims four and five of the British patent is a particular method to be practised in the manufacture of boots and shoes, and *includes only one step of the method defined in the claim of the Briggs patent.* Mr. Howard further testified:—

> "A machine could be built and used which would infringe the claim of the Briggs patent without infringing the claims 4 and 5 of the British patent No. 13,366 of 1888; while, on the other hand, a machine could be built and used which would infringe the method defined in claims 4 and 5 of the British patent, but would not infringe the claims of the Briggs patent. . . .
>
> "More than this the single claim of the Briggs patent includes as an important and essential step in its method a step which is not set forth in claims 4 and 5 of the British patent, and the claims in the Briggs patent would have been patentable if a machine practising the methods defined in

> claims 4 and 5 of the British patent had been a part of the prior art at the time the Briggs invention was made" (R. Vol. 2, p. 2274).

But here also, as in the case of the French and Meyer patent No. 412,704 above discussed, even if petitioner had proved its contention that Briggs patent No. 461,793 expired with the British patent in 1902, *it would be of no importance in this suit, because the record fails to afford the slightest suggestion that, prior to the organization of the United Company in February, 1899, any official of the predecessor companies believed, or had the least suspicion, that the Briggs patent expired before the end of its natural life on October 20, 1908.*

In another attack on Briggs patent No. 461,793 Mr. Chapman took a most extraordinary position. He asserted in 1913 that this patent, which had expired October 20, 1908, more than five years before he testified, was anticipated (R. Vol. 2, p. 2144, Int. 9). Since this contention was not mentioned in petitioner's briefs or arguments in the District Court, it may be assumed that it was abandoned and should not receive even passing notice. It was completely answered by Mr. Howard (R. Vol. 2, pp. 2270–3), who concluded his discussion of the alleged anticipation as follows:—

> "I never heard of the Stickel patent until it was mentioned by Mr. Chapman in his testimony, *and it has never in any way been mentioned in connection with any litigation involving the Briggs patent No. 461,793*" (italics ours).

Even assuming that Mr. Chapman was correct, it is submitted that testimony that this Briggs patent which expired in 1908 was anticipated by a patent which was never cited in any of the eleven suits on the Briggs patent and of which the owners of the Briggs patent had no knowledge until 1913, is not of the slightest consequence in this suit; the discovery of an anticipation *now* could have absolutely no bearing upon defendants' state of mind or intent in February, 1899.

Again, Mr. Chapman contended (R. Vol. 2, pp. 2203–4) that two of the patents which protected the rounding and channeling machine in 1899, No. 599,602, Feb. 22, 1898, and No. 600,883, Mar. 22, 1898, expired in 1910 with British patent No. 3497, of 1896, but petitioner nowhere charges defendants with knowledge

thereof in 1899. The facts regarding these two patents are as follows:

(1) Patent No. 599,602, February 22, 1898, French & Meyer, did *not* expire with British patent No. 3497 of 1896, because it shows and claims an *improvement* upon the machine shown in that British patent. The British patent which *does* correspond to patent No. 599,602 is No. 4426 of 1898, the application for which was filed February 22, 1898, the date upon which the United States patent issued. These facts are obvious upon comparing the patents.

(2) Patent No. 600,883, March 22, 1898, French & Meyer, is dominated by another patent on the rounding and channeling machine, No. 595,764, December 21, 1897, Cole, which was assigned to the Goodyear Company after it was granted (R. Vol. 2, p. 2305, Int. 30).

6. PETITIONER'S EVIDENCE THAT PATENTS ON MACHINES "EARLY IN 1899," OTHER THAN THE WELTER AND STITCHER, WERE NOT "BASIC" PATENTS, BUT THAT EARLIER PATENTS, MOST OF WHICH HAD EXPIRED, WERE THE BASIC PATENTS.

In his rebuttal testimony, after concluding his discussion of the welter and stitcher, Mr. Chapman completely abandoned the allegation of the petition that "early in 1899" many of the basic patents on the principal machines were about to expire. He then devoted his efforts to showing that the patents in 1899 on a number of machines, including the Chase lasting machine and the rounding and channeling machine, which he discussed in his first deposition, were not "basic" patents at all, but that earlier patents which had expired before 1899 were the basic patents (R. Vol. 2, pp. 2809–18).

For example, in discussing the Chase lasting machine, Mr. Chapman enumerated five lasting machine patents dated from October 4, 1859, to June 1, 1869, the latest of which expired in 1886, and said that the inventions of those patents "are clearly of pioneer character," and that in view of them the patents he had previously referred to (*supra*, p. 207) and those which Mr. Howard had discussed were "necessarily limited" (R. Vol. 2, pp. 2811–12). He also testified that all the patents in 1899 on

the rounding and channeling machine, another of the four machines selected by petitioner for its *prima facie* case, were "anticipated" by a patent granted in 1880 and,—

> "must necessarily, in their claims, run to details of construction and limited features of invention" (R. Vol. 2, p. 2816).

In elaborating this theory petitioner, by its own expert or on cross-examination of defendants' expert, proved that all the machines discussed by its own expert (*including the welter and stitcher* and excepting only the stitch separating machine, produced in 1895 for performing an operation always before performed by hand), and many others discussed by Mr. Howard, were improved machines for performing operations which had been performed many years before by machines the patents on which had expired prior to 1899 (R. Vol. 2, pp. 2719–20, 2733, 2734, 2743, 2746, 2758, 2760–1, 2763, 2764, 2809–18).

How petitioner could conceive that that evidence would be helpful in proving the allegation of the petition that early in 1899 many of the basic patents were about to expire is beyond understanding; the allegation is disproved by that evidence alone.

Moreover that evidence supplements and strongly corroborates defendants' evidence establishing that,—

7. THE PATENTS ON THE MACHINES "EARLY IN 1899" REPRESENTED MERELY THE 1899 STAGE IN THE CONTINUOUS AND CONTINUOUSLY PATENTED DEVELOPMENT OF SHOE MACHINERY.

The record shows that in nearly all instances the 1899 machines were not the first machines for performing their respective operations; that in fact there had been several machines in succession for performing each operation, each successive machine being better than its predecessor, before the 1899 machines had their turn as the best machines available at that time; but that under the constant pressure of continuous improvement and development, those 1899 machines have in their turn been superseded by machines which do more work and better work and which are much easier for the workmen to operate and enable them

to earn higher wages. The record also shows that from the beginning and all the way through this continuous development down to the present day the best machines have been patented; and that now, as at every stage in the development of the industry, manufacturers insist upon having the greatly superior patented machines and will not use the obsolete machines upon which the patents have expired.

The patents on the machines in 1899 represented the 1899 stage in the continuous patented development of the industry,—nothing more. The machines of the earlier expired patents had been superseded before 1899 by the improved patented machines of that day, and before December, 1911, when this suit was begun, the 1899 machines in their turn were in almost every case dead and buried and a new generation of much better patented machines had taken their places.

This steady and continuously patented development of shoe machinery may be illustrated by summarizing briefly the evidence showing the history of the welt and turn machine (the "welter") and the outsole stitcher, the two machines which petitioner regarded as "the only indispensable machines required for the commercial bottoming of shoes by machinery" (R. Vol. 2, pp. 2793–4; p. 2808, Int. 10).

A. Welt Sewing Machines.

The first machine for sewing the welt and upper to the insole was constructed under patent No. 34,413, February 18, 1862, Destouy, reissued as No. 3635, September 7, 1869. The fourth claim of the reissue is as follows:—

> "4. A sewing-mechanism, adapted to unite, by machinery, the upper, welt and sole, substantially as described, so as to produce a machine-made welted boot or shoe."

The Destouy machine, a lockstitch machine, was transformed into a chain-stitch machine by the improvements of patent No. 93,731, August 17, 1869, Mills. That machine was succeeded by the improved chain-stitch machine of patent No. 170,547, November 30, 1875, Goodyear and Hadley, which laid the chain on the welt instead of in the channel (R. Vol. 2, p. 2248, Int. 9). The machine of the Goodyear and Hadley patent, after being

extensively used for some years, was in turn succeeded by the machine of patent No. 190,709, May 15, 1877, Dancel. The machine of the Dancel patent was used until it was superseded by the welt and turn machine of 1899 (R. Vol. 2, p. 2248, Int. 9; p. 2720, Ints. 222–225).

Development Since 1899.

All the time since 1899 the United Company has been continuously engaged in aggressive and effective experimental work in developing improved welt sewing machines. In the course of this work a number of new machines have in succession been constructed and supplied to shoe manufacturers. Each of these machines was an advance in the art and an important step in the continuous development which, after a long period of inventing, experimenting, trying out and further improving, finally resulted in the wonderful Model K welter, which was the commercial machine when this suit was begun.

The first new welter put out by the United Company was a lockstitch welter known as "Sewing Machine: Goodyear Universal Inseam," which was first put out in June, 1899. This machine was protected by ten patents, of which six were granted after 1901 (R. Vol. 2, pp. 2250–1).

The United Company then concentrated its efforts on the production of an improved chain-stitch welter, and in July, 1902, put out an entirely new machine known as "Shoe Machine —Model E: Goodyear Welt and Turn." A large number of these machines were put out, all of which embodied improvements claimed in nine patents, six of which were granted after 1900 (R. Vol. 2, pp. 2252–3).

After years of continuous experimental work in the endeavor to produce a still better and faster welting machine, resulting in the construction in succession of several machines which were tried out, one after another, and in turn abandoned, the United Company finally produced in 1906 two experimental machines from which was eventually developed Shoe Machine—Model G: Goodyear Welt and Turn, an entirely new machine which was first put into commercial use in October, 1908 (R. Vol. 2, pp. 2253-4). Although many of the improvements embodied in this machine had not yet been patented when the testimony was

taken, there were seventeen patents claiming the organization of the machine, of which thirteen had been granted since January 1, 1910 (R. Vol. 2, pp. 2258, 2836(70)).

The Model G machine was run regularly at a speed of 500 stitches per minute as compared with the speed of 375 stitches per minute of the 1899 welter. Some of the many problems which had to be solved in producing a machine which would be capable of successful commercial use at so high a speed and the inventions which solved those problems were explained by Mr. Howard (R. Vol. 2, pp. 2254–7). Mr. Winslow testified that the Model G machine was:—

> "the highest development of sewing mechanism for attaching the welt, inner sole, and upper together that had been developed in the world up to that time" (R. Vol. 1, p. 560, lines 34–36).

Over 1,400 Model G machines were put out. The demand for it was so great that the company always had ahead unfilled orders for a large number of machines—more than 200 for a long period. It was the standard commercial machine until "it was superseded in June, 1911, by still another improved machine" (R. Vol. 2, pp. 2258–9).

After the acquisition of the Plant patents in September, 1910, the Model G machine was reorganized to incorporate the extremely valuable Plant inventions, together with important improvements made on those inventions by United Company inventors. The new machine,—Shoe Machine—Model K: Goodyear Welt and Turn,—was first put out for commercial use in June, 1911, and is now the standard commercial welter (Howard, R. Vol. 2, pp. 2259–66). On January 1, 1914, there were 1,024 Model K welters in use (R. Vol. 1, p. 863, lines 3–4).

This new Model K machine embodies improvements claimed in twenty-five patents, of which eighteen have been granted since January 1, 1910 (R. Vol. 2, pp. 2266–7, 2836(69)), and there are many pending applications (R. Vol. 1, p. 812, line 42; R. Vol. 2, p. 2117). The value and importance of these improvements were fully explained by Mr. Howard (R. Vol. 2, pp. 2259–68). This evidence is strongly supported by testimony of manufacturers and operators.

Testimony of shoe manufacturers and of welter operators

which will be reviewed in our discussion of the Plant purchase (*infra*, pp. 508–509) shows that the average output of the Model K welter is forty dozen pairs of shoes per day, while the average output of the old welter was only twenty-five dozen pairs; that the new welter sews a tighter seam; that there is a saving in welting on the new machine which amounts to five or six hundred dollars a year on each machine; that the new machine saves the operator's time and strength and that he can earn from 20 per cent. to 36 per cent. more on the new welter than he could on the old one, although the piece price on the old welter was one-third more than that on the new welter (R. Vol. 1, pp. 646–8, 658–60, 710, 723, 753).

The demand for the Model K welter has been so great that the United Company has always been unable to keep up with the orders for the machine; on March 1, 1913, it was 197 machines behind in filling its orders (R. Vol. 2, pp. 2268–9).

B. Outsole Stitching Machines.

The first patent for a machine for sewing the outsole to the welt was No. 127,423, June 4, 1872, Mills (R. Vol. 2, p. 2277). This machine was succeeded by a chain-stitch machine and by the lockstitch machine of patent No. 253,156, January 31, 1882, Campbell (R. Vol. 2, pp. 2278, 2734). Both those machines were superseded by the machine of patent No. 366,935, July 19, 1887, Dancel, while the machine of the Dancel patent was in turn superseded by Lockstitch Machine: Goodyear Outsole Rapid, which was the commercial machine, "early in 1899."

Development Since 1899.

Until the 1899 stitcher was in turn superseded by a better machine it was being continuously improved. One of the important improvements was organizing the machine to adapt it for stitching the outsole to the welt by the "fudge stitch," a practice which was introduced by shoe manufacturers about 1905 and was soon generally adopted. By 1908 and ever since over 75 per cent. of men's black shoes and nearly all women's black shoes have been fudge stitched. The advantages of

making shoes in that way and the importance of the improvements which enabled the machine to do that work were explained by Mr. Howard (R. Vol. 2, pp. 2285–7). Those improvements are broadly claimed in five patents granted from 1908 to 1912, the broadest in 1910 (R. Vol. 2, p. 2286).

Other very useful patented improvements were incorporated in the machine in 1905, 1907, 1908, 1909 and 1910 (R. Vol. 2, pp. 2284, 2287–9).

During all this period after 1899 the United Company had a number of inventors engaged in experimental work in an effort to develop an entirely new outsole stitching machine which would do more and better work. Their endeavors finally resulted in a radically new machine, known as Lockstitch Machine—Model K: Goodyear Outsole Rapid, which was first put out for commercial use in May, 1910, and immediately superseded the 1899 machine (R. Vol. 2, pp. 2284, 2289, 2290). The Model K machine was regularly operated at 540 to 560 stitches per minute as compared with 375 stitches per minute of the 1899 machine. In addition to this greatly increased capacity it did better work and was more convenient for the operator. Its numerous improvements were explained in detail by Mr. Howard (R. Vol. 2, pp. 2290–4). Besides many improvements for which patents had not yet been granted when the testimony was taken, the organization of this machine is set forth in the claims of twenty patents, of which seventeen have been granted since December 1, 1908 (R. Vol. 2, pp. 2294, 2836(73)). 543 Model K stitchers were put out in a single year, and the demand for the machine was so urgent that the company was always behind in filling the orders; for example, it was 145 machines behind in May, 1911 (R. Vol. 2, p. 2295).

Immediately after the acquisition of the Plant patents and inventions in September, 1910, including his valuable stitcher inventions (R. Vol. 1, p. 787, lines 16–30), the United Company put to work five different inventors upon the problem of embodying those Plant inventions in satisfactory mechanical form and adapting them for the Model K stitcher (R. Vol. 2, p. 2297). When that machine had been reorganized by incorporating in it the Plant inventions, much improved by the United Company's inventors, the new machine was called the Model M and was first put out for commercial use in June, 1911 (R. Vol. 1, p. 798,

lines 20–23; R. Vol. 2, pp. 2297, 2836(42)). The improvements incorporated in the machine give it a capacity of eight per cent. more than the Model K machine and 22 per cent. more than the 1899 stitcher. The commercial importance of those improvements were explained in detail by Mr. Howard (R. Vol. 2, pp. 2295–2301).

Both shoe manufacturers and stitcher operators testified to the practical advantages of the Model M machine. Ryan, a stitcher operator who had worked on the successive models of the United Company's stitcher, explained in detail the difficulties in operating the 1899 stitcher and the advantages of the Model M machine from the operator's standpoint (R. Vol. 1, p. 705, lines 1–38). He testified that he averaged fifty pairs a day more on the Model M stitcher than on the old machine, and that,—

> "The work on the Model M stitcher is a great deal easier. I earn more money. I will average fifty to seventy-five cents a day more on the Model M stitcher than on the old stitcher; and that is in less hours than I worked on the old stitcher, nine hours at the most. Lots of times I don't work nine hours" (R. Vol. 1, p. 706, lines 2–9).

Comparing the Model M and Model K machines Ryan testified:—

> "The Model M machine does more rapid work than the Model K. . . . I can make from 30 to 50 pairs more a day on the Model M machine than on the Model K. The Model M machine has devices which enable the operator to work with more convenience and which save his time" (R. Vol. 1, p. 707, lines 21, 25–28).

Shoe manufacturers testified that the increased capacity of the Model M machine was from 15 to 20 per cent. and that the operators of the Model M machine were earning from 24 to 45 per cent. more than they earned on the old stitcher, although the piece price was 40 per cent. less on the Model M than on the old stitcher (R. Vol. 1, p. 753, lines 16–18; p. 647, lines 10–14, 21–23).

On January 1, 1914, 1,158 Model M stitchers were in use (R. Vol. 1, p. 863, lines 5–7). Mr. Howard testified:—

> "The facilities of the Company's factory for building this machine have been overtaxed all the time since it was in-

troduced, and on the first of January, 1913, the Company was 256 machines behind in filling its orders for Model M machines" (R. Vol. 2, p. 2301).

The Model M machine is protected by twenty-two patents, of which sixteen have been granted since January 1, 1909, and a number of applications are still pending (R. Vol. 2, pp. 2299, 2836(67), 2836(73), 2119).

C. Other 1899 Machines.

The record shows that these two machines, the welter and the stitcher, are typical of nearly all the machines being put out "early in 1899." Other examples of those machines are:—Rounding and Channeling Machine: Goodyear Universal (R. Vol. 2, pp. 2303–2317, 2738, 2816); Channeling Machine: Goodyear (insole and turn) (R. Vol. 2, pp. 2321–2330, 2810); Leveling Machine: Goodyear Automatic Sole (R. Vol. 2, pp. 2332–2339, 2743); Separating Machine: Hadaway Stitch (R. Vol. 2, pp. 2340–2345); Pegging Machine: Davey (R. Vol. 2, pp. 2346–2355); Skiving Machine: Amazeen (R. Vol. 2, pp. 2355–2362, 2818); Lasting Machine: Chase (R. Vol. 2, pp. 2362–2382, 2811); Lasting Machine: McKay & Copeland (R. Vol. 2, p. 2364, Int. 72; pp. 2382–2387, 2760–2761); Lasting Machine: Ideal (R. Vol. 2, p. 2364, Int. 72; pp. 2387–2390; R. Vol. 1, p. 972, lines 19–34); Lasting Machine: Consolidated Hand Method (R. Vol. 2, pp. 2390–2421); Compressing and Loading Machine: Automatic Heel (R. Vol. 2, pp. 2423–2434, Int. 80; p. 2764, Int. 377); Compressing Machine: Fisher (R. Vol. 2, pp. 2423–2434; p. 2764, Int. 377); Nailing Machine: Loose (R. Vol. 2, pp. 2434–2443); Loading and Attaching Machine: McKay Automatic Heel ("Improved Rapid Nailer") (R. Vol. 2, pp. 2444–2451, 2459–2463; 2764, Int. 376); Nailing Machine: American Lightning (R. Vol. 2, pp. 2452–2459; 2764, Int. 376); Slugging Machine: Universal (R. Vol. 2, pp. 2464–2472; 2767, Int. 393); Turning Machine: Gem Lip (R. Vol. 2, pp. 2483–2486); Flexible Insole Machine: Gem (R. Vol. 2, pp. 2486–2494); Beating Machine: Goodyear Universal Welt (R. Vol. 2, pp. 2495–2502, 2817); Trimming Machine: Goodyear Universal Inseam (R.

Vol. 2, pp. 2502–2507); Skiving Machine: Goodyear Universal Shank (R. Vol. 2, pp. 2511–2516).

As to all these machines there was a strong patent situation in 1899 and there has been continuous and important patented development ever since, the details of which will be found in the testimony above referred to in connection with each machine.

It is perfectly clear on this record that the patents on the 1899 machines, far from being "basic patents" in any significant sense, represented merely the 1899 stage in the development of an old art; that the 1899 machines had in turn been superseded before December, 1911; that just as the 1899 machines were superior to the machines which preceded them, so were the machines of December, 1911, much better machines than those which they had superseded; and that at every stage in the development of shoe machinery the machines which shoe manufacturers wished to use and demanded were protected by strong patents. Again, just as in 1899, manufacturers could not afford to use the older machines which had been superseded, now the demand for the machines of 1899 has ceased and manufacturers demand the greatly superior modern machines.

The record further shows that during the period since February, 1899, there has been more important and more rapid development in shoe machinery than during any corresponding period in its history, and that this has been due to the remarkably aggressive and effective experimental work which has been continuously and consistently carried on by the United Company at enormous expense (R. Vol. 1, p. 424, lines 40–45; p. 425, lines 1–11; p. 426, lines 29–39; p. 427, lines 26–37).

D. New Machines Produced Since 1899.

As a result one hundred and fifty entirely new machines have been produced by the United Company (R. Vol. 1, p. 503, lines 7–9, 17; Defs.' Ex. 246, R. Vol. 5, p. 683), and it has developed thirty-nine machines which perform operations which in 1899 were performed by hand or not at all.

Among those thirty-nine machines are important machines such as pulling-over machine, assembling machine, welt-beating and slashing machine, clicking machine, lacing machine, pounding and trimming machine, tack-pulling and resetting machine,

shank reducing machine, shank welt-skiving machine, upper stapling machine, upper trimming machine, forepart turning machine, heel turning machine (R. Vol. 2, pp. 2671–2675). All these thirty-nine machines are patented, and the patents on them are "basic patents," if ever there were such.

The breadth and importance of the patents on the new machines which have been produced by the United Company were explained by Mr. Howard, in the case of the more important machines with great detail. For example: Rounding and Channeling Machine—Model E: Goodyear Universal (R. Vol. 2, pp. 2309–2316); Channeling Machine: Goodyear Universal (Welt Work) (R. Vol. 2, pp. 2323–2326); Channeling Machine: Goodyear Universal (Turn Work) (R. Vol. 2, pp. 2327–2330); Lasting Machine: No. 5 USMC (R. Vol. 2, pp. 2375–2382); Compressing Machine—Model No. 4: Automatic Heel (R. Vol. 2, pp. 2425–2434); Nailing Machine: No. 2 Loose (R. Vol. 2, pp. 2438–2443); Loading and Attaching Machine—Model B: McKay Automatic Heel (R. Vol. 2, pp. 2459–2464); Nailing Machine: Alpha Wood Heel (R. Vol. 2, pp. 2464, 2836(71)); Slugging Machine: No. 5 (Ziz) (R. Vol. 2, pp. 2468–2472); Heel Breasting Machine—Model B: Imperial (R. Vol. 2, pp. 2473–2476); Turning and Slashing Machine: Goodyear Lip (R. Vol. 2, pp. 2485–2486); Reinforcing Machine: Economy Insole (R. Vol. 2, pp. 2491–2492); Stitching Machine: Economy Insole (R. Vol. 2, pp. 2492–2493); Channeling Machine: Economy Insole (R. Vol. 2, pp. 2493–2495); Beating and Slashing Machine: Goodyear Welt (R. Vol. 2, pp. 2497–2501); Skiving Machine: Goodyear Shank Welt (R. Vol. 2, pp. 2512–2514); Reducing Machine: Goodyear Outsole Channel Shank (R. Vol. 2, pp. 2514–2516, 2836(75)); Indenting and Burnishing Machine: Goodyear Welt (R. Vol. 2, pp. 2517–2519); Trimming Machine—Model H: Rex Upper (R. Vol. 2, pp. 2523–2525); Pulling and Resetting Machine: Goodyear Tack (R. Vol. 2, pp. 2525–2528, 2836(75)); Stapling Machine: Goodyear Upper (R. Vol. 2, pp. 2528–2530); Pulling Machine: Goodyear Insole Tack (R. Vol. 2, pp. 2533–2537); Pulling-over Machine (3 models) (R. Vol. 2, pp. 2540–2553, 2836(75)); Assembling Machine: Rex (R. Vol. 2, pp. 2554–2558, 2836(71)); Pounding Machine—Model E: Rex (R. Vol. 2, pp. 2560–2562); Trimming Machine: Rex Toe (R. Vol. 2, pp. 2562–2564); Pounding and Trimming Machine—Model B:

Rex Rotary (R. Vol. 2, pp. 2564–2568); Pounding Machine—Model C: Rex Rotary (R. Vol. 2, pp. 2568–2570); Pounding and Beating Up Machine—Model A: Rex Rotary (R. Vol. 2, pp. 2570–2571, 2836(74)); Leveling Machine: Goodyear Welt and Turn (Turn Work) (R. Vol. 2, pp. 2576–2579); Leveling Machine: Hercules (2 models) (R. Vol. 2, pp. 2580–2584); Leveling Machine: Atlas (R. Vol. 2, pp. 2584–2587); Clicking Machine—Model C: Ideal (R. Vol. 2, pp. 2588–2597); Lacing Machine: Ensign (2 models) (R. Vol. 2, pp. 2599–2605); Trimming Machine: Goodyear Insole Heel Seat (R. Vol. 2, pp. 2607–2610); Jointing Machine: Goodyear (R. Vol. 2, pp. 2611–2616); Eyeletting Machine: Duplex (R. Vol. 2, pp. 2617–2621); Blacking Machine: Crest Heel (2 models) (R. Vol. 2, pp. 2622–2626); Repairing Machine—Model A: Patent Leather (R. Vol. 2, pp. 2628–2631); Beveling Machine—Model B: Champion Strip (R. Vol. 2, p. 2632); Building Machine: Pyramid Heel (3 models) (R. Vol. 2, p. 2632); Cementing Machine: Hub Lining (2 models) (R. Vol. 2, pp. 2633, 2836(72)); Cementing Machine: Star Channel (3 models) (R. Vol. 2, pp. 2633–2634); Clinch Machine: Universal Double (R. Vol. 2, p. 2634); Embossing Machine—Model B (R. Vol. 2, p. 2635); Eyeletting Machine: Universal (R. Vol. 2, p. 2636); Fastening Machine—Model D: Staple (R. Vol. 2, p. 2636); Grooving and Beveling Machine: Goodyear Power Welt (R. Vol. 2, p. 2638); Laying Machine—Model A: Apex Welt (R. Vol. 2, p. 2638); Laying Machine: Goodyear Improved Sole (3 models) (R. Vol. 2, p. 2639); Marking Machine—Model C: Paragon Vamp (R. Vol. 2, p. 2641); Molding Machine: American Twin Sole (2 models) (R. Vol. 2, pp. 2641, 2836(74)); Molding Machine—Model B: Goodyear Power (R. Vol. 2, p. 2642); Molding Machine: Stitch-Down Upper (R. Vol. 2, p. 2642); Nurling Machine—Model A (R. Vol. 2, p. 2642); Opening Machine—Model C: Apex Channel (R. Vol. 2, p. 2643); Rounding Machine: Goodyear Heel Seat (R. Vol. 2, p. 2645); Rounding Machine: Planet Sole (2 models) (R. Vol. 2, p. 2645); Sanding Machine—Model A: Tap and Sole (R. Vol. 2, p. 2646); Scalloping Machine—Model D: Top Piece (R. Vol. 2, p. 2647); Skiving Machine—Model D: Top Piece (R. Vol. 2, p. 2647); Skiving Machine—Model A: Champion Heel Lift (R. Vol. 2, p. 2648); Skiving Machine—Model A: Champion Shank (R. Vol. 2, p. 2648); Skiving Machine:

Eros Rand (R. Vol. 2, p. 2649); Skiving Machine: Pluma (2 models) (R. Vol. 2, pp. 2649, 2836(76)); Skiving and Finishing Machine: Monarch Counter and Box Toe (R. Vol. 2, p. 2649); Skiving or Rand Splitting Machine: Apex Tap (2 models) (R. Vol. 2, p. 2650); Snipping Machine: Goodyear Insole Toe (R. Vol. 2, pp. 2650, 2836(77)); Splitting Machine: Empire (2 models) (R. Vol. 2, p. 2651); Splitting Machine: Summit (R. Vol. 2, p. 2652); Stamping Machine—Model C: Eagle Sole (R. Vol. 2, p. 2652); Stamping Machine: Regent (2 models) (R. Vol. 2, p. 2653); Sticking Machine: Shank Piece (2 models) (R. Vol. 2, p. 2653); Trimming Machine: Ultima Heel (R. Vol. 2, p. 2655); Turning Machine: Goodyear Forepart (R. Vol. 2, p. 2655); Turning Machine: Goodyear Heel (R. Vol. 2, p. 2656); Turning Machine: Goodyear Welt Edge (R. Vol. 2, p. 2656).

Mr. WINSLOW testified:—

> "On Goodyear welt shoes the saving in cost of manufacture, resulting from the introduction of new machines and improvements in other machines that existed in 1899 and which we improved after the formation of the company, amounts to about seven and a half cents" (R. Vol. 1, p. 430, lines 27–31).

This saving is nearly two cents more than the aggregate royalties on men's Goodyear welt shoes and nearly three cents more than the aggregate royalties on women's welt shoes. In figuring the savings Mr. Winslow averaged men's, women's and children's shoes (R. Vol. 1, p. 430, lines 22–23). He also testified:—

> "On other kinds of shoes the manufacturers had the benefit of these savings so far as the machines were applicable to the reduction of the cost of those shoes" (R. Vol. 1, p. 430, lines 23–26).

In view of this situation it is of course to be expected, and the record shows, that—

8. IN DECEMBER, 1911, THE UNITED COMPANY'S MACHINES WERE FULLY PROTECTED BY STRONG AND VALUABLE PATENTS.

It is clear on the record that when this suit was begun the defendants' machines were more completely covered by patents

of real commercial value than ever before. The importance of those patents is explained in Mr. Howard's detailed discussion of over 150 of the more important machines, and the breadth of their claims is indicated by quoting typical claims (R. Vol. 2, pp. 2239–2664). Moreover, the patents on these modern machines are of recent date; indeed, 144 of the patents on the 1911 machines discussed in Mr. Howard's testimony in October and November, 1913, were granted after this suit was begun, and when he testified again in February, 1914, there had been granted twenty-eight more patents claiming improvements embodied in the machines (R. Vol. 2, pp. 2836(67–80)).

9. SUMMARY OF THE PATENT TESTIMONY.

Petitioner proved as to machines of its own selection that early in 1899 "basic patents" were *not* about to expire.

Defendants proved that of the important patents early in 1899 on the "principal machines" selected by petitioner's expert the latest had over fourteen years to run.

If the expression "basic patent" means anything, it means a patent on the first commercially successful machine for performing a given operation. There was no such patent "early in 1899" on any of the "principal machines" discussed by petitioner's expert,—the basic patents had all expired.

The record shows that throughout the history of this industry every machine which has been useful has been patented. Beginning with the crude machines of fifty years ago and following through the steady evolution of shoe machinery, we find continuously patented development, continuous step-by-step patented improvement, often by way of improving machines already existing, frequently involving the substitution of a radically new machine and sometimes,—often since 1899,—consisting in the introduction of the first machine for performing an operation always before performed by hand or for performing a new operation required by the improvements in shoes and in the methods of making them, so that to-day hand operations have been eliminated and machines have been provided for performing all the operations in the manufacture of shoes, by the use of which machines shoes are now made entirely by machinery for a frac-

tion of the cost of hand-made shoes and are made much better than hand-made shoes ever were made.

And the record further shows that practically all this patented development of shoe machinery has been accomplished by the United Shoe Machinery Company and its predecessors, that the period since February, 1899, has been a period of more important and more rapid development than any corresponding period in the history of the industry, and that this has been accomplished by the United Company through extraordinarily aggressive, effective and expensive experimental work; so that now the modern machines which the United Company is supplying to its customers, the machines which its customers demand and use and which they believe they must have to make the shoes which the public demands and to make those shoes economically and efficiently with a reasonable profit, are protected by broad and strong patents of recent date claiming the important and valuable improvements which are embodied in those machines and which make those machines so much better and so much more efficient and economical, through their greatly increased capacity and the improved quality of their work, that manufacturers of shoes do not desire and cannot afford to use the obsolete machines of the expired patents.

In a word, the machines which its customers demand and use, the machines which the United Company is supplying to its customers, are patented; they embody important improvements of so great commercial value that manufacturers must have these modern machines in order to make shoes which the public will buy and make them economically and efficiently; and those improvements are all protected by strong patents of recent date by which the United States has secured to the United Company a legalized monopoly of the machines which the United Company's customers demand and use.

10. FINDINGS OF THE DISTRICT COURT AS TO THE PATENT SITUATION.

A. The District Court Found that the Basic Patents Held by the Constituent Companies were not About to Expire.

The District Court found as follows:—

(R. Vol. 1, p. 1133.) "But it is important at this point first to determine how far certain allegations of the petition, which characterize the defendants' alleged project and their motives for forming it, have been sustained by the evidence. These are found on pages 15 to 17 of the record, and they are, in substance, that the component companies were in 1899 manufacturing their respective machines and parts thereof under patents; that 'many of the basic patents on the principal machines were about to expire'; that their manufacture and use was thus about to become open to the public 'in the near future,' and that the defendants, not being satisfied with the rights they had enjoyed under the patents and intending to expand and perpetuate them to the public detriment, devised the alleged project of acquiring a monopoly which the petition thereafter describes.

"This trial began on May 20, 1913. On June 27, 1913, the petitioner, having introduced substantially all its other direct evidence, stated that it desired to offer proof in support of the allegations just referred to, but was not then prepared to go into the matter.

"By consent, an order of reference to a Special Examiner was thereupon entered (pp. 262 T, 1996) for the purpose of taking such evidence as either party should offer regarding those allegations, out of court. Such evidence was required to be completed by October 11, 1913, but successive extensions of the time were afterward found necessary and allowed by consent. Before the Examiner the petitioner did not complete its direct evidence until October 6, 1913, and the evidence on both sides was not completed until November 19, 1913.

"At the final arguments, however, on June 2, 1914, the statement was made by petitioner's counsel that so many machines and patents were involved that examination of more than a very few had been impossible. It seems obvious, therefore, that the allegations in question could not have been founded, when they were made, upon any adequate or complete investigation of the facts.

"Nor can it be said that they have been sustained by the evidence before the Examiner. It seems unnecessary to spend time in considering what patents could and what could not properly be regarded as 'basic,' in view of the fact that, of the patents principally relied on as such by the petitioner, those protecting the welter and stitcher of the Goodyear Company, there were two, one upon its welter, the other upon its stitcher, which ran until 1908 and 1909, respectively. The petitioner's final position, indeed, as to what was proved by the evidence before the Examiner, was by no means that taken in the allegations referred to, but was only that the two machines above mentioned, and others protected in 1899 by patents not insisted on as 'basic' patents, became free to anyone to make or use—without any of the patented improvements added to them by the United Company since 1899, but nevertheless capable of successful commercial use—before the filing of this petition in 1911. In view of all the above, I must regard the allegations here in question as not sufficiently supported by proof; and hold that no such motive is shown to have prompted either the organization of the United Company, or any of its subsequent doings. The effect of the evidence and of the petitioner's argument is to show that Goodyear machines of the old type are capable of commercial use and could have been made by anyone who chose to make them. That after the expiration of the two so-called basic patents machines constructed according to them were not used is sufficiently accounted for by the superiority of the newer machines which the defendants had introduced. For that reason the older machines did not enter into competition with them, and the defendants cannot be charged with suppressing such competition."

B. The District Court Found that the United Company's Machines Have Always Been and are Now Protected by Patents.

The District Court found as follows:—

(R. Vol. 1, p. 1115.) "At any rate, it must be accepted that from the beginning the machinery offered by the respondent corporation was, in all its essential elements, protected by patents, and that there has been no proof to the contrary."

III.

THE DEFENDANTS' LEASES OF SHOE MACHINERY.

1. INTRODUCTORY STATEMENT.

Since about 1860, when the first shoe machinery was introduced, it has been the almost invariable practice as to all the important shoe bottoming machines, and a common practice as to all kinds of shoe machines, to lease them to shoe manufacturers on a royalty basis charging a fixed amount for each pair of shoes operated on by the machine. From the very beginning of the industry practically all shoe machinery was patented, and the agreements under which the machines were leased were not only leases but also licenses under patents granting specific and limited rights to use the leased machinery in certain ways and on the terms and conditions set out in the lease and license agreements. In 1899, therefore, when the United Company was formed, its constituent companies sold no machines manufactured by them but leased all machines under lease and license agreements. The United Company continued the lease system which had been employed by the constituent companies, and it has made no fundamental change in the system. It did not disturb outstanding leases and for over a year it made no changes at all. From time to time thereafter it has made changes in the leases of specific machines just as such changes had been made from time to time by the constituent companies in order to meet new conditions, to make its system of leases consistent or to enable it to offer more satisfactory terms to lessees. It has, of course, adopted certain leases for new machines which were invented or acquired by it and not previously manufactured by the constituent companies. As it has developed General Department Machines, which now total over 170 different machines, it has either leased or sold them at the option of the shoe manufacturer, thus relaxing the policy of the constituent companies which leased machines only.

The United Company's system of leases, therefore, was not formulated at any one time, but is the result of an historical development and growth extending over many years and represents the results of years of constant effort to provide a method of furnishing this great variety of intricate and expensive machinery to shoe manufacturers on terms mutually satisfactory and fair to the shoe manufacturer and to the machinery manufacturer.

Indeed it was admitted by the United States that the modifications made by the United Company in the leases were not planned in advance and that they did not base their charge of illegality upon the intent with which they were adopted. The District Court said:—

> "At the argument the admission was made on behalf of the United States that there was no proof that at the time they formed the United Company the defendants 'had in mind the adoption of the system of leasing which they later developed.' And the position then taken by the petitioner in argument was that the leasing system referred to has resulted in illegal restraint or monopoly and that the intent which prompted its development is therefore 'absolutely immaterial'" (R. Vol. 1, pp. 1154–5).

With this admission on the part of the United States that the intent with which the lease clauses were adopted is immaterial their entire contention in respect to the leases falls. We submit that an inspection of these clauses shows conclusively that they are not inherently unlawful, and therefore, if not adopted with an unlawful intent, they are clearly proper.

Owing to the gradual growth of the shoe machinery industry and the consequent gradual development of the leases, to the fact that different forms of leases have been adopted for different machines, to the variety of conditions which arose at different times and which led to the adoption of provisions to meet them, to the great number and variety of machines, and to the great number of different kinds of shoes made requiring the use of different machines or sets of machines, the leases are necessarily complicated and require careful study to understand them.

An examination of the record will show that the provisions in the leases which were in effect when the United Company was formed were adopted for the purpose of granting the shoe manu-

239

facturer satisfactory terms and at the same time securing the machinery manufacturer reasonable protection. In other words, that these provisions were adopted for the purpose of providing for the most efficient, productive, and satisfactory use of the different machines; that such modifications as have been made by the United Company have had the same purpose and object; that the provisions in the leases were not adopted for the purpose of arbitrarily excluding others or creating a monopoly, and that these provisions, or provisions of substantially the same character and having the same effect, are essential to a commercially successful leasing system.

As we have stated above, one of the principal purposes the United Company had in mind was to reduce the cost of making Goodyear Welt shoes, and to encourage shoe manufacturers to manufacture them (R. Vol. 1, p. 441, lines 38-42; Vol. 1, p. 407, lines 22-30). Various modifications of the lease system had this object in view.

2. ALLEGATIONS OF THE PETITION AS TO THE LEASES.

The basic charge of the petition, as we have shown above, is that the defendants determined to acquire a monopoly of shoe machinery, by (R. Vol. 1, p. 994):

1. Acquiring all concerns engaged in the shoe machinery business, and then

2. Refusing to sell or lease any essential machines, viz., lasting, welt sewing, and outsole stitching, heeling and metallic fastening machines, unless the shoe manufacturer took "practically all other machinery" from them.

The leases, it is alleged, were a step in carrying out the foregoing plan (R. Vol. 1, p. 994).

In order to sustain the charge of the petition, therefore, it is necessary to find that the leases require a lessee who takes lasting, welt-sewing or outsole stitching, heeling, or metallic machines to take from the United Company practically all other machinery.

In support of its allegation that the leases were steps in carrying out the foregoing plan, the petition recites that prior to the formation of the United Company a shoe manufacturer could

get machines of one of the constituent companies without being required "to use exclusively machines . . . manufactured by either of the other companies" (R. Vol. 1, p. 996). After the formation of the United Company it is alleged that the defendants,

> " . . . *discontinued* the sale to boot and shoe manufacturers of each and all of the machines included in said groups of machines . . ." (italics ours) (R. Vol. 1, p. 997),

and unlawfully devised and adopted arbitrary, oppressive and unreasonable lease and license agreements, which shoe manufacturers "are required to agree and conform to in order to obtain from said defendants any of the machines included in said groups" (R. Vol. 1, p. 997).

It is alleged that these agreements

> "*contain provisions, not found in their former lease and license agreements*, which compel boot and shoe manufacturers leasing any of such machines from defendants to agree to use exclusively one or more of the classes of machines included in said groups of machines . . . upon penalty of having all the machines included in said groups so leased to them by defendants immediately reclaimed and taken away and the lease and license agreements cancelled" (italics ours) (R. Vol. 1, p. 997).

The petition then recites that the leases adopted by the defendants contain provisions as follows (R. Vol. 1, p. 997):—

(1) An agreement to take the machines for a period of not less than seventeen years, regardless of the terms of the patents relating thereto.

(2) That lessees thereunder are compelled to obtain all duplicate parts for the machines from defendants at exorbitant prices.

(3) Many of the leases provide that the lessee shall at the expiration of seventeen years return the machines to the defendants and pay a return charge which in some cases amounts approximately to the original cost of building the machines.

(4) A provision reserving to the lessor the right to cancel all leases with shoe manufacturers if they fail to use exclusively and to their full capacity machines leased from the defendants.

The foregoing provisions, however, purport to be only a statement of the character of the provisions which the leases contain. The provisions which the petition contends are unlawful, as

carrying out the unlawful plan charged, are specified in Section XII. of the petition as follows (R. Vol. 1, p. 1028):—

(1) A covenant that the lessee shall use exclusively machines of the lessor to perform the same kind of work as that performed by the leased machine.

(2) A covenant that the lessee shall use in accomplishing work other than that for which the machine was designed only machines controlled or leased by the lessor.

(3) A condition that, should the lessee violate either of the covenants mentioned, the lessee would thereby forfeit the use not only of the machine leased, but of other machines, both those designed to accomplish the same work as the leased machine and those designed to accomplish work entirely different.

(4) A covenant that the lessee should use the leased machine for seventeen years.

A. SUMMARY OF CHARGES OF THE PETITION WITH RESPECT TO THE LEASES.

To summarize, the petition alleges that, in pursuance of the defendants' plan,—

(1) to acquire all shoe machinery concerns, and

(2) to refuse to sell or lease lasting, welt-sewing, outsole stitching, heeling, or metallic machines, unless the shoe manufacturer took practically all other machinery of them,—

the United Company—

(*a*) discontinued selling machines, and

adopted arbitrary and oppressive leases which, it is alleged in paragraph XII. of the petition (R. Vol. 1, p. 1028) were illegal in that they

(*b*) required the lessee to covenant to use the United Company's machines of the kind leased and of all other kinds exclusively,

(*c*) permitted the United Company to cancel its leases of all machines if these covenants were broken,

(*d*) required the lessee to use the leased machinery for seventeen years.

The petition also alleges that the leases required the lessee,—

(*e*) to obtain duplicate parts of the United Company for which it charged an exorbitant price;

(*f*) on the cancellation of the lease to pay exorbitant return charges.

These last provisions do not require a use of the United Company's machines and are therefore not referred to as evidence of the alleged plan to refuse to lease any machines unless practically all other machines are taken. They are apparently referred to merely as showing a general intent on the part of the United Company to oppress its lessees.

3. PROVISIONS IN THE UNITED COMPANY'S LEASES ON WHICH THE UNITED STATES RELIED IN SUPPORT OF ITS CHARGES.

The defendants' leases do not contain any provisions such as those alleged in the petition whereby the lessee covenants to use exclusively the United Company's machines of all kinds.

This being so, the United States, at the argument in the District Court, did not restrict itself to an attempt to support the allegations of the petition, but took exception to various provisions in the leases which we submit do not conform to the allegations in the petition, and contended that these provisions were illegal and tended to a monopoly of shoe machinery, even though they did not conform to the case stated by the petition. The provisions in the leases to which exception was taken by the United States are briefly as follows:—

Full Capacity Clause.

A clause requiring the lessee to use the particular machine leased to its full capacity on the work for which it is adapted so far as the lessee has work for it to do. This is referred to below as the **"Full Capacity Clause."**

This is the only clause contained in the United Company's leases (except the "Additional Machinery Clause" which was used only to a slight extent and was discarded entirely in 1907) **which obligates the lessee to use the United Company's Machines at all.**

This clause was used in various leases of the Consolidated Company prior to the formation of the United Company. It is employed by the United Company only in respect to

those principal machines for which a royalty is charged based on the amount of use. Without this clause the lessee would be at liberty not to use the machine at all, and the United Company, whose return is dependent on a royalty based on the amount of use made of the machine, would have no assurance of a return on its investment in the machine.

This clause does not require an exclusive use of the particular kind of machine leased, nor does it require any use of other machines. It merely requires that the particular machine which is installed in the lessee's factory under the lease shall be used by the lessee.

Additional Machinery Clause.

A clause found in certain leases made by the constituent companies prior to 1899 and in a few leases made by the United Company prior to 1907, but eliminated by the United Company in all leases after that date, requiring the lessee to take additional machines of the particular kind leased if he needed such machines for additional work. This is referred to below as the **"Additional Machinery Clause."**

This clause was adopted prior to the formation of the United Company to secure an adequate return on the leased machines and the inventions embodied therein after the lessor had gone to the expense of installing the machines and instructing operators in their use. It required a use by the lessee of other machines of the particular kind or class leased, but of no other kinds.

As the use of this clause was continued by the United Company after its formation only to a limited extent and was entirely discarded after 1907, more than four years before the present petition was filed, it is important in the present case only in that it shows that the United Company actually discarded from its leases the only clause which required an agreement on the part of the lessee to use any of its machines exclusively.

Exclusive Use Cancellation Clause.

A clause giving the lessor an option under a lease of a particular kind of machines, such as heeling machines, to cancel its leases of that particular kind of machines if machines of that kind obtained from it are not used by the lessee exclusively.

This clause is referred to below as the **"Exclusive Use Cancellation Clause."**

Under this clause the lessee does not covenant to use the lessor's machines of the particular kind leased exclusively, nor does the lessee agree to use the machines at all. The clause merely reserves to the lessor an option to cancel its leases of machines of a particular kind, such as heeling machines, when machines of that particular kind are not used exclusively. As we show below, this provision is necessary for the lessor's protection in order to enable it to withdraw its machines of a particular kind when, owing to the use by the shoe manufacturer of other machines of the same kind, the lessor finds that its machines are used only occasionally, or only on slow or difficult work, or that proper reports of the amount of work done on its machines are not made by the lessee so that the lessor does not receive a fair return on its investment.

This clause, or the "Additional Machinery Clause" under which the lessee covenanted to take additional machines if needed (in other words, to use the lessor's machines exclusively for operations of the particular kind or class for which the particular machinery leased under the particular lease in question was adapted) was used in most of the leases of the constituent companies, they having found by experience that such a clause was necessary to their protection under the leasing system. The continuation of this clause by the United Company, therefore, effected no change in the leasing system. Furthermore, as it does not require the lessee to use the United Company's machines at all, but merely gives the United Company an option under certain circumstances to withdraw its machines of a particular kind or class when other machines of the same kind or class are used by the lessee, it affords no support to the allegation of the petition that the leases required the lessee to covenant to use the United Company's machines exclusively.

Restricted Use Clause.

A clause restricting the use of a certain kind or group of principal machines to use on shoes operated on by certain other groups of machines. This clause is referred to below as the **"Restricted Use Clause."**

This clause is used where machines of certain departments are leased at reduced rates to be used with machines of other departments as a team or series, in which case the machines of the United Company being concededly the best in the market, and being mechanically constructed and adapted to use together, and being the only machines with which efficient service by skilled mechanics is provided, are manifestly more efficient, productive, and economical in operation when so used together as a team, and thus each machine produces a greater return for the United Company. This clause does not require the lessee to use the United Company's machines at all. On the contrary, it merely forbids the lessee to use the United Company's machines except as a team. It is simply the granting of a patent license to use a patented machine in a particular and defined field in connection with machines of other departments which are mechanically developed and adapted for use together.

Leases containing this Restricted Use Clause are alternative forms of leases. In practically every case the lessee is also offered a lease which does not contain any such restriction, but permits the lessee to use the machines without regard to his use of any of the lessor's machines of other departments. These unrestricted leases are offered lessees on terms as favorable or more favorable than those on which the machines could be obtained from the constituent companies prior to the formation of the United Company. The use of the restricted leases by the United Company, therefore, did not have the effect of preventing shoe manufacturers from obtaining machines on unrestricted leases on the same or better terms than were offered prior to the formation of the United Company. Their effect was merely to offer a wholesale rate to shoe manufacturers using a set or team of machines which were adapted for use together.

Auxiliary Restricted Use Clause.

A similar clause is employed to restrict the use of certain auxiliary machines of a department to use with the principal machines of that department. The principal machines are the recording machines on which a royalty is charged. The auxiliary machines are machines developed to aid in the work of the principal machines. They are treated as part of the principal ma-

chines and no separate royalty is charged for their use, but the return comes indirectly from the royalties on the principal machine to use with which they are restricted. Such a clause is referred to below as the **"Auxiliary Restricted Use Clause."**

This "Auxiliary Restricted Use Clause" was employed by the constituent companies, and its continuance by the United Company effected no change in the leasing system.

Cancellation for Breach Clause.

A clause permitting the lessor to cancel all leases between it and the lessee for violation of any condition contained in any of the leases which is expressed in the lease to be obligatory upon the lessee. This is referred to below as the **"Cancellation for Breach Clause."**

This clause merely permits the United Company to sever relations with a lessee who violates his agreements. If the agreements on the part of the lessee are legal, it is obviously proper that the United Company should have the right to cancel its leases if any one of them is violated. The leases of the constituent companies all provided that they might be cancelled for breach of conditions contained in those leases.

Seventeen-year Term.

A clause providing that the lease shall run for seventeen years.

This clause grants the lessee the right for an extended term to retain the leased machines for the royalty agreed upon and assures the United Company that they will be held for a sufficient term to provide an adequate return on its investment.

The leases of the constituent companies ran in some cases for seventeen years and in others for the term of the patents then or thereafter embodied in the machines or for the entire life of the machines. The seventeen-year term was adopted by the United Company in all its leases to make them consistent, and shortened rather than increased the term of the leases.

Agreement to Buy Repair Parts.

A clause requiring the lessee to purchase of the lessor duplicate parts needed to repair the leased machines, the com-

plaint being that the United Company charged exorbitant prices for such duplicate parts.

The constituent companies' leases all contained this clause, which is essential to preserving the physical integrity of the leased machine. The record shows that there was absolutely no foundation for the allegation that exorbitant prices for repair parts were charged.

Return Charges.

A clause requiring the lessee on the expiration of the lease to pay a return charge which it was alleged amounted in some cases approximately to the cost of building the machines.

This allegation also was without foundation, the record showing that the charges made upon a return of machines were considerably less than the cost of repairing them.

4. THE PROVISIONS IN THE UNITED COMPANY'S LEASES TO WHICH THE UNITED STATES TOOK EXCEPTION DO NOT SUPPORT THE ALLEGATIONS OF THE PETITION.

The foregoing brief statement of the clauses in the United Company's leases to which the United States took exception shows how utterly the United States failed to support the allegations in the petition in respect to the leases.

Those allegations, as we have shown, are that the United Company, in pursuance of the plan to acquire all shoe machinery concerns and to refuse to sell or lease lasting, welting, outsole stitching, heeling, or metallic machines, unless the shoe manufacturer took practically all other machinery of it,—

(A) discontinued selling machines and adopted arbitrary and oppressive leases, which

(B) required the lessee to use the United Company's machines of the kind leased and of all other kinds exclusively; and

(C) permitted the United Company to cancel its leases of all machines if these covenants were broken; and

(D) required the lessee to use the leased machinery for seventeen years.

A. The record shows that the constituent companies only leased and never sold machines. The allegation that the United Company discontinued the sale of machines was without foundation.

B. As shown above, there is no provision in the United Company's leases requiring the lessee to use either the machines of the particular kind leased or other machines exclusively. **The "Additional Machinery Clause" and the "Full Capacity Clause" are the only clauses which require any use of the United Company's machines whatsoever.** The Additional Machinery Clause referred only to machines of the particular kind leased, and as it was discarded by the United Company in 1907 it is immaterial in the present case. It is the only clause ever contained in the leases which required the lessee to take any machines except the particular machines he leased, and it was strictly limited to machines of the same kind required for additional work. The "Full Capacity Clause" requires the use only of the particular machine leased and therefore does not even require an exclusive use of that kind of machine.

The United States, therefore, utterly failed to support the charge on which the petition is founded that the defendants refused to lease essential machines, which it defined as lasting, welt sewing, outsole stitching, heeling, or metallic machines, unless the shoe manufacturer took practically all other machinery of it.

The only clause on which the United States relied in support of this allegation was the Restricted Use Clause, which, as pointed out above, does not require the lessee to use the machines at all, but, on the other hand, prohibits their use except under certain conditions. The contention of the United States was that this clause, while it does not require a covenant from the lessee to use the United Company's machines, does, by reason of its restrictions, induce the lessee to use not only the particular machine leased, but other principal machines to use with which it is restricted. Even this modified charge, however, was completely refuted by the fact that the United Company continued to offer unrestricted leases of its machines on terms as favorable or more favorable than those offered by the constituent companies prior to the formation of the United Company.

The District Court, therefore, held that this modified charge of

a refusal by the United Company to lease machines separately, which, previous to the formation of the United Company, were offered separately, as a means of compelling the taking of other machines, was completely unfounded, saying:—

> "It appears that after the consolidation there was no refusal or imposition of conditions as alleged, but that the defendants continued to give manufacturers terms which were substantially the same as before and in some instances better than those offered by the constituent companies before the consolidation. This is shown not only by the exhibits of 'independent' leases but by the testimony of officers of the Company" (R. Vol. 1, p. 1162).
>
> "The charge of this supposed scheme to deprive former customers of the right to use some machines unless they would also use others seems to have originated either in the erroneous assumption that a prohibitive lease was the only kind procurable, and that the former customer had no choice, or in disregard of the fact that it was merely an alternative form of lease. As the leases proved no such plan, whether of the extent alleged or of less extent, and as the evidence proves the exact contrary of what is charged, we think that the United Shoe Machinery Company is, upon the merits, entitled to a full clearance from this charge" (R. Vol. 1, pp. 1163–1164).

C. The allegation that the United Company was permitted to cancel its leases of all machines if the covenants requiring the lessee to use its machines exclusively were broken, was shown to be unfounded, since, as stated above, there were no covenants in the leases requiring the lessee to use the machines exclusively.

D. The term of the leases is for seventeen years. This is the only allegation in the petition which is substantiated by the leases themselves. An agreement that the lease of a particular machine shall run for seventeen years obviously does not require an exclusive use either of machines of the kind leased or any other machines. This clause, therefore, has no bearing on the fundamental charge made in the petition that the United Company refused to lease its essential machines unless the shoe manufacturer took practically all other machinery from it.

We submit, therefore, that the United States has wholly failed to substantiate by the leases the charge made by the petition that the defendants, acting through the United Company, planned to obtain a monopoly by refusing to lease essential ma-

chines except on condition that the shoe manufacturer should take practically all other machinery required by him.

We shall below consider the reasons for the leasing system, the leases used by the constituent companies, the modifications in the leasing system made by the United Company, and the business reasons underlying and requiring the use of the various provisions to which the United States objects and their legality.

5. THE UNITED COMPANY DID NOT DISCONTINUE THE SALE OF MACHINES—FOR THE CONSTITUENT COMPANIES ONLY LEASED AND DID NOT SELL MACHINES.

As above stated, the petition alleges that the defendants "discontinued the sale . . . of the machines . . . and . . . adopted . . . arbitrary . . . lease and license agreements" (R. Vol. 1, p. 997).

This charge that the United Company discontinued the sale of machines is absolutely without foundation. None of the constituent companies sold its machines; they were furnished to shoe manufacturers only on lease (Donham, R. Vol. 1, p. 2, lines 30–31; p. 4, lines 21–22, 28–29; Winslow, R. Vol. 1, p. 400, lines 37–39; Howe, R. Vol. 1, p. 468, lines 3–4).

The United States sought to show by Milton S. Florsheim that he had bought three Copeland Rapid Lasting Machines from the Goodyear Company (R. Vol. 1, p. 158, lines 22–25). On cross-examination Mr. Florsheim admitted he had obtained these on a lease which was introduced in evidence (R. Vol. 1, p. 165, line 40–p. 167, line 30). (See also Defendants' Exhibit 33; R. Vol. 5, p. 11.) This was the only evidence which the United States attempted to introduce in support of this important charge in its petition.

The District Court (Dodge, J.) said with reference to this charge:—

> "An attempt to support this charge by evidence wholly failed. Nothing of the kind was done, nor is it easy to see what grounds for making the charge could ever have been supposed to exist" (R. Vol. 1, p. 1153).

The United Company not only did not refuse to sell machines previously sold by the constituent companies, but on the con-

trary it did sell over 170 different kinds of General Department machines, which it developed, in contrast to the policy of the constituent companies (R. Vol. 1, p. 452, lines 39–44; p. 453, lines 1–6).

6. REASONS FOR MARKETING SHOE MACHINERY BY LEASES.

It is important to consider the reasons which had led shoe machinery manufacturers generally from the beginning of the industry to market their machinery by the lease system.

The adoption by a manufacturer of the best method of marketing his product and thereby best meeting the conditions peculiar to his goods or under which his customers do business is one of the most important elements of commercial success.

The ingenuity of modern business men has been largely directed to this problem and a great variety of methods has resulted. One manufacturer sells only at wholesale, one at retail, one through agents, another through jobbers, another through a chain of his own stores and another only upon mail orders; one leases, another sells outright; one sells for cash only, another on the instalment plan; one sells through traveling salesmen, another depends upon advertising in magazines or by letter; one offers premiums with each purchase, another sells on long-time contracts providing for all the customers' business; one makes discounts for large purchases, another declines to distinguish between large and small customers; one sells only for a money consideration, another takes stock or some share of the profits of the purchaser.

The foregoing are a few of the methods employed by modern salesmanship devised to attract customers and to provide an outlet for goods. They are all proper, normal methods because they are designed to advance the dealer's business by making his goods or terms attractive to his customers. The dealer is free to adopt any one of these methods he pleases. If he deems it the best policy to sell for cash only, no customer can demand credit; if he sells only through agents, no customer can demand that he sell directly to him; if he sells by mail only, no customer can demand that he sell at his office. Similarly, if he leases on terms which he believes best adapted to the conditions of the

industry, no customer can demand that he lease on other or different terms or that he sell as well as lease. This freedom of choice as to the method of marketing his goods is the life of competition and the very kind of activity which the Sherman Act sought to promote.

The system of leasing instead of selling shoe machinery, and charging not a fixed rental but a royalty based on the amount of use, has been a fixed and established principle in the shoe machinery industry from the date of the introduction of the first shoe machinery about 1860, and the entire business of manufacturing shoes by machinery originated and has been developed under the lease system because it was especially adapted to the conditions of that industry and was most satisfactory to the shoe manufacturer. The following are a few of the reasons:—

A. Under the lease system shoe manufacturers do not have to buy outright machines at the large prices which the manufacturer would be obliged to charge in case of a sale, as compensation not alone for the cost of the machines themselves but also for the use of the patented inventions embodied in the machines, and the great expense involved in experimenting with and developing them. Shoe manufacturers are thus saved a large initial investment in machinery and this money is left available for use in the business.

The shoe manufacturers testified almost unanimously to the advantages of this condition. Machinery depreciates rapidly and banks are unwilling to loan money on it. Furthermore, the shoe manufacturer turns his capital over rapidly and is thus able to do a large and profitable business on a small capital if he is not obliged to make a heavy investment in machines. Many shoe manufacturers are men with small capital and would be wholly unable to engage in the business if required to make a large initial investment.

Jonathan Brown, Jr., testified that depreciation in shoe machinery is so rapid from wear and on account of new machines being invented that 50 per cent. depreciation should be charged off as soon as a machine is purchased. He does not dare to carry machines as an asset at all, but if he buys a machine he charges it off as expense (R. Vol. 1, p. 732, lines 6–31).

Edward W. Burt testified that he figured about 25 per cent. depreciation on machines which he had to take care of himself.

His gross sales are six times his capital. He prefers not to tie up capital in machinery. In securing credit bankers never consider machinery worth a dollar (R. Vol. 1, p. 740, lines 29–41).

Frederick Allen testified that he turns his capital over about eight times a year. He prefers to lease rather than to purchase, because under the lease system he does not have to tie up his money in machinery "which as an asset is worthless as soon as it is installed" (R. Vol. 1, p. 722, lines 11–19).

ALANSON C. BROWN testified:—

> "The opportunity to lease our machines instead of investing our own capital in them by way of purchase has given us more money to put into other departments of our business. The capital which we invest in the materials which go into shoes we turn over about three times in the course of a year and in the usual course of business we make a profit every time. Our capital is four million and our gross business is around thirteen million a year" (R. Vol. 1, p. 618, lines 15–22).

R. P. HAZZARD testified:—

> "The capital of the Snow-Hazzard Company was $50,000. We now turn over our capital about eight times. Our investment as shown by our last audit is a little over $300,000 and during the past year we have done a business of approximately two millions and a half. We have gone on the plan of making as small a permanent investment in machinery as was possible and putting all our money into the active running of the business.
>
> "I might add right there that when the Snow-Hazzard Company was started as a $50,000 corporation, had we been obliged to have bought by outright purchase the machinery necessary to have equipped that plant, that it would have taken such a large part of our capital that our credit would not have been such as to enable us to have purchased our merchandise and conduct our business and allow us to grow as it has" (R. Vol. 1, p. 642, lines 3–16).
>
> "The thing which pleases me especially in this system is that I stand on an exact footing, so far as machinery and repairs are concerned, and everything of that kind, with every other shoe manufacturer that leases from the United Company, because I am conceited enough to think that if given an even start I can hold my own" (R. Vol. 1, p. 654, lines 3–8).

B. Under the lease system the shoe manufacturer only pays for the machines when and as he uses them. If business is poor, his royalties proportionately decrease. The amount of payment, therefore, is automatically adjusted to the amount of business which the shoe manufacturer does, and he is not burdened with heavy annual charges when business is poor.

C. The principal shoe machines are so delicate and need such constant adjustment that unless properly cared for they prove unsatisfactory. No small shoe manufacturer and few of the large shoe manufacturers can afford to maintain an efficient repair service. Nor do shoe manufacturers understand as thoroughly as the machinery manufacturers the importance of this service. In consequence, experience has shown that when machines were purchased outright they quickly got out of repair or adjustment, because of lack of proper attention, and thereby became discredited. Shoe machinery manufacturers, therefore, found that it gave better satisfaction to their customers if the machines were leased and were kept in repair by the lessor. The shoe manufacturer under this system got better machinery for his money and the machinery manufacturer a larger return.

D. From the beginning of the shoe machinery industry every machine has been to a large extent experimental until its usefulness is proved and demonstrated in actual commercial use over an extended period. Each machine as it has been developed has performed an operation which up to that time was done by hand. Shoe manufacturers hesitated to buy a machine at a large price which might not do as good work as was being done by hand, or which might otherwise prove a commercial failure, or might be supplanted within a short time by a better machine. Under the lease and license system shoe manufacturers do not have to take this risk; it is the machinery manufacturer who takes the risk.

See Strootman (R. Vol. 1, p. 744, lines 1–11).

E. By furnishing machines for a comparatively small initial cash payment or without any initial cash payment shoe machinery manufacturers were enabled to get active, energetic men to enter the shoe business and thus extend the use of their machines. To enter the shoe business no expensive factory is required, any loft being sufficient; the goods require no long time in process but are turned into cash quickly and the business can easily be started

on a small scale. The shoe machinery manufacturer is thus able to place his machines and develop his business in a way which would not be possible if a cash sale price were demanded.

As Mr. WINSLOW testified:—

"Under our system a small manufacturer has practically the same advantages as a large one as far as machine equipment is concerned. A man who goes into the business with a capital of $1,000 pays exactly the same royalty and receives exactly the same service as a man who goes into the business with a capital of $250,000" (R. Vol. 1, p. 555, lines 38–43).

FREDERICK ALLEN testified:—

"If I had had to buy my machinery I don't think I should have been able to start in business, because it would have taken all my capital to buy machinery. Under the arrangement by which I can obtain the machinery by lease, I can put all my capital into the business" (R. Vol. 1, p. 722, lines 34–38).

EDWARD W. BURT testified:—

"I am a small manufacturer. As to the effect upon my ability successfully to do business which a compulsory change in the method of leasing machines, making it necessary for the United Company to charge an initial premium when it put out its machines, would have, I am very glad you asked me that question, because I think it is a very important one. If manufacturers must buy their machines, they have got to get money from their capital, or borrow money, or get it somewhere, to buy machinery, and that takes away your working capital. Now, you must have machinery at the least expense possible in the manufacturing of shoes. And if we were obliged to buy our machines I should be very sorry. In fact, if the privilege of buying or leasing were given me, I should say lease every single time. I never would want to buy a machine.

"As to the effect which it would have had with reference to my ability to go into business at all, I never could have started. I started without any money in shoe manufacturing. I was able to do that because I could obtain my machines by this method.

"That is one of the greatest reasons why I could start in

the shoe business—because I could get machinery with practically no expense.

"I know that there are other men who from small beginnings have been enabled to start and grow. I have had experience along that line. I have had two superintendents leave me, both starting in the shoe business. They had practically no money" (R. Vol. 1, p. 741, lines 5–31).

C. Willis Bennett also testified that he could not have entered business had he been required to buy his machines (R. Vol. 1, p. 759, lines 1–20).

7. NECESSITY FOR PROVISIONS IN THE LEASES PROTECTING THE LESSOR.

A. Introductory Statement.

The United Company, under the lease system, installs in the shoe manufacturer's factory an equipment of machines, instructs the shoe manufacturer's operators in their use, and keeps the machines in proper operating condition. It depends for a fair return on its investment upon a royalty based upon the use of the machines.

The United Company, under this system, has installed millions of dollars' worth of machinery in the factories of lessees scattered all over the country. It is obvious that the leases of these machines must contain provisions carefully providing for the use and care of the machines and assuring the lessor a fair return on its investment.

The following conditions must be borne in mind in considering the provisions required in the leases:—

B. Compensation for Machines being Based on Amount of Use, Lessee must Agree to Use.

The United Company cannot manufacture and invest its money in expensive machines and install them in the shoe manufacturer's factory, instruct operatives and keep the machines in repair, depending for its return upon a royalty based on the use of the machines, unless assured that they will be used if the shoe manufacturer has work for them to perform. If the lessee were

under no obligation to them the United Company might receive no return on its investment. Mr. WINSLOW testified:—

> "The leases as existing in 1899, and as issued practically up to the present time, gave the possession of the machinery and the right to use the patents embodied in that machinery to the lessee, either for the life of all the patents that were then embodied in the machines, or for seventeen years upon his keeping certain conditions. The payment to the owner of the patents in these leases was dependent entirely upon the use that was made of the machines. Experience of the companies who were leasing machines prior to 1899 had shown them that frequently their machines would be in the hands of the manufacturers and would not be used for one reason or another. The machinery companies had gone to the expense of teaching operatives, educating the manufacturer in the use of the machines, and were by the custom of the trade called upon to teach the operator at any time in the use of those machines My own experience with the Lasting Machine Company had shown me that we might start and educate operatives on the machines two or three times, and then the machine would be stopped. Some method had to be adopted to properly protect the interests of the machinery company if it were to continue to lease machines" (R. Vol. 1, p. 443, lines 24–44).

C. Seasonal Character of Shoe Business Requires that Lessee Use Machines When He has Work.

The shoe manufacturer's business is seasonal; during three months of the year he will do twice to four times as much work as at other seasons. To enable him to do his work in his busy season the United Company must furnish him with an equipment having a capacity far in excess of his requirements during the greater part of the year. Mr. WINSLOW testified:—

> "The manufacturing of shoes is one that is divided into substantially two seasons. The manufacturer with an average production of a thousand pairs per day, in other words, who makes 300,000 pairs of shoes in the year, will ordinarily have to have a capacity to produce 600,000 pairs. His production in certain months will run at the rate of 2000 pairs per day, and in other months as low as 500 pairs per day, so that if he has the machines of our company—our entire income is dependent upon their use—we have to furnish him the equipment to make the 2000

pairs per day, although his total product only averages a thousand pairs per day. We furnish him that equipment for his maximum output, which is only used, the maximum, I am quite safe I think in saying, not over three months out of the twelve, and from that it runs down, varying according to the man's own particular business, to from twenty-five per cent. to fifty per cent." (R. Vol. 1, p. 444, lines 27–42).

It is obvious that if the shoe manufacturer, in order to provide for his maximum requirements during his comparatively short busy season, takes from the United Company a machinery equipment having a capacity in excess of his average or normal requirements, the United Company must be assured that such excess capacity taken by the shoe manufacturer be used when required. Otherwise, the United Company will furnish and the lessee will hold a machinery capacity which will not be used and for which the United Company will get no return.

D. Wholesale Price is Fair Both to United Company and to Shoe Manufacturers When its Machines are Used as a Team.

When a series of the United Company's principal machines, which are admittedly the best machines made and which have been developed and are adapted for use together, are used as a team or series and are repaired and cared for by the United Company and are thus maintained in an efficient operating condition so that no one of the team breaks down and stops the work on other machines, and when the operators are instructed in the proper use of the machines and operators are furnished the shoe manufacturer in case of necessity, each machine of the series can produce more shoes than it would produce if used with machines not so adapted for use together as a team and not so maintained and cared for. Furthermore, a series of machines can be cared for at less cost per machine than a single machine. As a result, when a shoe manufacturer desires to take the United Company's principal machines to be used together as a team or series the United Company can afford to charge a reduced or wholesale price, because it receives a larger return in royalties on each machine when so used and the cost of caring for each machine is less.

Mr. WINSLOW testified as follows in respect to the reasons for the increased productivity and efficiency of machines when used as a team:—

> "By limiting the use of one principal machine of the company to work which has been operated upon by other principal machines of the company, its use is confined to work done by machines with which we know that prompt and efficient service is furnished to keep that machine in proper condition to operate, and with operators who have been properly instructed in the operation of the machine at the expense of our company, and also with machines where new operators will be taught whenever they are needed. Now, of course, under those conditions we have a definite assurance as to the maintenance of the productivity of the machines and the quality of work that will be produced by those principal machines with which another principal machine is used" (R. Vol. 1, p. 857, lines 5–17).

E. United Company must have Right to Take Back its Machines if Lessees do not Act in Good Faith.

The United Company is dependent to a large extent upon its lessees for a correct statement of the number of shoes on which its machines operate and for a proper use of its machines.

The constituent companies which were combined into the United Company had 1,060 different lessees operating 1,079 factories (R. Vol. 1, p. 454, lines 21–23). The United Company in 1911 had 1,033 lessees operating 1,150 factories (R. Vol. 1, p. 454, line 45). An average of over 62 new concerns have started in the shoe manufacturing business in each year from 1900 to 1911, and in addition an average of over 22 new concerns have during that period succeeded old firms. 746 entirely new concerns engaged in business between March, 1900, and December 31, 1911 (Defs.' Ex. 223, R. Vol. 5, p. 390).

It is obvious that the United Company can have no assurance of the moral responsibility of many of its lessees. It is inevitable that some should act unfairly or dishonestly.

Furthermore, the United Company can have no assurance of the financial responsibility of many of its lessees. It is one of the virtues of the leasing system that it enables men having little capital and, therefore, necessarily slight financial responsibility, to engage in the business.

Under these circumstances the United Company must have fairly broad rights to withdraw its machines if it finds or has reason to believe that its machines are not properly cared for, or that the amount due in royalties is incorrectly reported, or that the lessee is otherwise violating his agreements, or if it finds that owing to the use by the lessee of other machines of the same kind as those leased, the lessee is using the United Company's machines only occasionally or only during his busy season, or only on slow or difficult work, or on shoes which although made on the United Company's machines the lessee reports as made on the other machines, and that for any of these reasons the United Company is not receiving a fair return on its investment in the machines.

F. Extended Term Necessary for Both Lessee and United Company.

The lessee embarking in business desires an assurance that he may hold his machines for an extended term and the United Company requires an assurance that the lessee will use the machines for a sufficient length of time to afford a fair return on the investment.

G. The Provisions in the Leases Objected to by the United States Attempt to Provide for and Meet the Foregoing Conditions.

The District Court said (R. Vol. 1, p. 1187):—

> "The clauses objected to are all subordinate and auxiliary to maintaining rights which unquestionably belong to the defendant; to charge their own prices and to choose as customers those who will pay those prices.
>
> "The attack of the United States is not upon these rights, but upon the particular mode in which they have sought to exercise them. Other modes, such as the requirement of arbitrary payment for the full period of the patents, would escape all such attacks. *The attack arises from the attempt to adjust the payments to the amount of use which particular manufacturers may have for the patented inventions*" (italics ours).

In considering the leases it must also be borne in mind that their purpose and effect cannot be tested solely by an examina-

tion of the wording of the clauses. In a lease of a complicated set of shoe machinery, even more than in the lease of a house or business premises, it is impossible to specify exactly and definitely every event or circumstance which should give the lessor a right to interfere for his protection. It is essential that the lessor reserve certain general rights, which, if violated, justify him in cancelling the lease if he feels such action necessary for his protection. As we show below (*infra*, pp. 415-420), the actual practice of the United Company has been to treat its lessees with the utmost liberality. The record shows that the United Company has enforced its right to cancel its leases in only five instances (apart from cases of insolvency) in each of which the lessee acted in flagrant disregard of the lessor's rights, and either used the United Company's machines without payment of any royalty at all, or abandoned their use entirely.

8. LEASE SYSTEM EMPLOYED BY THE CONSTITUENT COMPANIES PRIOR TO THE FORMATION OF THE UNITED COMPANY.

In order to understand the gradual growth of the lease system, the reasons necessitating the various provisions in the leases, and the reasons why the United Company upon its formation continued the system, and in order further to appreciate how slight were the changes made by the United Company in the system, it is necessary to consider carefully the lease system in use at the time the United Company was organized.

A. LEASES OF GOODYEAR COMPANY PRIOR TO 1899.

The Goodyear Shoe Machinery Company manufactured welt and turn sewing machines and outsole stitchers and sixteen auxiliary machines used in connection therewith. It also manufactured Ideal Lasting Machines developed and used for lasting women's welt shoes (R. Vol. 1, p. 468, lines 4–14; p. 624, line 31–p. 625, line 13; p. 626, line 36; p. 627, line 3).

(1) Lease of Goodyear Welt Set Prior to 1899 (P.'s Ex. 4, R. Vol. 3, p. 29).

The Goodyear Company leased its welt set, consisting of the Goodyear Welt and Turn Machine and the Goodyear Outsole

Stitcher and thirteen auxiliary machines as a single set and for a single royalty.

It charged an initial payment of $300 for the Welt and Turn Shoe Machines and $300 for the Outsole Stitcher and also an initial payment for each auxiliary (R. Vol. 1, p. 469, lines 16–18). It also charged a net royalty of four cents a pair for each pair of men's shoes on which the machines or any of them were used, three cents for women's shoes and boys' shoes, and less amounts for youths', misses', and children's shoes (P.'s Ex. 4, pars. Third and Fifth, R. Vol. 3, pp. 32–33).

The lessee agreed that the machine should be used only in the manufacture of "Goodyear Welts," *i.e.*, welt shoes welted and outsole-stitched on Goodyear Welters and Stitchers and that he would "*not use or permit the use of said machines, or either or any of them, upon boots or shoes in the manufacture of which any sole or welt-sewing machine not leased to him by the lessor is employed*" (italics ours) (par. Sixth, P.'s Ex. 4, R. Vol. 3, pp. 33–34).

The lease ran until the expiration of every patent referred to in the schedule of patents, or any extensions or renewals of the same (P.'s Ex. 4, par. Ninth, (*c*), R. Vol. 3, p. 35). The lessor had the right to add improvements, and if any patented improvements were added, it was provided that the lease should be construed as though such patents were contained in the original schedule (P.'s Ex. 4, par. Second, R. Vol. 3, p. 32). In other words, if the lessor added patented improvements, which he had the right to do, the lease would be continued indefinitely.

The lease could be terminated upon breach of any conditions on the part of the lessee (P.'s Ex. 4, par. Ninth, (*b*), Vol. 3, pp. 34–35). The lessee agreed to keep the machines in working order at his own expense and to procure all parts for repairing the machines from the lessor (P.'s Ex. 4, par. First, R. Vol. 3, pp. 31–32).

(2) Lease of Goodyear Turn Set Prior to 1899 (P.'s Ex. 3, R. Vol. 3, p. 22).

The Goodyear Company leased its turn set consisting of the Goodyear Welt and Turn Shoe Machine and three auxiliary machines as a single set and for a single royalty. It charged $300 as an initial payment for the turn machine, and likewise

initial payments for the auxiliary machines (R. Vol. 1, p. 21, lines 16–18; p. 469, lines 16–18). It charged a net royalty of 1½ cents per pair for men's, boys', youths', and women's shoes, and 1 cent for children's and misses' shoes (P.'s Ex. 3, pars. Third and Fifth, R. Vol. 3, pp. 24–25).

The lessee agreed that the machine should be used only in the manufacture of Goodyear turns.

The lessee agreed not to use in his factory any machines for uniting the soles of turn shoes to their uppers which were not leased to him by the lessor (P.'s Ex. 3, par Sixth, R. Vol. 3, pp. 25–26). *This clause, therefore, required an exclusive use of the Goodyear Company's turn machines.*

The lease ran for the same period as the lease of the welt set.

The lease could be terminated upon breach of any conditions (P.'s Ex. 3, par. Ninth, (*b*), R. Vol. 3, pp. 26–27).

The lessee agreed to keep the machines in working order at his own expense and to procure from the lessor all parts for repairing the machines (P.'s Ex. 3, par. First, R. Vol. 3, p. 23).

(3) Lease of Ideal Lasting Machines prior to 1899 (P.'s Ex. 5, R. Vol. 3, p. 37).

The Goodyear Company leased its Ideal Lasting Machine, together with the Rapid loose tackers used in connection therewith, for an initial payment of $300 (P.'s Ex. 5, Vol. 3, p. 44) and a royalty of one-half a cent for each pair of shoes lasted (P.'s Ex. 5, par. Fifth, pp. 40–41).

The lessee agreed not to use the machines on shoes "partially or wholly completed by the aid of any sole- or welt-sewing machine not leased to him by the Lessor" and not to use any of the rapid tackers on shoes "which have been partially or wholly lasted by the aid of any lasting machine not leased to him by the Lessor" (italics ours) (P.'s Ex. 5, par. Fourth, R. Vol. 3, p. 40). It is to be noted that this provision constituted a "Restricted Use Clause," limiting not only the use of the rapid tackers to the lasting machine or machines, but also limiting the use of the lasting machines to shoes on which the lessor's welter and stitcher were used.

The lessee agreed to buy of the lessor all tacks used in the loose tackers and hoppers (P.'s Ex. 5, par. First, R. Vol. 3, p. 39).

The lease, as in the case of the other leases of the Goodyear

machines, was to continue until the expiration of any patents embodied therein, or any patents or improvements which might thereafter be embodied in the machine by the lessor at its option (P.'s Ex. 5, par. Seventh, (*c*), and par. Second, R. Vol. 3, pp. 42, 39).

The lease could be terminated upon breach of any conditions (P.'s Ex. 5, par. Seventh, (*b*), R. Vol. 3, pp. 41–42). The lessee agreed to keep the machines in working order at his own expense, and to procure from the lessor all parts for repairing the machines (P.'s Ex. 5, par. First, R. Vol. 3, p. 39).

B. · LEASES OF CONSOLIDATED COMPANY PRIOR TO 1899.

(1) Lease of McKay and Copeland Lasting Machine Prior to 1899 (P.'s Ex. 6, R. Vol. 3, p. 45).

This machine was used for lasting heavy-weight brogans and metallic fastened and pegged shoes (R. Vol. 1, p. 3, lines 20–22).

An initial payment of $695 was required and a royalty (P.'s Ex. 6, Art. 3, R. Vol. 3, pp. 48–50; R. Vol. 1, p. 454, lines 3–8).

The lease declared it the intention of the lessee to use the machines leased for lasting all the shoes made by him applicable to said machines and not to have the machines in his possession as a means of reducing the price of hand lasting, or to influence any trade in connection with any other lasting machines not made by the lessor. The lessee further agreed to "use said machines and accessories hereby licensed and leased for rental, lasting all of his shoes and boots to their full capacity, limited only to the demands of his business; and should the demands of his business require, he shall take the license and lease of such additional machines and accessories as may be required to last all of his work, and in default of such use, the Licensor may at its option remove said machines and accessories . . . and may cancel this license and lease" (P.'s Ex. 6, Art. 12, R. Vol. 3, pp. 54–55). *This clause required the use of the machines to their full capacity and also required the exclusive use of the lessor's machines of this character.*

The lease ran "until canceled by the Licensor for breach of condition or otherwise"; in other words, it ran so long as the machine was in existence unless the lessor saw fit to cancel (P.'s Ex. 6, Art. 9, R. Vol. 3, p. 53).

The lessee agreed to buy of the lessor all spare parts for repairing the machines and also all string-nail, tack-strips, or other fastenings driven by any appliance for lasting all shoes lasted on the machines (P.'s Ex. 6, Art. 13, R. Vol. 3, p. 55). The right was reserved to cancel for breach of conditions (P.'s Ex. 6, Art. 9, R. Vol. 3, p. 53).

(2) Lease of Chase Lasting Machines Prior to 1899 (P.'s Ex. 7, R. Vol. 3, p. 57).

This machine, and the hand tackers used therewith, was used for lasting men's welts and was leased without initial payment for a royalty of one cent per pair for Goodyear shoes, with certain provisions for abatement (P.'s Ex. 7, par. Third, R. Vol. 3, pp. 60–62). If the lessor so requested, the lessee was required to pay not less than $10 per month, except when his factory was not running. If the machines were unused for four months the lessor could cancel the lease (P.'s Ex. 7, pars. Third and Eighth, R. Vol. 3, pp. 60–61, 63).

The lease declared it the intention of the lessee to use the machines leased for lasting all the shoes made by him applicable to said machines and not to have them in his possession as a means of reducing the price of hand lasting or of controlling hand lasters or of influencing a trade with the owners of any other lasting machines or reducing the price thereof. The lessee agreed to "use such machines hereby loaned for lasting all of his shoes and boots, to their full capacity, limited only by the demands of his business; and should the demands of his business require, he shall take and pay for the loan of such additional machines as may be required to do all his work" (P.'s Ex. 7, par. Twelfth, R. Vol. 3, p. 65). *This clause required the use of the machines to their full capacity and also required the exclusive use of the lessor's machines of this character.*

The lease ran until the expiration of the Letters Patent which the lessee was licensed to use, or which were or thereafter might be embodied in the machines (P.'s Ex. 7, par. Tenth, R. Vol. 3, p. 64). The lessor had the right to improve the machines (P.'s Ex. 7, par. Second, R. Vol. 3, p. 60). Thus the leases might run indefinitely.

The lessee agreed to buy all spare parts and all string-nail,

tack-strips or other fastenings of the lessor (P.'s Ex. 7, par. Thirteenth, R. Vol. 3, p. 65–66).

The lease might be cancelled for breach of conditions (P.'s Ex. 7, par. Ninth, R. Vol. 3, pp. 63–64).

(3) Lease of Consolidated Hand Method Lasting Machines (McKay) Prior to 1899 (P.'s Ex. 8, R. Vol. 3, p. 68; P.'s Ex. 9, R. Vol. 3, p. 74).

This machine was used for lasting McKay shoes. There were two alternative forms of lease, one requiring an initial payment, the other no initial payment.

Initial payment form (P.'s Ex. 8). This form required an initial payment of $300 for each machine and a royalty of one-half a cent a pair (P.'s Ex. 8, R. Vol. 3, pp. 69–70).

The lease ran until the expiration of all patents embodied in the machines or in any improvements thereafter attached thereto, which improvements the lessor had the right to make (P.'s Ex. 8, pars. Eighth and Sixth, R. Vol. 3, pp. 73, 71–72).

The lessee agreed to obtain all duplicate parts from the lessor. (P.'s Ex. 8, par. Sixth, R. Vol. 3, p. 72). The right was reserved to terminate for breach of conditions (P.'s Ex. 8, par. Seventh, R. Vol. 3, p. 72).

Non-initial payment form (P.'s Ex. 9). This form required a royalty of five-eighths of a cent per pair, with a minimum of $180 a year (P.'s Ex. 9, par. Third, R. Vol. 3, p. 77). If the machines were unused for four months the lease might be cancelled (P.'s Ex. 9, par. Eighth, R. Vol. 3, p. 79).

It was declared the intention of the lessee to use the machine for lasting all shoes made by him applicable to the machine, and the lessee agreed to use the machine "for lasting all of his boots and shoes to its full capacity, limited only by the demands of his business; and should the demands of his business require he shall take the license and lease of such additional machines as may be needed to do all his work" (P.'s Ex. 9, par. Twelfth, R. Vol. 3, pp. 80–81). *It therefore required a use of the leased machines to their full capacity and also required an exclusive use of machines of this kind.*

The lease ran until cancelled by the lessor for breach of condition or otherwise; that is, *it ran at the lessor's option so long*

as the machine was in existence (P.'s Ex. 9, par. Ninth, R. Vol. 3, pp. 79–80).

The lessee agreed to obtain all duplicate parts from the lessor, and wire used in lasting in the machines (P.'s Ex. 9, par. Thirteenth, R. Vol. 3, p. 81). The right was reserved to terminate for breach of conditions (P.'s Ex. 9, R. Vol. 3, p. 76).

(4) Lease of Consolidated Hand Method Lasting Machine (Welt) Prior to 1899 (P.'s Ex. 10, R. Vol. 3, p. 82).

This is a machine which the Company was just developing in 1899. A lease had been prepared prior to the formation of the United Company.

This lease required no initial payment and charged a royalty of one cent per pair (R. Vol. 1, p. 4, lines 9–13; P.'s Ex. 10, par. Third, R. Vol. 3, p. 85).

The lease ran until cancelled by the lessor for breach of condition or otherwise (P.'s Ex. 10, par. Ninth, R. Vol. 3, p. 87). It was declared the intention of the lessee to use the machine for lasting all the shoes made by him applicable to such machine, and the lessee agreed to use the machine "for lasting all of his boots and shoes to its full capacity, limited only by the demands of his business; and should the demands of his business require he shall take the license and lease of such additional machines as may be needed to do all his work" (P.'s Ex. 10, par. Twelfth, R. Vol. 3, pp. 88–89). *It therefore required a use of the leased machines to their full capacity, and also required an exclusive use of machines of this kind.*

The lessee was required to obtain all spare parts of the lessor and the lease could be cancelled for breach of condition (P.'s Ex. 10, par. Thirteenth, R. Vol. 3, p. 89; par. Ninth, R. Vol. 3, p. 87).

C. LEASES OF McKAY COMPANY PRIOR TO 1899.

(1) Lease of Heeling Machines Prior to 1899 (P.'s Ex. 11, R. Vol. 3, p. 90).

A royalty of one-fourth of a cent was charged and this charge extended to all heels made by or for the lessee, whether or not made by the lessor's machines (P.'s Ex. 11, par. Third, R. Vol. 3, pp. 97–98). The lessor reserved the right to cancel

if the lessee "*provides himself with any other machine to do any part of the work which any of said Lessors' machines are capable of doing*" (italics ours) (P.'s Ex. 11, par. Eighth, R. Vol. 3, p. 100). The lease ran for seventeen years "and for such further time as may be covered by the term of any Letters Patent now or hereafter owned by the Lessors, and any inventions of which are contained in any of the 'machinery' hereby leased or which shall be added to or embodied in said 'machinery' or used in connection therewith" (P.'s Ex. 11, par. Eighth, R. Vol. 3, p. 100). The lessor had the right to add improvements. The lessee agreed to buy all spare parts from the lessor (P.'s Ex. 11, pars. Second and First, R. Vol. 3, p. 97).

The lease could be terminated for breach of conditions (P.'s Ex. 11, R. Vol. 3, p. 96).

(2) Lease of Metallic Machines Prior to 1899 (P.'s Ex. 12, R. Vol. 3, p. 103).

This lease is upon an initial payment form which required the lessee to pay 10 cents a pair for all shoes operated on unless he should purchase of the lessor all the material used in the machines for fastening the shoes, which the lease stated was to be sold "at prices much in excess of the cost to the Lessors, with the intent that such excess shall be the rent and license fee hereunder" (P.'s Ex. 12, par. Third, R. Vol. 3, p. 107). This was in lieu of other royalty. The lease, however, carries a rider eliminating the initial payment and providing that the lessor has the right to terminate the lease whenever the lessee "*shall provide himself with any other machine to do any part of the work which said lessors' machines are, in the lessors' opinion, capable of doing*" (italics ours) (P.'s Ex. 12, Rider, R. Vol. 3, p. 112).

The lease ran until the expiration of all Letters Patent, embodied or thereafter embodied in the machines, by the lessor (P.'s Ex. 12, par. Ninth, R. Vol. 3, p. 110).

The lease carried a rider which provided the lessor might cancel if the lessee did not purchase all spare parts of the lessor (P.'s Ex. 12, Rider, R. Vol. 3, pp. 112–113, and par. Eighth, R. Vol. 3, p. 110).

(3) Lease of Davey Pegging Machine Prior to 1899 (P.'s Ex. 13, R. Vol. 3, p. 113).

A royalty of three-fourths of a cent was charged.

The lessee agreed that "he will do all the pegging of boots and shoes manufactured by him upon the said machines of the Lessor which are leased hereby, and that in case he has too much work for the machines hereby leased, he will take from the Lessor, under this lease or a similar lease containing the same terms and provisions, sufficient additional machines to perform the work" (P.'s Ex. 13, par. Fifth, R. Vol. 3, p. 118). *It therefore required an exclusive use of the machines.*

The lease continued until the expiration of Letters Patent embodied in the machine or on any inventions thereafter added to the machine, which improvements the lessor had the right to make (P.'s Ex. 13, pars. Tenth and Second, R. Vol. 3, pp. 120, 116). All spare parts were to be purchased from the lessor and the lease might be terminated for breach of conditions (P.'s Ex. 13, pars. First and Ninth, R. Vol. 3, pp. 115–16, 119).

9. SUMMARY OF LEASE SITUATION JUST PRIOR TO THE DATE OF THE FORMATION OF THE UNITED COMPANY.

A. General Summary of Provisions in Leases.

From the foregoing it will be seen that the system of leases of the Constituent Companies in effect at the date of the formation of the United Company incorporated the following provisions:

1. Machines could not be bought but were only leased.

2. When two or more machines were put out by the same company which were used on the same shoe, the machines were generally leased as a group. Thus the Goodyear Welter, Stitcher and Auxiliaries were leased for a single royalty. The Welter and Stitcher were restricted to use together and the auxiliaries were restricted to use on shoes operated on by the Welter and Stitcher (P.'s Ex. 4, par. Sixth). The Tackers were leased with the Ideal Machine for a single royalty and restricted to use on shoes operated on by the Ideal Machine (P.'s Ex. 5, par. Fourth). The various heeling machines of the McKay Company were leased as a whole for a single royalty (P.'s Ex. 11). In other

words, these leases contained the "Auxiliary Restricted Use Clause." The Ideal Laster was restricted to use on shoes operated on by the Welter and Stitcher, an instance of restricting a principal machine of one department to use with a principal machine of another department, *i.e.*, the "Restricted Use Clause."

3. Many of the leases required the lessee to use the lessor's machines of the kind leased exclusively, that is, they contained a direct agreement to this effect, or contained the "Additional Machinery Clause," which required the lessee to take additional machinery for all work which he had of the kind for which the machines were adapted (Goodyear Turn Set, P.'s Ex. 3, par. Sixth; McKay and Copeland Machine, P.'s Ex. 6, par. Twelfth; Chase Machine, P.'s Ex. 7, par. Twelfth; Consolidated Hand-method McKay Machine, P.'s Ex. 9, par. Twelfth; Consolidated McKay Hand-method Welt Machine, P.'s Ex. 10, par. Twelfth; Pegging Machine, P.'s Ex. 13, par. Fifth).

4. The leases of the McKay Company contained the "Exclusive Use Cancellation Clause" which permitted the lessor to cancel the lease if machines of the same kind as those leased were not used exclusively by the lessee (Metallic Machines, P.'s Ex. 12, Rider; Heeling Machine, P.'s Ex. 11, par. Eighth).

5. All of the leases ran for long and in most cases indefinite periods. In the case of the McKay and Copeland Machine, the non-initial lease of the Consolidated Hand-method McKay Machine and the Consolidated Hand-method Welt Machine, the lease ran until cancelled for breach of conditions; in other words, it ran for the life of the machine (P.'s Ex. 6, par. Ninth; P.'s Ex. 9, par. Ninth; P.'s Ex. 10, par. Ninth).

In the case of the heeling machines the leases ran for seventeen years and for such further time as any patents embodied then or thereafter in the machines were in force (P.'s Ex. 11, par. Eighth). In all other cases the leases ran for the life of the patents then embodied, or which might thereafter be embodied in the machines.

6. Most of the leases of the Consolidated Company contained the "Full Capacity Clause" (P.'s Ex. 6, par. Twelfth; P.'s Ex. 7, par. Twelfth; P.'s Ex. 9, par. Twelfth; P.'s Ex. 10, par. Twelfth).

7. All the leases permitted the lessor to cancel for breach of conditions.

8. All the leases required the lessee to obtain extra or duplicate parts required on the machines from the lessor.

9. The Goodyear Company required an initial payment upon the installation of its machines to cover the cost of installation and instruction of operatives. The Consolidated Company required an initial payment for its McKay & Copeland Machine and on one form of lease for its Consolidated Hand-method McKay Machine, and no initial payment on its other leases. The McKay Company had required an initial payment, but in 1899 was considering a change, and was temporarily loaning machines without initial payment.

B. Provisions by which the Constituent Companies Protected Themselves when Leasing Machines without Initial Payment.

Where the shoe machinery manufacturer as lessor installs his machinery in the factory of a lessee and instructs such lessee's operatives in the use of the machinery, the lessor to be paid by a royalty based on the amount the machinery is used, it is, of course, essential that the lessor be protected as to the amount of use in order to assure him an adequate return. He cannot afford to permit the lessee to keep the machinery idle or use it only on his difficult and slow work, or use it only at especially busy times, doing his work on other machines at other times; nor can he afford to permit the lessee to use the machine under such factory conditions that it cannot be determined how much the machine is actually used. Such protection is especially essential when no initial payment is required from the lessee. This protection was afforded in the leases of the constituent companies in various ways, some used in one lease and some in another. The following provisions are illustrations:—

(*a*) The lessee was required to use the machines to capacity, limited only by the demands of his business (P.'s Ex. 6, par. Twelfth; P.'s Ex. 7, par. Twelfth; P.'s Ex. 9, par Twelfth; P.'s Ex. 10, par. Twelfth).

(*b*) It was agreed that the lessor might cancel the lease if the machines were unused for a certain length of time (P.'s Ex. 7, par. Eighth; P.'s Ex. 9, par. Eighth).

(*c*) The lessor was permitted to cancel the leases of a type of machines if machines of that type were not used exclusively (P.'s Ex. 12, Rider; P.'s Ex. 11, par. Eighth).

(*d*) It was provided that the lessee should take additional

machines if he had more work than the leased machines could do (P.'s Ex. 6, par. Twelfth; P.'s Ex. 7, par. Twelfth; P.'s Ex. 9, par. Twelfth; P.'s Ex. 10, par. Twelfth).

(*e*) It was provided that the lessee should pay at the royalty rate in respect to all shoes whether or not made on the lessor's machines (P.'s Ex. 11, par. Third).

(*f*) The lessee guaranteed a minimum royalty (P.'s Ex. 7, par. Third; P.'s Ex. 9, par. Third).

(*g*) The lessor was given the right to cancel the lease if the machine was not used to the extent of earning a certain royalty within a given time (P.'s Ex. 6, par. Eighth).

(*h*) It was provided that the lessee should not hold the machines in his possession as a means of reducing the price of hand work or to influence a trade for other machines (P.'s Ex. 7, par. Twelfth; P.'s Ex. 9, par. Twelfth; P.'s Ex. 10, par. Twelfth).

Mr. Donham testified as follows with reference to the reasons for the introduction of certain of these clauses by the constituent companies upon the removal of the initial payments:—

> "Prior to the introduction of the non-initial payment leases, each time a lessee took a machine he had to pay down a certain amount of money, and he was not likely to do that unless he wanted the machine, but when machines were put out without initial payments the situation changed. The lessee then had no money in the machines and it was entirely the money of the lessor that was in them, and unless the lessor protected itself in some other way there was nothing to prevent a manufacturer from taking machines with no intention of using them—for example, simply to have them stand in his factory as a threat to his hand labor, to use as a means of trading for some other machine, or to use in case of an emergency.
>
> "So, when the constituent companies took off the initial payments before 1899, they simultaneously sought to protect themselves in several different ways against non-use or mis-use of the machines. Usually two or three different methods were adopted in the same lease. Provisions were inserted that the lessor might cancel the lease if the machines remained unused for a certain length of time; that he might cancel if they were not used to the extent of earning a certain amount of royalty within a certain time; that the lessee should pay a minimum guaranty in case the machines were not used enough to earn the amount of the guaranty; that the machines should be used for doing all

of a certain kind of work which a lessee might have; that the machines should be used for a certain kind of work only. The full capacity clause was inserted; and provisions were inserted that, in case the lessee had more work than could be done by the machines under lease, he should take additional machines; and that if he did not do so, the lessor could cancel his lease and take out his machines. There were also agreements in some cases that the lessee would not introduce any machinery not obtained from the lessor for doing the same work as done by the lessor's machines, and there were various limitations as to the manner and method of using the machines; for instance, a provision that the lessee should not retain the machines for the purpose of controlling his hand operatives or negotiating trades with other companies.

"In my study of the lease situation prior to 1899, I find that in all cases when the companies began to offer machines without initial payments they sought in some or all of these ways to protect themselves against the non-use or mis-use of the machines" (R. Vol. 1, p. 24, line 22; p. 25, line 17).

10. THE UNITED COMPANY NECESSARILY CONTINUED THE LEASING SYSTEM.

Such was the system of leasing machines in effect when the United Company was organized. It had gradually developed since the very beginning of the shoe machinery industry. Its general acceptance proved it to be the method best adapted to the needs of both the shoe machinery manufacturer and the shoe manufacturer.

The United Company could not have changed the essentials of this system even had it so desired without throwing the entire shoe business of the country into confusion. It could not have recalled and cancelled the outstanding leases without the consent of the lessees which it could not have obtained. As to all machines then outstanding it was obviously necessary to continue the system. The great majority of shoe manufacturers did business on a small scale and had comparatively little capital. They had been induced to enter the business by the offer of machines upon the lease system. Had the United Company refused to furnish additional machines on this basis, it would have seriously crippled many of these lessees and worked a great injustice. On the other hand, if it did continue to furnish ma-

chines on lease, it was essential that it continue the clauses which experience showed was necessary for the protection of the lessor.

Apart, then, from the fact that the United Company believed its lease system best adapted to the needs and conditions of the business, it found itself practically pledged to its continuance.

II. MODIFICATIONS BY UNITED COMPANY OF LEASES OF CONSTITUENT COMPANIES.

A. Introductory Statement.

The United Company made no modifications in the leases for more than a year after its formation, but continued to use the forms of leases employed by the constituent companies. Thereafter from time to time it made modifications in its leases, either to make them consistent, or gradually from time to time as special conditions relating to the machines of a particular kind demanded.

In making modifications in its leases, outstanding leases were not disturbed; Mr. Donham testified:—

> "After the formation of the United Company that company did nothing whatever with reference to the outstanding leases under which machinery had been obtained by manufacturers from the constituent companies. The manufacturers continued to hold their machines under the old leases so long as those leases continued to run. When the United Company adopted a new form of lease, it was offered to any lessees to take, if they desired. Old lessees had the privilege of changing to the new form if they wished to do so. But if the old lessees did not want the new leases they could remain undisturbed and enjoy their machines under the old forms of leases. A good many old leases issued by the constituent companies before the organization of the United Company are still outstanding" (R. Vol. 1, p. 19, line 40; p. 20, line 8).

The leases of the different constituent companies, as we have shown above, differed somewhat in their terms. Most of the modifications in the leases made by the United Company have relaxed restrictions rather than imposed additional restrictions.

An examination of the modifications of the leases of machines which had been put out by the constituent companies will show

that the two principal changes made in these leases by the United Company were the adoption in 1900 of an alternative form of lease for Metallic Machines containing a restricted use clause restricting the use of the machines to use with the United Company's Goodyear Welter and Stitcher and Lasting Machines, and the adoption in 1904 of an alternative form of lease for Heeling Machines containing a restricted use clause restricting their use to use with the United Company's Goodyear Welter and Stitcher, Lasting, Pegging and Metallic Machines. These restricted use forms of lease were optional and lessees could obtain the use of these machines as before without these restrictions.

The adoption of these alternative restricted use leases occurred long after the formation of the United Company, and an examination of the conditions which called for their adoption shows conclusively that they were adopted for the sole purpose of giving lessees better terms.

B. ADOPTION OF RESTRICTED USE CLAUSE IN METALLIC MACHINE LEASES.

With respect to the adoption of the restricted use clause in the leases of metallic machines, Mr. WINSLOW testified as follows (R. Vol. 1, p. 438, line 5; p. 439, lines 21, 31–38):

> "The first change made by the United Company in the method of marketing any of the machines which had been put out by the constituent companies prior to the organization of the United Company was the adoption of the new metallic lease of the United Company, about the middle of the year 1900.
>
> "For a year or two before 1899 the McKay Company had been putting out its machines without any lease, and that practice was continued by the United Company up to the middle of the year 1900.
>
> "At that time Mr. Charles H. Willson, who had been assistant to Mr. Brooks in the management of the metallic end of the McKay business, reported to me that the price of copper had been constantly advancing so that there was not a proper margin of profit in the sale of wire material used in the metallic machines, that he had called Mr. Brooks' attention to that fact just before our coming together, and that before 1899 he had prepared a list of advanced prices at which the material should be sold. He

suggested to me that something should be done and that I should take the matter up.

"Great amounts of brass wire and nails are used in the metallic fastening machines, and the price of copper is the important factor in the cost of that material. We use spelter [brass], composed of two parts copper and one of zinc.

"In January, 1898, copper was eleven cents a pound; in January, 1899, 12.8 cents per pound; in January, 1900, and in January, 1901, 17 cents per pound. During 1900 the lowest price was 16 cents in four months, 17 cents in three months, and from 16½ to 16¾ in four months. It averaged about 16½ cents a month.

"The old leases provided that the minimum amount of material for each metallic machine should be 400 pounds a year and a very substantial amount of that would be copper.

"This very considerable increase in the price of copper was a very serious factor, because the prices of the material used in the metallic machines constituted the entire royalty received for the use and care of those machines, and the margin between the cost of the material to the company and the price at which it was sold to represent that royalty had been fixed years prior to 1899, when copper was very much below these prices. The increase from 11 cents to 16 cents, of course, all came out of the royalty, so that it was a very serious question. All the royalty we got was the profit on the material, and when the material increased in cost the royalty disappeared.

"In view of this situation we adopted a policy of limiting the use of those metallic machines to work that had been done on machines of some other department that paid us a royalty. We restricted the use of the machines to footwear which had been lasted and welted and stitched upon machines leased of the United Company. That policy was adopted about August, 1900.

"That is, we got our royalty indirectly. We did not increase the price of material furnished for the metallic machines nor did we increase the royalty on the machines to use with which we restricted the metallic machines.

"We also adopted, in February, 1901, an alternative independent form of lease by which the use of the metallic machines was not limited to use with the machines of any other department and under which the manufacturer paid ten per cent. more for his material than he did under the limited license form. This form of lease was the result of negotiation and agreement with the manufacturers.

"Both forms of leases were offered to every lessee of the United Company simultaneously and he made his choice.

. . . . . .

"Since that time manufacturers have had a chance to take the metallic machines upon either of these forms, or more lately on a lease with an initial payment which is not limited to use with machines of any other department. Accordingly manufacturers have more recently had three alternatives, although it has been the intention of the company to withdraw the ten per cent. form and substitute the initial payment lease in order that the price of material might be uniform to all lessees."

C. ADOPTION OF RESTRICTED USE CLAUSE IN HEELING MACHINE LEASES.

With respect to the adoption of the restricted use clause in the heeling machine leases Mr. WINSLOW testified as follows (R. Vol. 1, p. 440, line 16; p. 441, line 42):—

"There was no change in the method of marketing the heeling machines until the year 1904. As to the occasion for the change which was made in that year, in the early Spring of 1904, as a result of long consideration of the subject, we had started to get out a lease for the Goodyear machines and their auxiliaries, without requiring the payment of an initial price, as had always been the case up to that time. As there were a great many machines in that department, and the amount involved was very large, that matter received a great deal of consideration, and it was not until late in that year that such a lease was finally prepared, not in fact until months after we expected to have it ready. Having that in contemplation, we had decided that if we were to remove that source of income, give up that source of income for the company, that we should be entitled to receive from that factory a surety of a further income, so the heeling machines were limited by that lease to use with the Goodyear department machines and some other departments.

"That was in effect simultaneous with the taking off of the initial payment on the Goodyear machines, because during the year 1904, while we had under contemplation this lease and were working on it, we furnished to a large number of manufacturers the loan of Goodyear department machines, and my remembrance is that in the case of every machine that was placed out after July 1st in that year, 1904, the manufacturer was allowed to exercise his choice of taking them upon the non-initial form of lease when it was gotten out, or the initial payment.

"With reference to preserving an alternative form of heeling department lease, it has always been the policy of the

company to maintain the right of the lessee to take a machine upon the preceding form of lease, if he cared to have it that way. There never has been a time when a lessee could not obtain the machines of any department upon an independent form of lease.

"The business reasons which led us to the adoption of the form of Goodyear lease without the payment of initial premium but accompanied by restrictive leases in the heeling department and the lasting department were as follows:

"The manufacture of Goodyear welt shoes required up to that time the investment of a very much larger amount of money for machinery and equipment than was required for any of the other types of shoes. This had resulted in the manufacture of welt shoes being limited to quite a large degree to those manufacturers who had a substantial amount of capital, but some of those manufacturers had seen their businesses grow so fast that they were embarrassed to find the money to add to their equipment. That was especially true as regards the auxiliary machines. Our company had spent a great many thousands of dollars to develop the auxiliary machines and believed that the use of all the auxiliary machines would produce a better shoe and that every manufacturer ought to have the benefit of them. They would facilitate the manufacture of a shoe, but it was a grave question with many of the manufacturers whether the improvements in quality or the little savings that could be made by the use of the auxiliary machines would warrant their investing their money in those machines in a fixed form rather than using it in their business, where they turned it over two or three times a year.

"Furthermore, the removal of initial payments would allow those who were entering into shoemaking, and all the other small manufacturers who were making other kinds of shoes, to equip their factories with a complete system for making Goodyear welt shoes so that they would be as well equipped as the largest and richest manufacturer in the country. The United Company believed that if those opportunities were offered its revenue and the manufacture of the Goodyear welt shoe would be very much increased. This of course required an investment by the United Company of a very large sum of money without any immediate return.

"I believed in the Goodyear shoe. I think there is no question in the minds of manufacturers, or of wearers who know the differences between shoes, that it is the best kind of footwear for any person to wear, and our endeavor was to bring that shoe within the reach of everyone."

D. SUMMARY OF MODIFICATIONS MADE BY THE UNITED COMPANY IN THE CONSTITUENT COMPANIES' LEASES.

(1) GENERAL SUMMARY OF MODIFICATIONS.

As we have stated, the modifications made by the United Company in the constituent companies' leases were for the purpose of making the leases consistent or to meet new or special conditions requiring a change. It should be very clearly understood that these modifications did not apply merely to machines of the exact type acquired from the constituent companies, but to entirely new machines or machines remodeled, improved, made vastly more efficient by the inventions of the experts of the United Company, to which had been added many new auxiliaries similarly invented and developed mostly for the purpose of facilitating the manufacture of the Goodyear shoe. The following is a summary of the modifications:—

1. The period of all the leases has been limited to seventeen years.

This was done to make the leases consistent and to make them run for a definite term. The employment of this definite term of seventeen years did not increase the term of the leases. Some of the leases of the constituent companies ran for the life of the machine; some ran for seventeen years and for such longer time as the patents embodied in the machines were in existence, and some ran for the life of the patents and for such further time as any patents then or thereafter embodied in the machines were in existence.

2. The "Additional Machinery Clause," employed in a number of the leases of the constituent companies, requiring the lessee to take additional machines from the lessor for additional work, thus requiring the lessee to use machines of the kind leased exclusively, was eliminated from all leases in or before 1907. The "Exclusive Use Cancellation Clause," that is, a clause permitting the lessor to cancel leases of its machines of the particular kind covered by the lease, if machines of that particular kind were not used exclusively, which clause had been used by the McKay Company prior to the organization of the United Company, was substituted for the "Additional Machinery Clause" and inserted

in most of the leases of royalty paying machines. By this clause the lessee was under no obligation to use the machines of the kind used exclusively. An option was reserved to the lessor to cancel if they were not so used.

If the "Additional Machinery Clause" which had been used by the constituent companies closed the door to competitors, the "Exclusive Use Cancellation Clause" which the United Company substituted for it clearly opened the door to competition.

3. The "Full Capacity Clause" requiring the use of the machines leased to their full capacity, so far as the lessee had work which they could perform, which was employed in certain of the leases of the constituent companies, was continued by the United Company and made to apply to such of its machines as are used to measure the amount of work done and royalty to be paid.

4. The "Restricted Use Clause" was employed in alternative forms of leases for certain groups of machines limiting their use to use on shoes operated on also by one or more other groups of machines leased from the United Company.

This is the provision most strenuously attacked by the United States. It was employed prior to the formation of the United Company by the Goodyear Company, which restricted the use of its lasting machines on welted shoes to use on shoes operated on by the welter and stitcher.

This clause, as we have explained, offers a wholesale rate to those lessees who desire to use two or more groups of the lessor's machines together.

In every instance where a lease of this kind restricting the use of the machines to use with certain other groups is offered, an alternative form of lease is also offered in which the same or a smaller initial payment than that formerly required by the constituent companies is charged and such restriction is omitted. These initial payment forms of lease without the Restricted Use Clause are as favorable or more favorable than the leases offered by the constituent companies prior to the formation of the United Company.

5. The United Company has adopted the "Cancellation for Breach Clause" in its new leases, permitting it to cancel all leases with the lessee for violation of any condition expressed by the lease to be obligatory upon the lessee. This merely permits

the United Company to sever relations with a lessee who violates his agreements. Prior to the organization of the United Company the constituent companies leased their machines on a single lease, adding to the old lease the numbers of the machines leased after the first one, so a single cancellation clause gave them the right in case of necessity to sever relations with a lessee. The United Company practically makes a separate lease for each machine so that the effect of its "Cancellation for Breach Clause" is practically the same as the effect of the cancellation clause in the leases of the constituent companies.

(2) MODIFICATIONS OF LEASES OF GOODYEAR MACHINES.

The United Company made no changes in the Goodyear Machinery leases until December, 1900, a year and nine months after its organization (R. Vol. 1, p. 7, lines 19–23).

The lease then adopted (P.'s Ex. 23, R. Vol. 3, p. 204) contained in the fourth clause the same restrictions upon the use of the machines as was contained in the former Goodyear Company lease (P.'s Ex. 23, par. Four, R. Vol. 3, p. 207; for description of this lease see also *supra*, pp. 262–264). This new form of lease was made applicable both to the welt set and the turn set of machines; the Goodyear Company had used different leases for the two sets of machines (R. Vol. 1, p. 7, lines 23–26).

In the new lease the United Company omitted the clause previously contained in the turn set lease (P.'s Ex. 3) by which the lessee agreed in Clause Sixth not to use in its factory any sewing machines not leased from the lessor and substituted the "Exclusive Use Cancellation Clause" giving the lessor an option to cancel if its machines were not used exclusively (P.'s Ex. 23, par. Seven, R. Vol. 3, p. 209). The royalty in turn shoes was reduced 50 per cent. from a net price of 1½ cents for women's shoes to ¾ of a cent (P.'s Ex. 23, R. Vol. 3, p. 207).

The principal changes then were the reduction of the royalty on the turn machines and the elimination of the agreement in the turn lease that the machines be used exclusively.

No further change was made until January 1, 1905. In the fall of 1904 the United Company determined to offer an optional form of lease for its Goodyear set without the initial payments.

The initial payment theretofore charged was $300 for the welter and turn machine and $300 for the stitcher (R. Vol. 1, p. 21, lines 10–12). The initial payments on the auxiliary machines ran as high as $500 for the more important machines (Defs.' Ex. 230A, R. Vol. 5, p. 443). It had been one of the purposes in forming the United Company to reduce if possible the cost of installing Goodyear machines and thus to extend their use (R. Vol. 1, p. 407, lines 22–30). January 1, 1905, a new form of lease without initial payment was put out (R. Vol. 1, p. 7, lines 36–41). Two forms of lease were provided, one for the sewing machines, including the welter and stitcher, and one for the auxiliary machines (P.'s Ex. 24, R. Vol. 3, p. 214; P.'s Ex. 25, R. Vol. 3, p. 226).

In these new forms no change was made in the restrictions imposed on the use of the machines. As in the case of the old Goodyear leases the welter and stitcher were to be used together and the auxiliary machines were limited to use with the welter and stitcher. To compensate for the removal of the initial payment the "Full Capacity Clause" was inserted, but it was made applicable only to the welter and stitcher, which are the two machines which record the amount of use (P.'s Ex. 24). The lessee agreed to pay royalty on all welted and turn shoes manufactured by him by the aid of machinery (P.'s Ex. 24, par. Six, R. Vol. 3, p. 218). A small minimum payment was guaranteed and a payment upon the return of the machine was provided for amounting to only ½ of the initial payment previously demanded.

In the lease of auxiliary machines a small annual rental for each machine was substituted for the initial payment (P.'s Ex. 25). This annual rental was very small compared with the initial payment previously required (Defs.' Ex. 230A, R. Vol. 5, p. 443). It was required so that a lessee should not, because they cost him nothing, take and hold auxiliary machines on which he paid no royalty, which were not needed by him.

The United Company continued to put out an initial payment form of lease (P.'s Ex. 26, R. Vol. 3, p. 241) which contained a full capacity clause, but otherwise was substantially the same as the form adopted in 1900 which followed the old Goodyear form of lease. The lessee, therefore, who chose to make the initial payments which had been required by the Goodyear Company and the United Company theretofore could just as

before get machines on the same terms previously asked by the Goodyear Company.

As Mr. WINSLOW testified:—

> "Both forms of Goodyear department leases, the old initial premium form and the non-initial premium form, have been continued as alternatives up to the present day at the choice of the manufacturer.
>
> "The difference between these leases, other than the initial premium, is that under the non-initial form the lessee paid royalty on all shoes welted or stitched in his factory, while on the initial form he paid royalty on all shoes welted or stitched on the leased machines" (R. Vol. 1, p. 442, lines 4–12).

In addition to these modifications in the regular form of leases various riders have from time to time been adopted to meet the wishes of lessees having special conditions to meet or special uses to which they wished to put the machine (Defs.' Exs. 278–279–280–281–283–284–285–286–287–288–289–290–291–292–293–294, R. Vol. 5, pp. 777–94). For example, Defendants' Exhibit 278 permits the auxiliary machines of the Goodyear Department to be used upon classes of footwear other than Goodyear Welt shoes. (For an explanation of these riders see R. Vol. 1, pp. 822–5.) When any such rider was executed for one lessee it was immediately made available to any lessee who wished it (R. Vol. 1, p. 823, lines 7–16).

Mr. DONHAM testified:—

> "Before the formation of the United Company the Goodyear Company charged an initial payment of $300 each on the welter and the stitcher. That sum has never been increased by the United Company. Wherever an initial payment has been charged by the United Company on the welter and the stitcher it has remained the same; but in 1905 the United Company offered those machines without that initial payment. The royalty charged by the Goodyear Company, before the United Company was formed, was the same as to-day. It has never been increased, but in the meantime both the welter and the stitcher have been very much improved, the auxiliary machines which the Goodyear Company had have been improved, and the United Company has introduced many additional auxiliary machines, all for the same royalty.

"In Plaintiff's Exhibit 25, the form of lease for Goodyear auxiliary machines, the figures in column 2 of the schedule are the small annual rentals paid for the machines against which they are set, when the machines are taken without initial payment. Otherwise there is no charge whatsoever for the use of those machines, but they are limited to use with the welting and stitching machines, in respect to which there is a royalty charge. That royalty charge for the principal machines is the same whether the lessee has the auxiliary machines or not.

"When the United Company was formed there were 16 or 17 auxiliary machines. The number has been increased, and now there are about 30 auxiliary machines. Those are all furnished to lessees of the welter and stitcher in the same way that the original 16 or 17 machines were furnished, without increase in the royalty and for a similar nominal charge.

"The United Company has reduced the royalty charged by the Goodyear Company for the use of its machines in making turn shoes, so that it is now only fifty per cent. of the royalty which was charged by the Goodyear Company" (R. Vol. 1, p. 21, lines 10–42).

The result of the modifications in the Goodyear leases has been an enormous saving to shoe manufacturers. In the first place, the lessee can get his machines without an initial payment. In the second place, the royalty on turn shoes has been reduced 50 per cent. In the third place, the lessee is given for the same royalty previously charged on welt shoes and one-half the royalty previously charged on turn shoes a vastly improved welter and stitcher and much improved auxiliary machines, and, due to the development and acquisition of new auxiliary machines the lessee is also offered for this same royalty 35 welt auxiliary machines instead of 13 welt auxiliary machines furnished in 1899, and 9 turn auxiliary machines instead of 3 turn auxiliary machines offered in 1899 (Defs.' Exs. 242–243–244–245, R. Vol. 5, pp. 681–3). In view of the charge of the petition that the defendants designed "to enhance the cost of said machines to users thereof" (R. Vol. 1, p. 997) the foregoing illustration of the reduction in cost to users of the machines is illuminating.

The elimination of the initial payments has enabled many shoe manufacturers of small capital to manufacture Goodyear Welt and Goodyear turn shoes.

Furthermore, the history of these Goodyear leases refutes

completely the charge that the defendants planned to "refuse to sell or lease any of the essential machines to the manufacturer of shoes except on condition that he buy or lease of them practically all other machinery of whatever kind," which is the charge on which the petition is founded (R. Vol. 1, p. 994).

The Goodyear Welter and Stitcher are as important as any machines produced by the United Company. Chapman, the patent expert for the United States, declared them to be the only essential machines for making a welt shoe (R. Vol. 2, p. 2794). The lessee of the Goodyear welter and stitcher, however, is not obligated to use any other machinery whatsoever. He is not even required by the leases to use Goodyear machinery exclusively. The clause contained in the old Goodyear Turn lease requiring the exclusive use of the lessor's turn machinery was eliminated in 1900, showing conclusively that the United Company did not plan to require an exclusive use of its machines by the adoption of new clauses in its leases as charged in the petition. The Goodyear Auxiliary Machines are limited to use with the welter and stitcher, but this clause was in the old Goodyear leases, and the lessee can use with the welter and stitcher any auxiliary machines obtained from others that he chooses. The "Exclusive Use Cancellation Clause" is applicable only to the use of the welter and stitcher; the United Company has no option to cancel its leases of its Goodyear Machines if auxiliary machines obtained from others are used. No Restricted Use Clause has been inserted in this lease. A lessee may obtain and use Goodyear machines without using any of the 250 or more other machines manufactured by the United Company.

(3) MODIFICATIONS OF LEASES OF LASTING MACHINES.

(a) Lease of Ideal Lasting Machine.

The United Company made no change in the lease of the Ideal Lasting Machine until August, 1901. It then put out a new form which substantially followed the old Goodyear form (R. Vol. 1, p. 6, lines 22–29). (Goodyear Company's form P.'s Ex. 3, R. Vol. 5, p. 37; *supra*, pp. 264-265; new form P.'s Ex. 18, R. Vol. 3, p. 154). As in the old form the use of the machine was restricted to use on shoes operated on by the Goodyear

Welter and Stitcher and the auxiliaries were restricted to use with the principal machine. Under the new form the royalty and initial payment remained the same. The lease contained the "Full Capacity Clause" and the "Exclusive Use Cancellation Clause." The clause in the former lease requiring the lessee to purchase from the lessor all tacks used in the loose tackers was omitted.

No other lease of Ideal machines has been put out (R. Vol. 1, p. 6, lines 28–9). It is to be noted that the United Company inserted no new provision obligating the lessee to use any other machines or requiring the lessee to use its lasting machines exclusively.

These machines were used only to a comparatively small extent and on the introduction of the new No. 5 laster became practically obsolete (R. Vol. 1, p. 971, lines 5–8).

(b) Lease of McKay and Copeland Lasting Machine.

The form of lease used by the Consolidated Company (P.'s Ex. 6, R. Vol. 3, p. 45; see also, for description of this lease, *supra*, pp. 265-266) continued to be the only form used until August, 1903, four and one-half years after the formation of the United Company (R. Vol. 1, p. 6, lines 38–39). The United Company then put out an additional form (P.'s Ex. 20, R. Vol. 3, p. 172). This lease reduced the initial payment previously required from $695 to $500 or less (R. Vol. 1, p. 454, lines 3–8) and contained a "Restricted Use Clause" limiting the use of the machine to use with the United Company's welter, stitcher, pegger, metallic and heeling machines. It continued the "Full Capacity Clause" which was in the old form of lease. It omitted, however, the "Additional Machinery Clause" and instead inserted the "Exclusive Use Cancellation Clause." The elimination of the "Additional Machinery Clause" eliminated the requirement of exclusive use; the insertion of the "Restricted Use Clause" was coincident with the reduction of the initial payment. The new form of lease was an alternative form, and any lessee could still obtain the old form if he desired it (R. Vol. 1, p. 852, lines 5–21).

These machines were used to a comparatively small and continually decreasing extent (R. Vol. 1, p. 454, lines 8–9).

(c) Lease of Chase Lasting Machine.

The form of lease used by the Consolidated Company (P.'s Ex. 7, R. Vol. 3, p. 57; see also, for description of this lease, *supra*, pp. 266-267) continued to be the only form used until June, 1901, when an additional form was adopted by the United Company (R. Vol. 1, p. 6, lines 32–35) (P.'s Ex. 19, R. Vol. 3, p. 163). The new form contained a "Restricted Use Clause" restricting the use to use with welting, stitching, and metallic fastening machines leased from the United Company. The "Additional Machinery Clause" was omitted and the "Exclusive Use Clause" substituted.

This new form was an alternative form, and the former lease without the "Restricted Use Clause" could be had by any lessee who desired it (R. Vol. 1, p. 543, lines 17–18). The use of these machines steadily declined and on the introduction of the New No. 5 Laster they became practically obsolete (R. Vol. 1, p. 971, lines 5–8).

(d) Lease of Consolidated Hand Method McKay Lasting Machine.

The Consolidated Company had two forms of lease for this machine, one requiring an initial payment of $300 and a royalty of ½ cent per pair (P.'s Ex. 8, R. Vol. 3, p. 68), the other requiring no initial payment and a royalty of ⅝ cent and containing the "Full Capacity Clause" and the "Additional Machinery Clause," thus requiring the exclusive use of the machines (P.'s Ex. 9, R. Vol. 3, p. 74; see also, for description of these leases, *supra*, pp. 267-268).

These forms were continued until the end of 1900 (R. Vol. 1, p. 5, lines 28–33). The United Company then adopted two forms of lease. It adopted an initial payment form (P.'s Ex. 14, R. Vol. 3, p. 121) in which $300 initial payment was required and ½ cent royalty (R. Vol. 1, p. 6, lines 2–5). This form contained the "Full Capacity Clause" and the "Exclusive Use Cancellation Clause." It contained no "Restricted Use Clause." The United Company also adopted a non-initial payment form (P.'s Ex. 16, R. Vol. 3, p. 137) requiring no initial payment, a royalty of ⅝ cent, and in addition to the clauses

contained in the initial form a "Restricted Use Clause" limiting the use of the machines to use with metallic fastening and Goodyear sewing machines leased from the United Company.

As to this lease, Mr. Winslow testified that the restriction as to use with Goodyear sewing machines was of no effect, as the machine was adapted for use only on McKay work on which Goodyear machines were not used. It was only inserted in the leases so that if the machines were remodeled to do welt work, they would be restricted like the welt lasting machines under Plaintiff's Exhibit 15 (R. Vol. 1, p. 540, lines 24–34).

(e) Lease of Hand Method Welt Laster.

This machine in 1899 was not perfected commercially. It was offered by the Consolidated Company on a form of lease with the "Full Capacity Clause" and the "Additional Machinery Clause" and a royalty of one cent per pair (P.'s Ex. 10, R. Vol. 3, p. 82; see also, for description of this lease, *supra*, p. 268).

This form was continued by the United Company until December, 1900, when it adopted a non-initial form (R. Vol. 1, p. 6, lines 5–9) which reduced the royalty from one cent to $\frac{5}{8}$ of a cent per pair, which continued the "Full Capacity Clause," but eliminated the "Additional Machinery Clause" and substituted the "Exclusive Use Cancellation Clause," and which contained the "Restricted Use Clause" restricting the use to use with Goodyear sewing machines (P.'s Ex. 15, R. Vol. 3, p. 129). In other words, the agreement to use the machines exclusively was eliminated, the royalty was reduced, and a "Restricted Use Clause" substituted. The United Company later (December, 1906) adopted another alternative form requiring an initial payment of $300, a royalty of $\frac{5}{8}$ of a cent, but which contained no "Restricted Use Clause" (P.'s Ex. 17, R. Vol. 3, p. 145; R. Vol. 1, p. 6, lines 15–21).

(4) MODIFICATIONS OF LEASES OF HEELING MACHINES.

The lease of heeling machines put out by the McKay Company required a royalty of $\frac{1}{4}$ cent and contained an "Exclusive Use Cancellation Clause" (P.'s Ex. 11, R. Vol. 3, p. 90; see also, for description of this lease, *supra*, pp. 268-269).

The United Company made no change in this lease until January, 1900 (R. Vol. 1, p. 9, lines 23–24). At that time the United Company adopted an additional form of lease, continuing the same royalty and containing the "Full Capacity Clause," and the "Additional Machinery Clause" (P.'s Ex. 27, R. Vol. 3, p. 254). In 1904 (R. Vol. 1, p. 9, lines 29–32) it adopted for the first time a form of lease containing a Restricted Use Clause limiting the use of the machines to use with Goodyear sewing machines, lasting, pegging, and metallic machines leased from the lessor (P.'s Ex. 28, R. Vol. 3, p. 261). No initial payment was required. The Additional Machinery Clause was eliminated. After the adoption of this form the United Company furnished its heeling machines, which had been much developed and improved since 1899, with an initial payment, and without the Restricted Use Clause, by attaching a rider to Exhibit 28 inserting the initial payment and striking out the Restricted Use Clause (R. Vol. 1, p. 9, line 38–p. 10, line 23).

The reason for the insertion of the Restricted Use Clause in 1904, was, as we have explained above (*supra*, pp. 282-283), that at that time the United Company determined to adopt the non-initial form of Goodyear lease, thus depriving itself of a large cash initial payment. This it could afford to do only if certain of its principal machines were used in groups so that the Goodyear Welter and Stitcher could be used efficiently and without interruption. The limitation in the use of the heeling machines when taken under the non-initial form of lease was, therefore, inserted in order to make the use of the Goodyear Welter and Stitcher more efficient and productive and compensate in part for the removal of the initial payments previously charged for these machines (R. Vol. 1, p. 440, line 16 *et seq.*).

(5) MODIFICATIONS OF LEASES OF METALLIC MACHINES.

Prior to 1899 this machinery was put out on a lease requiring the lessee to purchase all metallic material used in the machine from the lessor or pay a royalty of ten cents a pair on the shoes operated on. No initial payment was required, but the lease contained the "Exclusive Use Cancellation Clause" (P.'s Ex. 12, R. Vol. 3, p. 103; see also, for description of this lease,

supra, p. 269). A short time prior to 1899 the McKay Company had discontinued the use of this lease and had been temporarily putting out its machines without leases pending the adoption of the new form. This practice was continued by the United Company up to March, 1900 (R. Vol. 1, p. 438, lines 10–13). In March, 1900, the United Company adopted the form of lease requiring no initial payment, containing the Full Capacity Clause and the Additional Machinery Clause, but containing no Restricted Use Clause and no Exclusive Use Cancellation Clause (P.'s Ex. 29, R. Vol. 3, p. 272; R. Vol. 1, p. 10, lines 24–28).

In June, 1900, a lease containing a Restricted Use Clause was adopted restricting the use of the metallic machines to use with welt-stitching and lasting machines obtained from the lessor (P.'s Ex. 30, R. Vol. 3, p. 278). The "Additional Machinery Clause" was eliminated and a clause was substituted permitting the lessor to cancel if the lessee did not take additional machinery. The entire return to the United Company on its metallic machines came from the use of copper wire which the lessee used in the machine and was required to purchase from the lessor. Copper had increased so much in price that at the price charged by the United Company for the wire it did not receive a fair royalty on its machines. Instead of increasing the price of the wire it restricted the machines to use with the Goodyear and Lasting Machines, thus obtaining an indirect royalty through the royalties received on these other machines. The reasons for so doing are fully explained above (*supra*, pp. 276–278).

Shortly afterwards, in March, 1901 (R. Vol. 1, p. 10, line 40–p. 11, line 2), the United Company adopted a form requiring no initial payment and containing no Restricted Use Clause, in which form it reserved the right to charge 10 per cent. more for fastening material than was charged under the lease containing the Restricted Use Clause (P.'s Ex. 31, R. Vol. 3, p. 287). It also adopted a rider, which it attached to the Restricted Use form of lease (P.'s Ex. 30), eliminating the Restricted Use Clause and substituting an initial payment (P.'s Ex. 32, R. Vol. 3, p. 297; see also R. Vol. 1, p. 11, lines 5–17). A lease with this rider incorporated was drawn up in 1911 (P.'s Ex. 33, R. Vol. 3, p. 307; R. Vol. 1, p. 11, lines 18–20). A lessee of metallic machinery has, therefore, been at all times since 1901 able to take a non-

initial form of lease containing the Restricted Use Clause or a lease without the Restricted Use Clause under which he paid not in excess of 10 per cent. more for material or, at his option, paid an initial premium.

The lease adopted in March, 1901, without the Restricted Use Clause was the result of negotiations with the shoe manufacturers (R. Vol. 1, p. 439, lines 13–19), who acted through the New England Manufacturers' Association (R. Vol. 1, p. 635, lines 18–42). Plaintiff's Exhibit 31 was agreed upon as satisfactory in every respect to the shoe manufacturers (R. Vol. 1, p. 635, lines 35–38). It was agreed that a lessee could change his lease from the form containing the Restricted Use Clause (P.'s Ex. 30) to the form without the Restricted Use Clause (P.'s Ex. 31) at any time prior to February 1, 1902 (R. Vol. 1, p. 663). The United Company further stated its intention to offer both leases indefinitely after February 1, 1902 (R. Vol. 1, p. 663, lines 24–26) which intention was carried out (R. Vol. 1, p. 664, lines 1–4). Most shoe manufacturers took the form of lease containing the Restricted Use Clause (R. Vol. 1, p. 664, lines 4–8).

(6) MODIFICATIONS OF LEASE OF DAVEY PEGGING MACHINE.

The lease of the Davey Pegging Machine Company, at the time of the formation of the United Company, required an initial payment of $100, required the lessee to do all his pegging on the leased machines, and contained the Additional Machinery Clause (P.'s Ex. 13, R. Vol. 3, p. 113; see also, for description of this lease, *supra*, p. 270). This lease was used by the United Company until 1901 (R. Vol. 1, p. 14, lines 36–37), when the United Company adopted a form of lease which eliminated the initial payment, and which also eliminated the Additional Machinery Clause and the agreement to use exclusively (P.'s Ex. 45, R. Vol. 3, p. 413). It contained the Full Capacity Clause and the Exclusive Use Cancellation Clause and also a Restricted Use Clause limiting the use of the machine in connection with the United Company's lasting and metallic machines. It also adopted an initial payment form of lease (R. Vol. 1, p. 14, lines 43–45) which contained no Restricted Use Clause (P.'s Ex. 46, R. Vol. 3, p. 422).

Here again the Restricted Use Clause was inserted upon the removal of the initial payment, and the old form of lease without the Restricted Use Clause was continued as an alternative. In this case also the Additional Machinery Clause and the agreement to use exclusively were eliminated.

E. LEASES ADOPTED BY THE UNITED COMPANY FOR NEW MACHINES.

Many new machines, as we have stated, especially in the Goodyear Department, which were auxiliary to principal machines already in use, were added to the line of auxiliary machines already leased without charging any additional royalty and were leased under the existing forms of lease.

In the case of other new machines new leases were necessarily adopted which were substantially similar to the forms of lease in use at the time. In the case of all important machines two alternative forms were adopted. In one form no initial payment was charged and there was a Restricted Use Clause restricting the use to use in connection with machines of one or more of the following groups, namely, Goodyear sewing machines (*i.e.*, the Welter and Stitcher), lasting machines, metallic machines, and in certain cases pegging and heeling machines, and in one instance pulling-over machines. In the other form of lease an initial payment was charged and the Restricted Use Clause was omitted. In the case of most of the General Department machines the alternative was the right to purchase, the machines being sold outright.

(I) Pulling-over Machine Leases.

The pulling-over machines were invented and developed by the United Company and the first lease put out about 1902 (R. Vol. 1, p. 11, lines 37–40). This first form of lease (P.'s Ex. 36, R. Vol. 3, p. 331) contained the Full Capacity Clause, the Additional Machinery Clause, and a Restricted Use Clause limiting the use of the machine in connection with Goodyear sewing machinery, lasting machinery, metallic fastening, pegging, and heeling machinery of the United Company. By 1905 the United Company had developed a series of auxiliary machines, and a new lease was adopted (R. Vol. 1, p. 12, lines 9–13) which

covered the principal machines and the auxiliary machines and limited the use of the auxiliary machines to use in connection with the principal machines and which contained the Exclusive Use Cancellation Clause (P.'s Ex. 37, R. Vol. 3, p. 339). In other respects it was substantially similar to the previous lease.

In 1907 a lease containing substantially the same terms was adopted, except that it eliminated the Additional Machinery Clause (Defs.' Ex. 345, R. Vol. 5, p. 958; see also R. Vol. 1, p. 980, line 43; p. 981, line 20). In 1909 a new form was adopted which permitted the use of the auxiliary machines on shoes not operated on by the principal pulling-over machine and which contained the same Restricted Use Clause. It likewise omitted the Additional Machinery Clause (P.'s Ex. 38, R. Vol. 3, p. 350).

An alternative form of pulling-over lease requiring an initial payment and omitting the Restricted Use Clause was also offered lessees (P.'s Ex. 39; R. Vol. 3, p. 363).

(2) Clicking Machine Lease.

The Clicking Machine was invented and developed by the United Company about 1908 (R. Vol. 1, p. 14, lines 27–33). The lease adopted for this machine has never had a Restricted Use Clause limiting its use in connection with other groups of machines (P.'s Ex. 44, R. Vol. 3, p. 402). The lease provides that the lessee shall pay a certain sum in respect to all dies used on the machines. It further provides for a royalty payment when the machine is used on shoes lasted on machinery not leased from the United Company or welted or stitched on machinery not leased from the United Company. It contains the "Exclusive Use Cancellation Clause."

(3) Eyeletting Machine Leases.

The United Company first developed and put out its eyeletting machines in 1902 (R. Vol. 2, pp. 2617–22, 2636).

The United Company adopted a form of eyeletting machine lease requiring an initial payment of $100 and containing no Restricted Use Clause (P.'s Ex. 42, R. Vol. 3, p. 387; P.'s Ex. 173, R. Vol. 4, p. 1184). It also adopted a non-initial form of lease containing a Restricted Use Clause limiting the use in connec-

tion with Goodyear sewing, lasting, pegging, metallic fastening and heeling machinery of the United Company (P.'s Ex. 43, R. Vol. 3, p. 394; P.'s Ex. 172, R. Vol. 4, p. 1176).

Neither lease contained the Exclusive Use Cancellation Clause. Both leases required as royalty the use of eyelets purchased from the lessor.

The Vulcan Foot-power Eyeletting Machine was put out for an initial payment of $15 and was never restricted to use with other machines and the lease covering it did not contain the Exclusive Use Cancellation Clause (R. Vol. 1, p. 28, lines 20–24; P.'s Ex. 174, R. Vol. 4, p. 1191).

(4) No. 5 Lasting Machine Leases.

The No. 5 Lasting Machine is a new type of lasting machine invented and developed by the United Company and first put out about 1908 (R. Vol. 2, p. 2378).

Two forms of lease were adopted for this machine,—one requiring an initial payment and containing no Restricted Use Clause restricting its use to use with other machines (P.'s Ex. 22, R. Vol. 3, p. 193); the other a restricted use form of lease requiring no initial payment and restricting the machine to use with the United Company's Goodyear Welter and Stitcher, pulling-over machines, and metallic machines (P.'s Ex. 21, R. Vol. 3, p. 182). Both forms of lease have the Exclusive Use Cancellation Clause.

(5) General Department Machine Leases.

The General Department machines, comprising over 170 different machines (Defs.' Ex. 227, R. Vol. 5, p. 425), were all invented or developed by the United Company after its formation.

The General Department machines have at the option of the shoe manufacturer been either sold or leased. Since 1912 they have been only sold (R. Vol. 1, p. 12, line 37–p. 13, line 30). The leases of these machines required a small initial payment or a small annual rental, but called for no royalty. They contained a Restricted Use Clause restricting use to use with other groups of the defendants' machines. Under this form of lease the United Company, outside of the small initial payment or rental provided for by the lease, receives no return, except indirectly

through the royalties received from other groups of machines to use with which the General Department machines are restricted and through the added efficiency of such other groups of machines.

Plaintiff's Exhibit 40 (R. Vol. 3, p. 373), adopted in 1902 (R. Vol. 1, p. 13, lines 9–16), is the General Department lease requiring an initial payment. It has a Restricted Use Clause restricting the use to use in connection with the lessor's Goodyear sewing, lasting, pegging and metallic fastening machinery. It contains no Exclusive Use Cancellation Clause or Full Capacity Clause. The purpose of these two clauses is to insure an adequate return in the way of royalties to the lessor. As the General Department machines carry no royalty, the clauses are omitted.

Plaintiff's Exhibit 41 (R. Vol. 3, p. 379) is the form of General Department lease requiring a small yearly rental. It contains the same Restricted Use Clause and, like the initial payment form, contains no Exclusive Use Cancellation Clause or Additional Machinery Clause.

(6) Insole Machine Leases.

Before the United Company was formed the Gem Flexible Insole Company was engaged in the business of manufacturing and leasing a set of machines for making the patented Gem insole, a light canvas insole for use with welt shoes. After the United Company was formed the patents on the insole and the machines for producing it were acquired (R. Vol. 1, p. 15, lines 16–21). The United Company added the Gem Insole Machine to its Goodyear auxiliary set and abated the ½ cent a pair formerly charged (R. Vol. 1, p. 430, lines 11–13; p. 571, lines 24–29).

The lease of the Gem Insole Machine contains a Restricted Use Clause limiting the use to the manufacture of patented insoles to be used on welt shoes welted and stitched on the United Company's machines. It contains no Exclusive Use Cancellation Clause or Full Capacity Clause (P.'s Ex. 51, R. Vol. 3, p. 443).

As to the company's action respecting the Gem Insole machines Mr. Winslow testified that they did it,

"so as to reduce the cost to the manufacturer of the Goodyear welt shoe, as we have all of these things that you have treated in that way. The reason we took off the initial payment and put it out on rental was because we were hoping to increase the total manufacture of those shoes and thereby benefit the public" (R. Vol. 1, p. 571, lines 37–42).

Some years later (1907) the company acquired the patent for the Economy insole for welt shoes (R. Vol. 1, p. 15, lines 35–39).

The lease of the Economy insole machine (P.'s Ex. 52, R. Vol. 3, p. 450) limits the machines to making a patented insole to be used on Goodyear Welt and Turn shoes. The auxiliaries are limited to use with the principal machine. It contains the Full Capacity and Exclusive Use Cancellation Clauses. This is practically an auxiliary Goodyear machine except that in distinction from the other auxiliary machines a small royalty is charged for its use.

(7) McKay Sewing Machine Lease.

The constituent companies did not manufacture the McKay sewing machine. When the United Company started to manufacture it, it always either sold the machine or leased it at the option of the manufacturer. The machine was sold for $250 to $600 according to the type of the machine. It was leased for an initial payment of $100 and a rental of $5 per month and without any further royalty charge (R. Vol. 1, p. 29, lines 25–35). The lease (P.'s Ex. 170, R. Vol. 4, p. 1161) limited the use of the machine to use on shoes lasted by the United Company's machines. It contained no Full Capacity or Exclusive Use Cancellation Clause, as the machine was not a royalty machine.

The United Company did not begin to put out the machines covered by this lease till 1908 (R. Vol. 1, p. 977, lines 11–12).

F. USE OF RIDERS AND SPECIAL FORMS OF LEASE.

The United Company was always ready to adopt a new form of lease or a rider modifying its existing form of lease to meet new conditions or to accommodate lessees who wanted to use machines of other makers together with machines of the United

Company (R. Vol. 1, p. 442, line 42; p. 443, line 2). The regular forms of lease set forth are only such as are in general use. In addition the United Company had numerous riders which were adopted to meet such special conditions as they arose. (For the application of the various forms of riders see R. Vol. 1, pp. 822–828.) When any such rider was given one lessee other lessees were always free to obtain it (R. Vol. 1, p. 823, lines 7–16). Examples of such riders and agreements are given in Defendants' Exhibits 278–310 (R. Vol. 5, pp. 777–838).

Mr. WINSLOW testified:—

> "When lessees believed they wanted to put in machines other than those held from our company, or when it seemed to them that the necessities of their business required that they do this, the policy of the company has been to reorganize the leases which they then had so as to leave them in a position to use those other machines" (R. Vol. 1, p. 442, line 42; p. 443, line 2).

12. REASONS FOR USE OF THE VARIOUS CLAUSES AND THEIR LEGALITY.

An examination of the business conditions which led to the adoption of the various clauses will show that they were adopted either to enable the lessor to offer its machines on the best possible terms and so far as possible without initial charge to the lessees, so as to enable them to embark in the business or extend their business, or to provide for reasonable and proper protection to the lessor, and that such clauses or similar clauses are essential to a commercially satisfactory leasing system when the return to the lessor on its investment is based on the amount to which the machines are used.

A. CLAUSE REQUIRING LESSEE TO PURCHASE FROM THE LESSOR ALL REPAIR PARTS NEEDED IN THE MACHINE.

The United States in its petition alleges that lessees were required by the defendants to obtain duplicate parts for the leased machines from the United Company at exorbitant prices (R. Vol. 1, p. 997).

The only evidence offered in support of this allegation that exorbitant prices were charged is as follows:—

Frank C. Rand testified that he paid the United Company $25 for a pair of legs for a leveling machine and that he had a set of legs made himself for $6 not counting overhead charges (R. Vol. 1, p. 179, lines 9–13). On cross-examination he admitted that he did not know whether his mechanic made one or four legs and whether they were wrought or cast iron, and that his statement was hearsay at best (R. Vol. 1, p. 184, lines 25–41).

Herbert L. Cann, the local manager for the United Company in the St. Louis district, testified that the part which broke in Rand's leveling machine was not a leg which supports the machine, but a spindle which supports the last and which is referred to as a leg. This spindle is about 16 inches long, the bottom being made of wrought iron and the upper part of steel. The top part of the spindle in Rand's machine broke and his mechanic merely substituted a new top about 4 inches in length (R. Vol. 1, p. 749, lines 1–15). The United Company supplied entire spindles at $20 a pair (R. Vol. 1, p. 750, lines 10–13). After a year or so Rand obtained new spindles from the United Company to replace the repaired spindles (R. Vol. 1, p. 749, lines 16–17). It appears clearly, therefore, that Rand replaced only a portion of the spindle which the United Company furnished and for which it charged.

Carl H. Gleason, a witness for the defendants, testified that he had been employed in the Cost Department of the W. H. McElwain Company, one of the biggest companies in the country, and he had made a study of the cost of repair parts on the machines that the McElwain Company obtained from the United Company. He testified as follows (R. Vol. 1, p. 714, lines 17–40).

> "The cost per pair of shoes for the repair parts on these machines was as follows:—
>
> "Universal channeler, .001 of one cent; insole tacker, .005 of one cent; Rex assembling machine, .009 of one cent, Rex pulling over machine, .07 of one cent; Consolidated hand method lasting machine, .005 of one cent; No. 5 laster, .06 of one cent; tack puller and resetter, .008 of one cent; sole layer, model B, .007 of one cent; loose nailer, No. 2, .01 of one cent; Universal rounder and channeler, .01 of one cent; Rounder and channeler, model E, .01 of one cent;

Goodyear automatic leveler, .002 of one cent; lightning heeler, .004 of one cent; Mayo heeler, .008 of one cent; Universal slugger, .01 of one cent; edge setter, .02 of one cent.

"On the welter and stitcher my computation includes, in addition to mere parts, the cost of awls and needles which the machines are using all the time and which are ordinarily classed as supplies. The cost per pair of shoes for the model G welter, including awls and needles, was .15 of one cent per pair; for the model K stitcher, including awls and needles, .2 of one cent per pair; for the model M stitcher, including awls and needles, .08 of one cent per pair.

"I also computed the cost of repair parts on the model K stitcher, not including the needles and awls, and that is .1 of one cent per pair."

Mr. Winslow testified that the profits of the United Company from repair parts for the year 1911 were $276,000, while the net cost of repairing and putting into condition Goodyear, heeling, lasting, pulling-over, and metallic machines returned by lessees *in excess* of the charges made to customers for such work was $277,763.49, that is, $1,600 more than the entire profits on the parts (R. Vol. 1, p. 853, lines 12–18). He further testified that from the figure of $276,000 as profits for parts there had not been deducted any interest on capital or loss on obsolete parts (R. Vol. 1, p. 853, lines 1–8), although the loss from repair parts that are manufactured and are never used because they become obsolete runs into thousands each year (R. Vol. 1, p. 853, lines 9–11), and although the United Company carried an investment in parts for the year 1911 amounting to $1,415,474.49 (R. Vol. 1, p. 979, lines 3–5), on which, of course, it receives no interest return. It, therefore, appears that the total business of supplying parts and repairing returned machines shows a considerable loss. In the charge for repair parts the United Company does not take into account or include the cost to it of the services and expenses of its repair men, amounting to over $1,100,000 a year (R. Vol. 1, p. 554, lines 11–13; p. 979, lines 12–13).

Mr. Winslow further testified that the prices for repair parts, to the best of his knowledge and belief, are the same prices that would be charged by any other company manufacturing parts for machines; and that the prices charged for parts on General Department machines which were sold so that the owner was

under no obligation to purchase parts from the United Company were on the same basis as parts for leased machines where the lessee was required to purchase the new parts from the United Company (R. Vol. 1, pp. 553–4).

This provision is clearly necessary in the leases for the protection of the lessor. The leased machines are the property of the lessor. The new parts placed in the machine become the property of the lessor. When a part wears out it must be replaced by a part which is equally good and which has been made to fit that particular machine; if replaced by a cheaper part, or one which does not properly fit, the machine will be depreciated in value. The cheap part may also cause the machine to break down and thus prevent its earning royalty, and likewise stop work on other royalty-producing machines.

The lessor could properly provide that all repairs to its own machines should be made by itself and that the lessee should have no right to make repairs at all. In such a case the lessor could, of course, provide its own parts needed in the machine. When the lessee is permitted to make repairs himself, he cannot complain because the owner of the machine controls the character of the parts replaced. Nor can a competing shoe machinery manufacturer demand a right to supply parts for machines owned by the United Company.

This clause was employed in all the leases of the constituent companies prior to the formation of the United Company. Its continuance by the United Company was obviously necessary for its protection and constitutes no evidence of a plan to monopolize shoe machinery.

B. CLAUSE REQUIRING PAYMENT OF A RETURN CHARGE ON TERMINATION OF THE LEASE.

The petition charges that the United Company exacted a return charge at the termination of its leases which in some cases amounted approximately to the original cost of building the machines. It appeared in certain of the leases that a small return charge upon the expiration of the lease was required. Absolutely no evidence was introduced as to the cost of building the machines so leased or the comparative amount of this return charge. There is no evidence that the return charge was in any way exorbitant or oppressive.

On the contrary, it was shown that for the year 1911, a typical year, the cost of putting returned machines into condition for use was approximately $350,000, and the charges to lessees on account thereof only about $70,000, showing a loss to the United Company of $277,763.49 (R. Vol. 1, p. 853, lines 15–23).

This allegation of the petition is, therefore, only another example of the unfounded character of the charges made by the United States.

C. CLAUSE LIMITING THE TERM OF THE LEASE TO SEVENTEEN YEARS.

The leases of the constituent companies ran for long and indefinite periods. Thus the leases of certain lasting machines ran for the life of the machines. The McKay Company's heeling machine leases ran for seventeen years and for such further time as the patents embodied then or thereafter in the leased machine were in effect, and the other leases ran for the life of the patents then or thereafter embodied in the machines. These leases gave the lessor the right to attach improvements to the machines and thus gave it the right by attaching patented improvements to extend the life of the leases indefinitely. As many if not most of the machines when leased embodied inventions for which patents had recently been granted, or for which applications were still pending, and as in most instances improvements in the machines were made from time to time after they were leased, it is obvious that the leases of the constituent companies in most cases ran for more than seventeen years.

The adoption by the United Company of this term for all its new leases did not extend the period and affords no evidence of an intent to obtain a monopoly by new methods as charged in the petition. It was obviously adopted to make the leases consistent.

A long term is essential both from the point of view of the lessor and from the point of view of the lessee. If the United Company is called upon to build and place in the hands of shoe manufacturers millions of dollars' worth of machinery without receiving any initial payment, it obviously cannot do this unless the shoe manufacturers are willing to take this machinery for an

extended period so that the resulting royalties will compensate the United Company. The shoe manufacturer also requires an extended period. He proposes to engage in the business on the strength of obtaining patented machinery without initial cost. He must be assured of the right to retain this machinery for an extended period. If his leases ran only for a few years, he might find that after he had established a good-will and built up the business at considerable expense his leases of machines terminated and he could not extend the leases or obtain the machines elsewhere, or his royalties might be greatly increased or he might be required to buy his machines outright and not have sufficient capital to do so.

A lease of shoe machinery under these conditions is like a lease of a building erected for the use of a particular tenant. The landlord refuses to erect the building unless the prospective lessee agrees to take a lease for a sufficiently long term to compensate him for the capital invested in the building. The lessee on his part is unwilling to locate his business on the premises and establish a good-will in that locality unless he is assured of its permanency by means of a long lease.

The United States will doubtless contend that the long term of the leases makes it more difficult for the rival shoe manufacturers to compete. If this is so, it is merely incidental to a normal and proper contract. That bankers, brokers, and other business concerns have long leases of the premises occupied by them makes it more difficult for the owner of a new building to obtain tenants, but this does not make such leases illegal; that owners of cotton mills are already supplied with cotton machinery makes it more difficult for a manufacturer of new machinery to dispose of his product. If the leases ran for shorter terms,—say for ten or twelve years,—the rival shoe manufacturer would find substantially the same difficulty. Indeed, if the machines had been purchased outright by the shoe manufacturers, it is difficult to see, so far as this seventeen-year term is concerned, how the rival machinery manufacturer would be better off. Shoe manufacturers, if they had purchased machinery, would not discard it until it became obsolete or worn out. Their demands for new machinery would be limited to their requirements for additional machinery.

As said in *Coppage* v. *Kansas*, 236 U. S. 1 (p. 21):—

> "For constitutional freedom of contract does not mean that a party is to be as free after making a contract as before; he is not free to break it without accountability. Freedom of contract, from the very nature of the thing, can be enjoyed only by being exercised; and each particular exercise of it involves making an engagement which, if fulfilled, prevents for the time any inconsistent course of conduct."

Nor can the shoe manufacturer complain because he is bound for an extended term. He demands the assurance of an extended period during which he cannot be deprived of his machines, nor his royalties be increased.

In *Chicago, etc., R.R.* v. *Pullman Car Company*, 139 U. S. 79, the court held legal a contract giving an exclusive right to the Pullman Company to furnish drawing-room and parlor cars for a period of fifteen years, not only on the railroad company's then road but on any roads thereafter owned by it. The contract was held legal in spite of its extended term and in spite of the fact that it granted an exclusive right to furnish cars, the court saying (pp. 89–91):—

> "We cannot perceive that such a contract is at all in restraint of trade. . . .
>
> "But we are of opinion that public policy did not forbid the Railroad Company from employing the Pullman Southern Car Company to supply drawing-room and sleeping cars to be used by its passengers and, as a means of inducing the plaintiff to perform this public service and to incur the expense and hazard incident thereto, from giving it an exclusive right to furnish cars for that purpose. . . .
>
> "The stipulation, therefore, that the plaintiff, not being in default, should have the exclusive right for fifteen years to furnish drawing-room and sleeping cars for the defendant's use, and that the defendants should not, during that period, contract for cars of that kind with any other party, rightly construed is not unreasonable, and, properly performed, will promote the convenience of the public in that it enables the defendant to have on its lines, at all times, and as the requirements of travel demand, drawing-room and sleeping cars for use by passengers."

The United States complains that this seventeen-year term may extend the lease beyond the life of the patents embodied in the machines.

But the validity of this term is not dependent on the machines being patented. It is a normal and legitimate agreement desirable for the protection of both parties, and it, therefore, gives rise to no inference of illegal intent whether or not the machines are patented.

The fact that the machines are patented, however, affords an additional reason for holding this term legal. Patents are granted to recompense the inventor by enabling him to make a profit. For this purpose the patentee is granted a monopoly of the right to make, use, and sell the patented invention. The patentee in disposing of these rights, that is, in permitting others to make use of them, may impose any conditions he sees fit not in their very nature illegal.

Bement v. *National Harrow Co.*, 186 U. S. 70.

If the patentee feels that his invention is of great value and the price he is entitled to charge is so high that few might pay it, but that he can get an equivalent amount by leasing the machine for an extended period, charging a royalty for its use, he is entitled to do so. He can demand as long a term as manufacturers will agree to. If the public takes his machines on leases extending over a period of years in preference to other machines for shorter terms, it is because they believe the patentee's invention is of sufficient value to justify the extended agreement. The public, therefore, profits by obtaining the use of the invention more than it can lose by the extended term. The public is free to take or decline the invention on the terms offered. By taking it on these terms it proves that the use of the invention more than offsets the detriment, if there be any detriment involved in the length of the lease. Public policy does not forbid such an extended lease of patented articles; if it did, it might deprive the public of their use at all. As said by the court in *Henry* v. *Dick Co.*, 224 U. S. 1 (pp. 34–35), with reference to illustrations of conditions imposed by patentees which it was contended public policy should forbid:—

> "But these illustrations all fail of their purpose, because the public is always free to take or refuse the patented article on the terms imposed. If they be too onerous or not in keeping with the benefits, the patented article will not find a market. The public, by permitting the invention to go unused, loses nothing which it had before, and when the

patent expires will be free to use the invention without compensation or restriction."

The right to use the machine during the existence of the patent is of greater benefit than the obligation to pay for and use it after the patent expires or the public would reject the proposed terms.

The United States may object that the machines leased may become obsolete before the expiration of seventeen years and the lessee be obliged to continue paying for them after more efficient machines can be obtained elsewhere. No such condition has yet existed; the United Company has kept abreast of the times and given its lessees the benefits of the best improvements, and its lessees appear to have confidence that it will continue to do so. This argument is based upon too remote a contingency as held by the District Court (R. Vol. 1, p. 1177) and as held in *United Shoe Machinery Company* v. *Brunet*, 1909, A. C. 330.

Furthermore, while this clause permits the United Company to compel a lessee to retain the particular machine leased for the period of the lease, the record shows that the United Company in practice constantly varied this right, and furnished lessees with new or improved machines as they were developed without additional charge of any kind, taking back the old leased machines and scrapping them.

The record then shows that the adoption of the seventeen-year term actually reduced the term required by the constituent companies. It is clear that an extended term is a benefit to both parties, and there is not the slightest evidence that the term was adopted or used to oppress shoe manufacturers.

D. FULL CAPACITY CLAUSE.

The "Full Capacity Clause" requires the lessee to use the leased machines to capacity so far as he has work in his factory which they can perform. An example taken from the United Company's lease of its No. 5 Lasting Machine (P.'s Ex. 21, R. Vol. 3, p. 182, at p. 185) is as follows:—

"Subject to the foregoing limitations, the lessee shall use the leased machinery to its full capacity upon all boots, shoes or other footwear or portions thereof made by or for the

lessee in the manufacture or preparation of which such machinery is capable of being used."

The reason for this clause is obvious.

The lessor invests its money in a valuable machine, installs it in the lessee's factory, and instructs his operatives, relying for his return on a royalty paid on each pair of shoes on which the machine is used. The machine must be used or the lessor will get no return. The agreement to use the machine is a necessity if the machine is leased on this basis. Without this clause the lessee might get the lessor to invest in a valuable machine and install it in the lessee's factory and after a few months the lessee might discard it or use it only occasionally, thus depriving the lessor of any return on its investment.

The clause is a normal and natural agreement obviously designed for the purpose of assuring the lessor a return on its investment and not designed for the purpose of arbitrarily requiring the use of the United Company's machines or of excluding competitors. That this is the purpose of the clause is conclusively shown by the fact that this provision is applied only to machines for which a royalty is charged. Thus in the leases of General Department Machines the clause is omitted because the machines are leased for an annual rental or an initial payment and no royalty is charged, and, the lessor's return not being dependent on the use of the machines, it is not necessary that the lessee shall agree to use them. (See General Department Initial Payment form of lease P.'s Ex. 40, R. Vol. 3, p. 373; General Department Annual Rental form of lease P.'s Ex. 41, R. Vol. 3, p. 379; McKay Sewing Machine lease P.'s Ex. 170, R. Vol. 4, p. 1161.) So also in the case of the Goodyear auxiliary machinery. The lease of the Goodyear Welter and Stitcher provides that they shall be used to capacity because they are the recording machines on which royalty is paid (P.'s Ex. 24, R. Vol. 3, p. 214). No royalty being paid on the auxiliary machines, the lessee is not required to use them to capacity (P.'s Ex. 25, R. Vol. 3, p. 226).

There can be nothing unlawful in requiring one who has hired a machine upon a royalty measured by the machine's capacity, to pay for that capacity so far as he has work for it to do.

The lessee has acquired by his lease and license the full capacity of that machine. He has a right to the entire and exclusive use of it up to the limit of what it is physically able to do, but he is only required to pay according to that measure up to the extent of the work which he has for it.

If he has not work to keep it fully occupied, still he has the right to use the full capacity of the machine. Neither the United Company nor any one else can make any use of that surplus capacity which the lessee allows to go to waste. It is therefore obviously proper that he should agree to pay to the extent of the work he has for the machine to do.

If it once be granted that leasing for a royalty measured by use is reasonable, it is a necessary corollary that such use must be required and agreed to as will fairly compensate the one who supplies the use and fills the need.

The shoe manufacturer cannot complain of this clause. If he does not intend to use the machine, he has no right to take it under a lease whereby he is required to pay only if he does use it. If he does intend to use the machine, it is proper he should agree to use it so far as he has work for it to do.

The rival shoe machinery manufacturer also has no ground for complaint. He has no right to demand that shoe manufacturers who choose to take leases of the United Company's machines should remain as free to deal with him as though such leases had not been executed. If the lessee agreed to pay a fixed rental, he would use the machines for which he paid, not those taken from a competitor for which he must make an additional payment. Even if the lessee bought the machines, he would not ordinarily discard them for other machines. The rival shoe machinery manufacturer is in little if any different position from what he would be in if the lease omitted this clause and contained a fixed rental, or if the machines had been purchased outright. If there is any difference which affects him, it is the incidental result of a normal and proper contract.

The shoe manufacturer's business is seasonal, and he requires an equipment of machines having a maximum capacity far in excess of his average requirements. Furthermore, in many cases a lessee's business is so small that a single machine has a capacity exceeding his maximum requirements. The result is that the United Company's machines held by a lessee have a

capacity in excess of the ordinary requirements of the lessee. The United Company would be justified in charging a price based upon the maximum capacity of the machine. This, however, would be burdensome to the lessees who would only make use of such capacity occasionally. But if the United Company does not require payment for the full capacity of the machine, whether or not the lessee needs such capacity, it is only fair and reasonable that it should require payment for use to the full extent that the lessee has a use for it.

Mr. Winslow testified:—

> "We adopted the full-capacity clause in our leases to protect our interests under the conditions that I have described in the manufacture of shoes, where the seasons are changeable, and where our entire return is dependent upon the use made of the machine. The same reason applies to the adoption of the exclusive-use clause, but it is not the only reason for the adoption of either clause. There must be something in the lease requiring use of the machines or there is no security that they will be used. Because there are two seasons and because we have to furnish machines to take care of the peak of the manufacturer's load, there must be something to secure us properly for the use of the machines throughout the season. Otherwise, the manufacturer might use one of our machines just for taking care of the peak of his load and use somebody else's machine all the year round" (R. Vol. 1, p. 552, line 34; p. 553, line 3).

This provision for payment, viz., that the lessee shall use the machine so far as he has use for it, and pay for the amount it is used, is far more satisfactory to lessees and far less burdensome to them than a fixed monthly or annual payment (which is the only feasible alternative) would be. If a fixed payment were required, a shoe manufacturer would be obliged to pay the same amount whether his business was good or bad. Under the present method he pays according to the business he does, and thus his royalties are adjusted to his business: if business is good, his total royalties increase, but he can then afford to pay them; if business is poor, his total royalties are decreased.

Furthermore, if a fixed amount were charged, it would work to the disadvantage of the small manufacturer. Take a welter, for example. One welter will operate on 480 pairs of shoes a

day (R. Vol. 1, p. 647, line 3). In 1911 out of 1,033 lessees of the United Company 274 made less than 100 pairs of shoes a day (R. Vol. 1, p. 454, line 45; p. 455, line 1). If the welter were leased for a fixed rental, the shoe manufacturer who made 480 pairs of shoes a day would pay for his welting machine used on his entire output the same amount as the manufacturer of 100 pairs or less paid for his welting machine. In other words, his cost of welting machinery per pair of shoes would be less than one-fourth of the amount paid by the small manufacturer. The Pulling-over Machine, Goodyear Stitcher, Heeling Machine, Slugging Machine and Loose Nailing Machine each has as great a daily capacity (R. Vol. 1, p. 456, lines 4–9). The Slugger, Loose Nailer, and Heel Pricking Machine have a capacity of over 1,200 pairs per day (Defs.' Ex. 249, R. Vol. 5, p. 693).

The United States contended in the District Court that the Full Capacity Clause was unnecessary to assure the United Company a return on its investment, because it inserts in most of its leases a clause requiring a minimum payment. It is obvious that a minimum payment does not provide for a fair return unless it is large enough in and by itself to compensate for the use of the machine. In such case it becomes a fixed annual payment and is open to the objections stated above. The minimum payments required in the United Company's leases are so small that they do not provide for adequate compensation. This is not their purpose. The Minimum Payment Clause was inserted in the leases so that a lessee should return machines for which he had no use; if he were required to pay nothing on them, he might keep them although they were not needed at all.

Mr. Winslow testified (R. Vol. 1, p. 553, lines 4–28):—

> "The clause requiring payment of a minimum royalty, like many of the other clauses, is not enforced and never has been, excepting in cases of very great necessity to properly protect the company's interests, and then only in the way of asking the manufacturer to give up surplus machines. The original leases contained no means for recovering surplus machines. If a manufacturer's business decreased 50 per cent. he could retain a machine till the lease expired, and keep it idle. Such a condition showed us that we must have such control as would allow us to take back idle machines.

"The practice has been, when a manufacturer had surplus machines arising from these or other conditions, to call his attention to the minimum clause and to tell him that if he wanted to return the surplus machine, the lease of that machine would be cancelled. That clause is not enforced except to require adequate arrangements between our lessees and ourselves.

"The minimum-lease clause originated a great many years ago. It is not entirely a logical development, but, broadly speaking, the minimum clause is based upon half the capacity or 33 per cent. of the capacity of the machine, or something of that sort. The minimum has no bearing upon the amount of a reasonable return on our machines. In the Goodyear system, for example, the minimum is $15 per machine, if I remember correctly, but we are continually adding to the number of machines that we give to the manufacturer."

It is obvious that this clause is essential if machines are leased to be paid for only to the extent they are used. That it was adopted solely for the purpose of assuring an income from machines leased on this basis is conclusively shown by the fact that it is applied only to the royalty producing machines. If the United Company were forbidden to use this clause, it would necessarily be obliged to abandon leasing machines on this basis, a practice of enormous benefit to shoe manufacturers.

E. EXCLUSIVE USE CANCELLATION CLAUSE.

The following is an example of the Exclusive Use Cancellation Clause taken from the United Company's lease of Pulling-over Machines (P.'s Ex. 38, R. Vol. 3, p. 350, at p. 358):—

"*Eight:* If at any time the lessee shall fail or cease to use exclusively machinery held by him under lease from the lessor for performing all work in the manufacture or preparation of all boots, shoes, or other footwear made by or for him which is performed by the aid of machinery and which is of a kind or kinds which any or all of the machines of the lessor mentioned by name in the foregoing Schedule of Machines are designed to perform, the lessor, although it may have waived or ignored prior instances of such failure or cessation, may at its option terminate forthwith by notice in writing any or all leases or licenses of machinery of the Pulling Over System of the lessor then existing be-

tween the lessor and the lessee, whether as the result of assignment to the lessor or otherwise; and the possession of and full right to and control of all machinery the lease or license of which is so terminated shall thereupon revest in the lessor free from all claims and demands whatsoever."

It is to be noted that this clause only permits the lessor to cancel where other machinery of the same kind as that leased is only used by the lessee, and the lessor is then permitted to cancel leases of machines of this particular kind.

This clause was employed in the leases of metallic machinery and heeling machinery put out by the McKay Company (P.'s Ex. 11, P.'s Ex. 12, Rider).

The Consolidated Company in all its non-initial payment leases required an exclusive use of machines of the kind leased (P.'s Ex. 7; P.'s Ex. 9; P.'s Ex. 10). The Goodyear Turn lease also required the lessee to use only the lessor's turn machines (P.'s Ex. 3). The United Company eliminated these clauses employed by the constituent companies requiring an exclusive use of machines of the kind leased, and inserted in its leases of royalty machines this Exclusive Use Cancellation Clause which had been employed by the McKay Company and an example of which is quoted above.

This Exclusive Use Cancellation Clause does not require or obligate the lessee to use the United Company's machines of the kind leased exclusively. On the contrary, it recognizes the right of the lessee to use other machines of the kind leased, contemplates that the lessee may do so, and merely provides that in such case the lessor may take back its own machines. The clause contains no agreement on the part of the lessee at all. It is a mere reservation of a right to terminate the lease under certain conditions.

The machines of each kind or department are leased under a separate form of lease. This clause refers only to machines of the particular kind leased. For example, if the lessee uses heeling machines obtained from others, this clause permits the United Company at its option to withdraw its heeling machines, but does not permit it to withdraw any other kind of machines.

Of the effect of this clause the District Court (Brown, J., R. Vol. 1, p. 1169) said:—

"The 'Exclusive Use' clause relates only to machines of a particular kind or department, thus differing essentially

from the Prohibitive Clause. It was in use before the consolidation, and after the consolidation was not changed in this respect. Though it does not relate to grouping what before was separate, this clause imposes a limitation upon the right to use machines of a particular kind. The legal effect of it is merely a reservation of a right to cancel the lease in case the lessee should fail or cease to use the defendants' machines exclusively for work of a particular kind. It does not have the legal effect of a contract by the lessee not to use the machines of others. It is merely a limitation imposed by a patentee upon the right to use.

"*The reiteration by the United States of the statement that the lessee must use, or is required to use, defendants' machines exclusively is misleading. The distinction between a contract requiring a lessee not to take other machines, and a limitation of a right to use the leased machines is very material*" (italics ours).

This clause protects the lessor by permitting him to withdraw his machines if by reason of the factory conditions under which the machines are used, caused by the use of other machines by the lessee, the lessor is not getting a fair or proper return on the leased machines (R. Vol. 1, p. 447, lines 18–21).

The primary reason for the use of this clause is as follows: The shoe machinery business is seasonal, being divided into substantially two seasons. The manufacturer with an average production of 300,000 pairs of shoes annually must ordinarily have machinery which has a capacity to produce 600,000 pairs of shoes annually. If his average production is 1,000 pairs of shoes a day, he will at times manufacture 2,000 pairs a day and at others 500 pairs a day. In other words, the United Company must furnish him with an equipment sufficient to make 2,000 pairs a day, although he will use it to this extent at most for about three months in the year (R. Vol. 1, p. 444, lines 27–42).

Defendants' Exhibits 212, 213, and 224 show the variations in production in typical factories. For example, Defendants' Exhibit 213 shows that L. A. Crossett made 113,191 shoes in January, 1911, and only 36,516 in April, 1911 (R. Vol. 5, p. 310); Defendants' Exhibit 212 shows that Burt made 4,492 shoes in November, 1911, and only 1,823 in February, 1911 (R. Vol. 5, p. 297); Defendants' Exhibit 224 shows that the John Strootman shoe factory made 5,492 women's stitched shoes in September,

1911; 2,234 in April, 1911, and 749 in May, 1911 (R. Vol. 5, p. 421).

Referring to the variance in production shown in the Strootman factory Mr. Winslow testified:—

> "This is a fair sample of the condition with which we are confronted throughout the trade. It is not a selected case. I would be quite ready to take any factory and prepare the same figures" (R. Vol. 1, p. 445, lines 27–30).

A shoe manufacturer, therefore, requires a machine capacity in his comparatively short busy season which is not needed during the greater part of the year. A lessee who holds the United Company's machines and also machines of others may use the United Company's machines only during his busy season and use the other machines during his slack season, or he may do only his difficult and slow work on the United Company's machines and thereby reduce the royalties payable to the United Company. The United Company cannot afford to install its machines for a royalty measured solely by extent of use if they are to be used only occasionally or for slow and difficult work. It therefore inserts the "Exclusive Use Cancellation Clause" in its leases, permitting it to cancel the leases if on account of the use of other machines such conditions exist and it is deprived of a fair return.

Another reason for the use of this clause is as follows: The United Company leases machines for a royalty to be paid on each pair of shoes made. The United Company cannot keep men in each factory watching each machine in use on which a royalty is payable and counting the number of shoes on which it is used. On certain machines it can place recording mechanisms which will record the use with a certain degree of accuracy. On other machines, such as lasting machines, no such device is practicable. Even where such a device can be used, it records the revolutions of the machine rather than the number of shoes passing through the machine, and it, therefore, is not accurate, and furthermore, it may be tampered with by the lessee or get out of repair. If the lessee uses the United Company's machines of a particular kind—for example, heeling machines—exclusively, the United Company can tell by an examination of the lessee's books or by a knowledge of its total sales substantially the number of shoes on which the machines are used. Where,

therefore, the United Company's machines are used exclusively, it can check the returns made by the lessee and correct errors in such returns due to carelessness or dishonesty. Where, however, the lessee uses the United Company's machines and also machines of others for doing the same class of work, the United Company has no such check. If, therefore, the United Company finds that a lessee who is using its machines and also the machines of others of the same kind pays it a small return on its machines, it may have reason to believe that actually more work is being done on its machines than is paid for, and that through carelessness or dishonesty a correct account of the work is not rendered, but there is no way to check this up, and the lessor is at the mercy of the lessee. Under these conditions it must have the right to withdraw its machines.

This clause, or a clause more stringent in that it required an exclusive use of the lessor's machines, was employed in most of the leases of the constituent companies. Its use in the modified form by the United Company is therefore no evidence of the charge made by the petition of an unlawful plan adopted by the defendants to monopolize by the use of new methods. On the contrary, the elimination by the United Company of the clauses requiring an exclusive use which were previously employed in the constituent companies' leases and the substitution in these leases of the Exclusive Use Cancellation Clause, which merely permits the United Company to withdraw its own machines, is direct evidence that the United Company had no intent to require an exclusive use of its machines.

This clause is one which the experience of the constituent companies had proved to be necessary for the lessor's protection for the reasons stated above. It is a normal, legitimate agreement designed to permit the lease of machines without a substantial initial payment and at the same time protect the lessor so that it may cancel the arrangement if it does not receive an adequate return.

That the purpose of this clause is to protect the lessor when the factory conditions under which its machines are used do not afford it a proper royalty return, and that its purpose is not arbitrarily to prevent other manufacturers from placing machines, is conclusively shown by the fact that this clause is applied only to those machines which carry a royalty. Thus the clause

does not appear in the leases of General Department machines for which no royalty based on the use of the machines is charged, but only a fixed annual payment, or an initial payment. (See leases of General Department machines, P.'s Ex. 40–41; lease of McKay Sewing Machine, P.'s Ex. 170.) And so also in the leases of Goodyear machines this clause is made applicable only when the lessee uses other welting and stitching machines which are the machines on which the royalty is based, and it is not applicable where the lessee uses auxiliary machines obtained from others (P.'s Ex. 26, par. Seven). If the purpose of the clause were to require a use of the United Company's machines exclusively and thus arbitrarily exclude other shoe machinery manufacturers, it would certainly be applied to leases of machines like the McKay Sewing Machine, for which a fixed rental is charged.

As the clause is not applicable to General Department Machines of which the United Company makes over 172 different kinds, or to Goodyear Auxiliaries, of which 43 different kinds are made, or to eyeletting machines, it results that it is not applied to a majority of the kinds and numbers of machines put out by the United Company. Out of 90,276 machines leased by the United Company on March 1, 1911, over 53,000 of the kinds above mentioned were leased under leases which did not permit the United Company to withdraw its machines because machines of the same kind obtained from others were used (Defs.' Ex. 228 R. Vol. 5, p. 430).

Had the United Company intended by this clause to require an exclusive use of its machines of the kind leased, it would have so provided. The right to withdraw the lessor's machines of a certain kind—for example, heeling machines—because other heeling machines are used, obviously cannot compel the lessee to use the lessor's heeling machines. If the lessee is using other heeling machines, he doubtless prefers them. The exercise by the United Company of its option to withdraw its machines would under those circumstances leave the lessee at liberty to use the competitors' heeling machines, which is what the lessee would desire. It could exert no pressure on him to discard other heeling machines which he preferred to use.

Mr. Winslow testified:—

> "The United Company has never adopted the policy of requiring the exclusive use clause as an agreement upon the part of the lessee. That clause has always been in the form of a right reserved to the company in case the lessee does not use exclusively and the conditions are unbearable" (R. Vol. 1, p. 444, lines 21–25).

Mr. Winslow further testified that it was not true that the defendants inserted in each lease provisions reserving to themselves the right to terminate and cancel all existing leases if a shoe manufacturer should fail or cease to use exclusively and to their full capacity machines leased of the defendant and that that never was the purpose of the Company (R. Vol. 1, p. 447)

> "The purpose of the company has been nothing more than to reserve to the company the right to cancel leases of machines of a type which the lessee had ceased to use exclusively if conditions became too onerous to continue" (R. Vol. 1, p. 447, lines 18–21).

It is difficult to see in what way it can be contended that this clause restrains competition. It does not require the shoe manufacturer to use the United Company's machines. So far as this clause is concerned, the shoe manufacturer can freely take and use any other machines he pleases. If, for example, he uses other heeling machines and the United Company withdraws its own heeling machines, this only leaves the lessee free to use other heeling machines which he can get and which he apparently prefers.

The rival shoe machinery manufacturer will be actually benefited by the enforcement of this clause. If the United Company withdraws its machines, the shoe manufacturer is necessarily in the market for new machines, and a market is thereby created for the United Company's competitor. Nothing, therefore, would please competitors of the United Company better than to have it enforce this clause.

It is obviously fair and just that the United Company be entitled to withdraw a machine on which its return consists of a royalty based on the number of shoes on which the machine is used, if, owing to the use of other machines of the same kind by the lessee, the machine is only used occasionally or on slow or

difficult work, or the United Company has reason to believe that work actually done on its machines is not so reported; in other words, when, to use Mr. Winslow's words, "conditions are unbearable."

That the United Company may properly reserve a right to withdraw its machines under the foregoing conditions seems indisputable. It would be impossible to specify exactly and definitely these conditions. The clause is, therefore, necessarily general in its terms; but it only reserves an option to cancel; it does not provide that there shall necessarily be a cancellation of the lease if other machines of the same kind are used.

As, therefore, the right reserved by the clause may clearly be exercised for a proper purpose, even if it could also be so exercised as to result in excluding competitors' machines (which we submit is not the case), nevertheless this possibility would not be sufficient to make the clause unlawful unless it were shown that it was inserted in the leases for this purpose or that it was enforced for this purpose.

Mr. Winslow, as quoted above, testified that it was not inserted or enforced for this purpose. There is absolutely nothing in the record to contradict his testimony. Not a single instance was shown in which the United Company enforced or threatened to enforce the clause in order to exclude competitors' machines. In the only five cases (except cases of bankruptcy) in which machines were withdrawn by the United Company, no such instance appears (R. Vol. 1, pp. 447–8; *infra*, pp. 417–418).

On the contrary, so far from showing that the United Company withdrew its machines because competitors' machines were used, Plaintiff's Exhibit 161 (R. Vol. 4, p. 1118) introduced by Louis H. Harriman of the Haverhill Shoe Machinery Company, a competitor of the United Company, as a witness for the United States, gives a list of 17 concerns which had used or were using the Haverhill Turn Sewing Machine in the same factory with the United Company's Goodyear Turn Sewing Machine the leases of which contained the Exclusive Use Cancellation Clause, thus contradicting absolutely the contention that the United Company withdrew its machines merely because a competitor's machines of the same kind were used.

We submit, then, that even if it can be contended (which we deny) that the right given by this clause could be so exercised

as to exclude a competitor's machines, the record establishes that it was not inserted in the lease for this purpose and that it was not enforced to accomplish this result.

The Use of the Exclusive Use Cancellation Clause is the Mere Exercise of a Patent Right. Its Legality is not Affected by the Sherman Act nor can it be Tested by Considerations of Public Policy not Recognized in the Patent Law.

The leases in the present case are termed "Lease and License Agreements" and constitute not only leases of the physical materials in the machines but also licenses under patents to use the machines in the manner and to the extent defined therein.

A patentee has an absolute right to exclude all others from the use of the patented invention even though he does not use it himself. *Paper Bag Patent Case*, 210 U. S. 405.

The motive of the patentee in refusing to license others to use the patented invention is immaterial. As said in the Paper Bag Patent Case (p. 429),—

> "As to the suggestion that competitors were excluded from the use of the new patent, we answer that such exclusion may be said to have been of the very essence of the right conferred by the patent, as it is the privilege of any owner of property to use or not use it, without question of motive."

If the patentee does consent to grant a license to use his patented invention, he may grant it for such time long or short as he pleases. As the patent law gives him an absolute right to withhold or grant licenses as he pleases, regardless of his reasons or motives, the length of time for which any licenses he may choose to grant shall extend is absolutely within his discretion.

In *Mitchell* v. *Hawley*, 16 Wall. 544, the patentee conveyed the right to make and use four machines during the remainder of the original term of the Letters Patent. The licensee constructed and sold the four machines which he was authorized to make. The patent having been extended for an additional term of seven years it was held that the purchaser of the four machines had no right to use them during the extended term whether or not he had purchased with notice of the limited term of the license to use.

It is clear, then, that a patentee has the right to grant a license to use his patented invention for as long or short a term as he pleases. In pursuance of this right he may grant a license to use for a definite term or for an indefinite term, that is, until such time as he in his absolute discretion chooses to terminate it. After such termination the licensee, of course, has no longer any right to use. This is so even if, as in *Mitchell* v. *Hawley*, supra, the licensee has bought the machine which embodies the invention and still holds title to it.

Just as the patentee can refuse to grant a license at all, regardless of his motives or of the effect of his refusal, so in granting a license he may make it terminable at such time or in such event as he pleases, regardless of the effect of such termination or of his motives in so doing.

Such a grant of a license does not obligate the licensee to use the patented invention. It is a mere grant of a right. The licensee is as free in every respect as he was before the grant was made and in addition has the rights conferred by the grant. Upon the cancellation of the license, whether it be terminable at a definite time or at the patentee's option, and regardless of the patentee's motive in cancelling the lease, the licensee is no worse off than if the patentee had refused to make the grant at all.

Having an absolute right to make or refuse the grant, questions of public policy are not relevant. An argument that a grant for the full term of the patent, or an irrevocable grant, would be more beneficial, or would confer a greater benefit on the licensee, or would be more advantageous to competitors, has no standing. As said by the court in *Henry* v. *Dick Co.*, 224 U. S. 1, 35, in referring to conditions imposed by patentees,—

> "Arguments based upon suggestions of public policy not recognized in the patent laws are not relevant."

It follows, then, that in the present case the United Company could, in the exercise of its indubitable rights granted it under its patents, provide in its lease and license agreements that the licenses to use the leased machines should be operative only until such time as the United Company might at its absolute discretion choose to terminate them. It would have the right in such case to terminate the licenses either because the licensee ceased to use its machines exclusively or for any other reason

whatsoever. Its motives could not be questioned any more than its motives for refusing to grant a license at all could be questioned.

If, then, the United Company can in granting its licenses reserve this broad right to terminate for any cause whatsoever, surely it can reserve the lesser right (which is inevitably embraced within this broader right) of terminating because the lessee does not use its machines exclusively. The termination of the license is a mere exercise of the rights granted by the patents, namely, the rights to exclude others completely or to permit the use of the patented inventions for as long or short a period as the patentee pleases.

The United States may object that the termination of the license because the licensee does not use the patented machines of the kind leased exclusively may result in excluding competitors' machines. We have shown above that no such result will follow and that, even if such a result were possible, the United Company did not insert this clause or enforce it for this purpose or with this result. But assuming that the clause results in an exclusive use of the United Company's machines of the kind leased, it is, as we have shown above, within the rights of the patentee. If he grants licenses to use his machines and they are superior to all others in the market, they may drive such other machines out of use. If he refuses to grant licenses of his machines and they are sufficiently superior, he may by using them himself obtain all trade in the article which the machines produce. Questions of his motives, of public policy, or of the effect of his acts are irrelevant so long as he limits himself to the exercise of his patent rights, that is, to excluding others or permitting them to use for such periods as he pleases.

The fact that the United Company in addition to reserving the right to terminate its licenses to use the machines also reserves a right to withdraw the machines themselves is immaterial. The machines belong to the United Company and are clearly of no value to the lessee when his right to use them has terminated. Their withdrawal in such event can in no way injuriously affect either the lessee or competing shoe machinery manufacturers.

Considered from another aspect the clause is seen to be equally within the rights granted a patentee.

Thus a patentee can not only grant a license to use his pat-

ented invention for as long or as short a period as he pleases, but can also grant a restricted use, that is, a use only in a particular place, by a particular person, or for a particular purpose, regardless of his motives or the effect of the restriction.

Thus in *Rubber Co.* v. *Goodyear*, 9 Wall. 788, the patentee granted a license to use the patented invention only at the licensee's own establishment and for a particular purpose, reserving to the patentee the exclusive right to manufacture goods to be sold to the United States Government. The authority of this case was recognized both by the majority and the minority opinions in the Dick case.

Such a restricted license may be granted irrespective of its effect or the motive of the patentee so long at least as it is confined to a mere grant and does not require action on the part of the lessee. In *Henry* v. *Dick Co.*, supra, the court, after referring to suggestions of the evil consequences to trade which might result from the right on the part of the patentee to grant licenses to use on such terms as the patentee chooses to prescribe, said (p. 35):—

> "This larger right [namely the right to exclude all others] embraces the lesser of permitting others to use upon such terms as the patentee chooses to prescribe. It must not be forgotten that we are dealing with a constitutional and statutory monopoly. An attack upon the rights under a patent because it secures a monopoly to make, to sell, and to use, is an attack upon the whole patent system. We are not at liberty to say that the Constitution has unwisely provided for granting a monopolistic right to inventors, or that Congress has unwisely failed to impose limitations upon the inventor's exclusive right of use. And if it be that the ingenuity of patentees in devising ways in which to reap the benefit of their discoveries requires to be restrained, Congress alone has the power to determine what restraints shall be imposed. As the law now stands it contains none, and the duty which rests upon this and upon every other court is to expound the law as it is written. Arguments based upon suggestions of public policy not recognized in the patent laws are not relevant. The field to which we are invited by such arguments is legislative, not judicial. The decisions of this court, as we have construed them, do not so limit the privilege of the patentee, and we could not so restrict a patent grant without overruling the long line of judicial decisions from Circuit Courts

and Circuit Courts of Appeal, heretofore cited, thus inflicting disastrous results upon individuals who have made large investments in reliance upon them."

If, then, as is well recognized, the patentee can license for use only in a particular place, by a particular person, or under certain conditions defined by him, he can surely license for use only in a factory so long as his machines of the same kind are used exclusively in that factory, or he can license for use by a particular licensee so long as such licensee uses his machines exclusively.

By so doing he is not obliging the licensee to use his machines exclusively. He is merely exercising his unquestioned right to grant a license to use. The licensee is left free to exercise his license or not as he pleases. The patentee having an absolute right to grant licenses, either partial or complete, his motives in so doing are immaterial.

It being clear, then, that the United Company has an absolute right to grant a license to use its machines to be exercised only in factories where its machines of the same kind are used exclusively, it necessarily follows that it can grant a license which is subject to revocation at its option if its machines are not used exclusively. Such a provision is less stringent as it permits the licensee to use, even though other machines of the same kind are used, and merely provides for a revocation of the use in such case if the patentee determines such revocation is desirable.

F. ADDITIONAL MACHINERY CLAUSE.

This clause was used by the United Company in only a few leases, and its use was abandoned entirely in 1907.

By this clause the lessee is required to take from the lessor additional machines of the same kind as those leased if his work requires them.

This clause was employed in non-initial payment leases of the Consolidated Company prior to 1899 (P.'s Ex. 7; P.'s Ex. 9; P.'s Ex. 10), and a similar clause forbidding the lessee to use any other turn machines was employed in the Goodyear Company's turn lease (P.'s Ex. 3). The following example of this clause is taken from Article Twelfth of the Consolidated Com-

pany's lease for the Consolidated Hand Method McKay Lasting Machine, in use before the United Company was formed:—

> "*Twelfth:* It is declared and understood that it is the intention of the Licensee to use said machine herein licensed and leased for lasting all the boots and shoes made by him applicable to the said machine, and not to have it in his possession as a means of reducing the price of hand-lasting or of controlling hand-lasters, or of influencing a trade with any other lasting machine not controlled by the Licensor, or the list price thereon, and the Licensor enters into this contract because of and by reason of such understanding and agreement on the part of the Licensee. It is, therefore, agreed that the Licensee shall use such machine hereby licensed and leased for lasting all of his boots and shoes to its full capacity, limited only by the demands of his business; *and should the demands of his business require he shall take the license and lease of such additional machines as may be needed to do all his work*" (italics ours).

Mr. Winslow testified:—

> "All of those additional machinery clauses were removed from all of the leases of the United Company not later than 1907, and they were not in use and did not represent the policy of the company at the time of the bringing of this suit" (R. Vol. 1, p. 444, lines 17–20).

This clause was one of the various methods adopted by the constituent companies in an effort to assure a proper return upon their investment in machines. It protected the lessor against the abuses possible where its machines were not used exclusively, as we have explained above, in considering the Exclusive Use Cancellation Clause. By requiring an exclusive use of its machines it avoided their being used only occasionally during the busy season or only on slow work, thus reducing the royalty received, and it prevented also the difficulty of determining the actual work done on the machines which would arise where machines of others were used. It was usually introduced when the machines were first put on the market. Often when a shoe manufacturer first took a machine he used it only as a trading proposition. The lessor installed the machine and went to the expense of instructing operatives, and the lessee then used it to reduce the price of hand work or to obtain machines from others

cheaper and the machine being on a royalty basis, the lessor got no return. By this clause the lessee agreed to do his work by machines and to take additional machines for additional work, and this besides preventing the abuses above referred to gave a further assurance of an adequate return. Its purpose, therefore, was not to arbitrarily exclude others, but to provide an adequate return on the capital invested by the lessor.

The United Company did not adopt this clause for any general or extensive use. The United Company eliminated the clause from the lasting machine leases of the Consolidated Company as soon as new leases were drawn up, and substituted the Exclusive Use Cancellation Clause, which it felt sufficiently protected it against the abuses possible where machines of others were used.

It inserted this Additional Machinery Clause in its lease of metallic machines adopted in March, 1900 (P.'s Ex. 29; R. Vol. 1, p. 10, lines 24–25), but in the next printing of this lease, in June, 1900 (P.'s Ex. 30; R. Vol. 1, p. 10, line 31), it eliminated the clause and inserted a provision that the lessee should either take additional machines or the lessor might at its option cancel; in other words, a different form of the exclusive use cancellation clause under which the lessee was not obligated to use its machines exclusively.

The United Company employed this clause also in its Heeling Machine Lease adopted in January, 1900 (P.'s Ex. 27, R. Vol. 3, p. 254), but it eliminated the clause in the next form of lease, adopted in May, 1904 (P.'s Ex. 28, R. Vol. 3, p. 261). It also inserted the clause in its first lease of the pulling-over machine, which was an entirely new machine displacing hand labor, and, therefore, one which might be used as a trading proposition to reduce the price of hand work, but it eliminated the clause in the form of Pulling-over Lease which was adopted as early as 1907 (Defs.' Ex. 345, R. Vol. 5, p. 958; see also R. Vol. 1, p. 981, lines 1–7).

The Additional Machinery Clause was never used generally by the United Company. It was used by the constituent companies and to the limited extent above outlined by the United Company for a definite and legitimate business purpose and, therefore, shows no intention to restrain trade or monopolize.

The clause was primarily useful when new machines displacing hand work were first introduced. such cases, as explained above, it was found that a single machine was sometimes taken, not with the intention of doing the work by machine, but to enable the shoe manufacturer to reduce the prices paid hand workers by a threat of using the machine. The machinery manufacturer had gone to the expense of installing a single machine and instructing untrained operators in its use with the expectation and understanding that if successful, the shoe manufacturer would adopt it for general use. In such cases the additional machinery clause was important to the lessee's protection. When the superiority of the machine over hand labor was definitely established, experience showed that the other abuses guarded against by the additional machinery clause, namely, the abuses which might arise when machines of the same kind obtained from others were employed in the factory, could be sufficiently guarded against by the Exclusive Use Cancellation Clause, which did not require a use of additional machines, but merely gave an option to the lessor to withdraw its machines and this clause was, therefore, substituted.

The elimination of this clause by the United Company from the leases of the constituent companies, its limited use by the United Company, and its final abandonment by the United Company as early as 1907, four years before this petition was filed, show that it was not a method adopted by the defendants to monopolize, and make its further consideration immaterial in the present case.

G. CANCELLATION FOR BREACH CLAUSE.

The following example of this clause is taken from the defendant's Heeling Machine Lease (P.'s Ex. 28, par. Eleven; R. Vol. 3, p. 268):—

> "But if any breach or default shall be made in the observance of any one or more of the conditions herein contained or contained in any other lease or license agreement subsisting between the lessor and the lessee, whether as the result of assignment to the lessor or otherwise and expressed to be obligatory upon the lessee, the lessor shall have the right by notice in writing to the lessee to terminate forthwith any or all leases of or licenses to use machinery

then in force between the lessor and the lessee, whether as the result of assignment to the lessor or otherwise, and this notwithstanding that previous breaches or defaults may have been unnoticed, waived, or condoned by or on behalf of the lessor."

This clause permits the cancellation of all leases between the lessor and the lessee provided, and only provided, the lessee breaks one of the conditions in one or more of such leases "expressed to be obligatory upon the lessee"; in other words, some condition which the lessee obligates himself to carry out.

The leases contain various conditions which are obligatory upon the lessee. The following, taken from Plaintiff's Exhibit 28, will illustrate their character: (1) The leased machinery shall be used only by the lessee at his factory and shall not be transferred to any other person (par. One). (2) The lessee shall keep the machinery in good working order and not permit any one to remove any plate, dates, numbers or other inscriptions affixed to the same. He shall obtain from the lessor all duplicate parts needed in the machine (par. Two). (3) He shall indemnify the lessor from injury, loss or destruction by fire or otherwise (par. Three). (4) He shall pay all taxes and assessments on the leased machinery (par. Four). (5) He shall use the machinery to full capacity so far as he has work for it, and respect the Restricted Use Clause (par. Five). (6) He shall pay the royalty provided for in the lease (par. Six).

This clause merely provides that if the lessee does not act in good faith and violates his agreements the United Company may sever relations with him. If, for example, the lessee refuses to pay royalties or abuses the machines held by it under one lease, the United Company reserves the right to take back all its machines so that it will not suffer similarly in respect to machines held under other leases.

Mr. Winslow testified:—

"The right to cancel clause, for breach of a condition expressed to be obligatory upon the lessee, was adopted by the company with respect to conditions which would be such as to make the continuance of the business relations between the lessee and ourselves impossible, as where the lessee did not make proper returns of the royalties or did not pay his royalty or refused to pay the taxes—those

conditions which in the ordinary business relations between men would make the continuance of the relations impossible.

"In the twelve to thirteen years prior to the beginning of this suit the United Company availed itself of the right to cancel leases and remove machinery for reasons other than bankruptcy or receivership in only five instances" (R. Vol. 1, p. 447, lines 22–34).

As in the case of the Exclusive Use Clause, this clause merely gives the United Company an option to cancel its leases, if the lessee violates their terms. It is obviously fair that this general right should be reserved to the lessor and it is clear that cases may arise in which its exercise would be essential to the protection of the lessor. If (which we deny) it is possible that it might also be so exercised as to oppress lessees or unlawfully exclude competitors' machines, this probability alone would not make the clause objectionable unless it were shown that it was inserted in the leases for this purpose, or was enforced for this purpose.

The record fully sustains Mr. Winslow's testimony (*supra*) that the clause was inserted only to permit the United Company to sever its relations with a lessee on account of conduct by the lessee which "in the ordinary business relations between men would make the continuance of the relations impossible."

In the five cases in which (apart from bankruptcy) leases were cancelled, the lessee either had abandoned the use of the United Company's machines entirely or was persistently cheating the United Company of the royalty due on its machines (R. Vol. 1, pp. 447–8; *infra*, pp. 417–418).

The leases of the constituent companies all contained provisions giving the lessor the right to cancel if the lessee violated the lease. Practically every lease of property has such a condition.

The United States apparently objects to the present clause because it permits the cancellation not only of the particular lease, the agreement in which is broken, but of all other leases between the parties. The United Company could perfectly well furnish all its machines on a single lease, and if it did so this objection of the United States would not be applicable. For convenience it issues different leases for machines of different departments and also issues a new lease each time a new machine

is taken in any one department. Thus, if a lessee has six Goodyear machines, he may have six different leases. The relationship created between the lessor and the lessee by these various leases, however, is essentially a single relationship which, for convenience, is expressed in a number of different documents. If the lessee violates an agreement in any one of these documents, it is as fair to cancel all as it would be to cancel that particular one.

The practice of the constituent companies was to issue one lease for all the machines originally taken, and then, when additional machines were taken of the same kind, to incorporate these machines in the original lease. The Fifteenth Clause of the Consolidated Company's lease of the Chase Lasting Machine (P.'s Ex. 7, R. Vol. 3, p. 66), for example, provides for this practice. Mr. Howe testified that that was the universal practice of the Goodyear Company (R. Vol. 1, p. 690, lines 12–23). When, therefore, the lease was broken the lessee could cancel the lease and thereby withdraw all its machines taken at different times and held under its terms. The clause as adopted by the United Company, which issued new leases for additional machines, accomplished practically the same result.

It is impossible to see how this clause can restrain trade or tend to create a monopoly. The shoe manufacturer cannot complain if he loses his leases because he violates his agreements. A rival shoe machinery manufacturer cannot complain of the exercise of this clause because he is obviously benefited if a shoe manufacturer is deprived of machines of the United Company and therefore must seek machines elsewhere.

The United States contended in the District Court that this "Cancellation for Breach Clause" taken in connection with the "Exclusive Use Cancellation Clause" permits the United Company to cancel all its leases if machines of any one kind held by the lessee are not used by the lessee exclusively. This is obviously not so. This "Cancellation for Breach Clause" which we are now considering permits cancellation only for violation of a condition "obligatory upon the lessee." The "Exclusive Use Cancellation Clause" does not obligate the lessee to use the United Company's machines exclusively. On the contrary, it contemplates that the lessee may use other machines of the same kind and permits him to do so, and merely reserves an option

to the United Company to cancel its leases of machines of that kind. As the lessee is not obligated to use such machines exclusively the condition is not one "obligatory upon the lessee," and therefore the use of other machines which gives the United Company a right under the "Exclusive Use Cancellation Clause" to cancel leases of machines of that kind does not give the United Company any right to cancel all its leases or any of its leases under this "Cancellation for Breach Clause."

The United States may claim that it is not the actual exercise of this cancellation clause which operates to exclude the use of competitors' machines, but the power to exercise it in case of a violation by the lessee of the Full Capacity Clause, or the Restricted Use Clause. In other words, the contention may be that a lessee will not use a competitor's machine if one of the United Company's machines held by him for doing the same work is not being used to capacity, and will not use one of the United Company's machines taken under a restricted use lease, in a manner not permitted by the license, on shoes operated on by some competitor's machines if as a consequence the United Company would have the right to withdraw all its machines. As a result it may be contended that the use of competitors' machines is interfered with.

This argument depends wholly upon whether the Full Capacity and Restricted Use Clauses are in themselves lawful. If it is lawful to require the lessee to use a leased machine to capacity, and to grant a restricted license to use the machine, then it is obviously fair that the lessee should be bound by these clauses, and that if he chooses to violate them, his leases should be cancelled.

The objection made by the United States, then, is not that the Cancellation for Breach Clause is unlawful, but that the Full Capacity and Restricted Use Clauses are unlawful. The Cancellation Clause, permitting cancellation for violation of a condition obligatory upon the lessee, can under no circumstances be unlawful, if the conditions made obligatory upon the lessee are lawful.

H. RESTRICTED USE CLAUSE.

(1) REASONS FOR ADOPTION OF THE RESTRICTED USE CLAUSE.

The "Restricted Use Clause" restricts the use of the defendants' machines of one group or department to use on shoes operated on by certain machines of another group or department. The following example, taken from the United Company's lease of the Hand Method Lasting Machine (P.'s Ex. 15, R. Vol. 3, p. 129, at p. 131), which restricts the use of the machine to use on shoes operated on by the Goodyear Welter and Stitcher, illustrates the character of the clause:—

> "But the leased machinery shall not, nor shall any part thereof, be used in the manufacture of any boots, shoes, or other footwear which are or shall be welted, or the soles stitched on welt sewing or sole stitching machines not leased to the lessee by the lessor or its assignor, or in the manufacture of any turn boots, shoes, or other footwear, the soles of which are or shall be attached to their uppers by turn sewing machines, not leased to the lessee by the lessor or its assignor."

Considerations to be Noted at Outset of Discussion.

The following considerations must be noted at the outset:—

(*a*) In the first place, the Restricted Use Clause does not obligate the lessee to use either the leased machine or any other machines of the United Company at all. It merely restricts the use of the leased machine to use on shoes on which certain other machines obtained from the lessor are used. For instance, take the Restricted Use Clause quoted above from the lease of the Hand Method Lasting Machine, which restricts it to use with the Goodyear Welter and Stitcher. It does not require the lessee to use either the United Company's Lasting Machine or its Welter and Stitcher. If the lessee desires to use a competitor's lasting machine he may do so. If he desires to use a competitor's welter and stitcher he may do so. The only restriction is that if the lessee does use an outside welter and stitcher he cannot use the leased lasting machine on shoes on which such outside welter and stitcher are used. If he wishes to use the Lasting Machine

in connection with an outside welter and stitcher he may exchange his restricted lease for an unrestricted lease by paying an initial premium of $300.

Nor does the Full Capacity Clause taken in connection with the Restricted Use Clause obligate the lessee to use other machines. The Full Capacity Clause in every case requires the use of the leased machine only if the lessee is making shoes on which the leased machine may be used without violating the restrictions.

(*b*) Restricted Use Leases are only alternative forms of leases which are offered to lessees who desire to use a team of the United Company's principal machines. Unrestricted leases are offered all lessees who wish to use only certain kinds of machines furnished by the United Company in connection with other machines obtained from competitors. The royalty charged under the unrestricted leases is exactly the same as the royalty charged for the restricted leases. The only difference is that under the unrestricted leases an initial payment is charged to cover the loss in royalties and additional expense which result where the United Company's principal machines are not used as a team.

(*c*) The Restricted Use Clauses have a very limited application as we shall show below. They only restrict the use of the United Company's machines to use with a comparatively few of its principal machines, machines which are adapted for use together, which are delicate in operation, which are essential to the integrity of the shoe, and which must be kept in proper repair and adjustment to insure continuous and effective production in the factory. There is, as we show below, absolutely no justification for the charge on which the petition is founded that the United Company declined to lease its essential machines except on condition that all other machines be taken from it.

Auxiliary Restricted Use Clause Distinguished.

The Restricted Use Clause limits the machine leased to use on shoes operated on by the principal machines of another group or department. The Auxiliary Restricted Use Clause limits the use of auxiliary machines of a department to use on shoes operated on by the principal machines of that department. The reasons for the use of this latter clause differ somewhat from the reasons for the use of the Restricted Use Clause, grouping machines of different departments, and are considered below separately.

Reasons for Adoption of Restricted Use Clause.

The purpose of the Restricted Use Clause, when applied to machines of different departments, is to provide a lower rate for machines where they are used in a set or team, and thus not only make a better shoe, but work more efficiently and therefore produce a larger return for the United Company in the way of royalties on each machine. This clause provides a wholesale rate where the machines are used in a wholesale manner, thus enabling the lessee to share in the economies resulting from such use as a team.

The reasons why the use of certain of the United Company's machines as a team or series increases the efficiency of each machine, reduces the cost of service for each machine, and protects the reputation of the machines and thus justifies a better rate to lessees desiring to use the machines in this manner than is charged for machines taken independently to be used in connection with machines obtained from others, have been partially referred to above (*supra*, pp. 259–260). We shall, however, at this point summarize the reasons.

(*a*) A large number of different machines are used in the manufacture of each shoe. In the economical management of a shoe factory the shoes flow from one machine to another in a continuous stream, and when an important machine in the line breaks down it interrupts this flow and therefore not only stops work on that machine, but also stops work on all machines coming after it in the line; and as it would merely accumulate uncompleted work which could not be finished to operate machines preceding it in the line, it likewise stops work on those machines which precede it.

It is therefore of the utmost importance that each machine in the line be well constructed and well cared for so that it will not break down or get out of adjustment, and it is furthermore of the utmost importance that a machine be repaired at once if it does break down or get out of adjustment, so that work will be interrupted for as short a time as possible; otherwise, the machines all along the line will be idle when any one machine breaks down, and the lessor of those which pay a royalty will be deprived of his royalty, the operatives who are paid by the piece will suffer, as

they will be unable to work, and the shoe manufacturer's production will cease.

The advantages of a well-constructed line or series of machines which receive proper repair service are especially pronounced as respects the principal bottoming machines, namely, welters, stitchers, lasting, metallic fastening and heeling machines, to use with which other machines are restricted by the Restricted Use Clauses. These machines perform delicate and difficult operations, handle material like thread, wire and nails, and are themselves necessarily delicate machines, having a large number of moving parts, which are liable to get out of adjustment or repair.

No other company furnishes efficient service, so that when another company's machine is interjected into the series, the efficiency of the whole series of machines is lowered to the level of the efficiency of that machine, just as was the case with the machines of the constituent companies before 1899 (*supra*, pp. 183–186). The United Company's income decreases as the efficiency of the series is so lowered.

It is important, also, to remember that the machines of the different groups or departments furnished by the United Company are not used independently as separate groups, the work of one group being completed before the shoe passes to another group of machines of a different kind. The machines of the different groups are interspersed and in reality constitute a single unit.

This was illustrated by the moving pictures shown to the District Court. This was Defendants' Exhibit 241.

Mr. Winslow testified:—

> "The machines, the operation of which were illustrated by moving pictures, defendants' Exhibit 241, operate in a factory in the manufacture of Goodyear welt shoes in the order shown to the court." (The witness then stated the name of each machine as it operated in its order.) (R. Vol. 1, pp. 503–4.)
>
> "In these successive operations machines of the kinds obtained from the Goodyear Company, the Consolidated & McKay Lasting Machine Company, and the McKay Shoe Machinery Company are interspersed among each other through those consecutive operations, and they are all required in the production of a Goodyear welt shoe and perform these necessary consecutive operations" (R. Vol. 1, p. 504, lines 24–30).

Robert P. Hazzard, a large shoe manufacturer, testified:—

> "The machines from the different departments of the United Company are interspersed in their operations. The first thing in making the shoe is to prepare the bottom stock. In that we have to use auxiliary machines of the Goodyear department and also some of the general department machines. We next use the assembling machine and pulling over machine, from the pulling over department, and the No. 5 lasting machine from the lasting department, etc. At the same point we use the machine for tacking innersoles from the metallic department. We next employ machines for trimming the uppers, pulling the tacks, and welting the shoe from the Goodyear department, and then the auxiliary Goodyear machines for sole laying, etc. The heel seat nailing is done by a metallic department machine, and then we come to the Goodyear stitchers and more Goodyear auxiliary machines. Then the heeling machines of the metallic department are used, and then we swing back to the slugging machines of the metallic department. From there out we go back to the general department machines, edge trimmers, edge setters, etc. The operations of the machines from the different departments are all interwoven and the machines of one department are interspersed among the operations of the machines of the other departments" (R. Vol. 1, p. 642, lines 23–44).

The different machines might conceivably be incorporated into a single machine so far as their operation is concerned. They constitute for practical purposes a single machine. If one of the machines breaks down, the entire series is made idle to practically the same extent that all the parts of a single machine are made idle if one of the important parts breaks. It is as important for the efficiency of the machines as a whole that each machine of the team or series be adapted for use with the other machines and be well constructed and kept in proper repair and adjustment as it would be if they constituted parts of a single machine.

(*b*) It is important also to note that the principal machines of the United Company have been developed for use together. Each machine prepares the shoe for the operation of the next machine, leaving it in condition to be operated on by that machine, and the next machine is adapted to supplement the

operation of the preceding machine, correct any weaknesses or defects in its operation, and so in turn prepare the shoe for the peculiar operation of the succeeding machine in line.

The defendants exhibited to the court by moving pictures the operation of a large number of their machines to illustrate the truth of the foregoing. This was Defendants' Exhibit 241. As the pictures showing the operations of the various machines were exhibited to the court Mr. Winslow testified in explanation (see R. Vol. 1, pp. 495 to 502 inclusive).

Winslow testified:—

> "It is the fact that each of the principal machines of the United Company have been developed and improved with special reference to its operation upon work which has been or is to be done by other principal machines of the Company; and also new and improved machines have been developed to cooperate with them and increase the efficiency of the previously existing principal machines" (R. Vol. 1, p. 857, lines 29–35).

Robert P. Hazzard, a large shoe manufacturer, testified of the machines of the United Company:—

> "Practically every machine takes up the shoe where the preceding machine left it, and there are very few places today in the bottoming room where any labor is necessary between the operations of the United Company machines. Practically speaking, each machine prepares the shoe for the operation of the next; for example, when a shoe leaves the No. 5 lasting machine there are tacks in it to hold the upper in lasted position, and those tacks must be removed before the inseam can be trimmed. Then they come in with their tack-pulling machine which pulls out the tacks, leaving the shoe in condition so that the inseam trimmer can trim the upper, which it could not do if the tacks were there. So you go on indefinitely; it is just a continuous process" (R. Vol. 1, p. 643, lines 3–15).

Mr. Howard testified as follows:—

> "The manufacture of shoes is unique in that a great number of different successive operations are performed by different machines upon the shoe and its several parts. It is essential for the success of the operation of each machine that the shoe come to that machine in the right con-

dition for its operation, and that requires that the operations of machines which have previously been used upon the shoe shall have been performed properly. If such prior operations have not been properly performed, the work of that machine cannot be done right. On the other hand, proper performance of subsequent operations upon the shoe requires that each machine in turn shall efficiently prepare the shoe for the operation of the next machine to which the shoe is to be presented; and improper operation of any machine in the line may impair the efficiency of the operation of one or many of the machines which are to perform subsequent steps in the manufacture of the shoe. Frequently the combined effects of improper operations of a number of machines will accumulate as the shoe goes through the factory and will result in a poorly made shoe. It quite often happens that when the finished shoe is not right it requires some time to find out what machine is responsible, and frequently it will be found that the poor work is the combined effect of impaired efficiency of several machines which operate successively upon the shoe. It is therefore of the utmost importance that every machine shall be designed with a view to the succeeding machines, and so that it will deal accurately and efficiently with the precise shoe organization that comes to it from the preceding machines; and every machine must be kept in its most efficient and satisfactory condition. That requires incessant and careful supervision of the machines all along the line.

"Moreover, it is of great importance that each machine in the line be properly constructed from a mechanical standpoint. If a machine is poorly constructed, for example if some of the operating parts are weak, or if some of the movements given to any of the parts are too abrupt, or if the mechanical organization is not good, so that excessive wear and lost motion with consequent erratic operation results, a machine will frequently be put out of operation by breakage of parts or by necessity for adjustment to make the parts co-operate as they must to perform the machine's work. Every time a machine is put out of operation for any reason, shoes accumulate in front of that machine and there are no shoes for the operation of the machines for performing subsequent steps, so that those succeeding machines and their operators are idle and the whole factory suffers on account of that one disabled machine" (R. Vol. 2, pp. 2664–5).

Mr. Howard then explained at length the effect on the operation and work of other machines of a number of machines not

adapted for use with such other machines (R. Vol. 2, pp. 2265–2671), and added:—

> "The impairment of the efficiency of the operation of one machine by the failure of machines which have previously operated upon the shoe to do their work right extends all the way through the long line of machines which operate successively upon the shoe, and includes even those machines which perform minor operations. The difficulties which I have specifically discussed are merely illustrations of what may occur throughout the factory" (R. Vol. 2, p. 2671).

Therefore a team of the United Company's machines used together is more efficient and has a greater productivity and produces a better product than if the team were not used as a whole and an outside machine not specially adapted for use with other machines of the series were interjected into the series.

(*c*) The United Company, as we have shown, furnishes service with its machines free of charge. It is obvious that the United Company can furnish this service at less cost to itself for each machine if a series of machines is used than it can if a single machine or only a few machines of the series are used.

(*d*) Where a series of machines is used on each shoe, if the completed shoe is defective it is sometimes difficult to tell what particular machine of the series is at fault. Where a team of United Company's machines is used the United Company is responsible for the result, and by furnishing efficient machines and keeping its machines in proper adjustment and repair it maintains a high standard of product. Where an outside machine is introduced it may produce defective work.

The United Company owns the trademarks "Goodyear Welt" and "Goodyear Turn" and grants to its lessees the right to use them. Its machines have been especially developed to make "Goodyear Welts" and "Goodyear Turns." It is vitally interested in the quality of the product of its machines. Defective work affects the reputation of its machines.

When machines of different makes are used together on the same product it is not easy to tell which is responsible for defective work, and the results of poor work by one machine may run along and accumulate with each operation and produce unsalable or defective shoes and thereby affect the reputation of the United

Company's machines, even though they are not responsible for the defective work.

Mr. Winslow testified:—

> "The reputation for efficiency, both in quantity and quality of work done by our machines, is always in jeopardy and affected by the introduction of a machine of some other manufacturer into the series of operations done by our machines. The reputation of our Goodyear welt shoe, the standing of that shoe, is dependent upon the two different kinds of seams that are made by the two different machines used in the manufacture of that shoe. And the quality of work done is affected, and would be necessarily affected, by the way in which the work comes from, or is prepared by, one machine to go to the next machine.
>
> "Prior to the formation of the United Company there was a constant dispute between the different companies which made up the United Company as to who was responsible for a poor piece of work. As an illustration, which could be easily understood even by one not familiar with the manufacture of shoes, the very next operation from the lasting is the welt sewing. The welt-sewing machine operator would constantly lay the blame for poor work upon the lasting operator—the operator upon the lasting machine. The lasting machine operator would constantly blame the operator upon the welt-sewing machine.
>
> "Both those reasons have to do with the use of our tying clauses for the greatest and most successful production of our machines" (R. Vol. 1, pp. 866–7, lines 34–43, 1–12).

(*e*) The United Company also furnishes the best machines. This is proved by all the evidence and is found as a fact by the District Court. Having the best machines, adapted and developed to be used consecutively, as a team or plant, it is distinctly injurious to it to have an inferior machine introduced into the line, for at once the certainty and regularity of production is endangered, and royalties exposed to diminution.

One of the principal reasons for the formation of the United Company was to improve the service rendered with its machines and thus increase their productivity (*supra*, pp. 171–172). The three constituent companies prior to the formation of the United Company often had their machines in the same factory, but no one of the three could afford a really satis-

factory service. The extent to which the United Company was enabled to improve this service has been shown above (*supra*, pp. 186–188). The testimony of shoe manufacturers as to the efficiency and necessity of the service has also been referred to (*supra*, pp. 189–194). It has also been shown that as a result in part of this service and the use of the United Company's machines as a series or team the efficiency or productivity of each machine has increased to a startling extent. Thus each Goodyear welter operated on 66.7 per cent. more shoes in 1910 than it did in 1900, each Goodyear stitcher operated on 69.5 per cent. more shoes in 1910 than in 1900, each Goodyear turn sewing machine operated on 54.3 per cent. more shoes in 1910 than in 1900, each heel attaching machine operated on 62.3 per cent. more shoes in 1910 than in 1900, and each lasting machine operated on 24 per cent. more shoes in 1910 than in 1900 (*supra*, p. 197; Defs.' Ex. 218, R. Vol. 1, p. 428).

The foregoing conditions show beyond question that when a series of the United Company's machines is used the total number of shoes operated on by each machine is increased and therefore the amount of income on account of each machine carrying a royalty is proportionately increased; that the cost of the caring for each machine is reduced and the reputation of the defendants' machines is increased, factory space is economized because fewer machines will produce a larger output, and the regularity and certainty of product is assured. These results clearly justify the United Company (if any justification is needed) in granting the shoe manufacturer who uses a team of machines a better rate than is granted a shoe manufacturer who uses a single machine out of the team or only a portion of the machines constituting the team. Indeed, the shoe manufacturer may well insist that such wholesale or team rate is only fair to him, because when he so uses the machines the return to the United Company is greater on each machine. By granting such a team rate the shoe manufacturer is permitted to share in the economies resulting from the formation of the United Company and its consequent ability to furnish and care for a complete team of machines adapted for use together.

Mr. Winslow testified:—

"The restricted-use clause was adopted in our leases for the purpose of giving the company the proper return for the use of the machines when they were leased without initial premiums, and for that reason alone. With the terms of royalty fixed the company would not, without the initial premiums, receive a fair return for the machines unless they were used together as restricted in the leases. As a business proposition, after the initial premiums were removed, there would be no security whatever for a proper and fair return for the use of the machines without the restricted-use clause" (R. Vol. 1, p. 452, lines 29-38).

He further testified:—

"When I testified on cross-examination that the reason for the use of the tying clauses was not to cause more of our machines to be used and to make more people use them, but that the real reason was to increase the productivity of our machines, I meant that the clauses were introduced to increase the productivity of the principal machines and by increasing that productivity to reduce the number of machines required to do the work, and thereby reduce the cost to the company of the up-keep and service in connection with the machines, and at the same time increase the earnings of each machine.

"By limiting the use of one principal machine of the company to work which has been operated upon by other principal machines of the company, its use is confined to work done by machines with which we know that prompt and efficient service is furnished to keep that machine in proper condition to operate, and with operators who have been properly instructed in the operation of the machine at the expense of our company, and also with machines where new operators will be taught whenever they are needed. Now, of course, under those conditions we have a definite assurance as to the maintenance of the productivity of the machines and the quality of work that will be produced by those principal machines with which another principal machine is used.

This tendency in the operation of the tying clauses is clearly shown by the comparison in the exhibits showing the efficiency of the machines in 1911 over the machines in the year 1900. A relatively smaller number of machines are producing a larger number of shoes, resulting in less necessary investment in machines to produce a given product

and less relative expense to maintain those machines in condition to operate continuously, in the up-keep of those machines, and in the number of operators which must be instructed. The productive efficiency and quality of work done by any line of machines is only equal to that of the least efficient machine in the line.

. . . . . .

"With reference to this question of productivity, it would not be a business possibility for the company, without the requirement of initial premiums, to lease its machines on the terms of the restricted leases without the restrictions in those leases" (R. Vol. 1, p. 856, line 39; p. 857, line 39).

"While the restricted form of lease could not increase the number of our machines in use the two sets of machines were used in unison. The cost of the care of those machines was less per unit, and increased efficiency resulted because the same concern would from its branch office attend to the metallic machine so that it would not be delayed, or attend to the laster so that that would not be delayed" (R. Vol. 1, p. 550, lines 13–19).

"The manufacturers believe that we have the best machines, and they take them, first, for that reason. They take them on the limited lease system because it costs them less to equip their factories and they have the money that they would otherwise have in machinery to use to buy leather and other articles that they use, and they turn that money over two or three times a year. They know by experience that the life of a machine, while sometimes a long period, is many times a short period, and since the United Company was formed they have seen many improved machines. They know that if we improve a machine which they have without the license payment we will put the improved machine in their factory and take out the old one without any cost to them" (R. Vol. 1, p. 551, lines 5–17).

"The reputation for efficiency, both in quantity and quality of work done by our machines, is always in jeopardy and affected by the introduction of a machine of some other manufacturer into the series of operations done by our machines. The reputation of our Goodyear welt shoe, the standing of that shoe, is dependent upon the two different kinds of seams that are made by the two different machines used in the manufacture of that shoe. And the quality of work done is affected, and would be necessarily affected, by the way in which the work comes from, or is prepared by, one machine to go to the next machine" (R. Vol. 1, p. 866, lines 34–43).

(2) TESTIMONY OF SHOE MANUFACTURERS TO MERITS OF RESTRICTED LEASES.

The shoe manufacturers themselves appreciate the merits of the restricted forms of lease and prefer those forms to any others.

R. P. HAZZARD, manufacturer of 5,000 pairs of welt shoes daily, testified:—

> "When I started in for myself I adopted the plan of obtaining machines on the restricted leases because I considered it to our advantage to do so. Because in my judgment it was a necessity for the United Shoe Machinery Company to restrict in some way the use of those machines in connection with the machines paying a royalty, in order to make it practical for them to supply us with the agents' service which they give us, and that the saving in the machinery investment in our plant and the chances of new models coming up made the purchase of the machines in this manner better for us in a financial way as regards the investment of the machine, besides the advantage of the agents' services" (R. Vol. 1, p. 641, line 35; p. 642, line 2).
>
> "My reason for taking the restricted lease was primarily a question of finances, to save my money for working capital instead of tying it up in dead capital. Another reason was that I considered that the liability of loss in the replacement of a machine by a more up-to-date model would be less under the restricted lease than under the other lease. . . . I have never taken as much interest in the legal wording of the United Company's leases as I have in the personality of its people, and I have always had fair treatment from the United Company" (R. Vol. 1, p. 653, lines 10–20).

MARTIN E. WELCH testified:—

> "At the time we made up our minds to add a welt line of shoes I thought the United Company had the best machines and put them out on the best terms. I thought the restricted lease the best terms. First, because it allowed us the use of the money which would have to be put in machinery that at some time would be absolutely worthless; secondly, because we could tell almost to a dollar what the depreciation would be at the end, and thirdly, because I made a partner of the United Company. They owned the machines, and it was just as much to their interest to make the machines work to their fullest capacity

as it was to my interest to have them work to their fullest capacity. Again, when a man owns his own machine if a part breaks he must put it in, but if there are any poor parts in the United machines they paid for the parts. They have used me fair in that respect" (R. Vol. 1, pp. 709–10).

"As between the unrestricted lease and the restricted lease, in my judgment the restricted lease is preferable because, first, I can put into my business the money that I save instead of investing it in the machinery, so that I have more money; second, I can tell almost to a cent just what the depreciation is on that machinery—I call the return charges the depreciation; and, thirdly, I make a partner of the United Company. I have not a dollar invested in the machines, and their interest in the machines is fully as great as mine, and it is to their advantage to keep the machines working to their fullest capacity. That means less machinery for me to run in the factory, and it means a less investment for the United Company. It is true that under the unrestricted lease the United Company owns the machine, and the company draws the same royalty from that machine as it obtains from the other machine. . . .

"I do not see any advantage to the manufacturer in taking the unrestricted instead of the restricted lease, the advantage is with the restricted lease. . . .

"Before I changed to the restricted lease I had had the initial premium leases for about two years. I had practically all my machines on the initial payment basis and changed over from my own choice. I got back everything that was owed me" (R. Vol. 1, p. 713, lines 5–34).

FREDERICK ALLEN said:—

"When we equipped our new factory with machinery for making welt shoes we took the restricted form of lease. Of the three forms of obtaining machinery for making welt shoes—by purchase, by the independent lease, or by the restricted lease—in my judgment the restricted lease is the more advantageous for the manufacturer. I prefer that to purchase because I don't have to tie up our money in machinery, which as an asset is worthless as soon as it is installed. An investment in machinery has not any value for the purpose of obtaining credit; no one considers it an asset. Also the money is tied up so that a manufacturer is prevented from doing that much more business" (R. Vol. 1, p. 722, lines 6–16).

"I preferred the restricted form of lease because I am not obliged to tie up my money. There was a less invest-

ment of money if I took the machines under the restricted form of lease than if I took them under the unrestricted form" (R. Vol. 1, p. 723, lines 33–36).

CHARLES A. EATON testified:—

"We take a very large proportion of our machinery from the United Company. We chose the restricted lease because we felt that it was for our interest. That was because we were relieved from a large investment of capital, and because we believed that the development of shoe machinery was along that line and that we should get better and improved service by so doing.

"I have read the leases. The restrictions do not affect our activities at all. We have full confidence in the management of the company as indicated by their dealings with us since it was formed. They have not taken advantage of the technicalities of their leases to the extent that they could. They have been lenient in all their dealings and in the exchange of machines. Their policy has been very liberal, and they have kept the machines up to date. As new machines were brought out they have exchanged the old ones without any return payment or any charge to us, except for missing or worn parts and freight charges. Those are all the charges that have been made to us on account of the replacement of machines during these years of development since we have done business with the company" (R. Vol. 1, pp. 751–2).

EDWARD W. BURT testified:—

"We have always taken our machines on royalty leases, not paying initial charges. I have done that because I prefer not to tie up capital in machinery. It is a very great expense and, in securing credit, bankers never consider machinery worth a dollar" (R. Vol. 1, p. 740, lines 37–41).

C. WILLIS BENNET testified:—

"When I started out for myself I got my machinery from the United Company and from the Singer, the Union Special, and the Wheeler & Wilson Companies. I make from 800 to 1,400 pairs a day, depending upon the season.

"I took my machines from the United Company on the restricted form of lease without initial premiums. I chose that form because I had a very small capital when I started

and I didn't care to lock up so much money in machinery. I had been a superintendent and had saved some money. That is all I had to start with" (R. Vol. 1, p. 757, lines 40–45; p. 758, lines 1–4).

"As between purchasing machinery, or obtaining it upon an independent lease with an initial premium, or obtaining it on the restricted form of lease which I have, the restricted lease was the most advantageous because I had no money to tie up in machinery. Had I not been able to obtain my machines in that way, I would not have been able to start in business at all; never could have started if it hadn't been for the United Company. . . .

"I do not find anything irksome or difficult about the clauses in the leases limiting the use of our machines. I have read the leases" (R. Vol. 1, p. 759, lines 9–23).

(3) THE RESTRICTED USE CLAUSE DOES NOT REQUIRE A LESSEE TAKING ESSENTIAL MACHINES FROM THE UNITED COMPANY TO LEASE OF IT PRACTICALLY ALL OTHER MACHINES.

The fundamental charge of the petition, as we have shown (*supra*, p. 240), is that the defendants planned to acquire or obtain a monopoly by

A. Acquiring all concerns engaged in the shoe machinery business, and then

B. Refusing to sell or lease any essential machines, viz., lasting, welt sewing, outsole stitching, heeling, and metallic fastening machines, except on condition that the shoe manufacturer take from them "practically all other machines" which he required.

The United States relies upon the "Restricted Use Clause" to prove the second portion of this charge, namely, that the United Company refused to lease any of its essential machines, namely,

(1) Lasting machines,

(2) Welt sewing and outsole stitching machines,

(3) Heeling machines,

(4) Metallic fastening machines,

except on condition that the shoe manufacturer take practically all other machinery from it.

Unless, then, the Restricted Use Clause has the Effect of Requiring a Lessee taking Essential Machines to take Practically All Other Machinery from the United Company, it Fails to Support the Allegation of the Petition, and is Immaterial in the Present Case.

The charge is not that the United Company refused to furnish one of the so-called "essential" machines except upon conditions requiring the manufacturer to take from it the rest of the "essential" machines. The whole theory of this branch of the petitioner's case was that the manufacturer had to have the United Company's "essential" machines (that is, the five above enumerated), and that the United Company made use of its lawful patent monopoly of these machines and their controlling superiority to all others on the market to force upon the shoe manufacturers its much more numerous line of what the petitioner would presumably designate as "non-essential" machines and thus to exclude competitors and maintain an unlawful monopoly of such "non-essential" machines. It is clear, therefore, that the words, "practically all *other machines*," are intended to refer to machines other than the five kinds which the petitioner designates as "essential."

That the Restricted Use Clause has no such effect as that alleged is apparent from an examination of the leases themselves.

In the first place, it must be remembered throughout the discussion that the United Company never "refused to sell or lease" any of its machines, "essential" or "non-essential," except with the Restricted Use Clause in the lease. On the contrary, the United Company has always continued to offer all its machines, either for outright sale (as in the case of the General Department machines), or under leases containing no Restricted Use Clause, on the same or even more favorable terms than were in effect when the United Company was formed. The Restricted Use Clause merely offers an alternative form of lease at a reduced price to lessees desiring to use a number of the United Company's machines as a team. The wholly unfounded charge that the difference in price under the two forms of lease is prohibitive, or exorbitant, or in any way unreasonable, will be dealt with below.

Again, the Restricted Use Clause is not a "condition that the shoe manufacturer take from" the United Company "practically

all other machinery which he required," or all other machines even of a particular kind, or for a particular purpose. A lessee holding any machine under a lease containing this clause may take any other machines from competitors which he desires without in any way violating the terms of the Restricted Use Clause. The restriction is that he do not use certain of these machines *on the same shoes* on which he uses the United Company's machine. The clause merely limits the method of use of that particular machine. That this is not an immaterial distinction will appear below.

But disregarding for the moment both of these fundamentally erroneous statements in the petitioner's charge, the whole theory of this contention falls to the ground when it appears upon examination of the leases that instead of being customarily attached to the leases of the "essential" machines, and requiring these to be used only with the United Company's "other machinery," that is, the "non-essential" machines, the Restricted Use Clause was never used at all in any leases of the two machines which could most properly be described as "essential," namely, the Goodyear welt sewing and outsole stitching machines; and when used in leases of other so-called "essential" machines it restricts their use (with one or two minor exceptions noted below among the many forms of leases put out) not to use with other "non-essential" machinery, but solely to use with one or more of the other "essential" machines; and the Restricted Use Clauses, found in the leases of the "non-essential" machines, restrict them not to use with other "non-essential" machines, but to use with certain of the "essential" machines. Such a leasing system lends absolutely no support whatever to the charge that the "essential" machines were used to compel or even to induce by means of the Restricted Use Clause the purchase or leasing from the United Company of its "other machinery" or to exclude the "other machinery" of competitors. The Restricted Use Clause operated in exactly the wrong direction to support that theory; and the failure of this part of the petitioner's case was so complete as to make it rather astonishing that any one who had ever had an opportunity to read with any care the United Company's leases should ever have put forward such a claim.

The examination of the leases shows that a lessee, taking every

one of the so-called "essential" machines from the United Company under the restricted form of lease, is free to use with all of them on the same shoes any machines of any *other* kinds whatsoever obtained from competing makers, with only these two very small exceptions, namely, that if he uses under restricted lease a No. 5 Lasting Machine (which is only one of several kinds of lasting machines made by the United Company), he must, if he pulls over by machinery the shoes on which that lasting machine is employed, use the United Company's pulling-over machine in connection therewith; and that if he uses the United Company's heeling machine *on pegged shoes* (of which very few are made), he must use the United Company's pegging machine in connection therewith. With these two minor exceptions he is absolutely free to use all of the United Company's "essential" machines under restricted leases on the same shoes on which any other machines obtained from competitors are used, such as machines for stitching uppers, pulling-over machines, eyeletting machines, clicking machines, a large number of auxiliary machines (there being 43 in the Goodyear department alone), General Department machines (of which there are over 170 different kinds), and any other machines of any kind which may be useful in the manufacture of shoes.

That this statement, if true, completely disposes of the petitions charge must be apparent. It is only necessary to support the statement which has been made by a detailed examination of the leases of the so-called "essential" machines.

(*a*) Lasting Machines.

There were introduced by the Government, to show the form of lease upon which the United Company put out its lasting machines, nine different forms,—in addition to the forms in use before the United Company was formed and which the United Company continued to use.

Of the two forms introduced in respect to the **Consolidated hand method (welt) lasting machine** only one contains any limitation whatever to use with machines of any other department. That one limits the lasting machines held under it to use alone with the United Company's welt sewing and outsole stitching machines. There is no limitation or condition

as to any of what the Government refers to as "*other machinery*" whatsoever.

Of the two forms of lease for the **consolidated hand method (McKay) lasting machine** only one contains any limitation whatever to machines of any other department. That one limits the lasting machines held under it to use alone with United Company's metallic machines. There is no limitation as to any "*other machinery*" whatsoever.

Of the forms of lease introduced in respect to the United Company's **Ideal** and **Chase** lasting machines neither one limits to use with any machines other than the United Company's welt sewing and outsole stitching machines and metallic machines. In the case of the **Ideal** the restriction is to the United Company's welt sewing and outsole stitching machines only—there is no limitation or condition as to any "*other machinery*" whatsoever.

For the **McKay & Copeland lasting machines** one form of lease only (which was introduced by the United Company in 1903—four years after its formation) limits to any of what the Government refers to as "*other machinery.*" Of such "*other machinery*" that one limits to pegging machines only.

Of the two forms of lease introduced in respect to the United Company's **No. 5 lasting machines** only one contains any limitation to use with any other of the United Company's machines. That one so far as relates to what the Government refers to as "*other machinery*" limits to use with United Company's pulling-over machines only. This No. 5 Lasting Machine was not developed or put on the market until 1908—nine years after the formation of the United Company.

In the case of the other groups the lack of foundation for the Government's allegation is even more striking, if that is possible.

The second group which the Government refers to is—

(*b*) Welt Sewing Machines and Outsole Stitching Machines.

The Government introduced three forms of leases as showing the manner in which the United Company has leased these machines. There is not one of these leases which limits the machines to use with any "*other machinery*" whatsoever. As

a matter of fact, the United Company has never at any time in its existence put out any form of lease for its welt sewing and outsole stitching machines which limited such machines to use with the United Company's lasting, metallic fastening or heeling machines or any of them or which limited them to use with any "*other machinery*" whatsoever; or which prevented the use with the United Company's welt sewing and outsole stitching machines of any other machines of whatsoever kind or from whatsoever source obtained.

The next group mentioned by the Government is—

(*c*) Heeling Machines.

Of the three forms of lease in respect to the United Company's heeling machines only one contains any limitation whatsoever. Of such "*other machinery*," that one form (which was not adopted until 1904) restricts to pegging machines only.

The final group mentioned by the Government is—

(*d*) Metallic Machines.

The Government introduced seven forms of lease as showing the manner in which the United Company has put out its metallic machines; only three contain any limitation whatsoever to use with any of the United Company's other machines. In no instance is such limitation extended to the use of any of what the Government has referred to as "*other machinery*"—the limitation in the three cases which contain any limitation being to the United Company's lasting and to its welt sewing and outsole stitching machines alone.

The existence of a limitation to the United Company's pulling-over machinery in the one isolated instance in one form of lease for the No. 5 Lasting Machine adopted nine years after the formation of the United Company, and of a limitation to the United Company's Pegging Machine in the two instances mentioned, viz., one form of Lasting Machine lease adopted five years after the formation of the United Company and one form of Heeling Machine lease adopted six years after such formation, can hardly be taken as a demonstration of an "idea" alleged to have

been "conceived" by the defendants at the time of its formation years before—

> "*to refuse to sell or lease any of the essential machines* [(1) lasting machines, (2) welt sewing machines and outsole stitching machines, (3) heeling machines, and (4) metallic fastening machines] to the manufacturer of shoes *except on condition that he buy or lease of them practically all other machinery of whatever kind necessary or useful to* such manufacturer of shoes" (italics ours) (R. Vol. 1, pp. 991, 994).

As a matter of fact, an examination of all the leases offered in evidence will show that, with the exceptions noted below, in all those cases in which any limitation whatsoever exists it is always *to* one or more of the machines which the Government in its petition has designated as "essential" machines and never *from* such "essential" machines *to* "other" machines.

The only exceptions are that in a few instances, such as above pointed out, under particular forms of leases machines are limited to use with the United Company's pegging machines on pegged work, and in one instance, above noted (other than in the pulling-over leases themselves), there is a limitation to use with the United Company's pulling-over machines. The other limitations, where they exist, are all *to* one or more of the following of the United Company's machines, viz.: (1) lasting machines, (2) welt sewing and outsole stitching machines, (3) heeling machines, and (4) metallic machines.

The foregoing appears to be a complete answer to any claim that the United Company determined to "refuse to sell or lease any of the '*essential*' machines to the manufacturer of shoes except on condition that he buy or lease of them practically all *other machinery* of whatever kind necessary or useful to such manufacturer of shoes," but to further emphasize the lack of basis for such claim, consideration of some of the items of "*other machinery*" is illuminating. For example:—

"Other machinery" must include all of the machines used for attaching the soles of McKay shoes to their uppers. In 1899 such McKay sewed shoes amounted to 82,000,000 pairs out of a total of 172,000,000 pairs of shoes made in the United States; in 1904 to 94,000,000 pairs out of a total of 219,000,000 pairs made in the United States; and in 1910 to 105,000,000

out of a total of 278,000,000 pairs made in the United States (Defs'. Exhibit 215, Vol. 5, p. 322).

The United Company has never put out a lease to any manufacturer for any of its lasting or for any of its welt sewing or outsole stitching or for any of its heeling or for any of its metallic machines, or in fact for any of its machines of any kind, "*essential*" or otherwise, which contained any condition that such manufacturer buy or lease any McKay sewing machine from the United Company, or which limited the use of any of the United Company's machines to use with McKay sewing machines obtained from the United Company, or which precluded the use of any of the United Company's machines with McKay sewing machines obtained from any source whatever.

"*Other machinery*" must include all of the **machines used for the many operations in sewing together the parts of the uppers and linings** of all shoes made (100 per cent.). Such machinery in number of machines used represents a very large per cent. of all the machines used in the manufacture of shoes.

The United Company has never put out a lease to any manufacturer for any of its lasting or for any of its welt sewing or outsole stitching or for any of its heeling or for any of its metallic machines, or in fact for any of its machines, "*essential*" or otherwise, which contained any condition that such manufacturer buy or lease any machinery for performing any such operations from the United Company, or which limited the use of any of the United Company's machines to use with machines for such purposes obtained from the United Company, or which precluded the use of any of the United Company's machines with machines for such purposes obtained from any other source whatsoever.

"*Other machinery*" must include all of the **machines used for cutting or dieing out the various parts of the uppers and soles** of all shoes. This includes all **clicking** machines.

The United Company has never put out a lease to any manufacturer for any of its lasting or for any of its welt sewing or outsole stitching or for any of its heeling or for any of its metallic machines, or in fact for any of its machines, "*essential*" or otherwise, which contained any condition that such manufacturer buy or lease any such cutting or dieing-out machines or clicking machines from the United Company, or which limited

the use of any of the United Company's machines to use with cutting or dieing-out or clicking machines obtained from the United Company, or which precluded the use of any of the United Company's machines with cutting or dieing-out or clicking machines obtained from any other source whatsoever.

"*Other machinery*" must include all of the **machines for performing the various operations similar to those performed by the auxiliary machines of the Goodyear Department of the United Shoe Company, or other similar operations.**

The United Company never put out a lease to any manufacturer for any of its lasting or for any of its welt sewing or outsole stitching or for any of its heeling or for any of its metallic machines, or in fact for any of its machines, "*essential*" or otherwise, which contained any condition that such manufacturer should buy or lease any such auxiliary machines from the United Company, or which limited the use of any of the United Company's machines to use with such auxiliary machines obtained from the United Company, or which precluded the use of any of the United Company's machines with similar auxiliary machines obtained from any other source whatsoever.

"*Other machinery*" must include all **machines for inserting the eyelets and for inserting the lacing hooks** in all laced shoes made.

The United Company has never put out a lease to any manufacturer for any of its lasting or for any of its welt sewing or outsole stitching or for any of its heeling or for any of its metallic machines, or in fact for any of its machines, "*essential*" or otherwise, which contained any condition that such manufacturer buy or lease any eyeletting or lacing hook machines from the United Company or which limited the use of any of the United Company's machines to use with eyeletting or lacing hook machines obtained from the United Company or which precluded the use of any of the United Company's machines with eyeletting and lacing hook machines obtained from any other source whatsoever.

"*Other machinery*" must include all **machines for making and finishing all buttonholes and for attaching the buttons** of all buttoned shoes made.

The United Company has never put out a lease to any manufacturer for any of its lasting or for any of its welt sewing or outsole stitching or for any of its heeling or for any of its metallic

machines, or in fact for any of its machines, "*essential*" or otherwise, which contained any condition that such manufacturer buy or lease any button or buttonhole machinery of any kind from the United Company or which limited the use of any of the United Company's machines to use with button or buttonhole machinery obtained from the United Company or which precluded the use of any of the United Company's machines with button or buttonhole machinery obtained from any other source whatsoever.

"*Other machinery*" must include all **machines for treeing and finishing** all shoes made.

The United Company has never put out a lease to any manufacturer for any of its lasting or for any of its welt sewing or outsole stitching or for any of its heeling or for any of its metallic machines, or in fact for any of its machines, "*essential*" or otherwise, which contained any condition that such manufacturer buy or lease any treeing or finishing machinery from the United Company or which limited the use of any of the United Company's machines to use with treeing or finishing machinery obtained from the United Company, or which precluded the use of any of the United Company's machines with treeing or finishing machinery obtained from any other source whatsoever.

"*Other machinery*" must include all **machines for performing the operation of pulling over and the operations of the various auxiliary machines connected therewith** upon all shoes made which are so operated upon.

The United Company has never put out a lease to any manufacturer for any of its lasting or for any of its welt sewing or outsole stitching or for any of its heeling or for any of its metallic machines, or in fact for any of its machines, "*essential*" or otherwise, which contained any condition that such manufacturer buy or lease any pulling-over or auxiliary machinery from the United Company or (excepting in so far as in some forms of Pulling-Over Department leases the pulling-over machine and its auxiliaries are limited to use together) which limited the use of any of the United Company's other machines to use with pulling-over or auxiliary machinery obtained from the United Company or which precluded the use of any of the United Company's machines with pulling-over or auxiliary machinery obtained from any other source whatsoever. There is one exception that out of all the forms of lease put out by the United Company there was one

isolated form of lease for a No. 5 lasting machine (P.'s Ex. 21), which limited the No. 5 lasting machine when held on that particular form of lease to use with the United Company's pulling-over machine, when the shoes were pulled over by machine but not otherwise.

"*Other machinery*" must include all **machines for performing all of the various operations similar to those performed by the many different kinds of machines offered by the United Company for outright sale in its General Department.**

The United Company has never put out a lease to any manufacturer for any of its lasting or for any of its welt sewing or outsole stitching or for any of its heeling or for any of its metallic machines, or in fact for any of its machines, "*essential*" or otherwise, which contained any condition that such manufacturer buy or lease any machinery for performing any of such operations from the United Company, or which limited the use of any of the United Company's machines to use with General Department machines obtained from the United Company or which precluded the use of any of the United Company's machines with machines for performing such operations obtained from any other source whatsoever.

(4) THE RESTRICTED USE CLAUSES WERE NOT ADOPTED FOR THE PURPOSE OF EXCLUDING COMPETITORS' MACHINES.

We have shown above that the Restricted Use Clauses were adopted for the purpose of offering a wholesale rate to lessees desiring to use a team of the United Company's machines adapted for use together, and working most effectively together.

We have also shown that they do not require or even offer inducements to a lessee taking essential machines from the United Company to take of it practically all other machinery, or indeed any other machinery, and thus that they offer no support to the charge on which the petition is based. This being so, these clauses become immaterial in the present case.

However, we wish to call the court's attention to various other considerations supporting our showing that the Restricted Use Clauses were adopted solely for the purpose of offering reduced

rates to shoe manufacturers using a team of machines, and that they were not adopted for the purpose of excluding competitors' machines.

(a) THE FACT THAT THE UNITED COMPANY HAS ALWAYS OFFERED ALTERNATIVE LEASES CONTAINING NO RESTRICTED USE CLAUSES DISPROVES ANY INTENT TO COMPEL THE USE OF OTHER MACHINES.

There has never been a time when a lessee could not obtain machines of any department upon a form of lease containing no restrictions as to use with machines of other departments. Mr. Winslow testified (R. Vol. 1, pp. 440–1, lines 45, 1–2),—

> "There never has been a time when a lessee could not obtain the machines of any department upon an independent form of lease."

In 1911 Mr. Winslow gave to a committee representing the Manufacturers' Alliance a statement of the terms upon which lessees could then and could at all times previously obtain machines on unrestricted leases from the United Company. This statement is given in Defendants' Exhibit 40 (R. Vol. 5, p. 40).

Mr. Winslow testified with reference to this statement:—

> "Referring to defendants' Exhibit 40, the statement under the heading 'Goodyear welt and turn shoe machine and Goodyear outsole rapid lockstitch machine' represents the practice of the United Company at that time and prior thereto, from the date of the formation of the company and since that time, at least up to the time when this suit was brought. The statements in the three paragraphs under the heading 'Goodyear auxiliary machines' in defendants' Exhibit 40 are true of the company's practice with reference to the marketing of the Goodyear auxiliary machines at that time and prior thereto and up to the time of the bringing of this suit.
>
> "The statement (in defendants' Exhibit 40) under the heading 'Rex pulling-over machine' was true of the practice of the company at that time and prior thereto from the time when we first put out the pulling-over machine, and it has continued to be true of the company's practice up

to the time this suit was brought. We had been prepared to furnish machines in that way at any time and had issued leases in that form.

"The statement in the first paragraph under the heading 'Rex pulling-over system—Auxiliary machines,' in defendants' Exhibit 40, has reference to the pulling-over department alone, and the statements in the three following paragraphs under that heading were true of the practice of the company regarding the pulling-over auxiliaries up to the time the suit was brought.

"The statement under the heading 'Consolidated hand method lasting machine—U. S. M. Co. lasting machine, No. 5,' in defendants' Exhibit 40, is true of the company's practice with reference to those machines. The statements in that exhibit under the headings 'Metallic machines,' 'Heeling machines,' 'Clicking machines,' and 'General department machinery' are true of the company's practice and readiness to perform at that time and prior thereto and up to the time the suit was brought" (R. Vol. 1, p. 514).

Furthermore, the United Company has always been willing to permit a lessee holding a lease of a machine containing a Restricted Use Clause to cancel his lease and take in exchange an unrestricted form of lease. On pages 450 to 451 of the Record, Vol. 1, are given the names of nineteen shoe manufacturers who were offered unrestricted leases in exchange for their restricted leases.

The unrestricted leases carry the same royalty as the restricted leases; the only difference is that an initial payment is charged under the unrestricted leases with the single exception of the unrestricted lease of metallic machines adopted in 1901 by agreement with a committee of shoe manufacturers. In that lease no initial payment is charged, but instead the United Company is authorized to charge 10% more for fastening material used in the machine, the profit from the sale of which constitutes the only royalty that is charged under the lease.

In no instance where an initial payment is charged for an unrestricted lease has the amount of the payment been increased over what was charged prior to 1899, the date of the formation of the United Company, and in some cases the initial payment has been reduced, and in no instance has the royalty charged on any machine been increased

over that charged in 1899 (R. Vol. 1, p. 433, lines 29–32). On the contrary, certain of the initial payments previously required have been removed and the machines leased without the Restricted Use Clause on leases requiring no initial payment. Thus in 1899 $300 initial payment was charged for the Goodyear Welter and the same amount for the Goodyear Stitcher (R. Vol. 1, p. 515, lines 1–12, and Defs.' Ex. 41, Vol. 5, p. 44). The charge for some of the auxiliary machines was as much as $500 each (Defs.' Ex. 41, Vol. 5, p. 45). The lessee to-day can get his Goodyear machines without any initial payment, paying on the auxiliary machines only a small annual rental (Defs.' Ex. 230A, Vol. 5, p. 443), and the leases contain no clause restricting their use to use with other groups of machines. In addition the royalty on the turn machine has been reduced 50%.

The result is that a lessee to-day who does not wish to be bound by the Restricted Use Clauses adopted by the United Company can get leases without these clauses on better terms than were available in 1899, before the formation of the United Company, although the machines themselves have been much improved, numerous auxiliary machines have been added, and the cost of manufacturing machines has unquestionably increased.

It is obvious that if the defendants, as charged by the United States, had organized the United Company in order to insert clauses in the leases requiring the use of machines of different groups if the machines of one group were taken in order to oppress shoe manufacturers and obtain an unlawful monopoly, they would not have continued to offer machines of each group independently on as favorable or more favorable terms than before.

The District Court, referring to the contention that the leases of the United Company compel shoe manufacturers desiring to take certain machines from the United Company to take other machines which prior to the formation of the United Company they could obtain separately, said,—

> "The alleged plan of a refusal of what before could be had separately, as a means of compelling the taking of other machines, was a principal ground for invoking the Sherman Act" (R. Vol. 1, p. 1162).

After reviewing the various clauses in the leases, the District Court found that the Restricted Use Clause was the only one that

> "... has relation to the supposed scheme of using the power acquired by combination to refuse machines that before were separately obtainable, and to offer such machines only on condition that other machines of different kinds should also be taken" (R. Vol. 1, p. 1163).

The District Court, however, found not only that the Restricted Use Clause was lawful in and by itself, but that in view of the fact that machines on unrestricted leases are offered on as favorable terms as previously the United States must be held to have utterly failed to prove its contention.

Thus the District Court said,—

> "The restricted or prohibitive leases do not in themselves as documents prove the denial of the right to procure, as before, independent leases for individual machines. As matter of fact, independent leases which did give the right to use the machines with machines of other kinds, made by other machinery manufacturers, were always procurable. This was the general rule, and if there were any exceptions they were, so far as appears, inconsiderable.
>
> "It is a result of the consolidation that the United Company offers more attractive contracts for a group of machines of different kinds than for machines of one kind only; but as it still offers the contract for machines of one kind on as good terms as before it is difficult to see how that is detrimental to the shoe manufacturers.
>
> "The charge of this supposed scheme to deprive former customers of the right to use some machines unless they would use also others seems to have originated either in the erroneous assumption that a prohibitive lease was the only kind procurable, and that the former customer had no choice, or in disregard of the fact that it was merely an alternative form of lease. As the leases prove no such plan, whether of the extent alleged or of less extent, and as the evidence proves the exact contrary of what is charged, we think that the United Shoe Machinery Company is, upon the merits, entitled to a full clearance from this charge" (R. Vol. 1, p. 1163).

The Contention of the United States that the Prices Charged for Unrestricted Leases are Prohibitive is Utterly Unfounded.

The United States contended in the District Court that the initial payments charged for machines under the unrestricted leases were prohibitive. This of course is not the fact, because they are the same or less than the initial payments that manufacturers had paid and prospered under for many years before the United Company inaugurated the group form of leases from which the initial payments were eliminated.

The objection to the initial payment leases is not that the initial payments are exorbitant, but it lies only in the fact that the United Company's non-initial payment leases are more favorable.

No evidence was introduced by the United States as to the cost of building or the value of the machines, and there was absolutely no evidence that these initial payments were unfair. The United States did not attempt to show that the amount of the initial payments exceeded the difference between the return to the United Company when its principal machines are used as a team, and when they are used independently. In the case of the metallic lease adopted in 1901, where no initial payment was charged for the unrestricted lease, but the royalty was increased, where this form of lease was taken, over the amount charged under the restricted lease, the difference was only 10%.

The District Court said (R. Vol. 1, p. 1166):—

> "But surely, if the argument is made that there is coercion through an excessive price, such an argument can have no weight whatever for any purpose legal or ethical unless the fact that it is excessive affirmatively appears. From such evidence as is presented in this case as to the amount of initial charges upon independent leases we can draw no support for the charge of coercion through excessive charges."

Mr. F. C. Rand, vice-president of the International Shoe Company, a witness for the United States, testified that his company operated 1,635 machines taken from the United Company; that the cost of installing them under the restricted form of lease was between $10,000 and $12,000, and the cost under

the unrestricted form would be over $250,000, the royalty charged in both cases being the same (R. Vol. 1, p. 180, lines 38–45; p. 183, lines 37–38). The amount of the initial payment on each machine of the kind held by Mr. Rand is given in Defendants' Exhibit 41 (R. Vol. 5, p. 44). It is to be noted: *First*, that the amount stated by Mr. Rand as the cost of installation includes not only initial payments under the unrestricted form of leases of certain departments, but also the cost price of all General Department machines when purchased outright, which amounts to one-third of the total. The International Company by purchasing these General Department machines would avoid the annual rental otherwise payable on them; *Second*, that this total includes initial payments on Goodyear machines, the leases of which contain no clause restricting their use to use with other groups of machines, so that it would not be necessary to take the Goodyear machines on the initial payment form of lease to avoid the effect of the Restricted Use Clause; *Third*, that if a manufacturer desired to use machines without Restricted Use Clauses it would only be because he desired to use some but not all machines obtained from others, in which case he would not take machines of that kind from the United Company, and therefore would not pay the initial premiums required on such machines. This, of course, would reduce the total initial premiums paid by him. The more machines of others he took, the fewer would be the machines of the United Company which he used, and thus the initial payments made by him to the United Company would be proportionately reduced. In no possible case, then, would he be under the necessity of paying $250,000, or anything approaching that sum, because he wished to use a competitor's machines.

The International Company is one of the two largest shoe manufacturers in the world, having $25,000,000 capital, making 50,000 pairs of shoes a day, and operating twenty different factories (R. Vol. 1, p. 184). $250,000 (an average of $12,500 for each of the International Company's factories) is on its face a small sum to cover the cost of selling outright the General Department machines used in these twenty factories and furnishing the remaining machinery of the types manufactured by the United Company under conditions whereby the machines could be used at the option of the lessee independently of each other and not as part of a series.

That the Terms Charged for Unrestricted Leases are not Prohibitive or Arbitrary is Conclusively Shown by the Large Number of Machines which have been Taken on these Terms by Shoe Manufacturers.

On March 1, 1905, 1,798 out of a total of 1,851 welt and turn machines and 1,817 out of a total of 1,871 stitchers were out on unrestricted forms of lease, 603 out of a total of 8,129 metallic machines were on unrestricted leases, 1,500 out of a total of 1,652 heel attaching machines were on the unrestricted lease, and 1,956 out of a total of 5,280 lasting machines were on unrestricted leases (R. Vol. 1, pp. 448–9).

Mr. Winslow testified that in 1905 seven hundred and six manufacturers had principal machines of the United Company on unrestricted leases. "There were 186 unrestricted leases of principal metallic machines, 536 unrestricted leases of heel attaching machines, and 322 unrestricted leases of lasting machines" (R. Vol. 1, p. 976, line 43; p. 977, line 5).

As illustrating the extent to which manufacturers chose unrestricted leases and paid initial premiums, Mr. Winslow had compiled statistics for the Hand Method McKay Lasting Machine for each year from 1899 to 1911, as follows:—

March 1, 1899, to December 31, 1899, independent lease 185, restricted lease 250; in 1900, independent lease 65, restricted lease 283; in 1901, independent lease 143, restricted lease 415; in 1902, independent lease 115, restricted lease 425; in 1903, independent lease 72, restricted lease 385; in 1904, independent lease 54, restricted lease 233; in 1906, independent lease 59, restricted lease 293; in 1907, independent lease 36, restricted lease 247; in 1908, independent lease 47, restricted lease 159; in 1909, independent lease 54, restricted lease 169; in 1910, independent lease 21, restricted lease 200; in 1911, independent lease 18, restricted lease 214 (R. Vol. 1, p. 478, line 36–p. 479, line 2).

In 1911, 23,404 Goodyear, metallic, heeling, and lasting machines, including auxiliaries, were out on leases containing no Restricted Use Clauses (except that the auxiliaries were limited to use with the principal machines) out of a total number of machines in those departments under lease of 47,985. In other words, about half the total number of machines in these departments were leased on unrestricted leases (R. Vol. 1, p. 449, lines 25–32).

It is to be noted that the smallest number of unrestricted machines was in the Metallic Department. An unrestricted lease in this department can be obtained without initial payment for 10% more royalty than was charged on the restricted form, surely a small discount for a wholesale use of the machines as a team.

(b) OTHER CONSIDERATIONS SHOWING THAT THE RESTRICTED USE CLAUSES WERE NOT ADOPTED FOR THE PURPOSE OF EXCLUDING COMPETITORS' MACHINES.

That the Restricted Use Clauses are intended to offer wholesale prices to shoe manufacturers desiring to use a series or team of the United Company's machines and that they were not adopted to require an exclusive use of the Company's machines or to arbitrarily exclude competitors' machines is further shown by the following considerations:—

1. The clause, as we have shown above, does not require the lessee to use the United Company's machines at all. On the contrary, it prohibits the use of the United Company's machines except on certain conditions, that is, when they are used as part of a team.

The only effect, therefore, that it can have is to induce the shoe manufacturer to use a team of the United Company's machines because he thereby gets a wholesale price instead of a retail price.

Had the United Company planned, as charged, to refuse to lease any of its essential machines unless the lessee bought or leased practically all other machinery of it, or had it intended to require an exclusive use of its machines, or to arbitrarily exclude competitors' machines, it is obvious that it would have adopted a very different kind of provision to carry this purpose into effect.

2. The United Company, as we have shown, eliminated the clause occurring in a number of the leases put out by the constituent companies requiring the lessee to take additional machines of the same kind as those leased, if he needed them for additional work. The effect of this clause was to require an exclusive use of the machines of the kind leased. The fact that the United Company used this clause only to a limited

extent after its formation, and discarded it entirely after 1907, shows that it did not intend by its leases to require even an exclusive use of machines of the particular kind which the shoe manufacturer desired to take.

3. The Restricted Use Clause was not introduced at once upon the formation of the United Company, but only from time to time as special conditions, such as a reduction or elimination of an initial payment, called for its use. Thus, as we have shown, it was introduced into the metallic leases only when the cost of copper wire used by the lessees in the machines, the purchase of which afforded the royalty, compelled the United Company to introduce this clause or increase the price at which it sold the wire. It was not introduced into the heeling leases until the fall of 1904, nearly six years after the formation of the United Company, and was then introduced as partial compensation for the elimination of the initial payments previously charged for the Goodyear machines.

4. The United Company never inserted any Restricted Use Clause in its leases of Goodyear machines, restricting their use to use with machines of other departments. The Goodyear Welter and Stitcher are in many respects the most important machines manufactured by the United Company. Petitioner's patent expert Chapman testified that they were the only essential machines for welt shoes (R. Vol. 2, p. 2794). They are fundamental in its welt system and the largest royalty is paid for their use. Had the United Company contemplated refusing to lease its important or essential machines, unless the manufacturer took or used other machines furnished by it, it surely would have restricted the use of its Goodyear Welter and Stitcher.

5. The United Company sells outright 172 General Department machines which were invented or acquired by it after its formation (Defs.' Ex. 227). More than one-half the machines which it manufactures are General Department machines.

In other words, while the constituent companies prior to the formation of the United Company sold no machines, the United Company now sells outright more than half of the kinds of machines it makes. No other machines furnished by the United Company are restricted to use with any General Department machines. Had the United Company planned to compel shoe manufacturers leasing its machines, whether essential or otherwise, to take all

or a large part of the other machines required by them, it would certainly not have sold its General Department machines outright to any shoe manufacturer whether or not such shoe manufacturer took or used any of its other machines nor continued to lease all its other machines without any reference to whether the lessee bought any of its General Department machines.

6. The effect of the Restricted Use Clauses is very limited. Thus, a shoe manufacturer holding machines under restricted use leases can, without violating the restrictions applicable to such machines, obtain from competitors and use in connection with the United Company's machines the larger portion of the machines required by him in his factory. We consider this limited effect of the Restricted Use Clauses more in detail below.

(c) THE EFFECT OF THE RESTRICTED USE CLAUSES IS VERY LIMITED. A SHOE MANUFACTURER HOLDING MACHINES UNDER RESTRICTED LEASES CAN, WITHOUT VIOLATING THE RESTRICTIONS, OBTAIN FROM COMPETITORS, AND USE IN CONNECTION WITH UNITED COMPANY'S MACHINES BY FAR THE LARGER PORTION OF THE MACHINES REQUIRED BY HIM.

The restrictions contained in the United Company's restricted use leases, as we have shown above, limit the use of the machines to use in connection with only a few of its principal machines which are peculiarly delicate in their operation, which have, as we have stated, been constructed for use together, which are essential to the integrity of a shoe, and which comprise only a very small proportion of the total number of machines required by a shoe manufacturer.

As we have shown above, these so-called principal machines are restricted to use in certain cases with each other, but they are not restricted to use with any other machines, and while other machines are restricted to use with the principal machines, they are not restricted to use with each other. There are then no restrictions in any of the leases of any kind of machines which restrict the use of the leased machines except to use in connection with one or more of the following, viz., the Goodyear Welter and Stitcher (but not the 43 Goodyear Auxiliary Machines) Lasting Machines, Heeling Machines, Metallic Machines, and Pegging

Machines. The only exception to the foregoing statement is that the No. 5 Laster is limited to use with the Pulling-over Machine.

The result is that, with the single exception above noted, requiring a lessee of a No. 5 Laster to use it in connection with the United Company's Pulling-over Machine, a shoe manufacturer who leases from the United Company under restricted leases a Welter and Stitcher, a Lasting Machine, a Heeling Machine, a Metallic Fastening Machine (and, if he makes pegged shoes of which kind very few are made, a Pegging Machine) can use in connection with them, or in connection with any other machine leased from the United Company, any other kinds of machines he desires, whether obtained from competitors or not, without violating any Restricted Use Clause.

Thus he can take from competitors and use in connection with any machine he may lease from the United Company any one or all of the 43 different kinds of Goodyear Auxiliary Machines, any one or all of the 172 different kinds of General Department Machines, any Pulling-over Machines, Eyeletting Machines, Clicking Machines, Heeling Machines, or McKay Sewing Machines.

The Restricted Use Clause thus has a very limited effect.

Defendants' Exhibit 230 (R. Vol. 1, p. 456) shows the number of Pulling-over, Lasting, Heeling and Metallic Machines, and Welters and Stitchers required in factories making from 100 to 450 pairs of shoes per day. Only 7 such machines are needed in a factory making 100 pairs per day; only 12 in a factory making 450 pairs per day. In the manufacture of McKay shoes, the Welters and Stitchers are not needed, so that a factory making 450 pairs per day would require only 8 of these machines (R. Vol. 1, p. 456, lines 10–13). Out of a total of 1,150 factories which used the United Company's machinery in 1911, about half made less than 450 pairs per day (R. Vol. 1, p. 455). In a factory making 600 pairs of turn shoes only 6 such machines are needed, and in a factory making 4,800 pairs per day only 23 (Defs.' Ex. 249, R. Vol. 1, p. 506).

A shoe manufacturer, then, who leases from the United Company under restricted leases 12 machines of the kinds above mentioned in a factory making 450 pairs of welt shoes daily, or 8 of such machines in a factory making 450 pairs of McKay shoes daily,

or 6 of such machines in a factory making 600 pairs of turn shoes, can, at his option, take from competitors or from the United Company any one or more of 43 different kinds of Goodyear Auxiliary Machines, 172 General Department Machines, any eyeletting machines, insole machines, lacing machines, clicking machines, or any other kinds of machines, and use them in connection with any machines of any kind whatsoever leased from the United Company on restricted leases without violating any Restricted Use Clauses in such leases.

The foregoing limited effect of the Restricted Use Clauses is illustrated by the machines in the factory of R. P. Hazzard, who makes about 5,000 pairs of Goodyear Welt shoes per day (R. Vol. 1, p. 641, lines 9–10), and who, therefore, is one of the large manufacturers, and who takes from the United Company his welters, stitchers, lasting machines, heeling machines and metallic machines. A complete list of the machines in his factory is given in Defendants' Exhibit 262 (R. Vol. 5, p. 707). This company has in all 746 machines. 419 of these machines were obtained from other persons than the United Company and can be used in connection with any machine which the United Company makes without violating any restriction contained in any lease which it puts out. Of the remaining 327 machines which are furnished by the United Company only 121 including 14 pulling-over machines are machines to use with which any other machine made by the United Company is restricted in any of its leases. In other words, out of a total of 746 machines actually used by Mr. Hazzard's Company any one or all of 625 machines whether or not obtained from a competitor can be used in connection with any machine put out by the United Company on a restricted lease without violating any restriction contained in any such lease.

J. Brown & Sons' factory has a capacity of 7,500 pairs of McKay and Standard Screw shoes a day (R. Vol. 1, p. 730, lines 14–15). It is, therefore, one of the fifteen or sixteen largest factories in the country (R. Vol. 1, p. 455). A complete list of the machines in his factory is given in Defendants' Exhibit 236 (R. Vol. 5, p. 671). This company has a total of 424 machines. 296 of these machines were obtained from other persons than the United Company, and can be used in connection with any machine which the United Company makes without violating any restric-

tion contained in any lease which the United Company puts out. Of the remaining 128 machines furnished by the United Company only 53 are machines to use with which any other machines made by the United Company are restricted in any of its leases. In other words, out of a total of 424 machines actually used in this factory any one or more of 371 machines could be bought from a competitor and used in connection with any machine put out by the United Company without violating any Restricted Use Clause in any lease.

It seems self-evident that Restricted Use Clauses which, as in the case of J. Brown & Sons' factory, permit a lessee to use in connection with any of the United Company's machines he may take or wish to take 371 machines of competitors out of a total of 424 machines needed by him can hardly be said to show an intent to exclude competitors' machines, or, as alleged in the petition, an intention to require a lessee taking essential machines to take practically all other machinery from the United Company.

Furthermore, Each of the So-called Principal Machines is not Restricted to Use with all Other Principal Machines.

We have shown above that the only machines to use with which other machines are restricted are the two principal Goodyear Machines, viz., the Welter and Stitcher, Lasting Machines, Heeling Machines, Metallic Fastening Machines, and Pegging Machines with the single exception that the No. 5 Laster is restricted to use with the Pulling-over Machine.

However, the restricted leases do not restrict the use in most cases to all of the above-mentioned machines. Even in the case of the principal machines themselves this is not true. The result is that a shoe manufacturer can take various principal machines of competitors which he may desire to use and use them in connection with the United Company's principal machines of other kinds without taking all of such other principal machines from the United Company on unrestricted leases.

To illustrate:—

The Goodyear Welter and Stitcher are not restricted to use with any other machines whatsoever.

The Metallic Machines are restricted to use with the Goodyear Welter and Stitcher and the Lasting Machines.

The Heeling Machines are restricted to use with the Goodyear Welter and Stitcher, Lasting, Pegging, and Metallic Machines.

Lasting Machines are restricted:—

The Hand Method Welt to the Goodyear Welter and Stitcher.

The Hand Method McKay to the Metallic Machines.

The No. 5 to the Goodyear Welter and Stitcher, Pulling-over and Metallic Machines.

The other lasting machines have become practically or entirely obsolete.

The McKay Sewing Machine, when leased and not purchased, is restricted to use with the Lasting Machine.

A shoe manufacturer who does not desire to take all restricted or all independent leases from the United Company and who desires to use certain machines of the above classes obtained from competitors may therefore take the following, among many, combinations of machines and use them on the same shoes without violating any Restricted Use Clause and with very slight additional expense for such unrestricted or independent leases as are required. In no case will he be required to make an initial payment for his Goodyear machines.

FOR MAKING WELT SHOES.

No. 1. United Company's Goodyear Welter, Stitcher and Auxiliaries.
United Company's Metallic Machines on unrestricted 10% lease or initial payment lease.
Competitor's Heeler and Laster.

No. 2. United Company's Goodyear Welter, Stitcher.
Competitor's Auxiliaries.
United Company's Metallic Machines on restricted lease.
United Company's Lasting Machine on restricted lease.
Competitor's Heeler.

In this combination he will not be required to take any initial payment lease from the United Company.

No. 3. United Company's Welter and Stitcher, with either the United Company's or Competitor's Auxiliaries.
Competitor's Metallic Machines.
United Company's Hand Method Welt Laster on restricted lease.
Competitor's Heeler.

In this combination he will not be required to take any initial payment lease from the United Company.

No. 4. United Company's Welter and Stitcher with or without Auxiliaries.
Competitor's Laster.
United Company's Metallic on unrestricted 10% lease or initial payment lease.
United Company's Heeler on independent lease.

No. 5. United Company's Welter and Stitcher as above.
United Company's No. 5 Laster (on independent lease).
United Company's Metallic on restricted lease.
Competitor's Heeler.

No. 6. Competitor's Welter, Stitcher, and Auxiliaries.
United Company's Laster on independent lease.
United Company's Metallic on unrestricted 10% lease or initial payment lease.
United Company's Heeler on independent lease.

FOR MAKING MCKAY SHOES.

A manufacturer may take

No. 1. United Company's McKay Sewing Machine.
United Company's Hand Method McKay Laster—restricted.
United Company's Metallic—restricted.
Competitor's Heeler.

In this combination he need take no initial payment leases from the United Company.

No. 2. Competitor's McKay Sewing Machine.
United Company's Hand Method McKay Laster—restricted.
United Company's Metallic—restricted.
United Company's Heeler—restricted.

In this combination he need take no initial payment leases from the United Company.

No. 3. Competitor's McKay Sewing Machine.
Competitor's Laster.
United Company's Heeler—independent lease.
United Company's Metallic—unrestricted 10% lease or initial payment lease.

No. 4. Competitor's McKay Sewing Machine.
Competitor's Metallic Machines.
United Company's Heeler—independent lease.
United Company's Laster—independent lease.

No. 5. Competitor's McKay Sewing Machine.
Competitor's Laster.
Competitor's Heeler.
United Company's Metallic on unrestricted 10% lease or initial payment lease.

No. 6. United Company's McKay Sewing Machine.
United Company's Laster—independent lease.
Competitor's Heeler.
Competitor's Metallic Machines.

No. 7. United Company's McKay Sewing Machine—restricted.
United Company's Laster—restricted.
United Company's Metallic—restricted.
Competitor's Heeler.

In this combination he need take no initial payment lease from the United Company.

If a manufacturer has a full line of the United Company's Goodyear Machines, Lasting, Metallic and Heeling Machines on restricted leases and wants to use with them a competitor's

lasting machines, he need only change his heeling and metallic machine restricted leases to independent leases.

To change to a competitor's metallic machine he need only put his heeling machines on independent leases.

To change to a competitor's heeling machine he need not take unrestricted leases of any of the other machines. None of them is restricted to use with the heeling machine.

The foregoing are only a few illustrations of the many combinations available to a lessee desiring to equip his factory partially with United Company's principal machines, and partially with a competitor's principal machines.

Had the United Company intended by the use of the Restricted Clauses to exclude competitors' machines, it would obviously not have so drawn the clauses as to permit shoe manufacturers to use its machines in connection with competitors' machines, not only by taking initial payment leases, but even under the restricted leases with so little interference on account of the restrictions. The conclusion is obvious that the restricted clauses were not intended to exclude the use of competitors' machines.

(5) REASONS FOR ADOPTION OF "AUXILIARY RESTRICTED USE CLAUSE."

The "Auxiliary Restricted Use Clause" restricts the use of auxiliary machines to use on shoes operated on by the principal machines of the department.

This clause was used by the constituent companies, and the United Company merely continued the practice.

The larger number of auxiliary machines are in the Goodyear Department, and the reasons for the use of this clause can perhaps be best explained in connection with the Goodyear machines. The principal reasons for the use of this clause are as follows:—

1. The principal machines and the auxiliary machines as a rule perform practically a single operation, such as welting, pulling-over, or heeling. The auxiliary machines were originated and developed to assist the principal machine with which they are used, and are adapted for that particular purpose. For practical purposes they constitute a single machine. The principal machine or machines and the auxiliary machines used

in connection therewith are therefore leased as a unit, the auxiliaries being restricted to use with the principal machines, as this is the purpose for which they are taken by the lessee.

2. The United Company prefers not to put out machines of the kinds it leases unless it assures their being satisfactory by repairing them and keeping them in proper operating condition. A group of machines it can care for at a more or less ascertained price. A single auxiliary machine would be costly to care for by itself.

Mr. Winslow testified:—

> "I will state one reason why the United Company has not adopted a form of lease for the Goodyear auxiliary machines which would permit them to be used in connection with welters and stitchers manufactured by other companies, upon payment of a royalty. Of course our machines are all taken care of in the factories, and the expense of taking care of individual machines would be very large and no prices have been established for that. It was not the policy of the Goodyear Company, and we have developed along the same lines trying to furnish to manufacturers the greatest amount of help that we could in manufacturing Goodyear welt shoes, and it was only on these lines that we could see how to give the manufacturer the greatest value for the money. We spent large sums in developing these auxiliary machines, perhaps much in excess of their value as machines, or what we could charge for, but there was every incentive to do it to develop the manufacture of the shoes made by the principal machines" (R. Vol. 1, p. 544, lines 23–39).

3. As a matter of historical growth the principal machine of a group has been developed first and the auxiliary machines have been developed later to assist the work of the principal machine. When an auxiliary has been developed, therefore, the situation has been that the lessees already had the principal machine under leases requiring them to pay a specific royalty for each pair of shoes on which the principal machine was used. The lessor, having originated a new auxiliary machine, was therefore confronted with the question of whether he should put the machine out on an independent lease, charging a separate and additional royalty for its use, or should let the shoe manufacturer who was already using his principal machine have the new

auxiliary without additional royalty. It has always been the practice of the United Company and its predecessors to furnish lessees of its principal machines with auxiliary machines, as they have been successively developed, without requiring payment of any additional royalty. They have therefore furnished to a lessee a new auxiliary machine when it was developed, restricted to use with the principal machine the lessee already held, without exacting any additional payment except in some cases a small rental or initial payment. They have received their return for the use of the new machine indirectly through the increased use and efficiency of the principal machine on which royalty was paid. It is obvious that they could not be asked to furnish the new auxiliary machine without exacting any additional royalty for its use unless its use was so restricted, for otherwise they would have received no return whatsoever for the machine.

It is further obvious that as a practical business matter it was necessary to lease these machines as a group for a single royalty, which could only be done by restricting their use in this way. For example, the net royalty charged for Goodyear machines when used on men's shoes was four cents per pair (P.'s Ex. 24). It would have been impossible to distribute this royalty over the forty-five machines included in the Goodyear Department. Furthermore, as each new machine was put out it would have been necessary to increase the total royalty for the group by charging a new royalty on the new machine or to readjust the royalties on all outstanding machines. Such a readjustment would have been wholly impracticable.

4. The principal machines do better and more work when auxiliary machines are also used. It is to the advantage of both parties to furnish the lessees with auxiliary machines, which assist the principal machines, increase their productivity, and improve the quality of their work. The shoe manufacturer's output and the company's royalties are both increased. It therefore finds it to its interest to furnish lessees with auxiliary machines to be used in connection with the principal machines for the same reason that it finds it advantageous to furnish efficient repair service to lessees without making any charge for such service, believing thereby that the increased use of the principal machine will compensate it.

5. The royalty paid by the lessee is based on the number of

shoes on which the principal machines are or could be used. This at once presents a serious problem, namely, the problem of checking up the amount of the use of each machine. In the case of a large group of machines, such as the Goodyear Department group, where there are two principal machines and forty-three auxiliaries, it would be almost impossible to check the actual use of each machine, particularly in view of the fact that some of the auxiliaries are useful only on particular kinds of shoes and are not used at all on other kinds. It is easier to check the use of the principal machine or machines, which are always used, especially when, as in the case of the Goodyear Welter and Stitcher, they have recording mechanisms which show approximately the amount of their use. It would not be practicable to place such mechanisms on most of the auxiliary machines. The principal machines are therefore used as measuring machines to measure the payment required for the use of the entire group (R. Vol. 1, p. 442, lines 15–21). No independent charge is made for the use of the auxiliary machines except in some cases a small annual payment, but they are restricted to use with the principal machines, and thus the payment for their use is received indirectly through the royalty on the principal machines.

(6) THE "AUXILIARY RESTRICTED USE CLAUSE" DOES NOT RESTRICT THE PRINCIPAL MACHINES TO USE WITH THE AUXILIARY MACHINES NOR RESTRICT THE USE OF THE AUXILIARY MACHINES TO USE WITH EACH OTHER.

The "Auxiliary Restricted Use Clause" as a rule does not restrict the principal machines to use with the auxiliary machines. The lessee for example, who has the Goodyear Welter and Stitcher may use as many auxiliary machines obtained from others in connection with them as he pleases. Furthermore, the auxiliary machines are not restricted to use together; the lessee may use Goodyear auxiliaries and auxiliaries obtained from others on the same shoes. Finally, a lessee is not required to use auxiliary machines to full capacity, this clause being applicable only to the use of the principal machines; for instance, in the case of the Goodyear Welt set, to the Welter and Stitcher.

And the "Exclusive Use Cancellation Clause" is likewise applied only to the use of the principal machines, so that the United Company cannot cancel its leases of machines if Goodyear auxiliaries obtained from others are used.

A lessee of the Welter and Stitcher is furthermore under no obligation to take any auxiliary machines unless he wishes to do so.

The lessee can, therefore, freely take and use Goodyear auxiliary machines obtained from others in connection with any of the United Company's machines he may have. Many of these auxiliary machines are important, expensive machines. Had the United Company intended to compel lessees to use its machines exclusively and to exclude competitors' machines, it would surely have required that lessees using its principal machines must also take and use its auxiliary machines.

LEGALITY OF THE "RESTRICTED USE CLAUSE."

(7) THE RESTRICTED USE CLAUSE IS A NORMAL PROVISION ADOPTED TO ACCOMPLISH A LEGITIMATE BUSINESS PURPOSE, BENEFICIAL TO BOTH THE LESSOR AND LESSEE, AND IT IS THEREFORE LAWFUL.

The "Restricted Use Clause," where applied to principal machines, restricts the use of the principal machines of one department to use on shoes operated upon by certain of the principal machines of another department.

We have shown above that this clause was adopted for proper commercial reasons, namely, to grant wholesale terms where certain of the United Company's principal machines are used as a team or series, and the return to the United Company is consequently increased because of the increased productivity of the machines, and the cost of service is consequently decreased. The clause was therefore adopted for the purpose of furthering the United Company's business by enabling it to offer a wholesale rate to a lessee using its principal machines in a wholesale manner. It is therefore a normal agreement, adopted for a legitimate business purpose, beneficial alike to the lessee and the lessor, and not prohibited by the Sherman Act unless it is of such an inherently wrongful character that its use is

necessarily unlawful no matter with what intent it is employed. The contention that it is inherently unlawful we submit is without foundation.

It is necessary first to analyze the effect of the clause. As we have shown, it does not require the lessee to use any other machines of the United Company nor does it prohibit it from using competitors' machines. The clause merely defines the character of the use of the machines, which the lessee is authorized to make by the terms of the lease. It grants the lessee the use in a limited and defined field of a machine which without such grant he could not have used at all. The District Court (Brown, J.) said of its effect, referring to it as the "Tying Clause" (R. Vol. 1, p. 1163):—

> "'Tying,' therefore, does not mean that the manufacturer is required to agree, or agrees not to use the machines of others, but merely that he has secured only limited rights of use, and that if he exceeds such limited rights he may lose his lease. It is not a question of the legal effect of the lease, but of the practical consequences of securing only restricted rights of use. *The term is misleading in its implication that the manufacturer is bound by contract not to use the machines of others. He is bound only not to use the leased machinery in violation of the terms of the lease*" (italics ours).

•

The fault, then, which the United States finds with this Restricted Use Clause is not that it imposes an obligation on the lessee not to use the machines of others or that it requires the lessee to use the United Company's machines, because it contains no such provision, but, on the contrary, that it forbids the use of the United Company's machines except on certain conditions.

If a lessee holding the United Company's principal machines on restrictive leases obtains an entire series of machines from a competitor, he can, so far as this clause is concerned, use them exclusively and discard the United Company's machines. If he obtains a competitor's machines of only one or more departments, he can also use them as much or as little as he pleases. The only restriction is that if he does use them on certain shoes he cannot use certain of the United Company's machines of other departments on the same shoes without giving up his

leases of such machines of other departments, making initial payments on the machines he desires so to use, and getting unrestricted leases.

If, for example, the lessee has a No. 5 lasting machine on a restricted lease, it can be used only on shoes operated on, or to be operated on, by the United Company's Welter, Stitcher, Pulling-over Machine and Metallic Machine. If the lessee obtains a metallic machine from a competitor, then as each shoe is started through the factory the lessee is free to use the competitor's metallic machine on it or the United Company's Metallic Machine. If he does use the competitor's metallic machine, however, he must use some competitor's lasting machine, or last by hand, or change his lease of the No. 5 machine, paying $300 initial premium and taking an unrestricted lease of the machine.

The only effect of the Restricted Use Clauses, then, is that the lessee as each shoe goes through his factory is forced to choose between (1) using on it certain of the principal machines of the United Company as a team and paying the wholesale rate or royalty for their use, or (2) using a team or series of some competitor's machines and discarding certain of the United Company's machines, or (3) using one or more groups of United Company's machines and one or more groups of competitor's machines, in which case he must in the case of certain of such machines of the United Company obtain unrestricted leases and pay the initial payments required for such leases. In other words, the effect is to make the shoe manufacturer choose between paying the wholesale rate for the use of a series of the United Company's machines, if he desires to use them as a series, or the retail rate on certain of the machines, if he desires to use them independently in a retail manner in connection with machines of other kinds obtained from others.

The only complaint that a shoe manufacturer can make is that if he desires to use only one or more groups of the United Company's machines, and not the entire series, he must pay more for the use of each group than is paid by the manufacturer who uses them as a series.

What possible right has a shoe manufacturer to demand that the United Company market separate machines forming part of a series adapted for use together for the same price per machine that is charged when the entire series is taken?

The shoe manufacturer desiring to take the series has far more right to ask that he be given a reduced price.

A manufacturer of locomotives cannot be required to sell the various parts of the locomotive, namely, the boilers, wheels, axles, etc., at prices which will aggregate no more than the price of the complete locomotive. The Pullman Company, which leases Pullman cars, is not required to lease separately the parts which go to make up its car, namely, the wheels, body, axles, etc., at prices which exactly aggregate the prices charged for the complete car.

In all these cases the manufacturer can furnish the series of machines or the completed article cheaper than he can furnish the units separately. The purchaser or lessee desiring the series of the completed article may properly be given a share of the increased profit resulting from his wholesale use.

The District Court said of the effect of these clauses:—

> "We are unable to see that a shoe manufacturer has any just cause of complaint that the defendants offer him and their other customers restricted leases. One who refuses these leases and takes the independent leases may complain that other shoe manufacturers are getting their machinery on lower terms; but the royalty rate will be the same, and the cost of initial payments is fixed and may be weighed as against the estimated value of taking machinery from other manufacturers. It is a mere question of dollars and cents. It is legal for the defendants to discriminate in price between customers who take large amounts and those who take small amounts" (R. Vol. 1, p. 1168).
>
> . . . . . .
>
> "The assumption that it is highly desirable that the shoe manufacturer should be at liberty to group the defendant's machines with such other machines, taken from other manufacturers, as he may see fit, ignores the fact that though machines may be treated in the Patent Office as separate, in a shoe factory the machines have a very definite mechanical relation to each other and to the particular method of making the shoe. The grouping of machines in order that some may aid others in turning out a product affords a sufficient mechanical reason for installing them as groups and a sufficient business reason for dealing with them as groups.

"That there are sound mechanical and business reasons for grouping together machinery as it is grouped by a series of prohibitive leases is abundantly established. . . .

"A contract for a group of related machinery, or for a supply of machines not immediately related but used only in separate mechanical steps of a manufacturing business, is an entirely proper and normal contract" (R. Vol. 1, p. 1184).

It must be remembered that it is not the United Company alone which profits from the Restricted Use Clauses. The United Company profits because its machines when used together produce a larger royalty per machine. But the shoe manufacturer profits also, not only because he uses machines adapted for use together, and kept in repair by the United Company, but because he is enabled by the wholesale rate which the United Company can charge under these leases to obtain his machinery cheaper.

Nor has the competing shoe machinery manufacturer any cause of complaint when he attempts to dispose of his machines to a shoe manufacturer holding United Company's machines under restricted leases. He finds the shoe manufacturer entirely free to take and use his machines so far as these clauses are concerned. In other words, the leases contain no agreements whatever not to use machinery of others. If he can supply a complete series of machines, these clauses do not interfere with him at all. It is only the Full Capacity Clause, the only clause in the United Company's leases which requires a lessee to use its machines at all, which in any way interferes with him, and then only because he tries to supply a man who, to the extent of that particular machine's capacity but no further, has already been supplied and already taken out of the market.

If the machinery manufacturer has only a single kind of machine to offer, his only difficulty, so far as the Restricted Use Clauses are concerned, is that the lessee may prefer to use a series of the United Company's machines as a unit at a wholesale rate rather than to use separate groups of machines obtained from two or more manufacturers at retail rates. Unless the machinery manufacturer has a much superior machine to offer which justifies the lessee in paying retail rates this may prove a serious obstacle, but it is a normal, natural obstacle. In the same

way the manufacturer of one part of a locomotive, such for example as wheels, is at a disadvantage in competing with the manufacturer of complete locomotives.

The court in *United States* v. *Winslow*, 227 U. S. 202, 218, said,—

> "It is as lawful for one corporation to make every part of a steam engine and to put the machine together as it would be for one to make the boilers and another to make the wheels."

A manufacturer who makes the completed engine has a right to offer it at a wholesale price, as we have shown above. It is only by offering such a wholesale price that the purchaser or lessee can be permitted to share in the economies resulting from the manufacture and marketing of the complete product.

The District Court, referring to the effect of these clauses on competing shoe manufacturers, said (R. Vol. 1, p. 1184):—

> "He [the shoe manufacturer] has taken the machines as a group, and one who has not a group to offer in substitution has little practical chance to compete. But a competitor must be able to compete. If leases for machines for use as a group are offered and accepted for sound business reasons, and if, because of the greater productivity of a group and of the less cost of maintenance, better prices can be made, the defendants and the shoe manufacturers need not forego the making of such contracts for the sake of possible competitors who may have only single machines to offer. Contracts for large equipments of machinery, furniture, and other articles are too common to be condemned for such reason."

The United Company could, we contend, perfectly properly adopt clauses which went much further than the Restricted Use Clauses actually used here. For example, it could perfectly lawfully (*A*) lease the entire system of machines restricted to use together, and refuse to offer any alternative leases without restrictions, or (*B*) require the lessee to use its machines of every kind exclusively.

We refer to such possible forms of lease merely to illustrate how far short the United Company's leases fall from requiring what they might lawfully and properly exact.

A. A manufacturer may lawfully refuse to sell at retail. In

the same way he may lawfully refuse to sell different parts of a machine or series of machines or any other collection of articles separately. A manufacturer of automobiles is not required to sell the parts separately. He can refuse to sell anything but the completed automobile. The Pullman Company cannot be compelled to lease wheels, trucks, bodies, and other parts of its cars separately.

What the United Company really sells is the use of its machines, charging a royalty for each time that they are used. Just as it can refuse to sell any of its series of machines unless all are bought, so it can refuse to sell the use of one machine unless the use of all is bought. It owns the machines; it can refuse to grant any right to use them at all. If it chooses to grant the right to use them as a series, why may it not lawfully do so? It could not be compelled to grant the right to use them separately. When, then, it grants the right to use them as a series it presents a new opportunity to the shoe manufacturer which he did not have before. This offer, then, can in no wise restrain trade.

The United Company could thus insist that if any of its machines were used all must be used, even though its purpose were solely to induce shoe manufacturers desiring only certain of its machines to use all. This would be merely a legitimate competitive method. It is common and usual for a manufacturer to attempt to make some particular part of his machine or product better than the corresponding part of his competitor's machine or product and thus induce customers to use his machine or product for this reason. Thus a manufacturer of printing-presses may introduce and obtain an attachment on his press which his competitor cannot use on account of the patent, and may advertise this feature and obtain customers on account of it. He is not obliged to sell this attachment separately in order to accommodate either his customers or his competitors. By being permitted to reap the advantage of offering some special feature which is better than anything offered by competitors, invention is stimulated and competition developed.

There is no difference in this respect between a single machine made up of parts which could be sold separately, such as a printing-press, a locomotive, or an automobile, and a series of machines adapted for use together. The machines in the present case are all adapted to a single purpose; they are co-related,

and quite conceivably could be incorporated into a single machine, just as a device for cutting paper may be used separately or may be attached to a printing-press. It is immaterial and a mere matter of convenience whether two operations are performed by a single machine or by two separate machines each performing a single function.

B. It would also be lawful for the United Company to lease its machines under agreements requiring the lessee to use its machines exclusively. In a case where a machinery manufacturer provides without initial payment an equipment of expensive machines, cares for the machines, instructs operatives in their use, and depends for substantially all his payment on royalties received from the use of the machines, he becomes for practical purposes a partner with a shoe manufacturer, being dependent upon the latter's success for his return. As such quasi partner he can properly by agreement control the manufacturing conditions which are essential to a return on his investment by providing that his own machines be used exclusively.

As said by the District Court (R. Vol. 1, p. 1174):—

> "A contract requiring the use of certain machinery in a manufacturing business, between one who is to carry it on and one who is to furnish capital, or his own property tangible or intangible as a means for carrying it on, is a provision 'for the prosecution of the business in a particular mode and not for its restraint.'"

An exclusive contract is not inherently illegal, and if adopted for a reasonable purpose it is unobjectionable. In *Chicago, etc., R.R. Co.* v. *Pullman Car Co.*, 139 U. S. 79, the Pullman Company agreed to lease to the Railroad Company drawing-room and sleeping cars sufficient to meet requirements of travel. It was agreed that it should have the exclusive right for a term of fifteen years to furnish such cars for the Railroad Company's use on the roads then or subsequently controlled or owned by it. The Railroad Company being expressly forbidden to contract with any other party to run cars of this character, the Railroad Company contended that the contract was void as against public policy because of the exclusive rights granted the Pullman Company.

The court said (p. 89):—

> "We cannot perceive that such a contract is at all in restraint of trade."

(p. 90)

> "But we are of opinion that public policy did not forbid the Railroad Company from employing the Pullman Southern Car Company to supply drawing-room and sleeping cars to be used by its passengers, and, as a means of inducing the plaintiff to perform this public service and to incur the expense and hazard incident thereto, from giving it an exclusive right to furnish cars for that purpose."

(p. 91)

> "The stipulation, therefore, that the plaintiff, not being in default, should have the exclusive right for fifteen years to furnish drawing-room and sleeping cars for the defendant's use, and that the defendant should not, during that period, contract for cars of that kind with any other party, rightly construed is not unreasonable, and, properly performed, will promote the convenience of the public in that it enables the defendant to have on its lines, at all times, and as the requirements of travel demand, drawing-room and sleeping cars for use by passengers."

In *Wilder Mfg. Co.* v. *Corn Products Co.*, 236 U. S. 165, it appeared that the Corn Products Company agreed with its customers to give them a discount of ten cents per hundred pounds on all shipments of glucose and grape sugar at the end of the year provided they should have purchased exclusively from the Corn Products Company all glucose and grape sugar required by them.

The court said (p. 172):—

> "The case therefore reduces itself to the question whether the contract of sale was inherently illegal so as to bring it within the also elementary rule that courts will not exert their powers to enforce illegal contracts or to compel wrongdoing. The only suggestion as to the intrinsic illegality of the sale results from the averments of the answer as to the offer of a percentage of profits upon the condition of dealing exclusively with the Refining Company for the following year and the clause to the effect that the goods were bought by the Manufacturing Company for its own use and not for resale. But we can see no ground whatever for holding that the contract of sale was illegal because of these conditions.

The leases of the United Company, however, neither require that the machines be all used together nor require an exclusive use of the United Company's machines.

The United States may contend that a single lease might be legal but that leases of the same kind made with shoe manufacturers all over the country have in some way a cumulative effect which make them illegal. In support of this contention it cited, in the District Court, *U. S.* v. *Reading Co.*, 226 U. S. 324.

In the Reading case a number of different railroad companies controlled about 90% of the anthracite coal deposit and about 75% of the annual output. The railroads, acting in unison, made contracts with a large proportion of the independent coal owners containing substantially uniform provisions by which the independent coal owners agreed to deliver to the various railroad companies all the anthracite coal thereafter mined from any of their mines now being operated or which might thereafter be owned and operated. The court held that these contracts were illegal, an intent to suppress competition and restrain trade being shown by the extent of the control over the limited supply of anthracite coal acquired thereby.

As said by the District Court (R. Vol. 1, p. 1181),—

> "The resemblance between the Reading case and the present case lies only in the fact that in each is a large number of contracts."

In the first place, in the Reading case, practically all of the anthracite coal in existence was monopolized by means of these contracts. In the present case the leases do not give control of an existing supply of shoe machinery. On the contrary, as pointed out by the District Court (R. Vol. 1, pp. 1181–2), if the leases give any control it is a control of customers and not of machines. Such customers cannot be monopolized to any substantial extent. For example, the record shows that from 1900 to 1911 an average of 62 new firms entered business each year and an average of 22 new firms succeeded old firms (Defs.' Ex. 223). Thus an average of 84 concerns each year started business free from any obligation to the United Company. The United Company in 1911 had a total of only 1,033 lessees (R. Vol. 1, p. 26, lines 38–40). Furthermore, a rival shoe machinery manufacturer could appeal to any business man in the country to

enter the shoe business and if, as claimed by the United States, existing manufacturers were burdened by their leases with the United Company such appeal would be effective. Furthermore, any existing shoe manufacturer could join in forming a new corporation and it could do business free from obligations to the United Company. It is impossible, then, to monopolize the field of customers for shoe machinery (see opinion of District Court R. Vol. 1, pp. 1181–2).

In the second place, in the Reading case, it was not necessary for the various coal companies to enter into similar contracts with a large proportion of the coal owners. The making of these identical contracts by the different coal companies with such a large proportion of the coal owners was unnatural and gave rise to a clear inference of a conspiracy to monopolize the coal supply. In the case of the United Company's leases, if a single lease of the kind in question with a single lessee was natural and justified, the making of identical leases with all lessees desiring its machines was likewise natural and normal. The United Company has properly adopted the policy of offering to all lessees the same terms it offers any one lessee. It would be abnormal to offer leases of this kind to, let us say, ten or a hundred lessees and then to refuse the same terms to the remaining nine hundred.

In the third place, in the Reading case, we find separate coal companies combining to make these contracts, giving rise to an inference of conspiracy, while in the present case we find only the United Company, a single concern, putting out the leases complained of.

These very Restricted Use Clauses were upheld as lawful at common law by the Privy Council of Great Britain, in the case of *United Shoe Machinery Company of Canada* v. *Brunet*, (1909) A. C. 330, Lords MacNaghten, Atkinson, Collins, and Gorell composing the court. An injunction was ordered enjoining the violation of the clauses. The Canadian Patent Act contained certain provisions providing for the terms on which patented articles could be disposed of. It was not shown by the record, however, that the machines were patented, and the court, therefore, treated them as unpatented machines and disregarded the provisions of the Patent Act.

The court said (p. 342):—

> "The findings of the jury, therefore, dispose completely of all questions arising on the Patent Act, as, indeed, they also dispose of all the charges of fraud and coercion, since they remove the foundation on which the first charge rests, and their answer to question 19 limits the latter to the presentation to the shoe manufacturers of Canada of the alternative of either doing without these machines altogether, or of hiring them on terms identical with or similar to those contained in the 'leases sued on.' This alternative, however, does not subject the would-be customers of the appellants to any coercion beyond what their desire to promote their own trade interests imposes upon them. By virtue of the privilege which the law secures to all traders, namely, that they shall be left free to conduct their own trade in the manner which they deem best for their own interests, so long as that manner is not in itself illegal, the respondents are at liberty to hire or not to hire the appellants' machines, as they choose, irrespective altogether of the injury their refusal to deal may inflict on others. The same privilege entitles the appellants to dispose of the products they manufacture on any terms not in themselves illegal, or not to dispose of their products at all, as they may deem best in their own interest, irrespective of the like consequences. This privilege is, indeed, the very essence of that freedom of trade in the name and in the interest of which the respondents claim to escape from the obligations of their contracts."

(8) THE RESTRICTED USE CLAUSE IS MERELY THE GRANT OF A LIMITED PATENT LICENSE, WHICH IS CLEARLY LAWFUL.

(a) GENERAL DISCUSSION.

In the foregoing discussion we have shown that the "Restricted Use Clauses" are reasonable provisions adopted for the purpose of offering wholesale terms for the use of a series of machines and therefore they would be lawful whether or not the machines were patented.

The machines, however, are patented, and the "Restricted Use Clauses" clearly contain such restrictions as a patentee is permitted to impose by the terms of his patent. They, therefore, are the mere exercise of patent rights and cannot fall within the prohibition of the Sherman Law.

The agreements under which the machines are leased constitute leases of the machines covered thereby and also licenses under patents providing that the lessee may use the leased machines and defining the extent and character of use which is permitted. The "Restricted Use Clause" provides that the use of the leased machine which the licensee is authorized to make is a use on shoes operated on by certain other principal machines leased from the United Company in connection with which the leased machine can, in the opinion of the United Company, be used most effectively and thus produce the largest royalty return. That such a restriction imposed on the use of a patented machine is the lawful exercise of a patentee's rights has been determined by this court.

The Dick Case.

The "Restricted Use Clauses" are clearly legal within the authority of *Henry* v. *Dick*, 224 U. S. 1. Just as in the Dick case the license clause restricted the use of the mimeograph to use with certain specified supplies, so do the Restricted Use Clauses restrict the use of the machines to use on shoes on which certain other machines operate.

But it should be noted that the decision in the Dick case goes much further than is necessary to support the Restricted Use Clauses.

In the Dick case the mimeograph had been sold, title was in the purchaser, and the restriction therefore applied to a machine which the patentee no longer owned. In the present case the Restricted Use Clauses apply only to machines owned by the United Company and for which, in most cases, the lessee has made no payment whatsoever except in the form of royalties covering such past use as he may have made of the machines. (*Victor Talking Machine Co.* v. *Strauss*, 230 Fed. 449.) If public policy were to be considered in determining the validity of such restrictions, an argument might well be made that the ownership of a machine should not be separated from the unlimited right to use it, with the consequence that, if the particular use for which the machine was licensed were abandoned, the machine could not be used at all.

It was not shown in the Dick case that the supplies furnished by the patentee increased the efficiency of the machine and

therefore it did not appear that the use of these supplies increased the return to the patentee over what it would have received had it charged a money royalty based on the amount of use. In the present case we have shown that the use of the United Company's machines as a series as required by the restrictive use clauses, enormously increases the productivity of the machines. In the present case, therefore, there is a strong reason for sustaining these restrictive use clauses which directly promote the efficiency of the machines, which was not applicable in the Dick case.

In the Dick case the restriction permitted the use only of unpatented supplies sold by the patentee. In the present case the restriction applies only to use in connection with other patented machines. The United Company, therefore, by its restrictive use clause does not attempt to induce the use of unpatented articles or to project its control beyond its own patented field.

Minority Opinion in the Dick Case.

The objections to the decision in the Dick case raised by the minority dissenting opinion are not applicable to the present case.

In the opinion of the minority the restriction in the Dick case was not a restriction upon the use of the machine (which would have made it a legitimate patent restriction), but it was in truth a restriction upon the use of certain unpatented materials not embraced within the patent. Thus the minority said (p. 52):—

> "But as the right to employ any desired operative materials in using the patented machine was not a right derived from or protected by the patent law, but was a mere right arising from the ownership of property, it cannot be said that the restriction concerning the *use of the materials* was a restriction upon the *use of the machine* protected by the patent law. . . . And this after all serves to demonstrate that it is a misconception to qualify the restriction as one on the use of the machine, when in truth both in form and substance it was but a restriction upon the use of materials capable of being employed in operating the machine" (italics ours).

Defining the use which the patent protected, the minority said (p. 52),—

> "The exclusive right of use of the invention embodied in the machine which the patent protected was a right to use it anywhere and everywhere for all and every purpose of which the machine as embraced by the patent was susceptible."

In the present case the restriction is clearly upon the use of the machine, and not upon the materials to be used in it. The right to use the machine on shoes which have been operated on by machines other than those specified is reserved to the patentee.

The patentee does not by contract "bring within the claims of his patent things which are not embraced therein" as the minority held to be true in the Dick case (p. 53). He merely restricts the use of his own patented machines to use on certain specified shoes. In the manufacture of the shoes the licensee is free to use any materials he pleases wherever obtained. No attempt is made to control such supplies or materials as in the Dick case.

The restriction in the present case is the same character of restriction made by the patentee in *Rubber Company* v. *Goodyear*, 9 Wall. 788, which was differentiated from the Dick case and approved in the minority opinion. In that case the licensee was authorized to use the patented invention in the manufacture and sale of certain goods, but was not authorized to "make any contract with the Government of the United States" (p. 799). In other words, the patentee reserved to himself the right to make goods sold or to be sold to the United States Government. So in the present case the patentee reserves the right to make shoes operated on, or to be operated on, by certain other machines.

Again, in the Dick case the transaction by which the patented mimeograph was sold amounted in the opinion of the minority to a sale of the machine together with all the patent rights relating to it. By this sale the machine was placed completely outside the patent monopoly. The alleged restriction, therefore, in the opinion of the minority, could not be a patent restriction, but was necessarily a mere covenant or contract on the part of the purchaser. Thus, the minority opinion says (p. 65),—

> "That the sale here in question was one of all the rights which the patent protected has, it seems to me, at the outset been demonstrated beyond reasonable dispute."

And again (p. 53),—

> "In other words, every use which the patent protected was transferred to Miss Skou, and the very existence of the particular restriction under consideration presupposes such right of complete enjoyment, and because of its possession there was engrafted a contract restriction, not upon the use of the machine, but upon the materials."

It having been found by the minority that by the transaction the patentee sold all his patent rights in respect to the machine, the machine was thereafter outside the patent monopoly, and it, of course, followed that the alleged restriction, if effective at all, was effective solely as an agreement on the part of the owner of the machine. This being accepted, it followed that to hold this agreement to be protected by the patent law was an "extension by contract of the patent laws" (p. 56). It also followed that the Federal courts in taking jurisdiction of the case as a patent case were unwarrantedly extending the Federal judicial power.

In the present case the United Company has clearly not sold the licensee "all the rights which the patent protected." It still owns the machines and at the termination of the lease has a right to take them back, the patent license in such case being terminated entirely. Furthermore, the right to use is restricted in various other ways. It can, for example, be exercised only in a designated factory. It is obvious that the machines have not passed outside the patent monopoly and that the United Company has not sold the lessee all the patent rights it had in respect to the machine, as the minority opinion held had resulted in the Dick case, and the patented inventions embodied in the machines even under the rule contended for by the minority opinion are therefore still subject to the control of the patentee.

The case of *Bauer* v. *O'Donnell*, 229 U. S. 1, does not affect the decision in the Dick case. It holds that a patentee who sells his patented article receiving full consideration cannot impose a price restriction on future sales. By making such a sale the patentee has exercised the exclusive right to sell granted by his

patent. The Dick case was expressly differentiated as involving a restriction on the right to use. The decision in *Bauer* v. *O'Donnell*, therefore, does not affect the present case. In the present case the United Company's machines have not been sold, they are to be returned at the expiration of the leases, the lessee has only a right to use them, and the full consideration for such use is not received by the United Company when the lease is made but is to be paid only when and as machines are used. In other words the restriction which the patentee attempted to impose in *Bauer* v. *O'Donnell* was on the right to sell, which the court held had been fully exercised by the sale made by the patentee. In the case of the United Company's leases the restriction is on the right to use.

In *United Shoe Machinery Co.* v. *La Chapelle*, 212 Mass. 467, the court applied the doctrine of the Dick case to the United Company's leases as set out in the bill in that case. It was alleged that the United Company was an illegal monopoly, and that as a means of maintaining its monopoly it inserted in its leases of the principal or basic machines a requirement that the lessee should use only its machines in the manufacture of shoes,—a provision which we have shown goes further than any clause actually contained in the Company's leases. The court on demurrer said of this allegation (p. 478):—

> "There are averments that the plaintiff is a monopoly perpetuated by means of conditions in leases of certain patented machines to the effect that the lessees shall use no other machines not manufactured by the plaintiff, and that the plaintiff thus secures to itself a monopoly of all machinery used in the manufacture of footwear which is alleged to be an infraction of the federal anti-trust act of July 2, 1890, 26 U. S. Sts. at Large, c. 647. The power to make such leases appears to be within the protection granted by the patents. This is settled by *Henry* v. *A. B. Dick Co.*, 224 U. S. 1, decided since the argument of this case. See also *National Phonograph Co. of Australia* v. *Menck*, [1911] A. C. 336; *United Shoe Machinery Co. of Canada* v. *Brunet*, [1909] A. C. 330, 344. Hence these allegations and the evidence offered in support of them drop out of the case."

This restrictive clause is incidental to a license to use a patented machine and is used to define the field in which such use may

be made. It consists merely in the exercise of the right to subdivide the patentee's monopoly and to grant a portion of it to persons who wish to use a portion.

The right referred to is a property right belonging to the owner of the patent. It is a property in the patented thing which he has not granted; because of every restrictive use, it has been said time and again that those rights not granted, the owner of the patent retains. To his exclusive enjoyment in the retained rights the public faith is pledged.

Grant v. *Raymond*, 6 Peters, 218, 241.

Suppose the United Company leases a lasting machine and restricts the use of it to use upon shoes operated upon by its Welter and Stitcher. Every other use of the patented idea the company retains itself to do with as it chooses. This is merely a subdivision of the monopoly; the right to use the invention embodied in the laster in ways other than those granted, the company retains to enjoy itself or to lease to others.

Thus partially to grant a use of the patent is not to make a contract restraining the use of that which was free before the grant, but is to give a partial use of that invention, the enjoyment of which Congress has vested exclusively in the owner and which the licensee could not use at all.

It cannot now be denied, as held in the Dick case, that a license to use a patented invention only with unpatented articles could at the time this suit was brought lawfully be made. But the United States seems to deny that such a result can be accomplished if the article with which the patented invention must be used is also patented. That is to say, the United States must admit that the Dick Company can restrict its Neostyle to use with certain unpatented inks and papers, but it denies that the United Company has a right to restrict the use of its patented Lasting Machine to use with its patented Metallic Machine.

The distinction is plainly untenable. The United Company seeks only to sustain its right to restrict the use of one patented machine to use upon shoes operated upon by another patented machine, when such restriction is necessary and reasonable and incidental to obtaining the best results and a full return from the patented invention, when without such restriction it would not obtain such return.

It is clear that the United Company may restrict the use of its metallic machines to use with fastening material furnished by it, and thus receive its income indirectly from the sale of an unpatented article. It is equally clear that if it does not thus receive a full return it may further restrict their use to use with its lasting machines, and thus indirectly obtain its full return. If this method of restriction operates to confine the activities of the user, it is not because his rights are interfered with or his liberties restrained, because he had none before he received his license.

All rights of enjoyment of the patented invention were, prior to that grant, vested exclusively in the owner of the patent; by granting a use thus restricted he has not restrained trade, but has enlarged the use of his invention, which prior to his grant Congress had forbidden all the world but him to use.

All that the patentee does by such a license is to grant a right. No new obligation is imposed on the licensee at all.

But the United States argues that if the licensee accepts such a restricted license he is restrained of his liberty to trade with others. This is not so. The licensee accepting such a license does not agree that he will not use other machines. He does not even agree by this clause that he will use the leased machine. All that he agrees to is that he will not use the leased machines except in accordance with the restricted license. He is restricted in the use of the leased machine, not in the use of any other machines.

To make a contract to abide by restrictions lawful for the licensor to impose is not unlawful, and the actions of the licensee are not in truth restrained at all. He receives a limited license to use a patented article which before he had no right to use whatever. His enjoyment of *that* and *that only* is circumscribed by the license. As to all else he is exactly as he was before.

The United States may argue,—

> "One who holds a heeling machine under a restricted lease is prohibited from using, during the entire term of such lease, in the manufacture of a shoe upon which the leased machine operated, a lasting machine, or a welting machine, or an out-sole or turn sewing machine, or a pegging or metallic machine not obtained from the lessor."

This is not true, for the only restriction is upon the heeling machine. It is *its use and its use only* which is restricted.

He may use any one's lasting, welting, stitching, pegging, and metallic machines he wants to; but without the license from the patentee he may not use the United Company's heeling machine at all. If he takes such license, he has added to his rights, not subtracted from them, for in addition to his right to use any one's laster, welter, stitcher, pegger, etc., upon all the shoes he was previously making he has acquired the right to use the patented heeler upon shoes operated upon by certain of the patentee's other machines if he desires to use them.

In no case do the leases of the company operate to restrict the licensee in the use of any machines except those which he would have no right to use at all except for licenses granted by the company.

Manufacturers who take such licenses are not prohibited from taking machines from others. They are simply limited to using the leased machines with certain other machines of the same owner. But the company was not required to allow them to use the machines even for such limited purpose, and such use as has been permitted is a removal of the restraint and not the imposition of a new one.

The very use of the word "restraint" in this connection is apt to raise a misconception as to the true situation. There is in truth no restraint, there is a partial grant; and it is when the grantee desires to use beyond the line of the grant and infringes upon the patent rights of the grantor that the United States claims his liberties have been restrained.

This is a common and legitimate exercise of the patent monopoly, and if exercised in the marketing of one type of machine would not be questioned. But it is argued that if the owner of several patented machines exercises this right as to each machine, he extends the monopolies which the several patents give him. This is not true. With reference to each patent he exercises only the rights which the patent grant gives him; viz., to subdivide his monopoly and allow others a partial enjoyment of it.

Suppose A had a welter which would, in A's opinion, do better work when operating on shoes lasted on B's lasting machine than on shoes lasted on any other machine, would A not have the right to license another to use it and restrict its use to shoes

lasted on B's machine, and retain himself or grant to others the right to use the welter with C's machine or any one's else?

Suppose one owner has a patented laster and a patented heeler and licenses each to be used only upon shoes operated on by the other. If there are no other heelers or lasters in the market, of course no question arises. No one is prevented from inventing or supplying other heelers and lasters. If both are invented and supplied, no licensee of the first inventor is prevented from taking them. If a new heeler, only, is invented, it will find a market if it is good enough to furnish more advantages than both heeler and laster together of the first owner.

But the first owner is entitled to the advantage that lies in being able to furnish both heelers and lasters instead of only one of the two. Unless he is permitted to exercise his patent right as to both, he is by reason of his ownership of both deprived of rights which belong to each separately.

The truth is that the inventor of the new heeler is at a commercial disadvantage because he has not so much to offer as the man who has both heeler and laster. And until he can make as advantageous an offer, either upon equal terms as to quantity, or his one article is worth more to the trade than the other man's combination of articles, he will not get the business.

If the first man has been clever enough to invent or acquire two machines, it is a perfectly legitimate exercise of his right to say to customers, "You must use both of my machines on a shoe or neither." Even if there were no patents this must be so, as we have shown above.

A clothing dealer offers suits consisting of coat, vest, and trousers, but refuses to sell anything less than a complete suit. Can a manufacturer of trousers complain because the first man refuses to sell a coat and vest to go with the second man's trousers? Or is the trade of the consumer or the trousers manufacturer restrained? This is but one of thousands of illustrations of trade practices always regarded as normal and legitimate, and never attacked, which involve exactly the same principle as the case at bar.

If a manufacturer of coats, a manufacturer of trousers, and a manufacturer of vests can combine, as they surely lawfully may, to manufacture complete suits, they can when combined refuse to sell anything less than complete suits. The situation

is not changed if each had a monopoly of his line before the combination.

As was said in *United States* v. *Winslow*, the law does not require the reduction of all manufacture to isolated units of the lowest degree. The competition between makers of complete suits is adequate. It need not be between vest makers. So here competition between makers of lines of machines for making particular types of shoes meets the requirements of the Sherman Act. It is not necessary that there be separate and distinct competition in every unit in the series or line of machines with other manufactures.

Otherwise a manufacturer would not be able to put out a complete machine because the maker of a pulley, or a shaft, or an awl, or a needle might complain.

(b) PATENT RESTRICTIONS ARE LAWFUL UNLESS IN THEIR VERY NATURE ILLEGAL.

The general rule is that conditions or restrictions imposed by patentees are lawful unless they are in their very nature illegal.

In *Bement* v. *National Harrow Co.*, 186 U. S. 70, the following general rule was laid down (p. 91):—

> "Notwithstanding these exceptions, the general rule is absolute freedom in the use or sale of rights under the patent laws of the United States. The very object of these laws is monopoly, and *the rule is, with few exceptions, that any conditions which are not in their very nature illegal with regard to this kind of property, imposed by the patentee and agreed to by the licensee for the right to manufacture or use or sell the article, will be upheld by the courts.* The fact that the conditions in the contracts keep up the monopoly or fix prices does not render them illegal" (italics ours).

(c) CONSIDERATIONS OF PUBLIC POLICY NOT RECOGNIZED IN THE PATENT LAW ARE NOT RELEVANT WITH REGARD TO SUCH CONDITIONS OR RESTRICTIONS.

The rule permitting patentees to impose such conditions or restrictions as they please, provided only they are not definitely illegal, is a necessary part of and is included in the exclusive

right granted by the patent. As the patentee has the absolute right to exclude all others from any use, he necessarily must have the right to grant only a limited or restricted right of use, or a right to use only under such conditions as he pleases. As said by this court in *Henry* v. *Dick Co.*, 224 U. S. 1 (p. 35),—

> "This larger right [viz., the right of excluding all and refraining from use himself] embraces the lesser of permitting others to use upon such terms as the patentee chooses to prescribe."

The patentee's right, then, to prescribe the terms on which his patented article shall be used, being a right granted by the patent law, cannot be abrogated without depriving him of his rights of property granted by that law. So long, therefore, as the patent law remains in force the court cannot consider the legality of such restrictions in the light of public policy. To do so would be to abrogate the patent law. Public policy in respect to these restrictions is established by the Act of Congress.

As said by this court in *Henry* v. *Dick Co.*, supra (to repeat and add to the citation above made):—

> "This larger right [viz., the right of excluding all others and of refraining from use himself] embraces the lesser of permitting others to use upon such terms as the patentee chooses to prescribe. It must not be forgotten that we are dealing with a constitutional and statutory monopoly. An attack upon the rights under a patent because it secures a monopoly to make, to sell and to use, is an attack upon the whole patent system. We are not at liberty to say that the Constitution has unwisely provided for granting a monopolistic right to inventors, or that Congress has unwisely failed to impose limitations upon the inventor's exclusive right of use. And if it be that the ingenuity of patentees in devising ways in which to reap the benefit of their discoveries requires to be restrained, Congress alone has the power to determine what restraints shall be imposed. As the law now stands it contains none, and the duty which rests upon this and upon every other court is to expound the law as it is written. Arguments based upon suggestions of public policy not recognized in the patent laws are not relevant. The field to which we are invited by such arguments is legislative, not judicial."

Not only, then, is the patentee's right to impose restrictions included in the broader grant of rights to which his patent entitles him, and to the maintenance of which, to use Chief Justice Marshall's words below quoted, "the public faith is pledged," but, being a portion of those rights, it should be regarded and construed in the same liberal spirit in which a patentee's other rights are regarded and construed.

Mr. Justice Story, in *Ames* v. *Howard*, 1 Sumner, 482, 485, said:—

> "Patents for inventions are not to be treated as mere monopolies odious in the eyes of the law, and therefore not to be favored; nor are they to be construed with the utmost rigor, as *strictissimi juris*. The Constitution of the United States, in giving authority to Congress to grant such patents for a limited period, declares the object to be to promote the progress of science and useful arts, an object as truly national, and meritorious, and well founded in public policy, as any which can possibly be within the scope of national protection. Hence it has always been the course of the American Courts, (and it has latterly become that of the English Courts also,) to construe these patents fairly and liberally, and not to subject them to any over-nice and critical refinements."

In *Henry* v. *Dick Co.*, 224 U. S. 1, the Supreme Court said (p. 27) (in speaking of the patent law):—

> "It is a statute creating and protecting a monopoly. It is a true monopoly, one having its origin in the ultimate authority, the Constitution. . . . In *Bement* v. *National Harrow Co.*, 186 U. S. 70, 89, 90, 91 and 92, this court quoted with approval the language of Chief Justice Marshall in *Grant* v. *Raymond*, 6 Pet. 218, 241. Concerning the favorable view which the law takes as to the protection extended to the exclusive right, the court, through Chief Justice Marshall, said:
>
> "'It is the reward stipulated for the advantages derived by the public for the exertions of the individual, and is intended as a stimulus to those exertions. The laws which are passed to give effect to this purpose ought, we think, to be construed in the spirit in which they have been made; and to execute the contract fairly on the part of the United States, where the full benefit has been actually received, if this can be done without tran-

> scending the intention of the statute, or countenancing acts which are fraudulent or may prove mischievous. The public yields nothing which it has not agreed to yield; it receives all which it has contracted to receive. The full benefit of the discovery, after its enjoyment by the discoverer for fourteen years, is preserved, and for his exclusive enjoyment of it during that time the public faith is pledged.'"

Furthermore, such restrictions should be viewed with favor by the courts in order to carry out the manifest purpose and policy of the patent law. Congress, in granting a patentee exclusive rights for seventeen years, did so to enable the patentee to obtain as large a financial return as possible. It offered this opportunity "to promote the progress of science and the useful arts" by encouraging invention. Congress might have restricted the patentee's profits by providing, as has been done in some other countries, that the patentee should permit the use of his invention by others on reasonable terms. But it declined so to do, and, on the contrary, adopted the policy of permitting the patentee to obtain as much return as he could, either by granting licenses or by using the patented invention himself exclusively, or, if he deemed it to his best interest, by not using it at all. (*Paper Bag Patent Case*, 210 U. S. 405.) If, therefore, the patentee finds that his best return is obtained by granting restricted rather than unlimited licenses, it is clearly in accord with the policy of the patent law that he should be permitted to do so freely, and should be prohibited only when his conditions or restrictions are clearly and definitely illegal.

As the patentee can exclude all others from the use of his invention and use it exclusively himself, it is to the benefit of the public to induce him to permit others to enjoy the benefits of his invention, even if only to a limited extent. If, therefore, he is unwilling to grant others his full rights, he should be encouraged to grant them limited rights by being allowed to impose conditions or restrictions on the rights he grants. Public policy must favor conditions which give the public rights which might otherwise be denied them.

(d) RESTRICTIONS WHICH MERELY REQUIRE THE LICENSEE TO USE THE PATENTED ARTICLE IN A MANNER IN WHICH THE PATENTEE HIMSELF MIGHT LAWFULLY USE IT ARE NOT "IN THEIR VERY NATURE ILLEGAL."

As held in *Bement* v. *National Harrow Co.*, supra, the conditions and restrictions imposed by a patentee upon the use of the patented article are lawful except such as are "in their very nature illegal."

Conditions are in their very nature illegal which require a licensee to do something which it would be illegal for the patentee himself to do. Thus a patentee cannot himself sell a patented illuminating oil which falls below the standard required by law. He, therefore, cannot require or authorize his licensee to do so (*Patterson* v. *Kentucky*, 97 U. S. 501), and a provision to this effect in a patent license would be unlawful. The patentee cannot himself use a patented instrument as part of the equipment of a public service company and decline equal service to all. He, therefore, cannot authorize his licensee to do so.

In the present case the license merely grants the right to use the United Company's machines as a series. It is unquestioned that the United Company could use its own machines as a series and it would obviously violate no law in so doing. In granting the right to a licensee to use them in the same way, it is therefore merely restricting their use to a use which the United Company itself could lawfully and properly make of them. Such a limited license is clearly not in its very nature illegal.

(e) THE SHERMAN ACT DOES NOT FORBID SUCH RESTRICTIONS IMPOSED BY A PATENTEE.

In *Bement* v. *National Harrow Company*, supra, the court said (p. 92):—

> "But that statute [namely, the Sherman Act] clearly does not refer to that kind of a restraint of interstate commerce which may arise from reasonable and legal conditions imposed upon the assignee or licensee of a patent by the owner thereof, restricting the terms upon which the article may be used and the price to be demanded therefor.

> Such a construction of the act we have no doubt was never contemplated by its framers."

In *Henry* v. *Dick Company*, supra, the court, after quoting the above language and after referring to the fact that the court in that case held that restrictions as to the price at which patented articles could be sold were reasonable and legal, said (p. 31),—

> "If the stipulation in an agreement between patentees and dealers in patented articles, which, among other things, fixed a price below which the patented articles should not be sold, would be a reasonable and valid condition, it must follow that any other reasonable stipulation, not inherently violative of some substantive law, imposed by a patentee as part of a sale of a patented machine, would be equally valid and enforceable."

The language above quoted from the opinion in the Bement case was expressly quoted with approval in *Standard Sanitary Manufacturing Company et al.* v. *United States*, 226 U. S. 20.

In *Park* v. *Hartman*, 153 Fed. 24, at page 27, Mr. Justice Lurton (then circuit judge) said,—

> "That articles made under patents may be the subject of contracts by which their use and price in subsales may be controlled by the patentee, and that such contracts, if otherwise valid, are not within the terms of the act of Congress against restraints of interstate commerce or the rules of the common law against monopolies and restraints of trade, is now well settled."

In *Rubber Tire Wheel Co.* v. *Milwaukee Rubber Works Co.*, 154 Fed. 358, 362, the court said:—

> "The Sherman law contains no reference to the patent law. Each was passed under a separate and distinct constitutional grant of power; each was passed professedly to advantage the public; the necessary implication is not that one iota was taken away from the patent law; the necessary implication is that patented articles, unless or until they are released by the owner of the patent from the dominion of his monopoly, are not articles of trade or commerce among the several states."

In *Cilley* v. *United Shoe Machinery Co.*, 152 Fed. 726, 728, it was said,—

> "Contracts with respect to patents are, as a general rule, outside the doctrine of restraint of trade, both at common law and under the federal statute."

To the same effect are:—

Dickerson v. *Tinling*, 84 Fed. 192.
Edison Phonograph Co. v. *Kaufmann*, 105 Fed. 960.
Same v. *Pike*, 116 Fed. 863.
Rupp v. *Elliott*, 131 Fed. 730.
Victor Talking Machine Co. v. *The Fair*, 123 Fed. 424.

The reasons why the Sherman Act does not forbid restrictions which merely grant a limited or restricted right of use of a kind which the patentee himself might lawfully exercise are obvious. The grant of such a license is, as pointed out in the Dick case, the mere exercise of the patent rights granted by the patent, and the Sherman Act was not intended to repeal the Patent Act.

(f) THE GRANT OF A RESTRICTED LICENSE IMPOSES NO RESTRAINT ON TRADE.

The Sherman Act was directed against restraints imposed on trade. The grant of such a license imposes no restraint on trade; on the contrary it actually relaxes an existing restraint lawfully imposed by the patent law.

The patentee of inventions covering shoe machinery can absolutely exclude all others from the use of such machinery and either use it himself exclusively or not use it at all. In such a case no shoe manufacturer in the country can use the patented machines. Their use is absolutely restrained as the result of lawful patent monopolies. When the patentee grants the right to use these machines as a series he is imposing no new restraint on their use, but, on the contrary, is relaxing a restraint which previously was absolute. It is true that if he sold or leased the machines without any restriction whatsoever, he would still further remove the restraint imposed by the patent monopolies, but

this does not refute the fact that the grant of the restricted right, that is, the grant of the right to use as a series, removes an existing restraint and imposes no new restraint. Prior to the grant of such a license a shoe manufacturer had no right to use the patented machines at all; after the grant of this license he has a new right which he did not previously have, namely, the right to use them as a series. He is under no additional restraint of any kind because these Restricted Use Clauses do not require him to use the machines at all; they merely permit him to do so if he so desires.

It is important to bear in mind the fundamental distinction between contracts relating to patented articles and contracts relating to unpatented articles. In the case of unpatented articles, such as grain, lumber, and iron, every one is free to trade in and use them, and there is a natural flow of these articles in trade. As a matter of public policy the law requires such trade to continue free from monopoly or undue restraint caused by any contract or combination. In the case of patented articles there is an absolute restraint imposed by law except so far as the patentee is willing to release his rights. There is no trade in such articles to which the public is entitled, and there is no trade in them which the law on grounds of public policy holds should be free and untrammeled. As a matter of public policy the court is as much obliged to support and foster this monopoly and restraint which surrounds patented articles as in the case of unpatented articles it is obliged to encourage and insist upon freedom. No contract which the patentee can make with respect to such patented articles so long as they remain within the patent monopoly can impose a greater restraint on their use or a greater monopoly in respect to them than already exists by authority of the patent law.

To use the expression "suppression or restraint of trade" with respect to patented articles still in the control of the patentee is to misdescribe the situation. "Suppression" and "restraint" are predicated upon a former state of freedom of trade. They presuppose a restraint or restriction upon trade which but for such restraint or restriction would be free and untrammeled, which is not the case with the patented articles until they are released from the domain of the patent monopoly. Until such time the patentee can make no contract which restrains trade

in such articles, as there is no lawful existing trade to restrain, and he can do no act which creates a monopoly in them, as a complete lawful monopoly already exists.

In the present case the Restricted Use Clauses clearly impose no new restraint upon the lessee as respects the leased machines, because the lessee is absolutely restrained from using the patented machines until the license is granted. They impose no restraint upon the lessee as regards the use of other machines, as they do not prohibit him from using other machines, but, on the contrary, merely license him to use the United Company's machines if he so desires. It is clear, therefore, that these clauses impose no new restraint of any kind upon the licensee. Even then, if the Sherman Act applied to restrictions imposed by patentees (which the cases cited above show it does not) it could not be held to forbid the Restricted Use Clauses now under discussion.

(g) IF THE COURSE OF TRADE IS AFFECTED BY SUCH RESTRICTIONS IMPOSED BY A PATENTEE, SUCH EFFECT IS INCIDENTAL TO THE EXERCISE OF LAWFUL RIGHTS.

Any new invention or new method of doing business may greatly affect existing trade conditions. So also the grant of a restricted license may have an effect upon trade conditions. If so, it is merely incidental to the exercise of a lawful right and therefore not within the scope of the Sherman Act.

In the case of the restricted use clause which we are now considering, the only effect would be, as we have shown, that the shoe manufacturer might prefer to use a series of the United Company's machines at a wholesale rate, rather than to use a series of machines obtained from some other manufacturer or certain of the United Company's machines at retail rates in connection with certain other machines obtained from other manufacturers. Such an effect would be purely incidental to the exercise of a lawful patent right by the United Company.

The United States contends that, if the United Company granted only unrestricted leases, *i.e.*, only leased its machines separately, shoe manufacturers might be more easily induced by competitors to use certain of such competitors' machines. Of

course the United Company could not afford to furnish its machines separately at wholesale rates; if it only leased its machines separately, it could therefore not offer a wholesale price. Public policy does not require a course of marketing machines which would increase the cost to users thereof, but apart from this consideration the United Company has a right to refuse any use of its machines, and under these circumstances public policy cannot forbid the United Company to grant a limited use. Argument that the grant of an unlimited use would be more beneficial, even if true, is beside the point. As said by the Court in *Henry* v. *Dick* with reference to the consequences which might result from certain suggested conditions which patentees might impose (p. 34):—

> "But these illustrations all fail of their purpose, because the public is always free to take or refuse the patented article on the terms imposed. If they be too onerous or not in keeping with the benefits, the patented article will not find a market. The public, by permitting the invention to go unused, loses nothing which it had before, and when the patent expires will be free to use the invention without compensation or restriction. . . . It must not be forgotten that we are dealing with a constitutional and statutory monopoly. An attack upon the rights under a patent because it secures a monopoly to make, to sell and to use, is an attack upon the whole patent system. We are not at liberty to say that the Constitution has unwisely provided for granting a monopolistic right to inventors, or that Congress has unwisely failed to impose limitations upon the inventor's exclusive right of use."

An example of an incidental and therefore lawful effect on trade caused by the grant of a restricted license is furnished by *Heaton-Peninsular Co.* v. *Eureka Co.*, 77 Fed. 288. There the use of the patented machine for affixing buttons to shoes was restricted to use with staples furnished by the patentee. As such machines largely displaced all other machines previously used for the purpose, the market for the sale to the shoe trade of staples not adapted for use in the patented machines was practically destroyed, and, further, the users of the machines were restrained from purchasing staples for use on the machine other than from the patentee. Of this result Judge (later Mr. Justice) Lurton said (p. 296):—

"The monopoly in the unpatented staple results as an incident from the monopoly in the use of complainant's invention, and is, therefore, a legitimate result of the patentee's control over the use of his invention by others. Depending, as such a monopoly would, upon the merits of the invention to which it is a mere incident, it is neither obnoxious to public policy, nor an illegal restraint of trade."

Another example of an incidental effect is furnished by the case of *Henry* v. *Dick Co.*, supra, where the patentee's mimeograph could be used only with stencil paper and ink furnished by the patentee. Again, to the extent that this mimeograph process took the place of other processes for copying, the trade in paper and ink for such other copying purposes was destroyed and others were restrained from engaging in the business of furnishing such supplies for the new process.

A further example of the far-reaching but lawful effect on trade of the exercise of patent rights covering important or essential machines is set out by the court in the *Heaton-Peninsular case*, supra (p. 295):—

"Let it be supposed that the patents owned by this complainant were of so wide a character as to cheapen the process of manufacturing shoes, and to drive from competition all other modes of manufacture. Then suppose the patentees were of opinion that they could most profitably enjoy their inventions by retaining the monopoly of the use, and engaging in the manufacture of shoes. If content to undersell all others, they could engross the market for shoes, to the extent of their capacity to supply the demand during the life of their patents, or so long as their invention was not superseded by subsequent inventions still further cheapening the cost of manufacture. The monopoly thus secured would be the legitimate consequence of the meritorious character of their invention. Yet just such monopolies may result whenever a new and surprising advance is made in some art of wide and general use. The great consuming public would be benefited, rather than injured, for the monopoly could endure so long only as shoes were supplied at a less price than had prevailed before the invention. Now, if the patentees, by retaining to themselves the exclusive use of their invention, are able, legitimately and lawfully, to acquire a monopoly of the manufacture of shoes, and destroy the shoe market for those who before had shared it, why may they not, by a

system of restricted licenses, permit others to use their devices on condition that only some minor part of the shoe,—the pegs, the tips, the thread, or the buttons, or the button fasteners,—shall be bought from them? If these concessions were such as to enable others to compete, though their use of the mechanism was restricted by the terms of the license, who could justly complain, if the inventors, content with a monopoly of the market for the article named in their license, surrendered the opportunity for a monopoly of the manufacture of the complete shoe? The device protected by the patents owned by complainant is of no such wide or radical character as that used for purposes of illustration. Yet there is no appreciable difference in the legal principles applicable to the supposed facts used for illustration, and those stated on the face of the complainant's bill."

(h) RESTRICTIONS OF THE CHARACTER EMPLOYED BY THE UNITED COMPANY HAVE BEEN RECOGNIZED AS LAWFUL BY A LONG LINE OF DECISIONS. THE UNITED COMPANY IN EMPLOYING THESE PROVISIONS USED A METHOD OF MARKETING ITS MACHINES LONG RECOGNIZED AS NORMAL AND PROPER.

A great body of law has been built up which has recognized the right of patentees to restrict their patented machines not only in the manner employed in the present case, but in ways more far-reaching still.

Nat. Phonograph Co. v. *Menck*, 27 T. L. R. 239.

In *Henry* v. *Dick Co.*, supra, this court said (p. 36):—

> "That a violation of any such restriction annexed to a sale by one with notice constitutes an infringing use has been decided by a great majority of the Circuit Courts and Circuit Courts of Appeal, and has come to be a well-recognized principle in the patent law, in accordance with which vast transactions in respect to patented articles have been conducted. But it is now said that the numerous decisions by the lower courts have been erroneous in respect to the proper construction of the limit of the monopoly conferred by a patent, and that they should now be overruled. To these courts has been committed the duty of interpreting and administering the patent law. There is no power in this court to review their judgments, except upon a writ of certiorari, or to direct their decisions, save through a certified interrogatory for direction upon a question of law. This power to review by certiorari is one which has been seldom exercised in patent cases. *A line of decisions, which has come to be something like a rule of property, under which large businesses have been conducted, should at least not be overruled except upon reasons so clear as to make any other construction of the patent law inadmissible*" (italics ours).

The United Company in employing these restrictions, therefore, merely employed methods which were in general use in respect to patented machines and which were therefore normal and

natural in respect to such machines and were recognized by numerous decisions as a proper exercise of patent rights. Their doing so can give rise to no inference of intent to oppress shoe manufacturers or the public unlawfully. The use of these clauses can be material in the present case only if they are held to be inherently unlawful no matter with what intention they were used. This result can be reached only by overruling a large number of decisions which have established a rule that, as said in the Dick case, "has come to be something like a rule of property."

(i) CONSIDERATION OF DECISION IN STANDARD SANITARY MFG. CO. v. U. S., 226 U. S. 20.

The United States contends that the decision in *Standard Sanitary Mfg. Co.* v. *U. S.*, supra, shows that patent restrictions may be within the prohibition of the Sherman Act.

In this case sixteen competing manufacturers of enamel ware accepted licenses under a patent for the use of a tool the employment of which was useful but not essential to one out of many steps in the manufacture of the ware. Prior thereto the Standard Company, one of the manufacturers, had owned the patent, and none of the others had had licenses. A few of the others had used it by infringing, others had not used it at all. In accordance with an arrangement made by one Wayman the Standard Company transferred the patent to him, and he granted licenses to all the competing manufacturers to use the patented implement. Under these licenses the manufacturers agreed, among other things, to sell their enameled ware only at prices determined by a commission composed of the licensor and of five of their number. All jobbers were likewise required to sign licenses agreeing to sell only at stipulated prices and to buy all their enameled ware from the licensees. The concerns which accepted such licenses manufactured 85% of the total production. "The trade was, therefore, practically controlled from producer to consumer and the potency of the scheme was established by the co-operation of 85 per cent of the manufacturers and their fidelity to it was secured, not only by trade advantages, but by what was practically a pecuniary penalty."

The agreements were clearly in restraint of trade unless justi-

fied as restrictions under the patent. The court held that they were not so justified, because they "transcended what was necessary to protect the use of the patent or the monopoly which the law conferred upon it." In other words, the restrictions were not restrictions imposed by the patentee for his benefit upon the use of his patent and accepted by licensees in order to obtain the use of the patent. They were imposed, as the court pointed out, for the purpose of restraining trade, and were accepted by the licensees for this purpose. In fact, it was the licensees and not the patentee who insisted upon them. They were put in the form of restrictions in a patent license as a subterfuge with the hope of thereby legalizing them. The use of the patent was an entirely secondary consideration.

The court emphasizes the circumstances showing this. Thus the Standard Company which had owned the patent prior to the combination was unwilling to grant licenses, and the other manufacturers were unwilling to accept them, until the scheme for the elimination of competition was proposed. The manufacturers were also unwilling to accept the licenses until 83% of the total production assented, and it was provided that the licenses should not go into effect until such assents had been obtained. Furthermore, the patentee testified that "he hoped as one of the features of the license agreements to enable the companies to abolish ruinous competition," and he induced jobbers to accept licenses by stating that it was "a matter entirely for the jobber's benefit," and "much more advantageous than a continuous cut market."

It is clear that the entire transaction was brought about by a desire on the part of the competing manufacturers to restrain trade and regulate prices. The patent was merely used in an attempt to legalize this unlawful combination. The conditions contained in the licenses were not imposed by the patentee for his protection or benefit, but were, on the contrary, imposed by the licensees for their benefit. For example, the patentee did not benefit at all from the regulation of prices. The elimination of competition, therefore, did not result incidentally from the desire of the licensees to use the patented article and their consequent willingness to submit to conditions imposed by the patentee for his benefit.

Patents and patent rights cannot, of course, be used as a

subterfuge to justify an illegal combination. As the court said in *Virtue* v. *Creamery Package Co.*, 227 U. S. 8, 32,—

> "Of course patents and patent rights cannot be made a cover for a violation of law, as we said in *Standard Sanitary Manufacturing Company* v. *United States*, 226 U. S. 20."

The court in the Sanitary case took pains to point out that it approved the principle laid down in the Bement case, that the Sherman Act does not refer to that kind of restraint of commerce which may arise from reasonable and legal conditions imposed upon the licensee of a patent restricting the terms upon which the article may be used (p. 40). It further pointed out that its decision in no wise affected the decision in *Henry* v. *Dick* (p. 48).

The present case is different in every respect from the Sanitary case. There is no question in the present case but that the Restricted Use Clauses were imposed by the United Company for its benefit and protection and were accepted by licensees in order to enable them to use the patented machines. These clauses are not a subterfuge employed by agreement of the parties to effect some ulterior purpose. The present case falls within the rules laid down in the Bement case and the Dick case which, as expressly pointed out, were not affected by the decision in the Sanitary case.

It may further be noted that the restrictions in the Sanitary case applied to the prices charged for unpatented articles made and owned by the licensee by the use of an instrument not even essential to their production, while the restrictions in the present case relate to the use of patented articles owned by the patentee. There are no restrictions as to the prices which shall be charged for the shoes produced by the use of those patented articles. Further, it may be noted that these price restrictions in the Sanitary case applied to the goods even after they had been sold to jobbers, and thus, even had they been patented, they would have passed beyond the domain of the patent monopoly.

(9) LEGALITY OF "AUXILIARY RESTRICTED USE CLAUSE."

The legality of the "Auxiliary Restricted Use Clause" needs little further discussion, as it has been covered by the foregoing discussion of the "Restricted Use Clause."

It restricts the use of auxiliary machines to use with the principal machines, for the assistance of which the auxiliary machines were developed. As we have shown above, such clauses were used by the constituent companies and there were and are business reasons justifying and requiring their use. They were not adopted for the purpose of unlawfully excluding the use of other machines.

While no alternative forms of lease have been prepared permitting their use with principal machines obtained from other manufacturers, this is because they were developed for the purpose of assisting the principal machines of the United Company, and there has been no call for an unrestricted lease. The record showed no such demand. Mr. Winslow testified that the United Company would be prepared to so furnish them if there were such a demand and conditions justified (R. Vol. 1, pp. 544–6). As we have shown above, however, the United Company was under no obligation to furnish its machines except for use as a series.

13. ENFORCEMENT BY THE UNITED COMPANY OF ITS LEASES.

The petition alleges that the United Company has continually, persistently, and arbitrarily enforced the provisions of its leases (R. Vol. 1, p. 997). This charge is without any foundation whatsoever.

We have discussed the provisions of the leases above as though they were strictly enforced by the United Company. As a matter of fact, the United Company has only enforced them in a very few instances when the conditions in the lessee's factory were such that its machines were being damaged or it was being deprived of a proper return on its machines as was fairly contemplated by their spirit and intent.

The purpose and effect of leases of this character cannot, as stated above, be tested solely by an examination of the literal wording of the leases. In leasing a complicated set of shoe machinery to over a thousand lessees scattered all over the country, it is impossible to foresee all the conditions which may arise under which it may be unfair for the lessee to use the machinery, and even when such conditions can be foreseen it is often a ques-

tion of degree or of the particular circumstances of the case as to whether the lessor needs protection. It is essential that the lease contain general provisions agreed to by the lessee, which the lessor can enforce if his protection so requires. The same is true of the ordinary lease of a house or of business premises. For example, such a lease often contains a covenant on the part of the lessee not to permit any nails to be inserted in the walls, and the lessor is authorized to forfeit for violation of any covenant. If the lessee or any of his family drives a small nail into the wall, the lessor has a technical right to forfeit the lease. This, however, does not make the lease oppressive. It is obvious that the lease cannot specify exactly how many nails a lessee may drive without forfeiture. The reservation of this general right is necessary and the lessor in the ordinary lease exercises a reasonable discretion as to the exercise of his rights, and a court of equity will restrain an unjust forfeiture.

In considering, then, the purpose and effect of the provisions contained in the United Company's leases, it is necessary to consider not only the literal wording of the clauses, but the extent and manner in which the United Company has enforced these provisions.

The United Company has been far more Liberal to Lessees than the Terms of its Leases Required.

The following are a few striking examples of the extent to which the United Company has treated its lessees more liberally than was required by the terms of the leases.

1. Every lease which the United Company has put out requires the lessee at his own expense to keep the leased machinery in good and efficient working order and condition. (For example, see P.'s Ex. 24, par. Two; R. Vol. 3, p. 216.) None of the leases has required the United Company to instruct operatives for the lessee. Yet the United Company has always kept the machines in repair, charging only for the cost of new parts, and has always instructed operatives. It has charged the shoe manufacturer absolutely nothing for this service, except the cost of new parts, even paying the traveling expenses of its service men. In 1911 this service cost the United Company $1,196,494.86 (R. Vol. 1, p. 421, lines 18–23, 31–34; p. 974, line 22).

2. Every lease provides that the lessee upon the termination of the lease shall pay the lessor such sum as is necessary to put the leased machinery in suitable order and condition to lease to another lessee. (For example, see P.'s Ex. 24, par. Nine, R. Vol. 3, p. 223.) As a matter of practice the United Company has charged lessees upon the return of machines much less than the cost of repairs. For example, in 1911, the cost of repairing returned machines was $350,000, and the amount charged lessees was only $70,000 (R. Vol. 1, p. 853, lines 19–32).

The United Company has established a standard price for repairs to which is added the cost of new parts so that each lessee may know before he returns a machine how much the cost to him will be. All customers are treated exactly alike (R. Vol. 1, p. 853, lines 33–44; p. 854, lines 1–29).

3. When a lease of a machine is once made, the United Company has, of course, a right to insist that it be retained by the lessee for the period of seventeen years.

The United Company has disregarded this provision of its leases wherever a new machine has been developed which was better than a machine then in use. In such cases the United Company has offered the new machine to lessees, and taken back the machine previously leased, and when obsolete has scrapped it. The United Company has done this without making any charge to lessees for so doing, either on account of the scrapping of the old machine, or on account of the increased efficiency of the new machine (R. Vol. 1, p. 425, lines 12–20). The new Model K Welter, for example, effects a saving to shoe manufacturers and operatives of at least $800 per year. Yet these welters are substituted for the old welters without any charge, or the requirement of any additional royalty, although the United Company is under absolutely no obligation to do so. The United Company has thus substituted new improved machines for a large portion of the machines which were outstanding when it was formed. Nearly all of the machines made by the Goodyear Company in 1899 have been replaced by new and improved machines (R. Vol. 1, p. 430, lines 32–34).

4. The United Company has since its organization developed a large number of new auxiliary machines not supplied in 1899. It has, for example, added 22 welt auxiliary machines, and 6 turn auxiliary machines (Defs.' Ex. 242, R. Vol. 5, pp. 681; Defs.'

Ex. 245, R. Vol. 5, p. 683). Although under no obligation whatsoever to do so, it has furnished lessees under existing leases these new auxiliary machines without extra charge or royalty except a small rental or initial payment which affords no fair return on the machines.

5. Many of the leases require the lessee to guarantee a minimum payment. This clause has never been enforced, except for the purpose of requiring a lessee to return idle machines for which he had no further use (R. Vol. 1, p. 553, lines 4–19).

The United States, in spite of extraordinary efforts to present the evidence of every dissatisfied lessee out of the hundreds of lessees who have dealt with the United Company since 1899, has utterly failed to show a single instance of any arbitrary or oppressive enforcement of its leases. The thirteen instances of such conduct which it finally charged are set forth in its bill of particulars under the heading of "Misrepresentation and Threats to Induce Customers of Competitors to Abandon Competing Machinery" (R. Vol. 1, pp. 1075–8). As to six of these alleged instances it introduced no evidence whatsoever. The evidence as to the remaining seven showed the charge to be utterly unfounded. A statement of the evidence in respect to these charges is contained in the Appendix (Appendix, pp. 88–103), and a short summary is given below in the Brief (*infra*, pp. 544–546).

In a very few instances the record shows that the United Company called the attention of its lessees to the clauses in the leases. Except in the five cases of cancellation referred to below, and a single suit brought against the Plant Shoe Company under its leases, the record shows no instance of an enforcement by the United Company, by legal action or by cancellation of its leases, of any of the clauses objected to by the United States, viz., the clause providing that the lease should run for seventeen years, the Full Capacity Clause, the Exclusive Use Cancellation Clause, the Cancellation for Breach Clause, the Restricted Use Clause, or the Auxiliary Restricted Use Clause.

In each of the five cases of cancellation referred to, the United

Company cancelled its leases because of a most flagrant violation by the lessee of its rights. These were the cases of C. E. Ramlose, E. F. Bell & Co., Peter Tessier & Co., E. Bottomley & Co., and T. D. Barry & Co. (R. Vol. 1, p. 447).

In the Ramlose case the lessee persistently cheated the United Company by reporting on his royalty returns only about half the shoes made (R. Vol. 1, p. 447, lines 36–45).

In the Bell case the lessee persistently used wire purchased from others on his metallic machines, thus depriving the United Company of its royalty on these machines. Only the machines which were being so wrongfully used were removed, and the others were left (R. Vol. 1, p. 448, lines 1–10).

In the Tessier case the lessee had abandoned the use of the United Company's machines and was paying it no royalty (R. Vol. 1, p. 448, lines 11–18; see Appendix, p. 88).

In the Bottomley case the lessee obtained other machines and abandoned the use of the United Company's machines and wrote the United Company he would pay it no further royalties on them (see Appendix, p. 90).

In the Barry case the lessee abandoned the use of the Goodyear Welter, but used the Goodyear Auxiliaries without making any payment for such use (see Appendix, p. 92).

Not only then does the record fail to show any instances of oppressive enforcement of the provisions of the leases, but it shows various instances in addition to those stated above in which the United Company did not insist upon a compliance with the provisions of the leases or exercise its full rights reserved under the leases.

In respect to the term of the leases, we have shown that the United Company upon the invention of a new improved machine was always ready to cancel the old lease, and furnish the new machines without charge. The United Company was also ready at all times to change over restricted leases to unrestricted leases or vice versa (*supra*, p. 358). It was further ready to permit a shoe manufacturer to give up his leases if circumstances justified. Thus Mr. McElwain, whose company is one of the largest shoe concerns in the country, making about 30,000 pairs a day, asked the United Company if he could cancel his leases in case he decided he would take other machines, and was told by Mr. Winslow that the United Company would be

glad to make fair arrangements to cancel any or all of his leases, so that he might use another line of machines if he desired (R. Vol. 1, p. 502, lines 12–18).

Plaintiff's Exhibit 161 (R. Vol. 4, p. 1118), introduced by Louis H. Harriman of the Haverhill Shoe Machinery Company, a witness for the United States, gives a list of eight concerns which had used the Haverhill Company's Turn machine in the same factory with the United Company's Goodyear Turn machine, and of nine other concerns who were still doing so. In none of these cases had the United Company exercised the right to withdraw its Goodyear Turn machines, although it could have done so under the Exclusive Use Cancellation Clause, and although the lessee in certain cases was apparently using in connection with the Haverhill Turn machines, machines held under Restricted Use Clauses forbidding such use, including General Department machines on which no separate royalty was paid, and on which the entire royalty was received indirectly from the machines to use with which they were restricted (Donham, R. Vol. 1, pp. 828–30).

We do not intend to intimate that the lease clauses are not essential to the protection of the United Company. We merely wish to point out that, like all clauses of this kind, it is necessary that they should be general in their terms, and that the United Company enforces them only if necessary to protect itself against damage to its machines, or against the use of its machines under conditions which do not give it a fair return.

Furthermore, the leases as introduced in evidence do not give a complete picture of the policy of the United Company towards its lessees. The United Company is willing at all times to adapt its system to meet the reasonable requirements of shoe manufacturers.

Riders in great variety, as the record shows, have been adopted from time to time modifying the terms of the leases to meet particular situations, and the United Company is prepared to continue this policy. The policy of the United Company is expressed by Mr. Winslow's statement on cross-examination with reference to making a separate price for Goodyear Auxiliary machines:—

> "It is not fair to state that we will not permit one of these important auxiliary machines that we have developed and

are developing to be used in connection with a welter or outsole stitcher made by any one else. We have followed the line which in our judgment would give to the manufacturers of shoes the greatest amount of value for the money that we received, and there has been no other reason for it" (R. Vol. 1, p. 545, lines 19–25).

"Should a welter or a stitching machine that was the equal of our machine be developed and offered to the manufacturers, and the developer of that machine or that concern were not attempting to use it as a blackmailing proposition, or attempting to make shoes and call them Goodyear welts when they were not, I can quite understand our company to be perfectly willing to establish prices for its auxiliary machines" (R. Vol. 1, p. 545, lines 31–38).

The leases in evidence only represent the terms under which the United Company offers its machines for use under conditions for which there has so far been a demand. As Mr. Winslow testified:—

"The assumption that these leases that you have put in, or have been putting in, represent the policy of the company is entirely unfair. We have riders continually, when a condition arises, by which we let manufacturers use machines. They only represent just exactly certain notices as to how those machines should be used for the money that is paid for them, nothing more" (R. Vol. 1, p. 546, lines 13–20).

14. THE PROVISIONS IN THE LEASES ARE ESSENTIAL TO A CONTINUANCE OF THE PRESENT SATISFACTORY LEASE SYSTEM UNDER WHICH SHOE MANUFACTURERS OBTAIN MACHINES WITHOUT INITIAL PAYMENT FOR A ROYALTY BASED ON THE USE OF THE MACHINES. THEY ARE, THEREFORE, CLEARLY NOT CONDEMNED BY THE SHERMAN ACT.

The foregoing survey of the reasons necessitating the various provisions in the leases attacked by the United States shows that they are essential to a continuance of the present satisfactory lease system under which shoe manufacturers obtain machines without initial payment, and for a royalty based upon the use of the machine.

For example:—

The "Full Capacity Clause" is essential if machines are leased

without initial payment for a royalty based on use. The return to the United Company on its investment in machines cannot be made dependent on use unless the lessee agrees that he will use. If prohibited from employing this clause, the United Company would be obliged to (1) sell its machines, or (2) charge a large initial premium upon the installation of its machines, or (3) charge a fixed rental instead of a royalty based on use.

The "Restricted Use Clause," or some provision having the same effect, is essential if the shoe manufacturer who desires to use a team of the United Company's machines is to be given a wholesale rate and thus be permitted to share in the economies resulting from the use of the machines as a team. If forbidden to use this clause, the United Company must charge for each machine a price based upon the probable return from the machine when used as an independent unit, which is necessarily higher than the price charged when it is taken to be used as a part of a team of the United Company's machines. The shoe manufacturer desiring to use a team of the United Company's machines would, therefore, be obliged to pay more for his machines.

The "Exclusive Use Cancellation Clause" permits the United Company to withdraw its machines of a particular kind if, owing to the use by the lessee of the same kind of machines obtained from others, its machines are not used sufficiently to afford a fair return, or it has reason to believe that the lessee carelessly or dishonestly does more work on its machines than is reported. The United Company could not continue furnishing machines without an initial payment or fixed rental unless it had this right.

The "Cancellation for Breach Clause" enables the United Company to withdraw its machines if the lessee violates his agreements. If, in case the lessee refused to pay royalties, or damaged, removed, or assigned the machines or otherwise violated his agreements, the United Company had no remedy except to bring a succession of suits which might take years to conclude, and which might not be determined until after the lessee became insolvent, it could not continue to furnish its machines on lease at all, or, if it did lease them, without large initial payments.

A term of seventeen years is, of course, not essential. But a long term is essential. The United Company could not be asked to build $40,000,000 of machines and install them in

lessees' factories without initial payment on their part unless the lessees agreed to use the machines for a term long enough to insure an adequate return. The lessee likewise desires a long term; otherwise his royalties may be increased at any time. If the term is long, it is not of much consequence whether it be fifteen or seventeen years.

The clause requiring the lessee to obtain new parts needed in the leased machines from the United Company is essential to assure the proper maintenance of the machines which belong to the United Company. The United Company could not furnish its machines without initial payment if the lessee were permitted to replace broken parts with cheap parts or parts not adapted to the machine, and thus depreciate its value.

These clauses, then, or clauses similar in effect, are essential to the continuance of the present highly satisfactory lease system. The District Court said (R. Vol. 1, p. 1187):—

> "The attack of the United States is not upon these rights, but upon the particular mode in which they have sought to exercise them. Other modes, such as the requirement of arbitrary payment for the full period of the patents, would escape all such attacks. *The attack arises from the attempt to adjust the payments to the amount of use which particular manufacturers may have for the patented inventions*" (italics ours).

If the United Company should be forbidden to employ those or similar provisions and thus be prevented from continuing the present reasonable and satisfactory lease system, the consequences to shoe manufacturers and the public would be most serious.

Not only would the cost of machines be increased, but shoe manufacturers like Bennett, Burt, and Allen, as they testified, would not be able to start in business at all. Many existing shoe manufacturers who have made no initial payment on their machines and who have little capital would probably be unable to make an initial payment on the machines now held by them and thus be forced out of business.

Provisions necessary to enable the United Company to furnish machines without initial payment for a royalty based on use, and to share with its lessees the economies resulting from the use of machines as a team, are obviously normal, reasonable provisions not affected by the Sherman Act.

IV.

THE "ACQUISITIONS" OF OTHER CONCERNS AND PATENTS.

(The acquisition of the patents of Thomas G. Plant will for convenience be discussed separately (*infra*, pp. 476-542).)

1. GENERAL DISCUSSION.

The petition alleges that defendants

> "determined to acquire a complete monopoly of the manufacture, sale, and lease of shoe machinery, destroy existing competition among the manufacturers and dealers in such machinery, . . ."

and that

> "they conceived the idea of acquiring the ownership or control of all concerns engaged in manufacturing and dealing in any and all kinds of shoe machinery . . ." (R. Vol. 1, p. 994).

Section VII of the petition (R. Vol. 1, pp. 999–1023), which sets forth the "acquisitions," is introduced by these allegations:—

> "In pursuance of their purpose to monopolize the shoe machinery industry, the defendants have, through United Shoe Machinery Company, of New Jersey, by the methods herein described, absorbed many competitors. . . . Among the individuals, partnerships, and corporations who were competitors of the defendants, and whose businesses have been so acquired and absorbed by them are the following:" (R. Vol. 1, pp. 999–1000).

The petition then recites fifty-eight transactions entered into by the United Company at various separated times during a period of twelve years, and concludes,—

> "The competition which previously existed between said several concerns has been entirely destroyed" (R. Vol. 1, p. 1023).

The petition also alleges that defendants

> "have acquired many letters patent for valuable inventions, and have held the same for long periods of time without making use thereof, thus depriving the manufacturers and the public of the benefits arising therefrom; . . . they have bought the business of many competitors, though compelled to pay exorbitant prices therefor . . ." (R. Vol. 1, p. 999).

In view of these unqualified allegations that the parties with whom these dealings were had were "competitors" of the United Company, and, in view of the failure of the petition to set forth either adequately or accurately the facts regarding either defendants' intent or their accomplishment, it is important that at the outset an understanding be had as to the general character of these transactions.

GENERAL SURVEY OF THE "ACQUISITIONS."

These fifty-eight parties, almost without exception, were *not* competitors of the United Company. The petition aims to create the impression that most of them were manufacturers or dealers in shoe machinery generally, like so many sugar refineries or so many tobacco factories, and that by these transactions the United Company removed so many competitors from the shoe machinery field. This is very far from the facts.

Less than a Half of the Parties were Engaged in any Shoe Machinery Business.

In the first place, in twenty-four of these transactions *no shoe machinery was acquired.* In eight more transactions the parties were doing no business, their machines were only experimental. That is, only twenty-six of the parties to the fifty-eight transactions set out in the petition were doing any shoe machinery business of any kind; thirty-two were not doing any shoe machinery business at all. Accordingly more than half of these transactions are not even *prima facie* within the allegation in the petition that defendants' intent was

> "acquiring the ownership or control of all concerns engaged in *manufacturing and dealing in* any and all kinds of *shoe machinery*" (italics ours) (R. Vol. 1, p. 994).

And further, with but few exceptions the machines of those concerns which were in one way or another engaged in shoe machinery business were all different, not only from anything that the United Company had before, but each from the machines of all the others. So far from the truth is the allegation that

> "the competition which previously existed between said several concerns has been entirely destroyed" (R. Vol. 1, p. 1023).

By nearly All of the Transactions by which the United Company Acquired Anything it Acquired Something which it had never Had before.

Probably the most striking fact about the "acquisitions" is that by nearly all of the transactions by which the United Company acquired anything it acquired something which it had never had before. By fifty of the fifty-eight transactions, including nearly all of those by which any shoe machinery was acquired, the United Company entered an entirely new field by acquiring machines for performing operations for which it did not have machines, or supplies or findings which it did not have before; or it acquired patented improvements or inventions for the purpose of enabling it to supply better machines or products than it had before; or it acquired no property or business whatever. The remaining eight concerns were either not engaged in the shoe machinery business or were not in any sense competitors.

In so far as there was any suggestion of competition in respect to any of those fifty concerns by reason of slight overlapping of the field in which any of them was doing business and the United Company's field,—and there were but few cases of that,—either (1) the United Company's machine or product was very inferior and unsatisfactory and was discarded when the new machine or product was acquired; or (2) the acquisition of the overlapping machine or product was merely incidental to the transaction, entirely outside of its real purpose and object, and such slight competition as existed or was promised was of no consequence at all and may be disregarded. In every one of these transactions the all-important fact bearing upon both the intent and what was actually accomplished was that the United Company ac-

quired a new machine or a new product which it did not have before but which its customers used and demanded, or a new invention which was needed to improve its machines. The charge that the United Company acquired competing concerns is thus absolutely without foundation.

In its efforts to show that in some instances there was competition between the acquired concerns and the United Company petitioner has throughout the case endeavored to obscure the facts by telling only a part of the story,—for example, that the United Company and an acquired concern had machines of the same or similar names. In considering such arguments by petitioner it is highly important that the court keep in mind the fact that as clearly appears from the record the different kinds of shoes, owing to their radically different shoe organizations, in most instances require different machines for the same, or corresponding, operation (R. Vol. 1, p. 84, lines 1–4).

By a Majority of the Transactions the United Company did not Acquire any Machine of the Class in respect to which the United States Claims a Monopoly.

Considering the "acquisitions" from another viewpoint, it is an illuminating fact that in thirty-two of the transactions the United Company did not acquire any machine of the class in respect to which the United States claims a monopoly, namely, machines for preparing and attaching the bottoms to the uppers of shoes, eyeletting machines, and clicking machines. By twenty-three of the twenty-six transactions which do fall within the above classification as to which monopoly is claimed the United Company acquired a machine or an invention which it did not have before and which it needed. As to the three remaining transactions, in one case the machines were only experimental and infringed many of the United Company's patents. The other two transactions related solely to foreign business and were in effect only purchases of foreign patents; in one of those cases there were patent complications and in the other the United Company had been agent for the machine affected.

This shows that the acquisitions did not give the United Company any monopoly such as that charged, or affect the alleged monopoly to any significant extent, and they may therefore be disregarded in this aspect of the case.

As to acquisitions of this class the District Court said (Dodge, J., R. Vol. 1, p. 1140):—

> "It does not appear that they contributed anything essentially important to that degree of commercial success obtained by the company as above. If they assisted in obtaining it, it was by assisting the development of the machines to whose ultimate efficiency it was due. It can hardly be said as to any of them that they afforded anything more than a basis whereon to build."

The Concerns and Inventions which were Offered to the United Company and Declined were far more Numerous and Important than Those which it Acquired.

An examination of the lists of concerns dealing in shoe machinery and findings which were offered for sale to the United Company, but which it declined to purchase, and of the large number of other concerns engaged in the shoe machinery business in competition with the United Company which it has never acquired or attempted to acquire shows conclusively that the United Company made no attempt to acquire all concerns engaged in the shoe machinery business. This is confirmed by Mr. Winslow's testimony that in each instance outstanding competitors were left (R. Vol. 1, p. 465, lines 20–23).

Thus Defendants' Exhibit 233 (R. Vol. 5, p. 527), which is a partial list of concerns offered for sale to the United Company but declined, contains the names of 75 different concerns, many of great size and importance. (See Mr. Winslow's testimony regarding the business done by these concerns,—R. Vol. 1, pp. 472–5.) Many of these concerns had machines which are included within the classes of machines as to which the Government charges a monopoly. Mr. Winslow said of them (R. Vol. 1, p. 472, lines 16–23),—

> "Broadly speaking, this list includes manufacturers who, taken together, were making, or are now making, I should say, a complete line of shoe machinery, including the sewing machines for the fitting room."

The list includes such important concerns as the following:—

The Wheeler & Wilson Company (R. Vol. 1, p. 472, lines 24–26), manufacturing 90% of the machines used in making uppers.

The Atlas Tack Co., the largest manufacturer of tacks and a large producer of eyelets (R. Vol. 1, p. 472, lines 39–43).

The Canadian Shoe Machinery Co., making a full line of what is termed the important machines, including welters and stitchers, which did business in the United States through the Duplessis Company (R. Vol. 1, p. 473, lines 13–18).

The Duplessis Shoe Machinery Company (now the Hamel Shoe Machinery Company) which manufactured complete sets of machines for making welt, turn and McKay shoes (R. Vol. 1, p. 327, lines 15–25; p. 473, lines 30–31; p. 945, lines 1–4).

The Boylston Manufacturing Company, making lasting machines (R. Vol. 1, p. 956, line 8).

The Haverhill Shoe Machinery Company, which furnishes all kinds of shoe machinery for welts, McKays, turns, or pegged shoes (R. Vol. 1, p. 301, lines 5–9).

The Frechette Pegging Machine Co., making pegging machines (R. Vol. 1, p. 474, lines 9–12).

The Krentler Pym Lasting Machine Co., which manufactured a lasting machine (R. Vol. 1, p. 474, lines 26–28).

The R. H. Long Machinery Co., which manufactures large numbers of welters, stitchers, and lasting machines and is prepared to furnish a full line of machines for welt or turn shoes (R. Vol. 1, p. 345, lines 39–44).

The Union Lockstitch Co., which made and marketed large numbers of outsole stitchers (R. Vol. 1, p. 199, lines 9–45).

The Stanley Manufacturing Co., the successor of the McKay Sewing Machine Company, which manufactured the McKay Sewing Machine and carried on the business originally established by Gordon McKay (R. Vol. 1, p. 475, lines 26–32).

Defendants' Exhibit 336 (R. Vol. 5, p. 849) contains a list of shoe machinery manufacturers or dealers not acquired by the United Company, setting out the machines they offer for sale taken from Defendants' Physical Exhibits 311–321, which consist of catalogues, letters, and advertisements. It shows

over 125 different manufacturers and dealers offering every kind of machine, a number of them offering complete lines of machines.

Comparing the number of concerns which the United Company refused to purchase with those actually purchased the District Court said:—

> "As to several, at least, of these instances of refusal, the evidence warrants the belief that the business offered and refused much exceeded in importance to any such scheme of monopoly as now charged, any of the specified acquisitions. . . . If a monopoly of all machinery for attaching bottoms to uppers was really undertaken, it is hard to believe that opportunities would have been neglected, as they were, such as those for acquiring the Union lock-stitch machines or the welters and stitchers of the R. H. Long Company, all of them patented machines for use on welt shoes; or for acquiring a considerable business in producing McKay sewing machines, though these were unpatented and not capable of use on shoes of that kind" (Dodge, J., R. Vol. 1, p. 1141).

Defendants' failure to take advantage of the opportunities to acquire those companies could only be regarded as extraordinary, if back in 1899 they had, as the petition alleges,

> "determined to acquire a complete monopoly of the manufacture, sale, and lease of shoe machinery" (R. Vol. 1, p. 994).

Mr. Winslow's testimony regarding those concerns which were offered to the United Company but were not acquired (R. Vol. 1, pp. 472–5) also shows that a large number of them were engaged in the same lines of business in which many of the concerns which the United Company acquired were engaged.

In addition to the businesses offered to the United Company and not purchased, there were offered to the United Company between June, 1904, and December, 1911, 493 inventions which it did not acquire. These are shown by Defendants' Exhibit 222 (R. Vol. 5, pp. 370, 371–389). A large portion of the so-called "acquisitions" consisted merely of the purchase of inventions of the same kind as the 493 so offered the United Company, the purchase of which was declined.

This list of inventions the purchase of which was declined

includes over two hundred inventions which it is obvious from their titles related to machines of the kind in respect to which monopoly is charged. Of these the District Court said:—

> "The cases in which inventions were offered and refused during the same period were many times more numerous than the patents or inventions acquired" (Dodge, J., R. Vol. 1, p. 1141).

The Transactions Extended through a Period of Twelve Years.

Reverting to the allegations of the petition that prior to the formation of the United Company the officers and directors of the predecessor companies, individual defendants,

> "determined to acquire a complete monopoly of the manufacture, sale, and lease of shoe machinery,"

and

> "conceived the idea of acquiring the ownership or control of all concerns engaged in manufacturing and dealing in any and all kinds of shoe machinery" (R. Vol. 1, p. 994),

and that these fifty-eight "acquisitions" were made

> "in pursuance of their purpose to monopolize the shoe machinery industry" (R. Vol. 1, p. 999),—

these allegations prepare the reader for a showing that these defendants immediately went about gathering in all existing competitors and that they did this by a great number of practically simultaneous transactions so that within a few months at the most they had the field entirely to themselves.

On the contrary, the showing of the petition itself is that *these transactions were entered into at different separated times through a period of twelve years.* The petition alleges that eleven of them were at various times in 1899; seven in 1900; six each in 1901 and 1902; four in 1903; nine in 1904; one each in 1905, 1907, 1909, and 1911; three each in 1906 and 1908; and five in 1910. But, as we have already explained and shall later point out in detail, by a majority of these transactions the United Company did not acquire any shoe machinery business. Notwithstanding this fact, as was well stated by the District Court,—

> "Though thus extended through a period of years, and though widely varying each from the others in character, both in

respect to the nature of the transaction itself and also regarding the circumstances attending it, the petition sets them forth as if all had been in pursuance of one and the same scheme; there described as a scheme to control shoe machinery in general, though now called a scheme only to control the particular classes of shoe machinery before mentioned.

"The nature of some of these acquisitions may be regarded as enough of itself to prevent them from being called indications of a purpose to control any of the particular classes of machinery now important, however it might have been were the scheme now asserted the one originally alleged for controlling all shoe machinery in general" (Dodge, J., R. Vol. 1, p. 1138).

Taking only those transactions which are within the particular classes of machinery as to which monopoly is charged, there were, adopting the dates alleged in the petition, three transactions in 1899; four each in 1900, 1901, and 1902; two each in 1903 and 1908; one each in 1904, 1905, 1909, and 1911; and three in 1910.

It is beyond belief that these transactions, entered into at these widely separated times during this long period, none of which had any connection with or bearing upon any of the others, were entered into in the carrying out of an intent conceived in 1899, and defined in the petition as

"acquiring the ownership or control of all concerns engaged in manufacturing and dealing in any and all kinds of shoe machinery" (R. Vol. 1, p. 994).

It was found by the District Court:—

"The acquisitions above regarded as the only ones of any possible significance in the case were made at various separated times during the period of eleven years or thereabouts above referred to. It cannot be said that the later ones were in contemplation when the earlier acquisitions were made, because there is nothing to show that the circumstances attending any of them were such as could have been anticipated as likely to occur at the time of the preceding acquisitions. The most that can be said is, that as, in the progress of events, the needs of the United Company became manifest and these opportunities presented themselves, they were availed of" (Dodge, J., R. Vol. 1, p. 1140).

It is Essential to Normal Development of a Business in Patented Shoe Machinery that Patented Inventions Occasionally be Purchased from Others.

The United States may rely upon the number of the transactions to show an intent to monopolize. That this is no evidence of such intent is shown by the facts set forth above that the purchases were small in number and importance compared with the business and inventions offered for sale and refused, and that they were not purchases of competing concerns.

There are special reasons why a large number of acquisitions are normal and necessary in the shoe machinery business if a company desires to develop its business and furnish the best machines. In the case of most manufacturing businesses the product is more or less uniform and is not patented. Each concern in the business is engaged in making more or less the same goods in competition. In the shoe machinery business, however, we find over three hundred different kinds of machines, each patented, and a great variety of different findings and supplies, such as eyelets, tacks, wire, cement, sandpaper, glue, peg-wood, awls, needles, etc. We also find new machines being developed constantly. For example, the United Company, since its organization, has developed and put upon the market over 39 different machines to do work previously done by hand (R. Vol. 1, p. 503, lines 37–41; Defs.' Ex. 247, R. Vol. 5, p. 690). We further find many concerns making or dealing in a single machine, or a single kind of supply (Defs.' Ex. 336, R. Vol. 5, p. 849). A shoe machinery company desiring to furnish a line of machines or supplies may therefore acquire hundreds of concerns without purchasing a single one which is in any sense a competitor. Furthermore, we find that many of the individual machines embody over a dozen different patented inventions. A shoe machinery company in developing a single machine, therefore, may acquire half a dozen different patents from as many different people for the purpose of combining them in a single effective machine. An examination of the so-called "acquisitions" in this case will show that many of them were of this class, namely for the purpose of acquiring an invention to be combined with other inventions in the development of or perfecting or improving a single machine.

It must also be remembered that since the shoe machinery art is entirely dominated by patents, a manufacturer desiring to furnish a variety of machines of the most efficient type must not only be constantly engaged in inventing himself, but must occasionally acquire inventions from others whose patents stand in the way of his own experimental work. The situation is entirely different from that found in an unpatented industry, such, for instance, as the woolen, steel, or tobacco industry where the manufacturer can, without purchasing any inventions, engage freely in the business and manufacture any goods which his customers may desire without being restrained by patent monopolies held by other persons.

An examination of the record will show that the acquisitions of the United Company have been made (1) to enable it to furnish machines which it did not at the time manufacture; (2) to enable it to obtain inventions to be combined with other inventions for developing or perfecting some machine; (3) to enable it to furnish its customers supplies or findings, such as eyelets, peg-wood, awls, needles, sandpaper, etc., which it did not manufacture at the time; or (4) that they have not been acquisitions of property at all, but merely employment contracts, transactions whereby litigation was settled, settlements of prior obligations, or similar transactions.

At the time the United Company was formed it had a comparatively small number of machines for an equally small number of operations (R. Vol. 1, p. 2, lines 10–22; p. 3, lines 15–19; p. 4, lines 23–27), and for the most part those machines were adapted for welt shoes only (R. Vol. 1, p. 48, lines 35–38). Since that time it has greatly extended the kinds of machines which it furnishes. Thus since its formation in 1899 it has added to the machines furnished by it over 170 different General Department machines. In addition to the machines which it has acquired it has developed and put out 150 entirely new machines and it has produced 39 machines which perform operations which in 1899 were performed by hand or not at all, including the pulling-over machine and auxiliaries, the eyeletting machines, and the clicking machines (R. Vol. 1, p. 503, lines 7–12, 17, 37–41; Defs.' Exs. 246, 247, R. Vol. 5, pp. 683, 690). The number of machines and inventions purchased by the United Company is small in comparison with the number developed and invented by its own experimental department.

The Allegation that Defendants Paid Exorbitant Prices.

The petition also alleges that defendants

> "have bought the business of many competitors, though compelled to pay exorbitant prices therefor" (R. Vol. 1, p. 999).

Passing over the allegation that these concerns were "competitors," which as we have shown and shall later explain more in detail is not supported by the facts, there is not a word of testimony in the entire record which shows or even suggests that the consideration paid in any instance was more than the property acquired was worth. The largest consideration, $775,000, was that paid in the J. C. Rhodes & Company transaction, and they did no shoe machinery business whatever. They were a large eyelet-making concern established long before, owning real estate and a factory and employing 116 men. The broadly patented enamel eyelet which they manufactured was in general use.

In only one other transaction, Pearson & Bennion, Ltd., did the consideration exceed $200,000. That concern did business only in England and it in no way competed with the United Company. The list of their assets, including a new factory, at the end of Plaintiff's Exhibit 61, coupled with their agreement to assign their Letters Patent (R. Vol. 3, pp. 525, 527, 530), shows that the United Company got full value for the amount which it paid, $410,245.

The aggregate of the considerations paid in all of the fifty-eight transactions, including nearly $1,200,000 paid in the Rhodes and Pearson & Bennion transactions, was approximately $3,555,000, an average of less than $62,000. That sum, excepting the consideration in the Plant purchase, which will be discussed by itself, represents the entire amount paid by the United Company over a period of twelve years for new machines, new products, and patented inventions which enabled it to enter many new fields and to add a great number of substantial and important improvements to its machines. It is certainly an insignificant sum as compared with the United Company's assets of over $40,000,000 on March 1, 1911 (P.'s Ex. 167, R. Vol. 4, pp. 1137, 1143). And compare the amounts paid from 1907 to 1911 with the $2,267,000 which it expended on its own experimental work in

that same period,—1907 to 1911 (Defs.' Ex. 216, R. Vol. 5, p. 322). The aggregate of the considerations paid for the acquisitions during those five years, including a number not doing any shoe machinery business, was $639,588.93; for those concerns which were doing shoe machinery business approximately $375,000 was paid during that period.

The District Court held:—

> "An allegation in the petition that the business of many competitors was bought at exorbitant prices, fails of support in the evidence relating to any specified instance of acquisition among those thus far considered [all except the Plant purchase]. As to them, indeed, no claim of the kind seems to be seriously urged" (Dodge J., R. Vol. 1, p. 1142).

The Charges that Plants have been Closed and Businesses have been Discontinued.

In the summary of the "acquisitions" in the petition there are frequent statements that "the plant has been closed" and "the business has been discontinued." The facts are as follows:—

In thirty-three of these transactions *no plant was acquired.* Real estate was acquired in only six. Five of those six businesses were continued and are now being carried on in the same plants, and the sixth was continued for a considerable time in the same plant and then, for reasons of convenience and economy, was transferred to the United Company's Beverly factory where it has since been continued and increased.

In general, as to forty-one of the fifty-eight transactions the United Company has continued to carry on the business when the transaction involved the acquisition of a business, or has used the patented inventions when those were the subjects-matter of the transactions; in most of the other seventeen transactions no shoe machinery business was acquired; while as to the few transactions in respect to which the United Company has not yet succeeded in doing anything with what it acquired, either the demand ceased entirely owing to radical changes in manufacturing methods or it proved impossible to make the experimental machines acquired commercially successful, as will be fully set forth in our detailed discussion.

Again, the petition alleges that defendants

> "have acquired many letters patent for valuable inventions, and have held the same for long periods of time without making use thereof, thus depriving the manufacturers and the public of the benefits arising therefrom" (R. Vol. 1, p. 999).

There is not a particle of evidence in support of this allegation, but there is ample evidence which positively disproves it. Mr. Winslow testified:—

> "The United Company has suppressed absolutely no machines, no inventions and no improvements" (R. Vol. 1, p. 433, lines 27–28).

Mr. Howe testified:—

> "The United Shoe Machinery Company has never suppressed an invention that it thought could be worked out to make a commercial machine which would benefit the lessees. . . . I have never known of a single patent which had prospective value when embodied in machinery being laid on the shelf or suppressed" (R. Vol. 1, p. 671, lines 18–20, 23–25).

Mr. Howard testified that as regards all the acquisitions the acquired inventions were put to practical use so far as they were useful, and that in every instance where the invention was not put into practical use, it was because study and experiment proved that it was not practicable or was inferior to what the industry already had (R. Vol. 2, pp. 2087, 2088, Cr. Ints. 1657, 1658).

2. DETAILED DISCUSSION OF THE ACQUISITIONS.

(NOTE.—The Plant purchase (R. Vol. 1, p. 1019) will be discussed separately (*infra*, pp. 476–542). The allegation in the petition regarding the Boston Blacking Company (R. Vol. 1, p. 1005) was abandoned by petitioner and Plaintiff's Exhibit 76 (R. Vol. 3, p. 599) was withdrawn (R. Vol. 1, p. 47, lines 21–43).)

On examining the facts regarding these transactions, which are set forth in the Appendix to this Brief (pp. 3–81), the court will find that the circumstances attending each transaction fully justified the United Company in entering into it, and that the facts about all of them completely disprove the allegations of the

petition that these transactions were made in pursuance of any "purpose to monopolize the shoe machinery industry" (R. Vol. 1, p. 999), or with the intent to suppress competition, or that they had any such effect.

It is of course impracticable to review here the facts of each transaction, but, as indicated in our general discussion, each transaction presented one or more striking characteristics which were common to a large proportion of the others, so that the discussion of the transactions may be facilitated by grouping those presenting important distinctive features in common.

A. CLASSIFICATION OF THE ACQUISITIONS.

(1) In Nine Transactions no Tangible Property or Business of Any Kind was Acquired.

The agreements with GEORGE W. FREEMAN, FRED H. PERRY, and JOHN H. RICHARDSON were merely contracts of employment (Appendix, pp. 14, 49, 68).

The agreements with the LINCOLN SEWING MACHINE COMPANY and ZACHARY T. FRENCH were merely contracts commuting obligations created and existing before 1899 (Appendix, pp. 23, 53).

The AMERICAN GLUE COMPANY transaction was merely an exclusive agency, terminable by either party on six months' notice, for sandpaper in the shoe trade. The United Company was not manufacturing sandpaper (Appendix, p. 52).

By the BREACH MANUFACTURING COMPANY transaction the United Company acquired only an exclusive license under patents. Those patents related to a machine for cutting outsoles. The United Company had no such machine, and acquired this license for the purpose of developing a clicking machine under those patents (Appendix, p. 10).

From JOSEPH P. CURTIS the United Company acquired only two pending patent applications, which related to a machine for cementing a piece of fabric to an upper. Curtis had only an experimental machine which was not acquired. The United Company had no machine for that work and desired to be able to furnish one (Appendix, p. 48).

From LEOPOLD J. COURTEAU the United Company acquired a patented invention relating to a mechanism for holding linings

of uppers while being pasted to the upper leather. Courteau was doing no business and had only an experimental machine. Even that was not acquired. The United Company had no machine for that work and wished to develop one under the Courteau patent (Appendix, p. 56).

(2) By Fifteen Other Transactions the United Company Acquired Nothing More than Supplies of Various Kinds which are Used by Shoe Manufacturers; it did not Acquire Any Shoe Machinery.

The Corrugated Wire Fastening Company was doing a small business in supplying wire and spare parts for an obsolete machine which had not been put out for years (Appendix, p. 9). This business was characterized by the District Court "as making wire and spare parts for use in an obsolete metallic fastening machine" (Dodge, J., R. Vol. 1, p. 1128).

The Globe Shoe Tool Company was manufacturing and selling cutters and edge irons, which are tools, not machines. The Globe Company infringed two of the United Company's patents. The United Company desired to secure the services of H. M. Loomer, one of the vendors, as manager or superintendent (Appendix, p. 17).

The John Ritchie Company, who were shoe manufacturers at Quebec, Canada, were also, in a small way, making wire for use on standard screw machines and were selling it to lessees of the United Company. This was a dishonest situation which it was the purpose of the transaction to remove (Appendix, p. 18).

The Boston Fast Color Eyelet Company was dealing in patented celluloid covered eyelets known as Fast Color Eyelets. This was a new field for the United Company. The purpose of the transaction was to enable the United Company to go into the fast color eyelet business (Appendix, p. 23).

The Enamel Eyelet Company was endeavoring unsuccessfully to market a patented enamel eyelet. This was a new field for the United Company. The object of acquiring the Enamel Company's patents was to enable the United Company to enter that field (Appendix, p. 24).

J. C. Rhodes & Company was doing a large business in enamel eyelets which were broadly patented. Both the Rhodes

Company and the Enamel Company infringed a patent owned by the other and each had sued the other. The objects of this acquisition were to compose that litigation, to enable the United Company to produce a commercially satisfactory enamel eyelet without infringement, and to enable it to procure satisfactory metal blanks for its fast color eyelets (Appendix, p. 32).

From the MORLEY BUTTON MANUFACTURING COMPANY the United Company acquired a patented enamel eyelet of a different type from the Enamel Company and Rhodes Company eyelets. The Morley Company infringed and had been sued under the patents on both the Enamel and Rhodes eyelets. The objects of this transaction were to settle that litigation and to obtain valuable patents on a new type of enamel eyelet. The principal business of the Morley Company was manufacturing buttons; that business was not acquired (Appendix, p. 34).

The MARLBORO AWL & NEEDLE COMPANY was manufacturing McKay needles, hand awls and mallets,—none of which the United Company had made before. The object of this acquisition was to enable the United Company to enter that new field (Appendix, p. 36).

W. W. CROSS & COMPANY, INCORPORATED, was manufacturing nails and tacks. The United Company had never made any nails or tacks, but was buying tacks in large quantities from Cross for its lasting machines. The purpose of this transaction was to obtain an assured source of supply for the tacks which the United Company needed (Appendix, p. 45).

JOSEPH W. LEARY had a small business in cements and blackings and was dealing in an insignificant way in second-hand upper sewing machines. This transaction was merely an employment contract, Leary making it a condition of his employment that the United Company take over his small stock (Appendix, p. 49).

THE F. G. FARNHAM BRUSH MANUFACTURING CO. was dealing in patented brushes and parts of brushes. The United Company bought its patents in order to be able to furnish a better brush (Appendix, p. 50).

KIMBALL & HADLEY were making and selling Goodyear needles. The United Company was not making Goodyear needles and had been obliged to purchase from others the needles which it supplied for its own Goodyear machines. Its purpose was to

enable the United Company to manufacture its own Goodyear needles (Appendix, p. 54).

The METALLIC HEEL AND COUNTER COMPANY was manufacturing a patented metallic heel and counter for use on shoes worn by miners and quarrymen, etc. The United Company had nothing of the kind before. The United Company desired to enter that new field and to secure the services of three experts who were connected with that company (Appendix, p. 60).

The ELLIS LACER COMPANY was making a patented wire lacer for holding the edges of an upper at the right distance apart during manufacture. This was a new field for the United Company which it desired to enter but could not without acquiring the Ellis Company's patents, while on the other hand the Ellis Company infringed broad patents of the United Company (Appendix, p. 72).

The B. F. STURTEVANT COMPANY were manufacturing peg-wood and wooden shanks. The United Company had previously been obliged to purchase from others, including the Sturtevant Company, the peg-wood and shanks which it supplied to its customers; peg-wood was required for its pegging machines. The object of this transaction was to obtain an assured source of supply for those articles (Appendix, p. 75).

(3) Eight of the Parties from which Shoe Machinery was Acquired were Doing no Business at all with their Machines which were Merely Experimental and not Adapted for Commercial Use.

The GODDU SONS METAL FASTENING COMPANY had experimental metallic fastening machines of four types. It had done no business and its machines could not have been used commercially without entire reconstruction. The McKay Shoe Machinery Company claimed that the inventions in those machines belonged to it and had brought suit to compel the transfer of the inventions, which had been vigorously prosecuted. The McKay Company had also prepared to bring suits for infringements of several of its patents by each of the Goddu Company's machines. The purpose of this transaction was to settle and avoid litigation (Appendix, p. 3). The finding of the District Court on this transaction was:—

"The metallic fastening machines acquired by purchase of a controlling interest in the company were none of them in the hands of users; their then state of development does not appear to have been such as made them capable of commercial use, whatever the merit of the inventive ideas they sought to embody; nor is the evidence sufficient for a belief that without reconstruction, radical in character, anyone could have used them as competing machines" (Dodge, J., R. Vol. 1, p. 1140).

EDWIN T. FREEMAN had constructed an experimental slugging machine which was patented. He had put out no machines. The United Company infringed one of his patents, there was an interference pending in the Patent Office, Freeman's machine infringed the United Company's patents, and the Freeman patents barred the way to improvement of the United Company's machines. The objects of the transaction were to avoid litigation and to enable the United Company to improve its machines without infringement. His inventions have since been embodied in three different machines of the United Company (Appendix, p. 13).

ALBERT G. BREWER had built an experimental heel breasting machine which was patented. The United Company had no such machine, but was experimenting on a machine of similar type, which was not successful until the Brewer invention had been incorporated in it. Brewer infringed a broad patent owned by the United Company. The purpose of the transaction was to obtain an invention needed to make the United Company's machine successful (Appendix, p. 15).

ERASTUS E. WINKLEY and BENJAMIN PHILLIPS were not engaged in business and no machinery was acquired from them. They had invented a leveling machine adapted for McKay shoes. The United Company had no leveling machine for McKay shoes and used the Winkley and Phillips inventions in the Atlas leveling machine. The object of this transaction was to enable the United Company to produce a leveling machine for McKay shoes (Appendix, p. 20).

THE SMITH LACING MACHINE COMPANY had an entirely new machine for lacing uppers. It was experimental and had not been put out. The United Company had no machine for that work and desired to obtain one. The Smith Company had broad

patents but infringed a patent owned by the United Company (Appendix, p. 59).

From ZOTIQUE BEAUDRY the United Company acquired a patented experimental heel burnishing machine. The inventions could be embodied in the machine of the United Company which had nothing like them. Beaudry's machine infringed the United Company's patents. These inventions were acquired for the purpose of improving the United Company's machine (Appendix, p. 62).

From HARRY L. RICE and FRED LACHAPELLE radically new patented welting machine inventions were acquired. Their machine was only experimental. These inventions could be put into the United Company's machines and were acquired for that purpose because they would strengthen the stitch and effect substantial economies (Appendix, p. 71).

From ADAM H. PRENZEL, a shoe manufacturer, patented inventions relating to children's shoes and machines for making them were acquired. The United Company had nothing of the kind and desired to be able to furnish these valuable inventions to its customers. Prenzel infringed (Appendix, p. 75).

From all of these eight parties excepting the Goddu Company the United Company acquired *either new machines which it did not have before or patented inventions which could be embodied in its own machines for the purpose of improving those machines.*

All of the Thirty-two Transactions which have been Named are Outside of the Petition's Allegations as to the Defendants' Intent.

The allegations as to defendants' intent in entering into these transactions are that they—

> "determined to acquire a complete monopoly of the *manufacture, sale, and lease of shoe machinery* . . ." (italics ours) (R. Vol. 1, p. 994),—

and that—

> "they conceived the idea of acquiring the ownership or control of all concerns *engaged in manufacturing and dealing in* any and all kinds of *shoe machinery*" (italics ours) (R. Vol. 1, p. 994).

These allegations certainly cannot be stretched to include either twenty-four concerns from whom no shoe machinery whatever was acquired or eight concerns whose machines were only experimental, far from being commercial, and who could not possibly be regarded as "engaged in manufacturing and dealing in . . . shoe machinery."

(4) By Seventeen of the Transactions with Parties who were actually doing Shoe Machinery Business the United Company entered an Entirely New Field by Acquiring Machines for Performing Operations for which it did not have Machines Before.

The new machines which were acquired will be briefly indicated in the following list of these transactions:—

PEARSON & BENNION, LTD., General Department machines (Appendix, p. 7).

PETER A. COUPAL and WILLIAM GORDON, experimental basting machine, really an employment contract (Appendix, p. 11).

BOSTON SHOE TOOL COMPANY (Timothy A. Bresnahan), edge trimming and setting machines and tools (Appendix, p. 12).

STANLEY MANUFACTURING COMPANY, foreign agency for McKay sewing machine and for some "General Department" machines (Appendix, p. 21).

ROSS-MOYER MANUFACTURING COMPANY, General Department machines (Appendix, p. 25).

SWAIN-FULLER MANUFACTURING COMPANY, leveler for turn shoes (Appendix, p. 29).

OLIVER A. MILLER, treeing machine (Appendix, p. 35).

THE T. A. NORRIS MACHINE COMPANY, six new "General Department" machines (Appendix, p. 37).

THE GEORGE A. SMITH MACHINERY COMPANY, supplies, spring heel scarfer (Appendix, p. 42).

G. W. EMERSON & COMPANY, tip scourer, power spring heel scarfer (Appendix, p. 43).

J. K. KRIEG & COMPANY, heel seat rounding, Louis heel scarfing machines (Appendix, p. 46).

ARNOLD MACHINE & SUPPLY COMPANY, machine for cementing Gem insoles (Appendix, p. 55).

Booth Brothers (1904 agreement), vamp perforating machine (Appendix, p. 57).

Brockton Supply Company, patents on tack pulling machine (Appendix, p. 58).

Booth Brothers (entire business), two new machines (Appendix, p. 63).

Carver Cotton Gin Company, leveling machine for "freaks" and samples, leatherboard skiver, counter dividing machine (Appendix, p. 68).

Charles P. Stanbon & Company, new folding machine, important improvements on two others (Appendix, p. 78).

(5) By Seven of the Nine Remaining Transactions the United Company Acquired Patented Improvements or Inventions for the Purpose of Enabling it to Supply Better Machines than it had Before.

The Boot & Shoe Sole Laying Company had a patented sole laying machine. The United Company's machine was inferior, of different type, and very unsatisfactory. The United Company infringed a patent owned by the Boot & Shoe Sole Laying Company (Appendix, p. 8).

The Seaver Process Lasting Company had a patented experimental pulling-over machine which, although a commercial failure, embodied inventions indispensable to a successful machine. The United Company was developing a pulling-over machine, not yet commercial, which embodied those inventions; they have been in all pulling-over machines put out by the United Company and are of the utmost importance (Appendix, p. 19).

The Globe Sewing Machine Company had patents on very superior features in its lockstitch welter which barred the way to development by the United Company of its lockstitch welter (Appendix, p. 30).

The American Sole Laying Machine Company had patent rights which prevented the United Company from making a double or two-form sole laying machine which would operate on right and left shoes and have double the capacity of the United Company's machine, and which also prevented development of the Atlas leveling machine. The United Company infringed (Appendix, p. 38).

The RICHARDSON SHOE MACHINERY COMPANY had a greatly improved, patented McKay sewing machine, which was much superior to and did a great deal better work than the United Company's machine. The Richardson patents prevented development of the United Company's machines and one of them was infringed by the United Company (Appendix, p. 65).

THE WENTWORTH COMPANY had a patent on a shank sticking machine which prevented the United Company from developing such a machine (Appendix, p. 73).

M. V. BRESNAHAN & COMPANY had a patented experimental lasting machine, not yet commercial, and a patented heel burnishing machine, which infringed two patents controlled by the United Company. The United Company had nothing in its lasting machines or its heel burnishing machines which would do the work that was done by the patented mechanisms in the two Bresnahan machines. A large amount of litigation was composed by this transaction (Appendix, p. 77).

(6) The Two Remaining Transactions.

The transactions with the BAY STATE INTERNATIONAL SHOE MACHINERY COMPANY (Appendix, p. 28) and WILLIAM J. YOUNG (Appendix, p. 40) both related solely to foreign business in patented machines, in no way to business or conditions in the United States. Both were in effect merely purchases of foreign patents. The Bay State Company was infringing the United Company's foreign patents. Its business was insignificant. The acquisition was made at the earnest solicitation of the people interested, who were shoe manufacturers and customers of the United Company, because it was the cheapest way to settle the litigation. The only property acquired from Young was his foreign patents under which as agent for Young the United Company had for years been putting out his heel compressing machine abroad. Young's machine was the only one of the kind that the United Company had been putting out abroad. Young has ever since continued to put out his machine in the United States in competition with the United Company.

The foregoing summary shows that by forty-four of the transactions the United Company either entered an entirely new field by acquiring machines or patents on machines for

performing operations for which it did not have machines, or supplies or findings which it did not have before, or it acquired patented improvements or inventions for the purpose of enabling it to supply better machines or products than it had before; and that the remaining transactions consisted merely in contracts of employment, contracts commuting obligations created before 1899, purchases to settle or avoid serious patent litigation or transactions of such character that they are entirely unimportant and have no significance in this case. Of the 58 transactions at least 20 were not concerned with the acquisition of shoe machinery or patents on shoe machinery at all.

During this period the United Company was engaged in a remarkable development of the art of shoe machinery. It improved by new inventions practically all its machines. It developed 150 new machines including 39 machines which performed work previously done by hand.

It developed and acquired 172 different General Department machines (*supra*, pp. 194–197). The patents and machines acquired by the acquisitions were used in building up and perfecting this large body of new and improved machines. They were, however, of insignificant importance, as the foregoing summary shows, compared with the results accomplished by the inventive efforts of the United Company itself.

B. THE ACQUISITIONS CONSIDERED FROM OTHER VIEWPOINTS.

(1) In Thirty-two of the Transactions the United Company did not Acquire Any Machine which was within the Scope of the Alleged Monopoly.

The parties to thirty-two of the transactions did not have any machine which was within the field to which petitioner has limited its charge of monopoly:—

> "Machines for preparing and attaching the bottoms to the uppers of shoes, eyeletting machines, and clicking machines" (R. Vol. 1, p. 837, lines 40–43; p. 838, lines 1–3, 18–20).

In this classification we have omitted all concerns which might possibly be regarded as within the field as to which petitioner claims a monopoly, although a number of those concerns had no "bottoming" machines but only machines of General

Department types performing minor operations in the way of "preparing" the soles.

As to the twenty-six transactions which may be regarded as within the class of machines as to which a monopoly is charged:—

(1) By fifteen transactions the United Company acquired machines for performing operations for which it did not have machines before, so that by each of those transactions it was entering a new field. These were: Pearson & Bennion, Ltd. (Appendix, p. 7); Breach Manufacturing Company (Appendix, p. 10); Erastus E. Winkley and Benjamin Phillips (Appendix, p. 20); Stanley Manufacturing Company (Appendix, p. 21); Ross-Moyer Manufacturing Company (Appendix, p. 25); Swain-Fuller Manufacturing Company (Appendix, p. 29); The T. A. Norris Machine Company (Appendix, p. 37); The George A. Smith Machinery Company (Appendix, p. 42); G. W. Emerson & Company (Appendix, p. 43); J. K. Krieg & Company (Appendix, p. 46); Arnold Machine & Supply Company (Appendix, p. 55); Brockton Supply Company (Appendix, p. 58); Carver Cotton Gin Company (Appendix, p. 68); Adam H. Prenzel (Appendix, p. 75); Charles P. Stanbon & Company (Appendix, p. 78).

It was held by the District Court:—

> "There remain a number of instances involving the acquisition of patent rights, patents, or machines relating to or capable of being included within some of those kinds of shoe machinery whereto the case is restricted as above. In the larger portion of these the device or machine acquired is shown to have been of a kind not then being produced by the United Company. There being nothing unlawful, as above stated, in the acquisition of different groups of non-competing patented machines, it is clear that by such enlargements of the United Company's field of operation no 'competitor' can be said to have been absorbed or driven out of business, and that no reason appears for holding the acquisitions thus made unlawful either in themselves or because made in furtherance of an unlawful purpose" (Dodge, J., R. Vol. 1, p. 1139).

All of these transactions are clearly within the rule of *United States* v. *Winslow*. So also, we submit, are the eight named in the next paragraph.

(2) By eight of the eleven remaining transactions the United Company acquired patented improvements or inventions for the purpose of enabling it to supply better machines than it had before. These were: Boot & Shoe Sole Laying Company (Appendix, p. 8); Seaver Process Lasting Company (Appendix, p. 19); Globe Sewing Machine Company (Appendix, p. 30); American Sole Laying Machine Company (Appendix, p. 38); Richardson Shoe Machinery Company (Appendix, p. 65); Harry L. Rice and Fred LaChapelle (Appendix, p. 71); The Wentworth Company (Appendix, p. 73); M. V. Bresnahan & Company (Appendix, p. 77).

The District Court held:—

> "In all such cases it appears that the acquisitions made were of patented improvements, whether or not embodied in an actual machine, enabling the United Company to increase the efficiency of its own machines, or to complete the development of others with which it was then experimenting or had not yet succeeding[ed] in rendering commercially successful. . . . The most that can be said is, that as, in the progress of events, the needs of the United Company became manifest and these opportunities presented themselves, they were availed of" (Dodge, J., R. Vol. 1, pp. 1139, 1140).

It should also be noted that the United Company infringed patents owned by the Boot & Shoe Sole Laying Company and the Richardson Company; while the Seaver Company, the Globe Company, The Wentworth Company, and Bresnahan infringed the United Company's patents.

(3) There are but three other transactions which were within the class of machines as to which a monopoly is charged,—those with the Goddu Sons Metal Fastening Company, the Bay State International Shoe Machinery Company, and William J. Young.

As has previously been explained (*supra*, pp. 440-441) and as is set forth in detail in the Appendix (pp. 3–6), it is shown by the record and it was held by the District Court that the metallic fastening machines of the Goddu Company were experimental, and that they could not have been used without radical reconstruction. A suit had been brought by the McKay Shoe Ma-

chinery Company and had been vigorously prosecuted before February, 1899, to compel the transfer of the inventions embodied in the Goddu Company's machines on the ground that those inventions belonged to the McKay Company. The Goddu Company's machines all infringed the United Company's patents, in the aggregate a large number, and the only purpose of this transaction was to settle and avoid litigation.

The facts which we have already stated (*supra*, p. 445) show that the transactions with the Bay State International Shoe Machinery Company (Appendix, p. 28) and William J. Young (Appendix, p. 40) were entirely without significance in this case.

(2) In Forty-eight of the Transactions the United Company did not Acquire Any Machines which were Adapted or Intended for the Same Work as Any of the Machines which the United Company was Putting Out in February, 1899, or Any of its Predecessors before That.

In only ten of the fifty-eight transactions did the United Company acquire any machines which were adapted or intended for the same work as any of the machines which it was putting out in February, 1899, or any of its predecessors before that.

This shows conclusively that the United Company's purpose in making the acquisitions was to acquire machines or patents or supplies in new fields.

The ten concerns which had a machine or machines adapted or intended for the same work as any of the machines which the United Company was putting out in February, 1899, were: Goddu Sons Metal Fastening Company, Boot & Shoe Sole Laying Company, Edwin T. Freeman, Seaver Process Lasting Company, Bay State International Shoe Machinery Company, Globe Sewing Machine Company, American Sole Laying Machine Company, William J. Young, Harry L. Rice and Fred LaChapelle, M. V. Bresnahan & Company.

Summarizing the facts already stated about these ten concerns:—

(1) The machines acquired from four of these concerns were experimental, and no business was being done or could be done with them for they were far from being commercial. Those

were: Goddu Sons Metal Fastening Company (Appendix, p. 3), Edwin T. Freeman (Appendix, p. 13), Rice and LaChapelle (Appendix, p. 71), and M. V. Bresnahan & Company (Appendix, p. 77).

From three of those four, Freeman, Rice and LaChapelle, and Bresnahan, valuable inventions were acquired which the United Company did not have before. Also there were serious patent complications in connection with the Goddu Company, Freeman, and Bresnahan transactions. Other litigation with the Goddu Company and Bresnahan was pending.

(2) By four transactions the United Company acquired valuable inventions which were a bar to further development of its own machines. These were: Boot & Shoe Sole Laying Company (Appendix, p. 8), Seaver Process Lasting Company (Appendix, p. 19), Globe Sewing Machine Company (Appendix, p. 30), and American Sole Laying Machine Company (Appendix, p. 38).

(3) The two remaining transactions, those with the Bay State International Shoe Machinery Company (Appendix, p. 28) and William J. Young (Appendix, p. 40), have already been explained (*supra*, p. 445).

(4) There are other facts showing the little importance of these ten transactions. No real estate was acquired from any of the ten concerns and from only one of the six who were actually doing business was even a machine shop acquired. That was the Seaver Company, which employed only six men, whose lasting machine infringed, whose business had fallen to pieces, and which was insolvent (Appendix, p. 19). Further the aggregate considerations paid in the six transactions with the concerns which were actually doing business were less than $150,000.

(3) Serious Patent Complications were Cleared Up by a Large Number of the Acquisitions.

By twenty-six transactions the United Company secured patents completely dominating new fields which it desired to enter, patents which it infringed, patents which barred the way to needed improvements in its own machines, or patent applications with which its own applications were in interference; or

it acquired machines which infringed its patents, thereby composing and avoiding expensive and annoying litigation and protecting its lessees from the embarrassment of infringement suits.

Officials of the United Company were aware of these complications and they were, in all instances, the subject of study before the several acquisitions were made (R. Vol. 1, p. 821, lines 13–19).

All of the few concerns which petitioner may urge had apparently competing machines are in this class.

> "In most of the cases of this sort the machine or device acquired was claimed to infringe patents belonging to the United Company, or the patent acquired was one which some machine belonging to it was claimed to infringe, or the application acquired was in interference with applications of its own; and the object of the acquisition is shown to have been the avoidance or compromise of pending or threatened litigation. In such cases it is still less possible to say that any wrongful absorption of a 'competitor's' business has been proved" (Dodge, J., R. Vol. 1, p. 1140).

(NOTE.—These complications are set forth in full detail in Defs.' Ex. 275, R. Vol. 5, pp. 755–777, which consists largely in statements of the opinions of defendants' patent expert Howard in regard to these patent complications. Not a single statement in this exhibit and none of Mr. Howard's testimony to the same effect, no statement by Mr. Winslow as to patent complications in Defs.' Ex. 231, R. Vol. 5, pp. 444–479, and none of Mr. Winslow's or Mr. Howe's testimony to the same effect, have been controverted in any manner by petitioner.)

These transactions were: Goddu Sons Metal Fastening Company (Appendix, p. 3), Boot & Shoe Sole Laying Company (Appendix, p. 8), Peter A. Coupal and William Gordon (Appendix, p. 11), Edwin T. Freeman (Appendix, p. 13), Albert G. Brewer (Appendix, p. 15), Globe Shoe Tool Company (Appendix, p. 17), Seaver Process Lasting Company (Appendix, p. 19), Boston Fast Color Eyelet Company (Appendix, p. 23), Enamel Eyelet Company (Appendix, p. 24), Bay State International Shoe Machinery Company (Appendix, p. 28), Swain-Fuller Manufacturing Company (Appendix, p. 29), Globe Sewing Machine Company (Appendix, p. 30), J. C. Rhodes & Company (Appendix, p. 32), Morley Button Manufacturing Company (Appendix, p. 34), American Sole Laying Machine Company (Appendix, p. 38), G. W. Emerson & Company (Appendix, p. 43), Brockton Supply Company (Appendix, p. 58), The

Smith Lacing Machine Company (Appendix, p. 59), Zotique Beaudry (Appendix, p. 62), Booth Brothers (entire business) (Appendix, p. 63), Richardson Shoe Machinery Company (Appendix, p. 65), Ellis Lacer Company (Appendix, p. 72), The Wentworth Company (Appendix, p. 73), Adam H. Prenzel (Appendix, p. 75), M. V. Bresnahan & Company (Appendix, p. 77), Charles P. Stanbon & Company (Appendix, p. 78).

As to these transactions defendants' expert Howard, who has been head of the United Company's Patent Department since the company was organized (R. Vol. 2, p. 1998), testified:—

> "In some cases there were interferences pending in the Patent Office; in others, actual litigation, or, in my opinion, such a conflict of patents as to threaten litigation; or a field which we desired to enter was absolutely dominated, in our opinion, by patents owned by the acquired company; or the acquired company had inventions which we believed we ought to have and must have to make our machines commercially satisfactory" (R. Vol. 1, p. 820, lines 22-29).

3. WHAT THE UNITED COMPANY HAS DONE WITH THE ACQUIRED BUSINESSES.

In the summary of the acquisitions in the petition there are frequent statements that the "plant has been closed" or that "the business has been discontinued." The petition also alleges that defendants

> "have acquired many letters patent for valuable inventions, and have held the same for long periods of time without making use thereof, thus depriving the manufacturers and the public of the benefits arising therefrom" (R. Vol. 1, p. 999).

These allegations are disproved, first, by the testimony of defendants' witnesses as to the United Company's general policy. Mr. Winslow testified:—

> "The United Company has suppressed absolutely no machines, no inventions and no improvements" (R. Vol. 1, p. 433, lines 27-28).

Mr. Howe testified:—

> "The United Shoe Machinery Company has never suppressed an invention that it thought could be worked out

to make a commercial machine which would benefit the lessees. . . . I have never known of a single patent which had prospective value when embodied in machinery being laid on the shelf or suppressed" (R. Vol. 1, p. 671, lines 18–20, 23–25).

These allegations of the petition are further disproved as to all the transactions by the evidence regarding each of those transactions.

As to the Allegations of the Petition that the Businesses have been Discontinued.

(*A*) With respect to forty-one of the transactions the record shows that the United Company has continued to carry on the business where a business was acquired, or has used inventions where those were the subjects-matter of the transactions. These were: Pearson & Bennion, Ltd. (Appendix, p. 7); Boot & Shoe Sole Laying Company (Appendix, p. 8); The Corrugated Wire Fastening Company (Appendix, p. 9); Peter A. Coupal and William Gordon (Appendix, p. 11); Boston Shoe Tool Company (Timothy A. Bresnahan) (Appendix, p. 12); Edwin T. Freeman (Appendix, p. 13); Albert G. Brewer (Appendix, p. 15); Globe Shoe Tool Company (Appendix, p. 17); Seaver Process Lasting Company (Appendix, p. 19); Erastus E. Winkley and Benjamin Phillips (Appendix, p. 20); Boston Fast Color Eyelet Company (Appendix, p. 23); Enamel Eyelet Company (Appendix, p. 24); Ross-Moyer Manufacturing Company (Appendix, p. 25); Swain-Fuller Manufacturing Company (Appendix, p. 29); J. C. Rhodes & Company (Appendix, p. 32); Morley Button Manufacturing Company (Appendix, p. 34); Oliver A. Miller (Appendix, p. 35); Marlboro Awl & Needle Company (Appendix, p. 36); The T. A. Norris Machine Company (Appendix, p. 37); American Sole Laying Machine Company (Appendix, p. 38); William J. Young (Appendix, p. 40); The George A. Smith Machinery Company (Appendix, p. 42); G. W. Emerson & Company (Appendix, p. 43); W. W. Cross & Company, Incorporated (Appendix, p. 45); J. K. Krieg & Company (Appendix, p. 46); The F. G. Farnham Brush Manufacturing Co. (Appendix, p. 50); American Glue Company

(Appendix, p. 52); Kimball & Hadley (Appendix, p. 54); Booth Brothers (1904 agreement) (Appendix, p. 57); Brockton Supply Company (Appendix, p. 58); The Smith Lacing Machine Company (Appendix, p. 59); Metallic Heel & Counter Company (Appendix, p. 60); Booth Brothers (entire business) (Appendix, p. 63); Richardson Shoe Machinery Company (Appendix, p. 65); Carver Cotton Gin Company (Appendix, p. 68); Ellis Lacer Company (Appendix, p. 72); The Wentworth Company (Appendix, p. 73); B. F. Sturtevant Company (Appendix, p. 75); Adam H. Prenzel (Appendix, p. 75); M. V. Bresnahan & Company (Appendix, p. 77); Charles P. Stanbon & Company (Appendix, p. 78).

. (*B*) *By thirteen of the seventeen transactions not included in the above list no shoe machinery business was acquired.* These were: Goddu Sons Metal Fastening Company (Appendix, p. 3); Breach Manufacturing Company (Appendix, p. 10); George W. Freeman (Appendix, p. 14); John Ritchie Company (John Ritchie) (Appendix, p. 18); Lincoln Sewing Machine Company (Appendix, p. 23); Joseph P. Curtis (Appendix, p. 48); Fred H. Perry (Appendix, p. 49); Joseph W. Leary (disregarding his insignificant dealing in second-hand upper sewing machines) (Appendix, p. 49); Zachary T. French (Appendix, p. 53); Leopold J. Courteau (Appendix, p. 56); Zotique Beaudry (Appendix, p. 62); John H. Richardson (Appendix, p. 68); Harry L. Rice and Fred LaChapelle (Appendix, p. 71).

As to these transactions:—

(1) From eight of these parties no tangible property whatever was acquired. The Freeman, Perry, and Richardson transactions were merely contracts of employment. The Lincoln Company and French transactions were merely contracts commuting obligations created and existing before 1899. From the Breach Company, Curtis and Courteau, the United Company acquired certain patent rights and nothing more.

(2) As we have already explained (*supra*, pp. 440, 441) the record shows and District Court held that the metallic fastening machines of the Goddu Company were experimental, that they were not capable of commercial use and that they could not have been used without radical reconstruction. The evidence also

shows that the minority stockholders of that company stood in the way of development of those machines.

(3) As to the inventions acquired from the Breach Company, Curtis and Courteau named above, and from Beaudry, the United Company experimented aggressively with each of those inventions until in each instance it was proved that the invention was of no commercial value. Each of these situations is set forth in detail in the Appendix.

(4) As to the John Ritchie Company business it is to be presumed that the United Company's lessees were supplied with the wire which they needed. It could not be expected that the United Company would continue the dishonest situation which it was the object of that transaction to eliminate, as fully explained in the Appendix (p. 18).

(5) The Leary transaction was in effect merely a contract of employment. He was dealing in a small way in cements, blacking and second-hand upper sewing machines and made it a condition of his employment by the United Company that it should buy his stock. The consideration was $3,052.

(6) The United Company has been working on the Rice and LaChapelle inventions since they were acquired, it has tried them out several times in a shoe factory, and is still at work with the purpose of developing them into a commercial machine. "It takes a long time to develop one of these machines" (R. Vol. 1, p. 72, lines 3–4).

(*C*) As to the four remaining transactions:—

For the machine acquired from the Arnold Machine & Supply Company (Appendix, p. 55) the demand ceased immediately after the acquisition owing to a revolutionary change in the methods of shoemaking.

Shortly after the acquisition of the patents of the Globe Sewing Machine Company (Appendix, p. 30) shoe manufacturers decided that they did not desire to sew the inseam by a lockstitch as they found it was impossible to secure a tight inseam, and they refused to use lockstitch welters.

The record is silent as to the history of the machines of the Stanley Manufacturing Company (Appendix, p. 21) and the Bay State International Shoe Machinery Company (Appendix, p. 28) after the dates of those transactions, but both of them

related to foreign business only. The Bay State Company had put out only a few machines in England and its machines were distinctly inferior to those of the United Company. The Stanley Company transaction amounted simply to an agency contract which contained a covenant that the United Company should use its best endeavors to sell the Stanley machines in foreign countries and provided that if it should fail to purchase machines from the Stanley Company, that company should then have the right to sell them abroad itself.

As to the Allegations of the Petition that the Plants have been Closed.

(*A*) *Thirty-three of the parties either did not have any manufacturing plant or even a machine-shop, or if they had any the United Company did not acquire it.* These were: Goddu Sons Metal Fastening Company (Appendix, p. 3); Boot & Shoe Sole Laying Company (Appendix, p. 8); Breach Manufacturing Company (Appendix, p. 10); Edwin T. Freeman (Appendix, p. 13); George W. Freeman (Appendix, p. 14); Albert G. Brewer (Appendix, p. 15); John Ritchie Company (John Ritchie) (Appendix, p. 18); Erastus E. Winkley and Benjamin Phillips (Appendix, p. 20); Stanley Manufacturing Company (Appendix, p. 21); Lincoln Sewing Machine Company (Appendix, p. 23); Boston Fast Color Eyelet Company (Appendix, p. 23); Enamel Eyelet Company (Appendix, p. 24); Bay State International Shoe Machinery Company (Appendix, p. 28); Globe Sewing Machine Company (Appendix, p. 30); Morley Button Manufacturing Company (Appendix, p. 34); American Sole Laying Machine Company (Appendix, p. 38); William J. Young (Appendix, p. 40); The George A. Smith Machinery Company (Appendix, p. 42); Joseph P. Curtis (Appendix, p. 48); Fred H. Perry (Appendix, p. 49); Joseph W. Leary (Appendix, p. 49); American Glue Company (Appendix, p. 52); Zachary T. French (Appendix, p. 53); Arnold Machine & Supply Company (Appendix, p. 55); Leopold J. Courteau (Appendix, p. 56); Booth Brothers (1904 agreement) (Appendix, p. 57); The Smith Lacing Machine Company (Appendix, p. 59); Zotique Beaudry (Appendix, p. 62); Richardson Shoe Machinery Company (Appendix, p. 65); John H. Richardson (Appendix, p.

68); Carver Cotton Gin Company (Appendix, p. 68); Harry L. Rice and Fred LaChapelle (Appendix, p. 71); Adam H. Prenzel (Appendix, p. 75).

Some of these parties had their machines or products made for them by others, *e.g.*, Boot & Shoe Sole Laying Company, Boston Fast Color Eyelet Company, Globe Sewing Machine Company, American Sole Laying Machine Company, Richardson Company. Others had each only a single experimental machine, *e.g.*, Brewer, Winkley and Phillips, Rice and LaChapelle. From others no tangible property of any kind was acquired, *e.g.*, Breach, G. W. Freeman, Lincoln Company, Curtis, Courteau, Perry, French, J. H. Richardson.

Seven of these thirty-three parties had manufacturing plants *but the United Company did not acquire the plants.* These parties were: Stanley Company, Morley Company, Young, American Glue Company, Booth Brothers (1904 agreement), Beaudry, Carver Cotton Gin Company.

(*B*) *Nineteen of the parties leased the premises which they occupied and no real estate was acquired from any of them.* These were: The Corrugated Wire Fastening Company (Appendix, p. 9); Peter A. Coupal and William Gordon (Appendix, p. 11); Globe Shoe Tool Company (Appendix, p. 17); Seaver Process Lasting Company (Appendix, p. 19); Ross-Moyer Manufacturing Company (Appendix, p. 25); Swain-Fuller Manufacturing Company (Appendix, p. 29); Marlboro Awl & Needle Company (Appendix, p. 36); The T. A. Norris Machine Company (Appendix, p. 37); G. W. Emerson & Company (Appendix, p. 43); J. K. Krieg & Company (Appendix, p. 46); The F. G. Farnham Brush Manufacturing Co. (Appendix, p. 50); Kimball & Hadley (Appendix, p. 54); Brockton Supply Company (Appendix, p. 58); Metallic Heel & Counter Company (Appendix, p. 60); Booth Brothers (entire business) (Appendix, p. 63); Ellis Lacer Company (Appendix, p. 72); The Wentworth Company (Appendix, p. 73); M. V. Bresnahan & Company (Appendix, p. 77); Charles P. Stanbon & Company (Appendix, p. 78).

As to these nineteen transactions, in every instance the business was continued, if a business was acquired, and the United Company has continued to manufacture the machines or products either on the acquired concern's leased premises or at the Beverly factory; or, if patented inventions were what was acquired, the

United Company has incorporated those inventions in its machines. The only apparent exception is the Seaver Process Lasting Company, but that company's lasting machine was inferior to the United Company's and there was no demand for it after the acquisition. Its valuable pulling-over inventions, the acquisition of which was the real object of that transaction, have been embodied ever since in the United Company's pulling-over machine and are of vital importance in that machine (Appendix, p. 19).

(*C*) *In only six of the transactions did the United Company acquire any real estate.* These were: Pearson & Bennion, Ltd. (Appendix, p. 7); Boston Shoe Tool Company (Timothy A. Bresnahan) (Appendix, p. 12); J. C. Rhodes & Company (Appendix, p. 32); Oliver A. Miller (Appendix, p. 35); W. W. Cross & Company, Incorporated (Appendix, p. 45); B. F. Sturtevant Company (Appendix, p. 75).

The businesses of five of those concerns were continued and are still being carried on *in the same plants.* These were: Pearson & Bennion; Rhodes; Miller; Cross; Sturtevant Company.

In the case of the Boston Shoe Tool Company

> "the business was continued at the same plant for a considerable period of time. Subsequently, for convenience and economy of manufacture, the business was transferred to the Beverly Factory, where the United Company has ever since continued and increased the business" (Winslow, Defs.' Ex. 231, R. Vol. 5, pp. 444, 460).

In this connection it should be understood that the purchase of machine-shops where shoe machinery has been made does not give the vendee control of existing facilities for making shoe machinery. As explained by Mr. Winslow:—

> "The manufacture of shoe machinery does not require any particular kind of machine tools. The standard machine tools used in manufacturing all ordinary machines are the tools that are used in every factory making shoe machinery. The only other things needed are the special tools and jigs which are made by any manufacturer of a particular machine" (R. Vol. 1, p. 858, lines 25–31).

4. CONCLUSION AS TO THE "ACQUISITIONS."

Petitioner has completely failed to establish its charges that these fifty-eight individuals or concerns were competitors, that these transactions were entered into in pursuance of a purpose to monopolize the shoe machinery industry or with intent to suppress competition, that defendants have acquired patents and suppressed them, or that the considerations in the transactions were exorbitant.

The parties from whom these acquisitions were made were not competing with the United Company; in the few cases in which a machine was acquired of the character of one made by the United Company, or an invention was acquired applicable to a machine made by the United Company, the purpose of the United Company in entering into the transaction was to acquire a patent necessary to perfect or improve its own machines, or to acquire a patented machine of the same name as one it had, but used for a different purpose, or to settle litigation which might have prevented the United Company from putting out its own machine, and if any possible competition was eliminated, it was trivial in character, its elimination was not a motive for the transaction, but incidental thereto, and in no case did such competition have any material effect upon the industry.

Practically all the parties who were doing business—and many were not doing any—were putting out machines performing operations which no machine that the United Company had before could perform; or they were making and selling some of the great variety of supplies or "findings" which were used by the United Company's customers and none of which it supplied or was in position to supply before; or they had valuable patented inventions which the United Company had to acquire in order to make some of its machines commercially successful or to enable it to effect substantial improvements in the quality of work or speed of operation of its machines.

Viewing the acquisitions as a whole it is clear that they were made for the purpose of enlarging the United Company's field or adding important and needed improvements to its machines. They were plainly a continuation of that "effort after greater efficiency" which began with the formation of the United Company in 1899, already approved by this court, and which has re-

sulted in the United Company's taking advantage of opportunities, which have presented themselves from time to time during a period of more than twelve years, to enlarge its field and improve its machines. That such transactions were lawful has been established by *United States* v. *Winslow*. The court in that case said:

> "It is said that from seventy to eighty per cent. of all the shoe machinery business was put into a single hand. This is inaccurate, since the machines in question are not alleged to be types of all the machines used in making shoes, and since the defendants' share in commerce among the States does not appear. *But taking it as true* we can see no greater objection to one corporation manufacturing seventy per cent. of three non-competing groups of patented machines collectively used for making a single product than to three corporations making the same proportion of one group each. The disintegration aimed at by the statute does not extend to reducing all manufacture to isolated units of the lowest degree" (italics ours) (*United States* v. *Winslow*, 227 U. S. 202, 217).

If any further proof were needed that these fifty-eight transactions were normal and reasonable steps in the developing and carrying on of the United Company's business, we have, first, the fact that there were serious patent complications attending a large proportion of the transactions, including all of the few concerns which petitioner may urge had apparently competing machines. The acquiring of patents which it infringed or which barred the development of its machines, frequently preventing the construction of a successful machine, and the avoidance or composing of patent litigation are certainly normal, reasonable, and lawful steps in the development of the business of a corporation doing business in patented machines. Transactions entered into for such reasons and with such objects not only benefit the corporation, but they are clearly to the advantage of its customers and the public.

The unimportant character of these transactions in their bearing upon this case is further shown by the facts that more than half of the transactions were clearly outside of the scope of the alleged actual monopoly as frequently defined by counsel for the United States during the trial; that only ten of the parties had any machine which performed the same work as any of the machines which the United Company was putting out in February, 1899; that no

factory or machine shop was acquired in more than half of the transactions and real estate was acquired in only six, and that there is nothing on the record to show that any of forty-four of the parties were engaged in interstate or foreign trade or commerce. Nearly all of the parties that had any machines had but one or two. Many had but one machine, and that frequently only an experimental machine, never in a shoe factory.

If defendants had had any such intent as was alleged they never would have refused the opportunities which were offered them to acquire the large concerns which were and are actively competing with the United Company. The record shows that its biggest and most aggressive competitors, putting out complete lines of machines for making all kinds of shoes, were offered to the United Company and those offers were declined. And, in general, the record shows that a much greater number of shoe machinery concerns than it acquired, many of them having bottoming machines, and a far greater number of inventions than it purchased, over two hundred of which were within petitioner's definition of the alleged monopoly, were offered to the United Company and declined by it.

And finally the record shows that the United Company has *used* what it has acquired by these acquisitions. In a very few cases its hopes were disappointed and the most aggressive experimenting failed to make an acquired invention commercially successful, as frequently happens with its own experimental machines. But in nearly all cases the company has been able to utilize what it acquired to great advantage. For years it has been putting out and its customers have been using scores of machines—including such important machines as the Pulling-over Machine, Model M Outsole Stitcher, Goodyear Tack Pulling and Resetting Machine, Goodyear Twin Sole Layer, Goodyear Welt Indenting and Burnishing Machine, Model B Standard Screw Machine, Atlas Leveling Machine, Imperial Heel Breasting Machine, Ensign Lacing Machine, and Model B McKay Sewing Machine—which the United Company could not have manufactured or put out without infringement if it had not made these acquisitions.

In considering the few purchases of machines similar to machines held by the United Company or inventions applicable to machines of the kind already owned by the United Company,

the distinction between the acquisition of a patent or patented machine and the acquisition of an unpatented machine must be borne in mind. Even if the acquisition of a patent or patented machine may result in the elimination of actual or potential competition, it does not make the transaction inherently unlawful.

In the case of the purchase of the business of manufacturing and furnishing to the trade an unpatented machine, the purchaser, prior to the purchase, is free to make the machine and furnish it to his customers in competition. He is under no restraint, and by making the purchase he does not relieve himself of any restraint previously imposed upon him which forbade his furnishing the same kind of machine. By the purchase of a patented machine the purchaser acquires the patents covering the machine. Prior to the purchase he was restrained by these patents from making the machine; by the purchase he is relieved from this restraint. If the patented machine is one desired by his customers, he cannot satisfy their demands without making the purchase. Unless he make the purchase he is therefore not in a position to compete on equal terms with the owner of the patented machine.

The Sherman Act was intended to protect the normal flow of commerce. Where a manufacturer is lawfully restrained by a patent monopoly owned by another person from manufacturing machines desired by such manufacturer's customers, the Sherman Act was not intended to prevent his acquiring the right to make and furnish such machines by the acquisition of the patent even if thereby an incidental competition is eliminated.

In *Virtue* v. *Creamery Package Company*, 227 U. S. 8, it appeared that the Disbrow Company entered into a contract with the Owatonna Company granting the latter rights under patents for churns and butter workers. The latter company at the time had other patents covering such articles. The Owatonna Company also made the Creamery Package Company its exclusive sales agent.

The court said (pp. 36, 37):—

> "We may therefore sum up by saying that the Disbrow Company, by its contract with the Owatonna Company, did nothing more than confirm or enlarge the rights which the Owatonna Company had obtained, by the contract of 1893, and conveyed to it the exclusive right in the patents for cer-

tain named royalties. This was no violation of law. The Owatonna Company did nothing more in its contract with the Creamery Package Manufacturing Company than to make that Company its exclusive sales agent, and this was no violation of law. Both contracts had natural and adequate legal inducements and conveyed rights that could under the law be conveyed, and, as a necessary incident to the conveyance, one only of the parties could thereafter exercise them. *It may be that the Disbrow Company was to an extent in competition with the Owatonna Company, but it was a competition in part, at least, which, it was contended, was illegally conducted against rights which had been transferred in 1893. But, be that as it may, we repeat, patent rights may be conveyed partially or entirely, and the monopoly of use, of manufacture or of sale is not one condemned by law*" (italics ours).

If two patented machines can do the same work, it is not infrequently the case that each has a patented improvement which the other does not have. A far more efficient machine would result if the patents were combined and the two improvements embodied in a single machine. In such a case the manufacturer of one machine may lawfully purchase the patents held by the manufacturer of the other machine, even though competition between the two machines is thereby eliminated. To hold otherwise would be to hold that the public could not be furnished the most efficient machines possible to the art. But the Sherman Act was intended to benefit the public, not to injure it.

In *Nash* v. *United States*, 229 U.S. 373, the court said (p. 376):—

> " . . . Only such contracts and combinations are within the act as, by reason of intent or the inherent nature of the contemplated acts, prejudice the public interests by unduly restricting competition or unduly obstructing the course of trade."

In *Wilder Mfg. Co.* v. *Corn Products Co.*, 236 U. S. 165, the court said (p. 174):—

> "In other words, founded upon broad conceptions of public policy, the prohibitions of the statute were enacted to prevent not the mere injury to an individual which would arise from the doing of the prohibited acts, but the harm to the general public which would be occasioned by the evils which it was contemplated would be prevented."

A purchase which is made for the purpose of enabling the purchaser to produce a more efficient machine, even if it does result in the elimination of competition between inferior machines, cannot be said to "prejudice the public interests" or produce "harm to the general public." Such a purchase distinctly benefits the public, and is obviously a normal, legitimate step in the development of the industry.

In *United States* v. *American Bell Telephone Company*, 167 U. S. 224, the right of a patentee to acquire other patents which will improve his apparatus, although thereby his monopoly will be extended indefinitely, was affirmed as undoubted.

The court said (p. 249):—

> "Much is said in the briefs and in the arguments about the practical continuance of the telephone monopoly. It is well to understand exactly what is meant thereby. No one questions that the Bell patent has expired, and that all of his invention is free to the use of the public. It is not denied that Berliner's invention is something independent and distinct from the Bell invention. It is the combination of these inventions with those of Blake and Edison which makes the instrument in commercial use, and because this is the most serviceable it is the one that the public insists upon having. But each invention has independent rights. It loses nothing because when united with another it results in an instrument more valuable than either alone will give. Suppose that at the expiration of this Berliner patent some new invention shall be made by which in connection with those already free to the public an instrument can be manufactured far surpassing in utility that used today, and the Bell Company shall purchase that invention, the public, which always insists on having the best and most serviceable, will undoubtedly take the new instrument, and in that way it may happen that what is called the telephone monopoly is practically still further continued. But surely that does not abridge the legal rights of anyone. The inventor of the latest addition is entitled to full protection, and if the telephone company buys that invention it is entitled to all the rights which the inventor had."

It appears from that case that the telephone was covered by four patents. Bell's invention was the fundamental invention; the others were improvements. If, as was not impossible, after the expiration of Bell's patents, a telephone could have been con-

structed by the addition of either one of the improvements, could it possibly have been contended that the owners of those improvements, although there would have been competition between them if they had remained separate, could not have combined, and by the use of all their patents made a more perfect instrument? We think it clear from the language of the court that such a combination would have been permissible.

We do not here contend that every purchase of patents or of a business protected by patents is lawful, although there is authority to this effect. We do submit that every such purchase made to enable the purchaser to manufacture and offer his customers machines which he could not manufacture unless he purchased the patents, or to enable the purchaser by a combination of different patents to put on the market a better machine than any then manufactured, is lawful. To hold otherwise would prevent a manufacturer from fairly competing with his competitors by preventing his manufacturing the same class of machines which they can manufacture under their patents, or would prevent his putting upon the market the best machines which could be manufactured by a combination of patents.

Unless a company like the United Company which is engaged in an industry dominated by patents is privileged to make such acquisitions, the character of its machines will deteriorate and its business decline.

The United Company's machines are the best in the market. It hopes that they may continue to be the best. To this end it expends enormous sums each year in conducting experiments and making inventions. It also acquires from others such inventions as will improve or perfect its machines, or enable it to put out new machines. This it is legitimately and lawfully entitled to do.

Its lessees look to it to furnish them with the best and most improved machines. It can only do this by maintaining its own experimental department, and by acquiring such inventions made or owned by others as will effect this end. It is not only entitled to do so: it would be lax in its obligations to its lessees if it declined to do so.

V.

COVENANTS TAKEN FROM VENDORS, INVENTORS, AND EMPLOYEES IN CONNECTION WITH THE ACQUISITIONS.

1. GENERAL DISCUSSION.

The petition alleges that the defendants have taken from "*all or substantially all*" of those whose businesses they have purchased covenants in writing not to engage for long terms of years in trade "*in shoe machinery in competition*" with the defendants and have further required the vendors to agree that if they "*shall invent or cause to be invented*" or shall patent or cause to be patented "*any machines adapted for use in the manufacture of boots or shoes*" or shall acquire interests in or under letters patent relating thereto, they shall assign and transfer to the defendants all such inventions and letters patent (R. Vol. 1, p. 1000). The District Court found with respect to these allegations as follows (Dodge, J., R. Vol. 1, p. 1141):—

> "These charges are not justified by the documents themselves, which have been produced. They are by no means uniform in their terms, there was no generally prescribed form for them, nor were they all the work of the same hands. Each was framed according to the circumstances of the particular transaction. In many cases, at least, the agreements required only that there should be no competition in the line of business involved in the particular transaction, or that all patents or inventions thereafter made in the particular line to which the acquired invention belonged should be transferred. There are enough of the agreements in these cases which are without covenants of the kind described, to leave the allegation unjustified that such covenants were required in substantially all. And of the instances wherein covenants are found in any degree answering the alleged description, it may be said generally that none are clearly shown to have exceeded what the law permits. Still less reasonable would it be to regard what is found in them as indicating a consistent purpose on the defendants' part to exclude all those with whom the agreements were made from all possible future competition with the United Company."
>
> . . . . . .

This finding of the District Court is fully supported by the record.

The covenants are only such covenants as are usual and customary in the case of a purchase of a business, the purchase of patents, or a contract of employment with an inventor.

In the case of the purchase of a business it is well recognized as usual and necessary to require the vendor to covenant not to compete with the business sold. Such a covenant in nowise violates the Sherman Act.

When an inventor sells his patents it is recognized as equally essential that he covenant to transfer his future inventions covering the same subject-matter in order to give the purchaser protection. It is common experience that an inventor at the time of sale may have in mind inventions which he has not yet patented which may render valueless what he is selling.

When an inventor is employed and taken into the employer's experimental department a covenant to assign future inventions is even more essential. Not only must much expense be incurred in providing draughtsmen and mechanics to work out his inventions, but the inventor has every opportunity to acquire highly confidential information. It is accordingly essential that he be required to agree that if he leaves the company's employ, he will assign future inventions because, first, such inventions are likely to be the fruits of his labors while with the company and in reality the results of the work which the company has paid for; second, there is serious danger that if he has not agreed to transfer future inventions he will not disclose an important invention, but leave the company's employ and then patent the invention, taking to himself the benefit of the work for which the company has paid; and, third, there is grave danger that if unscrupulous he will appropriate the inventions of others with which his confidential relations have permitted him to become familiar, and will patent them himself,—dangers which render such covenants both usual and normal.

In the present case the covenants in each and every instance were necessary for the protection of the United Company, and the District Court so found. But this is not the material issue in the present case. Whether or not a covenant in a particular case is absolutely necessary for the protection of one of the parties is a question of judgment which must be determined in the light

of the circumstances surrounding that particular case, a question difficult alike for the court and for the parties themselves to decide, with reference to which the law has been developing and changing and differs in different states. The material fact here is that the covenants are of the general character which are customary, normal, and proper in such transactions, and afford no evidence of a design to take broader covenants than the parties fairly believed necessary and usual.

The record shows that the officers of the company had no plan or design whatsoever with respect to these covenants and did nothing but leave it to the attorney who drew the papers to insert such clauses as were usual to protect the company as purchaser.

Thus Mr. Howe testified:—

> "Neither the Directors nor officers of the Company, so far as I know, ever had anything to do with them [the covenants]. In fact, except in special instances, where they may have read that part of the contract, I doubt if they knew what they were" (R. Vol. 1, p. 667, lines 16–19).

He further testified (R. Vol. 1, p. 667, lines 20–27):—

> "*Q.* Or did you receive directions from President Winslow as to the covenants you should use?
> "*A.* Neither from the President nor from any officer.
> "*Q.* You then exercised your own judgment as a lawyer?
> "*A.* That matter was all left to the Legal Department.
> "*Q.* Was there any intent upon your part to bring about a monopoly or an unlawful restraint of trade by the use of those covenants?
> "*A.* No intention whatever. It was merely intended for the protection of the Company in what it had paid for, or what it had contracted to pay for."

Mr. Winslow testified (R. Vol. 1, p. 502, lines 19–30):—

> "With reference to the covenants in agreements of purchase of properties by the United Company, I have had nothing to do with the covenants of the vendors, with respect to their future activities, in agreements relating to the acquisitions by the United Company. The drafting of those papers was left entirely to the United Company's Legal Department; I did not direct anything to be inserted and

no action was taken by me, or by the Board of Directors, or by any officer of the Company that I knew of, directing or requiring the insertion of any such restrictive covenants in any agreement. These matters were left to counsel like the drawing of a deed, and I paid no attention to whether they put in covenants or what covenants they put in."

In thirteen transactions there were no covenants whatever as to competition or to future inventions. These were: The Corrugated Wire Fastening Company (R. Vol. 3, p. 530); Seaver Process Lasting Company (R. Vol. 3, p. 591); Lincoln Sewing Machine Company (R. Vol. 3, p. 628); Bay State International Shoe Machinery Company (R. Vol. 3, p. 655); Swain-Fuller Manufacturing Company (R. Vol. 3, p. 660); Globe Sewing Machine Company (R. Vol. 3, p. 662); Boot & Shoe Sole Laying Company (R. Vol. 3, p. 666); Marlboro Awl & Needle Company (R. Vol. 4, pp. 693, 703); The T. A. Norris Machine Company (R. Vol. 4, p. 734); W. W. Cross & Company, Incorporated (R. Vol. 4, p. 744); Brockton Supply Company (R. Vol. 4, p. 831); Metallic Heel & Counter Company (R. Vol. 4, p. 843); B. F. Sturtevant Company (R. Vol. 4, p. 928).

In the case of most of the transactions where covenants were inserted particular pains were taken to limit the covenant strictly to the particular kind of machines or goods which were sold. The allegation in the petition that the vendors who made covenants not to compete were restrained in all cases from engaging in competition in shoe machinery generally and that inventors were required to convey patents on shoe machinery generally which they might thereafter invent or acquire is absolutely without foundation. The very few cases in which general covenants were taken were either employment contracts where such broad protection was necessary or the general covenants were justified by the special circumstances of the case. Furthermore in nearly every case the covenants have been limited in time.

In the only case in which the United Company has sought to enforce any of these covenants they were held to be reasonable and the defendant was restrained (*United Shoe Machinery Company* v. *Kimball*, 193 Mass. 351). That was the contract with Kimball & Hadley (R. Vol. 4, p. 814).

2. LAW AS TO COVENANTS NOT TO COMPETE.

That a covenant not to compete when made as part of the sale of a business, although it directly undertakes to restrain trade, is not within the prohibition of the Sherman Act is settled by *Cincinnati Packet Co.* v. *Bay*, 200 U. S. 179. The court there says (pp. 184–5):—

> "Presumably all that there was to sell, besides certain instruments of competition, was the competition itself, and the purchasers did not want the vendors' names.
>
> "This being our view of the covenant in question, whatever differences of opinion there may have been with regard to the scope of the Act of July 2, 1890, there has been no intimation from anyone, we believe, that such a contract, made as part of the sale of a business and not as a device to control commerce, would fall within the act. On the contrary, it has been suggested repeatedly that such a contract is not within the letter or spirit of the statute, *United States* v. *Trans-Missouri Freight Association*, 166 U. S. 290, 329, *United States* v. *Joint Traffic Association*, 171 U. S. 505, 568, and it was so decided in the case of a patent. *Bement* v. *National Harrow Co.*, 186 U. S. 70, 92."

Darius Coal Transportation Co. v. *White Star Line*, 186 Fed. 63 at p. 65.

Blount Mfg. Co. v. *Yale & Towne Mfg. Co.*, 166 Fed. 555 at p. 558.

Indeed, a covenant not to compete is so necessary to the protection of a purchaser of a business, that in Massachusetts, where most of these contracts were made, a covenant not to compete is implied by law where the good-will of a business is sold and such covenant is necessary or proper for the protection of the purchaser.

Marshall Engine Co. v. *New Marshall Engine Co.*, 203 Mass. 410.

It appears then that even if the United Company had not taken express covenants not to compete, its right to take such cove-

nants is so clear that the law would have protected it by implying them.

The law goes so far that under such an implied covenant the vendor may be forbidden to set up a competing business in any part of the world.

In *Marshall Engine Co.* v. *New Marshall Engine Co.*, supra, the court said (p. 422):—

> "On the other hand had there been no covenant in the sale by Nordenfelt of his good will as a manufacturer of guns and ammunition, which was before the House of Lords in *Nordenfelt* v. *Maxim Nordenfelt Guns & Ammunition Co.* (1894) A. C. 535, under the Massachusetts rule he could not have set up a similar business anywhere. Where the governments of the world are the customers, the place of business is of no consequence."

Such a covenant not to compete may, if necessary for the vendee's protection, be unlimited both in time and space.

In *Marshall Engine Co.* v. *New Marshall Engine Co.*, supra, the court said (p. 424):—

> "The defendants have argued that if Marshall had entered into a covenant never to engage in the business of manufacturing Marshall Perfecting Engines it would have been void as a covenant in restraint of trade. But it is now settled that a covenant, even if it be unlimited both in time and space (*United Shoe Machinery Co.* v. *Kimball*, 193 Mass. 351, 358), not to engage in a particular business is valid if it is coupled with the sale of a business and is necessary to give to the purchaser what he has bought. *Anchor Electric Co.* v. *Hawkes*, 171 Mass. 101. *United Shoe Machinery Co.* v. *Kimball*, 193 Mass. 351."

Where necessary to protect the vendee, a covenant not to compete with the business of the vendee generally, although that business is broader than the particular business sold, is valid.

Anchor Electric Company v. *Hawkes*, 171 Mass. 101.

3. LAW AS TO COVENANTS TO ASSIGN FUTURE INVENTIONS.

Covenants, by vendors of patents or by inventors who enter the employ of the company, not to compete are even more necessary for the vendee's or employer's protection than covenants not to compete made upon the sale of a business.

This is well recognized by numerous decisions.

In *Aspinwall Mfg. Co.* v. *Gill*, 32 Fed. 697, Mr. Justice Bradley said (p. 700):—

> "But where a man purchases a particular machine secured by a patent, and open to an indefinite line of improvements, it is often of great consequence to him that he should have the benefit of any future improvements that may be made to it. Without that the whole value of the thing may be taken away from him the next day. A better machine might be made by the inventor, and sold to another party, which would make the machine acquired by the first purchaser entirely useless. *These things happen every day. And hence it has become the practice, in many cases, to stipulate for all future improvements that may be made by the same inventor upon any particular machine which he induces a party to purchase from him, sometimes by way of license to use such improvements and sometimes by way of purchase and ownership thereof.* Where the inventor is connected in business with the party making such stipulation, or is interested in the profits arising from the business in which the invention is used, the arrangement seems to be altogether unobjectionable. But such a connection or interest does not seem to be necessary to the validity of such bargains" (italics ours).

In *Hulse* v. *Bonsack Machine Co.*, 65 Fed. Rep. 864, an agreement by an employee to assign all inventions made by him while in the company's employ or at any time thereafter was held reasonable and valid. The court said (p. 867):—

> "Is this contract unreasonable or unconscionable? The Bonsack Machine Company owned valuable patented machines, employed in the manufacture of cigarettes. Comparatively the invention was in its infancy, and the machinery was known to be difficult of operation, and open to improvement. Any one entering into the employment of the company had full opportunity of learning the merits of the machines,

and, by constant and daily use, could see where the machine was defective, and where improvement was needed. If any improvement suggested itself to his mind, he could, by using the machine and the time and material of the company, experiment upon it, and ascertain its value. The improvement would be his own idea. But it owed its suggestion and origin, its progressive development and perfection, to the business, the practical working, the opportunity afforded by the company. When, therefore, the company, taught by costly experience, determined to protect itself from the discovery of improvements by its own servants, it did a natural and reasonable thing; and, when it protected itself by a covenant in advance of any employment with those seeking its service, it did a fair thing. Nor was that part of the contract which put in the same category improvements made while in the employment of the company and those made at any time thereafter unconscionable or unreasonable."

See also *Westinghouse Air Brake Co.* v. *Chicago Brake Mfg. Co.*, 85 Fed. Rep. 786.

In *Registering Company* v. *Sampson*, L. R. 19, Eq. 462, the court said:—

"Now nothing is better known than this, that when persons have turned their attention to a particular class of invention they are likely to go on and invent, and likely to continuously improve the nature of their invention, and continuously to discover new modes of attaining the end desired. Persons, therefore, who buy patents of inventors are in the habit of protecting themselves from the utter destruction of the value of the thing purchased by bargaining with the seller that he shall not use any new invention of his for producing that product in which they are about to deal at a cheaper rate, because if he were allowed to do so he might, the day after he had sold his patent, produce something which, *without being technically an infringement, and without being technically an improvement*, might accomplish the desired object in some other way, and utterly destroy the value of that which they had purchased. They, therefore, not unreasonably, and not unusually, make it a part of their bargain that whatever the man discovers of the same kind in the shape of machinery or apparatus which will produce the product in which they are about to deal shall belong to them. They say, 'We cannot buy on any other terms, because otherwise we are exposed to the instantaneous, or almost instantaneous, competition of

the inventor with the benefit of his previous experience.' That, as I said before, is not an unusual, nor is it an unreasonable, bargain" (italics ours).

Reece Folding Machine Company v. *Fenwick*, 140 Fed. Rep. 287, decided in the First Circuit in 1905, is a strong case on this point. Judge Putnam in the opinion of the court, page 288, says:—

"By the last contract Fenwick agreed to assign all the inventions which he had already made, together with any which he might thereafter make, appertaining to the particular subject-matter to which the prior contracts related; that is, certain details in the manufacture of collars and cuffs. . . .

"The defense is set up that such contracts for an indefinite period, covering inventions to be afterwards made, are against public policy. On the other hand, whether based on agreements for employment or on other valuable considerations, such contracts have been extensively made, and have never been doubted until of late. They are essential to the business of the contracting parties, and are not unjust. A person may purchase an invention, and pay therefor a very large sum, and proceed to make use of it. The inventor, according to a practice not uncommon, may subsequently overlap that invention by improvements, which, though small, may be enough, in these days of sharp competition, to build up a successful hostile business. This court recognized these principles to a certain extent in *Thibodeau* v. *Hildreth*, 124 Fed. 892, 893, 60 C. C. A. 78, 63 L. R. A. 480. Therefore it is right and reasonable, and legal, that contracts of the kind in suit should be made and sustained where they relate to improvements upon inventions already purchased, as in the case at bar."

4. MISSTATEMENTS MADE IN THE PETITION AS TO THE COVENANTS.

In its statement of the alleged facts regarding the acquisitions (R. Vol. 1, pp. 999–1023), the petition purports to state the substance of the agreements and the covenants contained in the agreements entered into in connection with the respective transactions. Many of these statements are entirely inaccurate and grossly exaggerate the nature and scope of the covenants, although the United States had the original agreements in its possession for months prior to the filing of the petition (R. Vol. 1, p. 37, lines 15–20; p. 78, lines 24–29). The most glaring of these misstatements are set out in the appendix (see Appendix pp. 82–87).

VI.

THE PLANT PURCHASE.

1. INTRODUCTORY STATEMENT.

In September, 1910, the United Company acquired the patents and inventions of Thomas G. Plant. In the same transaction it acquired from Plant sixty per cent. of the capital stock of the Thomas G. Plant Company, a corporation manufacturing women's shoes.

The petition alleges that Plant—

> "was engaged in the manufacture of machines designed and adapted for use in performing all the principal operations in the manufacture of boots and shoes which can be performed by the aid and use of machinery" (R. Vol. 1, p. 1019).

This statement and many others in the petition regarding this transaction are incorrect and are entirely unsupported by the evidence.

Plant had constructed a number of experimental machines embodying his inventions and had installed them in the shoe factory which he controlled where women's shoes were made exclusively. He had not put any machines into any other factory.

Plant was not a competitor of the United Company. He was not carrying on any shoe machinery business and he was not prepared to supply any machines. He declared that he did not want to go into the shoe machinery business, that he desired to retire from business; and after the purchase he did retire. There is uncontradicted evidence showing that the sole purpose of the Plant enterprise was to create something which he could sell to the United Company. He so stated himself and the history of his negotiations with the United Company proves this to be the fact. He offered a large commission—$250,000 and later $500,000—to an influential shoe manufacturer if he succeeded in effecting a sale to the United Company, and he later offered and had to pay a commission of five per cent. to another

intermediary who undertook to effect a sale to the United Company.

Attention will be called to evidence, for the most part uncontradicted, which establishes that the Plant machines were crude, really in the experimental stage, entirely useless for men's shoes and unfit for the making of women's shoes; that in their use in the Plant shoe factory they were constantly breaking down; that they broke a great number of lasts; that it was necessary to employ a large number of men to repair shoes that were defective on account of the poor work of the machines; that it cost three and a quarter cents per pair more to make shoes on them than it cost on the United Company machines; that the profits of the Plant shoe business after the Plant machines were installed were one-half less than they had been when the United Company machines were used; that the machines could not be used for manufacturing shoes according to the methods universally followed by other shoe manufacturers; and that after the purchase the managers of the shoe factory, Plant's former associates, found it impracticable to continue the manufacture of shoes with Plant's machines and of their own volition discontinued the use of those machines and substituted United Company machines.

On the other hand, in the course of his experimental work Plant had made many inventions and his machines were patented. Although their mechanical embodiments in Plant's crude machines were defective and unsatisfactory, the United Company's experts could see that many of those inventions were extremely valuable and represented important advances in the shoe machinery art.

Plant had, however, developed his inventions and constructed his experimental machines upon the foundation which for many years the United Company and its predecessors had been building; he had added his improvements to old machines of the United Company, and all of his important machines infringed the United Company's patents,—a great number of claims in approximately a hundred patents,—as shown by evidence entirely uncontradicted. Many suits had already been brought by the United Company for infringements of its patents by the Plant machines. On the other hand, fifteen of the United Company's machines infringed twenty patents owned by Plant.

There were also pending in the United States Patent Office twenty-three interferences between patent applications owned by Plant and applications owned by the United Company. The patent complications in which the extremely valuable Plant welter and stitcher improvements were involved were such that neither Plant nor the United Company could have supplied those inventions to the public without infringing the other's patents.

The United Company had never sought nor even considered any purchase from Plant until overtures were made by Plant. The interviews resulting from those overtures were all sought by Plant and his proposals were several times declined without encouragement to renew them. Throughout the negotiations Mr. Winslow insisted that he would not consider the purchase unless there were opportunity for the United Company's experts to examine the Plant machines and determine the value of his inventions, and that he would consider purchasing those inventions upon no basis other than the value which they would have to the shoe industry and to the United Company in the advancement of the art.

After negotiations had several times been broken off by the United Company and renewed by Plant, he finally permitted its experts to examine the machines in the Plant shoe factory. As a result of the extended and thorough examination which was then made it was determined that while the Plant machines themselves were crude and unsatisfactory, Plant had made some very valuable inventions which could be incorporated in the United Company's machines with great advantage to the United Company and to its customers. Accordingly, when Plant offered to sell those inventions at a much lower price than he had previously named, and offered also to include his valuable holdings in the shoe manufacturing company, the United Company accepted the offer. The primary reason for the purchase was the great value of the Plant inventions, but the United Company's officials were also greatly influenced by a realization that common ownership of the patents and applications of the two parties would avoid endless litigation and chaotic conditions in the shoe manufacturing industry which would have been intolerable.

Immediately after the acquisition of the Plant patents and inventions the United Company put many inventors at work

to adapt to the United Company's machines the most important Plant inventions, the value of which had already been determined, and its inventors and mechanics worked night and day until those inventions had been successfully embodied in its machines. Experts were sent to the Plant shoe factory to make a thorough study of the Plant machines and inventions and to recommend what should be done with each Plant machine and invention. They spent many weeks in that investigation and their exhaustive written report is an exhibit (*infra*, pp. 504–505).

The United Company improved and adopted seventeen of Plant's patented machines, and inventions covered by forty-three of the patents acquired from Plant have been incorporated in twenty-six of the United Company's machines. Of these the welter and stitcher inventions are so valuable that alone they more than justify the price paid for all the Plant inventions. The record abounds with testimony as to the savings in material and other economies, the increased output and the improved working conditions, both in higher wages and in convenience of operation, which have been effected by these improvements as they have been incorporated in the United Company's machines (*infra*, pp. 506–514).

That the shoe manufacturing industry has been greatly benefited by common ownership of the Plant patents and those of the United Company is beyond dispute. Shoe manufacturers now have the best machines available, incorporating the valuable inventions of both parties, which could not have been had without common ownership of the patents, and intolerable conditions which otherwise would have inevitably resulted from the chaotic patent situation have been avoided.

We propose to discuss the evidence relating to the Plant purchase in the following order:—

(1) The evidence showing that Plant was not in competition with the United Company and did not desire or intend to go into the shoe machinery business.

(2) The evidence that Plant's machines were not commercially successful.

(3) The evidence as to Plant's valuable inventions and the use which the United Company has made of them.

(4) The evidence showing that the Plant purchase was a great benefit to the industry.

(5) The evidence showing that these great benefits were the only reason for the purchase.

(6) The evidence that the Plant patents were worth more than was paid for them.

(7) The evidence showing the history of the negotiations between Plant and the United Company.

(8) The evidence regarding the alleged attempt of certain shoe manufacturers to purchase Plant's patents after he had agreed to sell to the United Company.

(9) The evidence regarding misstatements as to facts by petitioner's patent expert.

2. PLANT WAS NOT IN COMPETITION WITH THE UNITED COMPANY, HE HAD NO MACHINES TO SELL, AND THE MACHINES WHICH HE HAD CONSTRUCTED AND HAD SOLD TO HIS OWN SHOE COMPANY WERE NOT COMMERCIALLY SUCCESSFUL.

A. Plant was not Engaged in Shoe Machinery Business, He did not Intend to Engage in that Business, and He had no Machines to Sell.

The only machines which Plant had constructed were the crude and defective machines which months before he had forced into his own shoe factory, of which he owned sixty per cent. of the stock (R. Vol. 1, p. 777, lines 18–23). Those machines had been bought and paid for by the Shoe Company (R. Vol. 1, p. 778, lines 13–14, 20–21), and accordingly had been definitely and completely withdrawn from the field of shoe machinery competition; there is no evidence that in September, 1910, Plant had any machines to sell or that he intended to make any machines.

The petition alleges that Plant had advertised his machines extensively through the public press (R. Vol. 1, p. 1020). Petitioner failed to put any such advertisements in evidence, although it had no difficulty in producing other advertisements published before the United Company was formed. The record shows that the advertisements which Plant did publish were not advertisements of machinery.

> "There were advertisements of the opinions of lawyers in regard to the shoe machinery leases. . . . The advertise-

ments attacked the United Company's leases, but they were not advertisements of machinery in the sense of advertisements of anything for sale" (Herrick, R. Vol. 1, p. 611, lines 17–21).

"They were advertisements calculated to 'bear' the stock of the United Shoe" (Howe, R. Vol. 1, p. 687, lines 44–45).

The petition alleges that Plant

"had solicited among shoe manufacturers, in various parts of the United States orders for the sale and lease of such machines" (R. Vol. 1, p. 1020).

Absolutely the only evidence suggesting any attempt by Plant to put machines into any shoe factory is the testimony regarding his offers, declined in both instances (R. Vol. 1, p. 576, lines 15–21; p. 720, line 5), to equip the factories of the Commonwealth Shoe & Leather Company (of which C. H. Jones is president) and the Endicott, Johnson Company, as a part of his scheme for forcing a sale to the United Company. Mr. Endicott testified that Plant in May, 1910,

"stated that his plan was to fit up three factories—the Thomas G. Plant factory, Commonwealth Shoe & Leather Company factory, and Endicott, Johnson's factories—with his machinery, and then sell out to the United Company" (R. Vol. 1, p. 575, lines 41–45; p. 576, lines 25–26).

"I think his proposition to equip our factory and the Commonwealth factory and the T. G. Plant factory was made to me in the presence of my partner and my expert, I think, and in the presence of Mr. Charles H. Jones and Mr. Clarence D. Reed. Mr. Reed is Mr. Jones's associate and is the practical man in the Commonwealth Shoe Company" (R. Vol. 1, p. 576, lines 27–32).

"He stated to me, as I testified, that he wanted to fit us up, use us as a club to sell out to the Machinery people" (R. Vol. 1, p. 576, lines 34–36).

"He said he would like to fit up our factory to help him to sell out to the United Shoe Machinery Company" (R. Vol. 1, p. 585, lines 2–4).

As to these offers it was found by the District Court (Dodge, J., R. Vol. 1, p. 1142):—

"There is uncontradicted evidence of declarations by Plant in 1909 that his intention was to equip these two

other factories and his own with his new machines and then sell out to the United Company. That the effecting of such a sale, and not any actual competition in the market with machines then in use, was his real purpose, is hardly left doubtful by the history of his subsequent negotiations with the defendants."

Robert Hazzard, a shoe manufacturer, testified:—

"Mr. Plant sent me one of his statements and wrote me a very nice letter about the wonderful things he had in machinery at the time he started his newspaper campaign. I told him I was very much interested and should like to bring my superintendent to Boston and look the plant over, but he wrote me that the plant was not open for inspection. Afterwards he sent a nice illustrated pamphlet and I told him I could not see any use in sending it out if he didn't have anything to sell; and that if he did, I would like to see it. My letter was never answered. I never had anything to do with the operation of Plant's machines; he would not let me see them" (R. Vol. 1, p. 650, lines 28–38).

There is a great deal more testimony, entirely uncontradicted, showing that Plant never had any intention of going into the machinery business, but his real purpose, the sole object and end of his enterprise was to sell out to the United Company.

Plant himself made repeated declarations to this effect. For example:—

"Mr. Plant stated, as he had before, that *he wanted to get out of business entirely* . . . that *he didn't want to embark in the shoe machinery business*" (italics ours) (Winslow, R. Vol. 1, p. 487, lines 11–12, 15–16).

"Mr. Plant stated that he would like to get out of business" (Endicott, R. Vol. 1, p. 580, lines 36–37).

Plant had previously, in 1909, endeavored to interest Mr. Endicott in his venture, stating that the investment

"would require some nerve, but *would be a pretty quick turn-over*" (italics ours) (Endicott, R. Vol. 1, p. 576, lines 5–6).

Plant told Mr. Herrick that

"he was anxious to get out of business . . . that he would like to get the money and retire . . . *that he had always planned to so arrange himself that he would be free to sell out*

to the United Shoe Machinery Company" (italics ours) (Herrick, R. Vol. 1, p. 603, lines 26–27, 30, 32–34).

At another time Plant told Mr. Herrick that while he had talked about putting his machinery in a factory he didn't intend to do it and that

> *"he had always held himself in a position where he could trade with the United Shoe Machinery Company, and that was his plan"* (italics ours) (R. Vol. 1, p. 611, lines 3–5).

On cross-examination Mr. Herrick testified that during a conversation with Mr. Plant

> "he never said anything to the effect that he was going to put competition into the field. *He always said that he had got it up to sell to the United Company"* (italics ours) (R. Vol. 1, p. 615, lines 26–28).

Harry W. Smith, whom Plant employed to effect the sale, testified that on July 22, 1910, Plant said to him *"that he wanted to play the game as he had figured to play it"* (italics ours), and also said:—

> "'I can do nothing on the eastern end. I have broken with Winslow, and Endicott has gone back on me.' . . . 'Now, if you can get Barbour to send for me, as you told me you could, then I can get an opening with Barbour, and if you can get Herrick, so Herrick will come to my side of the case, I believe something can be done.' . . . He said Mr. Herrick and Mr. Barbour were the strongest against him" (R. Vol. 1, p. 769, lines 38–44; p. 770, lines 7–9).

Finally there is uncontradicted evidence that Plant agreed to pay Mr. Endicott a commission of $250,000 if he would effect or help effect a sale to the United Company and that later he increased the offer to $500,000 (Endicott, R. Vol. 1, p. 576, lines 39–41; p. 580, lines 16–18); and that he paid his intermediary, Smith, a commission of $300,000.

> "For accomplishing what he wanted me to do, he paid me five per cent. on the six million—$300,000" (Smith, R. Vol. 1, p. 771, lines 8–10).

It appears that after the sale of his patents Plant carried out his expressed intention of retiring from business (R. Vol. 1, p. 488, lines 24–25).

B. Even if Plant's Machines had been Commercially Successful They would not have been Accepted by Shoe Manufacturers because They Made Shoes by Obsolete Methods and could not be Used for Making Shoes according to the Methods Universally Followed by Other Shoe Manufacturers.

George E. Warren, defendants' practical expert, who spent over two days examining the Plant machines before the purchase and about eight weeks in continuous study of them after the purchase (R. Vol. 1, p. 785, lines 7–20; p. 808, lines 42–44; p. 809, lines 1–3; p. 814, lines 34–35; p. 815, line 44; p. 816, lines 1–2), testified that every manufacturer that he knows of is using the rounding and channeling machine. Plant had no rounding and channeling machine. His catalogue illustrates a "Rough Rounder," *i.e.*, rounding and channeling machine, but it "was never completed" and Plant told Warren that it "was not in any condition to be shown" (R. Vol. 1, p. 792, lines 16, 18–19; p. 793, lines 13, 30–31). McGaffee, general manager of the Plant shoe factory, had never seen such a machine; Plant told him "he didn't have any rough rounding machine" (R. Vol. 1, p. 776, line 29; p. 781, lines 2–3). Plant's method of making shoes without a rounding and channeling machine was obsolete before the United Company was formed. The invention of the rounding and channeling machine revolutionized the method of attaching the outersole. By the old method which Plant used the outsole was shaped and then channeled before it was put on the shoe. By the modern method a blocked or unshaped outsole is temporarily cemented to the shoe and then is shaped to that particular shoe and the channel is formed in exactly the right location for that shoe, both operations being performed simultaneously by the rounding and channeling machine. The advantages of the modern method as compared with Plant's obsolete method are set forth in the record in detail, and an adequate explanation of the absence of a rounding and channeling machine from Plant's line will be found in the discussion of the United Company's patents on such machines (R. Vol. 1, p. 793, lines 13–15, 23–24; R. Vol. 2, pp. 2304–6, 2330, 2331).

Nine of Plant's machines were adapted only to peculiar methods which were in use only in the Plant factory. For example,

Plant used a peculiar kind of innersole and five of his machines were peculiarly adapted for making that innersole, of which Mr. Warren said, "We don't know of anybody that would care to make it" (R. Vol. 1, p. 792, lines 34–37, 42–43). Another of these machines was Plant's "cleaning and treeing leg" which operated according to an obsolete method and "the result was that the shape of the shoe was spoiled" (R. Vol. 1, p. 793, lines 34–43; p. 794, lines 1–9).

Plant's stitcher

> "could not be used commercially because it had never been organized to sew shoes with extension edges. This was a very serious defect, because almost every manufacturer wished to make shoes with extension edges" (Warren, R. Vol. 1, p. 794, lines 37–40).

Mr. McGaffee testified that it cost three and one-quarter cents per pair more to manufacture shoes in the Plant factory in accordance with the Plant method than in accordance with the method of the United Company's machines (R. Vol. 1, p. 780, lines 43–45).

Nearly all manufacturers used and insisted upon the extension edge organization (sometimes called the Baltimore Edge Attachment) and it produced a great deal better work (R. Vol. 1, p. 795, lines 25–27). Nearly all welt shoes, both men's and women's, are made with extension edges. The practical advantages of the extension edge and the importance and value of an organization in an outsole stitching machine which will enable it to attach the soles of extension edge shoes are explained in full detail by defendants' experts (R. Vol. 1, p. 794, lines 41–44; p. 795, lines 1–5; Vol. 2, pp. 2281–3, 2762).

Mr. McGaffee stated that the lack of an extension edge organization on the Plant stitcher "was a great hindrance to the quality made on that machine" and that it resulted in the shoe ripping (R. Vol. 1, p. 775, lines 34–35, 43–45). Ryan, who operated a Plant stitcher, testified that through the lack of the extension edge device there was "a great deal of trouble running into seams and one thing and another" (R. Vol. 1, p. 707, lines 7–9).

Plant told McGaffee that he could not use an extension edge

organization on account of the United Company's patents, which are set forth in the record (R. Vol. 1, p. 775, lines 32–34; p. 780, lines 1–7; Vol. 2, p. 2282).

Again, Plant had produced no pulling-over machine (R. Vol. 1, p. 792, lines 10–11), another of the "machines for preparing and attaching the bottoms to the uppers of shoes" (R. Vol. 1, p. 839, lines 13–14). The testimony regarding defendants' patents on that machine shows that Plant was wise not to enter that field (R. Vol. 2, pp. 2540–8).

Plant's heel slugger "couldn't handle the zinc wire or soft brass wire" which are commonly used for slugging, and in using that machine they had to slug the toplifts before they were attached to the shoe, thus not securing the advantages which are obtained by the general practice of inserting the slugs after the toplifts are attached to the shoe (R. Vol. 1, p. 796, lines 38–44; p. 797, lines 10–11; Vol. 2, p. 2464).

Also eight other Plant machines, including important machines such as the heelseat dinker, stitch separator and sole rounder, were either unfinished or were regarded by Plant himself as experimental, and the Plant Shoe Company was making shoes without using those machines, getting along in one way or another as best it could (R. Vol. 1, p. 791, lines 35–45; p. 792, lines 1–33; p. 814, lines 1–7).

C. Even for Manufacturing Shoes according to Plant's Obsolete Methods, Differing Radically from Methods Universally Used, Plant's Machines were not Commercially Successful in his own Factory where Women's Shoes only were Made.

No better evidence on this proposition can be had than that of the man who as general manager of the Plant factory had to make shoes on the Plant machines. Mr. McGaffee testified that the Plant machines "wouldn't stand up" (R. Vol. 1, p. 774, lines 15–16); that the profits of the shoe business the first year that the Plant machines were installed were one-half less than the profits of the preceding year when United Company machines were used, on account of "the great amount of bother and trouble we had with the Wonder Worker* machines" (R. Vol. 1, p. 778, lines

*Plant called his machines "Wonder Workers" (R. Vol. 1, p. 773, lines 20–22).

6–12); that an average of 235 pairs of lasts were broken each week on the Plant machines as compared with ten pairs a week on the United machines which were displaced by the Plant machines (R. Vol. 1, p. 777, lines 6–12; p. 780, lines 9–10); and that he had thirty repairers at one time repairing shoes after the Plant machines (R. Vol. 1, p. 776, lines 1–2).

> "The Wonder Worker would do the work so poorly that I would have to have somebody fixing the work up by hand before it could go to the next department" (R. Vol. 1, p. 779, lines 3–5).

He also testified as to the "continual breaking down" of the Plant machines (R. Vol. 1, p. 774, lines 22–23), and, finally, he stated as his reason for substituting the United Company machines for the Plant machines,—

> "I put those machines in for the simple reason that I couldn't make the shoes with the Wonder Worker" (R. Vol. 1, p. 774, lines 40–41).

Mr. Winslow testified:—

> "During our inspection we saw many machines that were broken down, not in condition to operate" (R. Vol. 1, p. 491, lines 24–26).

Mr. Warren testified that of the sixty-nine machines in the Plant catalogue (P.'s Ex. 266) ten machines were unfinished or had only been used experimentally (R. Vol. 1, p. 788, line 27; p. 791, lines 35–40); that eleven more machines were not commercial, with detailed explanations (R. Vol. 1, pp. 794–7); that seven other machines were "faulty in construction," also with detailed explanations (R. Vol. 1, p. 797, lines 28–45).

Among his criticisms of specific machines he testified that he observed frequent breakage in the welter, in the stitcher and in the heel-attaching machine, and observed also the noticeable breakage of lasts (R. Vol. 1, p. 790, lines 35–40); and stated that the Plant welter was mechanically defective and had to be run at practically maximum speed all the time "or else it would stop" (R. Vol. 1, p. 797, lines 23–27; p. 818, lines 26–37). The necessity of capacity for different speeds is explained in McGaffee's comparison of the Plant welter with the United Com-

pany welter (R. Vol. 1, p. 775, lines 23–28). Even the valuable improvements in the welter and stitcher "had not been carried out in a mechanical way," and Mr. Warren "felt satisfied that they would not stand up and do the work" (R. Vol. 1, p. 788, lines 3–7).

Of another defect in the welter Mr. Warren said:—

> "A particular weakness was the construction of the welt guide and back gage movement. With the particular mechanism used and the lightness of its construction this would not have lasted any time at all" (R. Vol. 1, p. 810, lines 20–24).

The leveler was constantly breaking lasts and required a great number of expensive forms,—the forms used at the Plant factory cost over $4,000. The custom sole layer required the same expensive forms and it was 50 per cent. slower than the United Company machine (R. Vol. 1, p. 795, lines 44–45; p. 796, lines 1–14, 24–28).

Four operators at the Plant shoe factory testified that the Plant toe and heel laster was much slower, that the work on the machine was very hard, and that accordingly the operators on those machines were given a raise in wages (R. Vol. 1, p. 761, lines 27–29; p. 762, lines 41–43; p. 764, lines 42–44; p. 765, lines 1–2, 31–38).

The testimony just referred to is typical of the evidence regarding the Plant machines, which is well summarized in Mr. Warren's following general comments:—

> "Generally speaking they were of such construction that they would break and get out of order" (R. Vol. 1, p. 794, lines 17–18).
>
> "And in looking over all these Plant machines we found by a careful examination that they were faulty in construction, light in weight in places, and badly designed" (R. Vol. 1, p. 790, lines 28–31).
>
> "These machines of Mr. Plant's, built as they were, in my opinion *would not have been commercially successful* to do work under the varying conditions under which machines have to be supplied to shoe manufacturers" (italics ours) (R. Vol. 1, p. 790, lines 15–18).

But perhaps the most conclusive evidence is the action of the Plant Shoe Company in throwing out the Plant machines, for

which they had paid $400,000 less than three years before, and substituting the United Company's machines (R. Vol. 1, p. 774, lines 33–44; p. 778, lines 13–14).

Mr. McGaffee, general manager and vice-president of the Plant Shoe Company, stated his reasons for discarding the Plant machines as follows:—

> "I changed back again because I wanted to see if I could get a line of machinery that would stand up and manufacture shoes, without manufacturing machines all the time. I was absolutely satisfied that the Wonder Workers wouldn't stand up . . . the longer they ran the weaker they got. . . . I was not able to get out the work. . . . I couldn't make the shoes with the Wonder Worker" (R. Vol. 1, p. 774, lines 13–16, 23, 24, 40–41).

Mr. McGaffee further testified:—

> "The United Company has not in the slightest way interfered with my management of the business, or in any way attempted to exercise any influence or control over my judgment in the management of the business. . . . It was my judgment that determined the policy of the company with respect to the changing over from the Wonder Workers. . . . My action in putting in the United Company machines was governed absolutely by my own wishes and my own independent judgment. I did it because I felt that it was for the interests of the business of the Thomas G. Plant Company, of which I am a stockholder. The United Company never approached me in any way" (R. Vol. 1, p. 773, lines 15–19; p. 774, lines 16–18; p. 775, lines 1–6).

He found that the work of the United machines was "a great deal less expensive," that on those machines they saved three cents and a quarter a pair as compared with the work on the Plant machines, and that his operators could do a good deal more work and make more money than they could on the Plant machines (R. Vol. 1, p. 775, lines 13–16; p. 776, lines 17–22; p. 777, lines 24–28).

Mr. McLeod, "practical man" and a director of the Plant Shoe Company, who shared the responsibility for the selection of machinery, decided that the United machines would be best for their business and approved the change. Among his reasons he stated that the United machines

> "do not tire an operator so much, so that the operator can do better work and feel fresher at night. . . . He can turn out a bigger day's work with the United machine than he could with the Wonder Worker machine" (R. Vol. 1, p. 782, lines 3–20, 25–27, 30–32).

He testified that he was in accord with what Mr. McGaffee said as to the economies and advantages effected by the change, the United Company did not bring any pressure or influence to bear, no suggestion was made that it would be advantageous to change machines, and the change was made in the exercise of his honest and independent judgment (R. Vol. 1, p. 783, lines 25–28, 33–39). Both these men had been connected with the Plant Shoe Company for over twenty years (R. Vol. 1, p. 773, lines 4–6; p. 782, line 6).

D. Much less could Plant's Machines have been Used on Men's Shoes, which Require much Stronger Machines and Frequently Machines of Entirely Different Types from Those Used on Women's Shoes.

It is not disputed that women's shoes exclusively were made in the Plant shoe factory and that there had been no use of the Plant machines in any other factory.

It is clear from the record that the problems that have to be solved in handling men's shoes, which are larger, made of heavier leather and with heavier box toes and counters and in which durability and wearing qualities are the first requisite, are entirely different from the problems met in producing machines for making women's shoes, which are smaller, made of lighter materials throughout, and in which the primary consideration is style and appearance. Accordingly for many operations the machines used on men's shoes and women's shoes are different. For example, we have seen that the Chase lasting machine was structurally not adapted and was never used for lasting women's welt shoes, while the Ideal lasting machine was structurally not adapted and was not successfully used for lasting men's welt shoes (*supra*, pp. 124-129, 133–135).

All the testimony which we have reviewed above (*supra*, pp. 484–486) showing that many of Plant's machines could be used for making shoes only by obsolete methods or by peculiar

methods used only in Plant's factory, and at prohibitive expense, condemns the machines for men's work as well as for women's work. The testimony that as used in the Plant shoe factory on women's shoes the machines were continually breaking down, that they were destroying lasts and that they did the work so poorly that it had to be fixed up by hand (*supra*, pp. 486–490), is further conclusive proof that the machines were entirely impracticable for use on men's shoes.

In addition to that evidence there is testimony bearing directly upon the capacity of Plant's machines for men's work and the possibility of using them on that work.

Mr. McGaffee, general manager of the Plant shoe factory, testified:—

> "I don't think you could have manufactured men's shoes on that line of machinery that Mr. Plant had got out and do it anywhere near satisfactory at all" (R. Vol. 1, p. 774, lines 30–32).

Mr. Howe, who examined the Plant machines with Mr. Winslow, testified that the Plant machines were

> "too light to stand commercial use for making men's work,"

and that they

> "were not strong enough for continuous use, in my judgment, on his own manufacture, women's welts" (R. Vol. 1, p. 668, lines 35–37; p. 688, line 44; p. 689, lines 8–9).

Mr. Warren testified that in his opinion the Plant machines

> "would not have been commercially successful to do work under the varying conditions under which machines have to be supplied to shoe manufacturers . . . it has always been the experience of anybody that has designed or made any shoe machinery that you can't tell by trial on one kind of work whether a machine will become commercial or not" (R. Vol. 1, p. 790, lines 16–18, 21–24).

The mechanical and shoemaking reasons why the various Plant machines could not be used for men's shoes were explained in great detail by Mr. Warren. Typical of his criticisms of specific machines are the following:—

HEELER AND ATTACHER: "The pressure in closing the heel down on to the shoe is much greater on a man's shoe than on a woman's shoe. We found parts that would break on a woman's shoe on account of this pressure, and we knew that when we attempted to apply any more pressure the breakage would be more frequent; and, also, there are more nails to drive in a man's shoe than in a woman's shoe, and that would have put additional strain on the machine, so that there would have been continual trouble in that respect, as there was in doing the women's shoes" (R. Vol. 1, p. 794, lines 24–33).

HEEL AND TOE LASTER: "We knew that it did not compare with our No. 5 machine for strength, and that trouble would come if it was attempted to be used on any heavy grade of work" (R. Vol. 1, p. 796, lines 34–37).

HEEL LOADER: "The machines in use at the Plant factory were continually giving trouble, and they only had to handle a small number of nails. Now, the wear and strain on the machine when used for men's work would have been a great deal worse" (R. Vol. 1, p. 797, lines 14–18).

"The LOOSE NAILER had the disadvantage that it was so constructed that you could not handle a nail longer than seven-eighths of an inch. In some classes of work, heavy double outersoles and spring heels, it is necessary quite often to drive nails longer than that" (R. Vol. 1, p. 797, lines 41–45).

"The WELT BEATER was not provided with any means for what is called slashing the welt . . . all men's work had to be slashed in order to beat it out properly" (R. Vol. 1, p. 795, lines 34–35, 40–41).

"The HEEL BREASTER was particularly adapted for women's work. There are several types of heels used in men's factories that could not be done on this machine, because either the knife or some of the mechanism was in the way" (R. Vol. 1, p. 797, lines 19–22).

Two Manufacturers of Men's Shoes to whom Plant Offered his Machines Examined the Machines and Decided that they were not Practicable for Men's Shoes.

As we have shown (*supra*, p. 481), Plant made an effort to put these machines into the factories of two shoe manufacturers as a part of his scheme for forcing a sale to the United Company. In consequence of those offers his machines were examined by those manufacturers.

Clarence D. Reed, treasurer of the Commonwealth Shoe & Leather Company (of which petitioner's witness C. H. Jones is president), who has charge of all the factories, the machinery and the selection of the machinery for that company (R. Vol. 1, p. 119, lines 16–17; p. 719, lines 25–26, 34–36), examined the Plant machines with particular reference to their adaptability for his factories, and "decided we better not have them" (R. Vol. 1, p. 720, line 5). He testified:—

> "Of course the machines looked light to us, and our work is men's work, which is heavier, and we thought there would be danger of breakage and trouble. . . . We thought that it would be too much of a risk, and that we should have to lower our standard of shoemaking. . . . We should get poorer work" (R. Vol. 1, p. 720, lines 7–9, 12–13, 16).

Henry B. Endicott, of the firm of Endicott, Johnson & Company, who made 40,000 pairs a day of all kinds of men's shoes (R. Vol. 1, p. 575, line 31; p. 576, lines 21–23), testified that he, his partner, and one of his superintendents spent a day examining the Plant machines (R. Vol. 1, p. 583, lines 28–30), and that—

> "as a result of my own examination and the reports of my experts the conclusion which I came to, as a practical shoe manufacturer, in regard to the equipment of my factory with Plant's inventions, was *not to put in his machines.* The reason for that conclusion was that, from the reports of my experts, my own judgment was that *the machines were not strong enough or practical to do our work*" (italics ours) (R. Vol. 1, p. 576, lines 15–21).

On cross-examination he testified:—

> "From the reports my experts gave me, I felt they were not practical for our business" (R. Vol. 1, p. 584, lines 8–9).

Petitioner's Fruitless Efforts to Show that the Plant Machines could have been Used for Men's Shoes.

In support of its contention that the Plant machines could have been used on men's shoes, petitioner relies upon the testimony of three witnesses, McElroy, Selz, and Jones.

McElroy testified that he examined the Plant machines and that

"They were actually at work on women's shoes. I saw men's shoes there which were made upon them" (R. Vol. 1, p. 189, lines 24–25).

On cross-examination he testified that the men's shoes that he saw there had been stitched but not heeled, that he didn't know when they had been stitched, and that to the best of his information men's shoes had never been made for the market on the Plant machines (R. Vol. 1, p. 193, lines 13–17). He added:

"I questioned the strength of those machines for making men's shoes. . . . The making of men's welts involves dealing with heavier material and requires more strength in the machine than the making of women's welts. If his machines had been used commercially on men's shoes the frames should have been stronger. As a commercial proposition they would have to be built heavier to make them available for that purpose" (R. Vol. 1, p. 193, lines 17–18, 20–26).

Selz, another shoe manufacturer, testified that he spent half a day examining the Plant machines and that they could have been used in making men's shoes (R. Vol. 1, p. 146, lines 1–2, 28–30). On cross-examination he testified that he questioned the strength of the Plant machines for making men's shoes and that he had never seen them used for making men's shoes (R. Vol. 1, p. 155, lines 33–45; p. 156, lines 1–3).

Selz was a prejudiced witness.

"*Q.* Mr. Selz, how large an interest have you in the Boylston Manufacturing Company?
"*A.* I think up to date we have paid in somewhere between twenty-five and thirty thousand dollars.
"*Q.* So you have that amount at stake upon these machinery leases being declared invalid?
"*A.* If you choose to look at it that way.
"*Q.* If they are not, you stand to lose that money?
"*A.* Yes, sir.
"*Q.* If they are, you stand to make it?
"*A.* Yes." (R. Vol. 1, p. 157, lines 41–44; p. 158, lines 1–7.)

Selz also testified that with several others, including Mr. Jones, he had visited the Attorney-General's office in Washington on shoe machinery business (R. Vol. 1, p. 155, lines 1–4).

Jones's testimony goes no further. Basing his expression of opinion upon an examination of Plant's machines "at different times during one entire day" (R. Vol. 1, p. 114, lines 29–30), he said that those machines could be used on men's shoes,—although admitting that he never knew of men's shoes being made on them (R. Vol. 1, p. 124, lines 16–27). That is all,—the barest expression of opinion without a bit of technical or practical explanation. But Jones's opinion on a matter requiring practical and technical knowledge is of no weight. He is not a practical shoe manufacturer. He admitted, "I haven't visited the factory for three years" (R. Vol. 1, p. 127, line 10). And against his testimony we have that of Clarence D. Reed, the treasurer of Jones's company, the Commonwealth Shoe & Leather Company, who owns over one-third of that company, and who has charge of the manufacturing end of the business, including the making of the shoes. He testified that he had charge of all the factories and has had charge of the selecting of the machinery for the factories for over ten years. He said that he examined the Plant machines in 1910, "saw them operating and went through them," considered the question of equipping his factories with those machines, and decided not to take them. His reasons were that the machines were too light, that "there would be danger of breakage and trouble," and that they would "get poorer work."

> "We thought that it would be too much of a risk, and that we should have to lower our standard of shoemaking" (R. Vol. 1, pp. 719–21).

Furthermore, Jones, like Selz, was a prejudiced witness. He testified:—

> "I am a stockholder and director in the Boylston Manufacturing Company. I have a stockholding interest in it that is large for me" (R. Vol. 1, p. 122, lines 28–30).

His well-known hostility to and activities against the United Company were evidenced by reluctant admissions and evasive answers throughout his cross-examination. When questioned about his attacks on and activities against the United Company he admitted that he had made "perhaps three visits to Washington" and that he had appeared before the Massachusetts

Legislature; that he had called on the Attorney-General and appeared before committees of Congress making complaints against the United Company:—

> "*Q.* And you spent a number of days there detached from your shoe business in Massachusetts, sitting around committee rooms and making complaints, didn't you?
> "*A.* Yes, sir";

that he had furnished information regarding the United Company to assistants to the Attorney-General; that he had appeared before a committee of the Massachusetts Legislature making complaints against the United Company's leases; and that he had published articles in the newspapers attacking the United Company's method of leasing machinery (R. Vol. 1, p. 119, lines 34–44; pp. 120, 121; p. 122, lines 1–24).

These bare expressions of opinion by three witnesses,—none of whom went so far as to say that the Plant machines were capable of *actual commercial use* on men's shoes,—constituted petitioner's entire showing on this point; and, as we have seen, Selz and Jones were prejudiced witnesses and Selz and McElroy retracted on cross-examination. And after defendants had introduced overwhelming testimony of many witnesses showing that the Plant machines were absolutely unfit for use on men's shoes (*supra*, pp. 490–493), no attempt to answer that evidence was made in petitioner's rebuttal.

E. There is Nothing in the Record to Indicate that Plant could have made his Machines Commercially Successful.

There is nothing in the record to indicate that Plant ever could have made his machines commercially successful for either men's or women's shoes. On the other hand, the record does contain abundant evidence as to the time that is required and the difficulties that must be overcome in transforming an experimental shoe machine into a commercially successful machine. That evidence shows that after a new machine has been constructed so that it can actually be used in making shoes, it frequently takes years of continuous experimental work before the machine becomes a commercial success, that

is, before the machine can be satisfactorily used under commercial conditions, and that during all that period there is no assurance that it ever will be made commercial.

The inseam trimming machine, which was put out by the Goodyear Company prior to 1899, did not become an entirely successful machine until 1909, after ten years of experimental work resulting in a long series of improvements (R. Vol. 2, pp. 2505–7). Experimental work upon a new slugging machine began in 1902 and has been continuously carried on ever since; the third design was given a shoe factory trial in 1907 and it then seemed sufficiently promising to justify building a number of machines to try out in different factories, and fourteen machines of that design were put into factories. It was confidently believed that the difficulties which were encountered in the use of those machines could all be overcome in time, but those problems have not been solved and the machine is not yet successful (R. Vol. 2, pp. 2468–70).

> "Whether or not the machine will ever become commercially successful is still problematical. Considerably over $100,000 has been spent already in the experimental work upon this machine" (Howard, R. Vol. 2, p. 2470).

Again, it was not until the third experimental pulling-over machine was constructed that the machine was deemed worthy of a factory trial, and after that nearly four years of continuous experimental work was required before the machine became a commercial success. During that period the United Company built and put into shoe factories over a hundred experimental machines, but, after a commercially successful machine had been produced, all of those machines, which had all been built less than three years before, were broken up for junk. Nearly a million dollars was spent in the development of the pulling-over machine before any revenue was derived from it (R. Vol. 2, pp. 2542, 2552, 2553).

The power heel breasting machine, which the McKay Company had started to develop before 1899, did not become commercially successful until 1902, when the invention purchased from Brewer was put into the machine. Up to that time experimental work on that machine had been carried on continuously; some fifty experimental machines had been constructed and put into shoe

factories, but none of them was commercially successful, none was operated at all after a few months' trial and eventually all of those fifty machines were junked (R. Vol. 1, p. 45, lines 9–16; R. Vol. 2, pp. 2473, 2474). Another machine which was started before 1899, the tack puller and resetter, did not become commercially successful until 1910, after experimental work extending over a period of more than ten years, during which a number of experimental machines had been successively constructed (R. Vol. 2, pp. 2525, 2526).

The United Company spent two years in the endeavor to make the Breach sole rounding machine commercially successful and had to give it up. This endeavor cost the United Company $40,000 (R. Vol. 2, pp. 2068, 2084, 2100; Defs.' Ex. 231, R. Vol. 5, p. 467).

The Beaudry experimental heel finishing machine contained inventions of which the United Company thought so highly that they paid $12,500 for the experimental machine. After it was acquired,—

> "we constructed several experimental machines. . . . We tried in all sorts of ways to make it practicable, but the extreme inconvenience to which the operator would be put by a machine so organized finally condemned it as entirely impracticable" (R. Vol. 1, p. 86, lines 1–3, 12–15; Defs.' Ex. 231, R. Vol. 5, p. 469).

Mr. Howard testified as to two other machines:—

> "We were unable to make a practicable machine embodying the Courteau invention. We made a very determined effort to make it practicable. . . . We did the best we could with it but could not develop anything out of it, and it was given up" (R. Vol. 1, p. 87, lines 38–40; p. 88, lines 3–4).
>
> "The Curtis machine did not prove commercially acceptable and was not a success. We did what we could to make it a commercial success. We put out some forty-five of them, but they were constantly giving trouble. . . . Most of the machines which we put out have come back" (R. Vol. 1, p. 92, lines 13–16, 19–20).

Another difficulty frequently encountered in developing shoe machinery, of which the record affords many specific illustrations, is stated by Mr. Winslow:—

"In other words, a machine may be constructed that will work perfectly in A's factory, but is entirely imperfect when you try to use it in B's factory in work that varies to the ordinary eye but very little. In the list that I presented to the Court the other day we have one machine on there which we have been at work on for seven or eight years to accomplish just that very thing" (R. Vol. 1, p. 491, lines 40–45; p. 492, line 1).

Mr. Warren testified that, "because conditions vary so in different factories," before the United Company adopts improved devices,—

"We will try out a machine with improved devices in one factory for several months, and then we give the machine a similar trial in some other factory on another kind of work, and we try it out in that way in six or eight different factories" (R. Vol. 1, p. 790, lines 7–14).

This testimony shows what Plant would have had to go through before he could have made his machines commercially successful, if indeed he ever could have done that. Mr. Howe thus summarized the situation:—

"To redesign and strengthen the machines would require first the making of working drawings and then changes in the patterns and tools for making the machines and making dies for parts that were to be drop forged, or else make the first machines by hand work in order to test them; it would require going back to first principles" (R. Vol. 1, p. 689, lines 1–6).

Mr. Warren testified:—

"Well, it would have taken him years to remedy those things. . . .

"*Q.* Couldn't it have been made a little heavier?

"*A.* When we say that, that leads to a change in some other part of the machine. It might finally mean a total reorganization of a machine to make it better.

"*Q.* But you don't mean to say, Mr. Warren, that that machine could not have been taken up by a mechanical expert or five mechanical experts, and those various defects taken out of it within a few months' time or a year's time, say?

"*A*. I think when they had done that they would probably have had a machine like ours" (R. Vol. 1, p. 809, lines 42–43; p. 810, lines 25–34).

F. Finding of the District Court as to the Character and Capacity of the Plant Machines.

"Whatever the merit of Plant's inventions, these machines in which he had first embodied them are not shown by the evidence to have been commercially successful in September, 1910, or to have been capable of such success in their then stage of development. They are shown to have been lightly built, not adapted to produce men's shoes, and by no means satisfactory in making women's shoes, the kind of work to which the Plant factory was devoted. The evidence is uncontradicted that, while operated there, they fell behind the United Company's machines, which they had supplanted, in efficiency,—that breaking down and defective work was more frequent with them,—and the cost per pair of making shoes with them distinctly greater. Though some of them, as later developed and improved by the United Company, proved to have merit, the most that can be fairly said of them in 1910, on the evidence, is that they were more or less promising experimental machines. There was no complete set of them for combined operation; for that purpose several important machines were yet to be developed. In the state in which the United Company took them over, they were not found capable of profitable use. Nothing is found in the evidence which affords reasonable support for the petitioner's contention that they were 'right at the threshold of extensive competition with the United Company'" (Dodge, J., R. Vol. 1, p. 1143).

3. CRUDE AND UNSATISFACTORY AS PLANT'S MACHINES WERE, HE HAD INCORPORATED IN THEM MANY VERY VALUABLE INVENTIONS WHICH WERE CAPABLE OF BEING USED IN THE UNITED COMPANY'S MACHINES.

While, as we have seen, Plant's machines were crude and not adapted for commercial use, Plant had nevertheless incorporated in them many extremely valuable inventions. Although the mechanical embodiments of those inventions in the Plant machines were also crude and unsatisfactory, the United Company's experts were able to see that the inventions

had great value and that when the Plant mechanisms had been reconstructed and reorganized to overcome their mechanical defects and to adapt them to the United Company's superior machines, those inventions would be of great value both to the United Company and its customers.

Mr. Winslow testified that the more important of the Plant inventions, "that were of special service in the development of our machinery," were those relating to the welt sewing machine, stitching machine, lasting machine, rough rounding machine and heel attaching machine (R. Vol. 1, p. 559, lines 11–13, 21–27). These inventions and numerous others, covered by forty-three of Plant's patents, are now embodied in twenty-six of the United Company's machines.

To explain here the nature and importance of inventions claimed in forty-three patents and to review the evidence regarding those inventions is of course out of the question. Accordingly we shall confine ourselves to a brief summary of the testimony regarding Plant's improvements on the welter and the outsole stitcher, the two machines which petitioner's patent counsel characterized as "the only indispensable machines required for the commercial bottoming of shoes by machinery" (R. Vol. 2, p. 2808, Int. 10).

The Plant Welter Inventions.

For the first time in the history of the industry Plant had embodied in a welt sewing machine means for cutting off the welt close to the end of the seam, for holding the end of the welt in proper position to start on the next shoe with minimum waste of welting, for measuring the welt and positively preventing waste, and, finally, means for automatically stopping the machine and casting off the last loop of thread from the barb of the needle. Always before, even in the United Company's new Model G Welter, it had been necessary for the operator to stop the machine by putting his hand on the belt pulley, first slowing up the machine, then stopping it, and finally turning the machine backward at such time and in such manner as to free the needle from the last loop of thread, in order to free the shoe from the machine. Then with a hand knife he cut the welt. In starting with the next shoe he had to hold the end of the welt with

his finger and this involved wasting about two inches of welting upon each pair of shoes, worth at least a quarter of a cent per pair,—more on men's shoes (R. Vol. 1, p. 488, lines 28–45; p. 489; p. 490, lines 1–7; p. 786, lines 29–46; p. 787, lines 1–3; p. 810, lines 43–44; p. 811, lines 1–8; Vol. 2, pp. 2259, 2260, 2263, 2268).

Mr. Warren reported to Mr. Winslow "that the advance made in the welter was very great" (R. Vol. 1, p. 786, lines 1–2). Mr. Winslow testified that he "studied those machines personally as an expert" and that he regarded those welter improvements "as of the very greatest practical importance and of very great value,"—"almost incalculable" (R. Vol. 1, p. 485, lines 15, 41–42; p. 488, line 32). Mr. Howard explained their importance and value in great detail and quoted typical claims from the Plant patents (R. Vol. 2, pp. 2259, 2265).

The Plant Stitcher Inventions.

The practical advantages of the Plant Stitcher improvements are explained in detail by Mr. Howard (R. Vol. 2, pp. 2296, 2298). The nature of these improvements is indicated by Mr. Warren (R. Vol. 1, p. 787, lines 16–23, 26–30) as follows:—

> "The stitcher was provided with a stop motion similar to that one on the welter, so arranged that the machine would always stop in a proper position to remove a shoe, and so that another could be inserted, and in this stopping it raised the presser-foot which helps hold the shoe in position. Before this it always had been necessary for the operator to stop the machine by hand—remove one hand from the shoe, stop the machine, and then raise the presser-foot so he could remove the work. . . . Also, under the old method, it was necessary for the operator to lift the presser-foot so he could introduce a shoe. Now, in this machine, after the shoe had been finished and removed, it was all ready to start again. This was a great saving in time and a great saving in the exertion of the operator."

Mr. Winslow testified:—

> "That was fundamental; it was a very important invention" (R. Vol. 1, p. 560, lines 11–12).

Speaking of the welter and stitcher inventions together, Mr. Warren testified:—

> "I was much impressed with the improvements. . . . I reported to Mr. Winslow that they were very valuable indeed. . . . I told Mr. Winslow that we should have them" (R. Vol. 1, p. 787, lines 34–35; p. 788, line 7; p. 809, line 35).

4. USE MADE BY THE UNITED COMPANY OF THE PLANT INVENTIONS.

The general policy which the United Company has followed in regard to the Plant inventions was set forth by Mr. Howe. He said that ever since the purchase the resources of the United Company's Experimental Department had been crowded to the full in the work of embodying the Plant inventions in the United Company's machines or building new machines to incorporate those inventions (R. Vol. 1, p. 670, lines 41–44; p. 671, lines 11–13).

Mr. Winslow testified (R. Vol. 1, p. 491, lines 12–14):—

> "We have offered every one of them to our customers as fast as we have perfected them, or where we have been able to take them without the necessity for perfection."

Mr. Warren testified that out of Plant's 69 machines and devices the United Company had so far made use of 30 and was still at work upon others which had not yet been satisfactorily worked out (R. Vol. 1, p. 799, lines 15–17).

The United Company adopted seventeen of the Plant machines, although they all required more or less development or improvement, and those machines have all been offered to the trade. Mr. Warren testified:—

> "Seventeen were adopted, but we found after adopting them that a number of them were not as good as we thought they would be, and especially when they were put on another kind of work. And the result is that several have been wholly reconstructed. Others we had to make some changes in to suit conditions that were different from the conditions in the Plant factory" (R. Vol. 1, p. 789, lines 33–39).

The United Company has also incorporated in its own machines thirteen devices which were found in the Plant machines. Mr. Warren said about these:—

> "We found many devices which would either assist the operator to do more work or better work, which we thought if they were embodied in our machines would be a great improvement, and we recommended that quite a number of those be adopted. And out of that number there were finally thirteen embodied in our machines. A great many more were tried but were found to be inoperative or not practical" (R. Vol. 1, p. 789, lines 17–24).

Striking illustrations of the United Company's aggressive work in perfecting the Plant inventions and incorporating them in its machines are afforded by the history of the Plant welter and stitcher inventions after the purchase.

The United Company immediately put to work six inventors to adapt the Plant welter improvements for the United Company's Model G Welter. They worked night and day and the result was the Model K Welter, which embodied all of the Plant inventions and also important improvements on them made by the United Company's inventors, and which was put out for commercial use in June 1911. On January 1, 1914, 1,024 of these Model K Welters were in use (R. Vol. 1, p. 810, lines 1–10; p. 812, lines 38–42; p. 817, lines 8–14; p. 863, lines 3–5; Vol. 2, pp. 2259, 2260, 2765). The advantages of these improvements as embodied in the Model K Welter will be referred to later (*infra*, pp. 506–510).

Immediately after the purchase five different inventors were put to work to adapt Plant's stitcher improvements to the United Company's Model K Stitcher. Their combined work resulted in the Model M Stitcher, which was first supplied to manufacturers in June, 1911, and of which 1,158 were in use on January 1, 1914 (R. Vol. 1, p. 863, lines 5–7; R. Vol. 2, pp. 2297, 2836 (42)). The advantages of the Plant improvements in that machine will be summarized later (*infra*, pp. 510–513).

The Mayo and Warren Report.

Immediately after the purchase of Plant's inventions two of the United Company's experts, Messrs. Mayo and Warren,

were sent to the Plant shoe factory to make a thorough examination of the Plant machines and the inventions incorporated in them and to recommend what should be done with each machine and each invention. Their entire time for eight weeks was spent in that work, and upon its completion on November 26, 1910, they submitted an exhaustive report (R. Vol. 1, p. 785, lines 35–43; p. 815, lines 43–44; p. 816, lines 1–2). Mr. Winslow testified that this report was made

> "to show what machines or improvements could be adopted to benefit our machines and in what respects. . . . Also to show if an invention in Plant's machines was in commercial shape or condition, or if it required and was advisable to try to develop it—that is to say, whether it gave promise of being of value to our customers in the trade" (R. Vol. 1, p. 594, lines 32–39).

The original signed report is Plaintiff's Exhibit 267, a physical exhibit. The typewritten matter in that report, but not the numerous illustrations, is reproduced in the record (R. Vol. 4, pp. 1396–1441). The letter which introduces the report (R. Vol. 4, p. 1395) shows how thoroughly their examination was conducted and how intelligently their report was prepared. Mr. Warren's testimony shows that the United Company has adopted practically all the machines and devices which they recommended. Could any doubt remain as to the United Company's motives in acquiring the Plant inventions, that doubt would be removed by this Mayo and Warren report and by the United Company's conduct in accordance with it.

5. THE ACQUISITION OF THE PLANT PATENTS BY THE UNITED COMPANY WAS A GREAT BENEFIT TO THE INDUSTRY.

A. Common ownership of the Plant patents and the United Company's patents made possible, first, the use of the valuable Plant inventions by shoe manufacturers without infringement of the controlling patents owned by the United Company; second, the incorporation of the Plant inventions in the superior machines of the United Company; and, third, further important improvements on those inventions by United Company inventors,—improvements which otherwise would never have been made.

The benefits to the industry which have resulted from common ownership of the Plant patents and the United Company's patents are strikingly illustrated by the testimony showing how the United Company has used and has improved upon the Plant welter and stitcher inventions.

Welter.

The testimony is uncontradicted that Plant's welter, incorporating his improvements, infringed United Company's patent No. 700,279, May 20, 1902, Winkley, which claimed a welt holder broadly (R. Vol. 2, p. 2262; Defs.' Ex. 273, R. Vol. 5, p. 739), and suits had already been brought by the United Company on that patent against Plant and the Plant Shoe Company (Defs.' Ex. 270, R. Vol. 5, p. 723). But the United Company had not succeeded in producing a commercially successful welt holder, the Winkley mechanism was only experimental, it did not include any means for either cutting or measuring the welt, and in Plant's improvements it was the combination of means for holding, cutting, and measuring that saved the welting (R. Vol. 1, p. 684, lines 10–24; p. 689, lines 20–29; p. 786, lines 13–18, 29–46; p. 787, lines 1–3; p. 816, lines 17–26; Defs.' Ex. 273, R. Vol. 5, p. 739). In Mr. Winslow's words,—

> "In a broad way it was a perfect deadlock. He had controlling patents for a practical way of doing it while we had the controlling patents of the invention itself" (R. Vol. 1, p. 488, lines 41–43).

Common ownership of the Winkley patent and the Plant patents removed this deadlock and made possible the use of these valuable improvements by shoe manufacturers without infringement. It also enabled the United Company to incorporate the Plant improvements in its own Model G Welter, which was much superior to Plant's (R. Vol. 1, p. 787, lines 36–37, 43–45; p. 809, lines 28–38; p. 815, lines 29–31; p. 818, lines 24–33), and which Mr. Winslow characterized as

> "the highest development of sewing mechanism for attaching the welt, innersole, and upper together that had been developed in the world up to that time" (R. Vol. 1, p. 560, lines 34–36).

The Plant welter was "constructed substantially on the lines of the United Company's 1899 machine" and was "not so satisfactory a machine as was the United Company's 1899 machine" (Vol. 2, p. 2266). Plant added these improved devices to the old type of machine (Warren, R. Vol. 1, p. 787, lines 6–7).

> "It was not, therefore, until these improvements were incorporated in the high speed Model G machine of the United Company that the advantages and utility of the improvements were fully realized" (Howard, R. Vol. 2, p. 2266).

This was an important development in the industry, but even greater advantages resulted. In the United Company's experimental work in adapting the Plant improvements to its Model G Welter,—

> "improvements were made which represent almost as important advances in the industry as did the Plant improvements" (Howard, R. Vol. 2, pp. 2260, 2261).

For example, in the use of the plant welter the operator had to step on a treadle to actuate the welt holder and cutter, while it is automatic in the Model K Machine,—the new United machine incorporating the Plant improvements,—"the machine itself operates it when the man gets ready to remove the shoe" (R. Vol. 1, p. 812, lines 3–4; R. Vol. 2, p. 2261). Again, the Plant mechanism for stopping the machine and freeing the shoe by casting off the loop of thread held by the needle was so constructed that the Plant machine had to be run "practically at

one speed all the time . . . or else it would stop" (R. Vol. 1, p. 818, lines 31–32, 37). This was bad, because it is essential that a welter have capacity for being run at a reduced speed around the toe, where the work is most difficult. The Model K Machine can be slowed down at any time when the operator desires (R. Vol. 1, p. 491, lines 6–7; p. 660, lines 3–4; p. 775, lines 26–28).

Also the mechanical embodiments of the Plant inventions in his machine were not commercially satisfactory.

> "The welter was defective in the stop motion and in the mechanisms for holding and cutting the welt. . . . The ideas were excellent, but they hadn't been carried out in such a manner that they could have been used in other factories" (Warren, R. Vol. 1, p. 797, lines 23–27).

These defects were all remedied when the Plant inventions were adapted to the United Company's machine.

> "We improved the stop mechanism very much, and also the cutting mechanism and the welt holder. We also made over the back gage and welt guide motion so as to put it on our machine in better shape than on the Plant machine" (Warren, R. Vol. 1, p. 798, lines 39–43).

The result of the incorporation of the Plant inventions in the United Company's machine in commercially successful constructions, with the important improvements made on them by the United Company's inventors, was the new Model K Welter, "a very much better machine" than either the United Company or Plant had before (R. Vol. 1, p. 799, lines 1–3). The record abounds with testimony to this effect. For example, McGaffee testified that in the Plant factory they "do 50 pairs of shoes a day more" on the Model K Welter embodying the Plant improvements than they did on the Plant welter, and that the operators can make a great deal more money (R. Vol. 1, p. 777, lines 24–32; p. 779, lines 42–44). Hazzard testified that in his factory the average wages of operators on the Model K Welter are 36 per cent. higher than the average wages of operators on the old model, although the piece price was higher on the old machine than on the new; that the average output of the old welter was 25 dozen pairs a day, while the average on the new welter is 40 dozen pairs per day; that the new welter sews a tighter seam; and that the saving in welting by the welt holding

and cutting device is at least half a cent a pair and amounts to $24 a day, five or six hundred dollars a year on each of their thirteen machines (R. Vol. 1, p. 646, lines 14–18, 41–44; p. 647, lines 1–3, 25–26, 41–44; p. 648, lines 6–7, 10).

Eaton, another manufacturer, testified:—

> "We have found that the saving in welting by the Model K welter, as compared with the Model G welter, was five per cent. under exactly similar conditions" (R. Vol. 1, p. 753, lines 6–8).

Allen testified that the new machine saves four inches of welting on a pair of shoes; that while on the old machine operators in his factory earned from $30 up to $40 a week, operators on the new machine had been earning over $50 a week (R. Vol. 1, p. 723, lines 1–2, 10–12).

Welch testified that in his factory they make a saving of a quarter of a cent per pair in the length of welting and also a saving in the width of welting which amounts to from one-quarter to three-quarters of a cent, according to the quality of the welting (R. Vol. 1, p. 710, lines 37–44).

Blagden, who had operated different types of welters since 1903, explained in detail the disadvantages and inconveniences of the old welter from the operator's standpoint. He said that the new machine

> "saves his time and saves his strength and quickens him in his work";

that on the old machine 25 dozen pairs were considered a good day's work, while an average day's work on the Model K Machine is 40 dozen pairs, and that he had done 65 dozen pairs in a day: that he earned 20 per cent. more on the Model K Welter than he did on the old welter and didn't have to work so hard, although the piece price on the old welter was about one-third more. He also said that there was a saving in both the length and width of the welting and a saving in thread on the new machine (R. Vol. 1, pp. 658–60).

Figuring the saving in welting at $500 per machine (which was Mr. Hazzard's minimum figure), the aggregate saving in welting alone effected by the 1,024 Model K Welters in use on

January 1, 1914 (R. Vol. 1, p. 810, lines 1–10), amounts to $512,000 per year. The Model K Welters were rapidly displacing the old machines and when the 2,527 machines which were out on March 1, 1911 (Defs.' Ex. 226, R. Vol. 5, p. 424) are all displaced, the saving in welting alone, figured on the same basis, will amount to $1,263,500 per year. Adding the large savings due to the greater capacity of the machine and the increase in the wages which were in consequence earned by the operators, the total economies effected for manufacturers and operators by each Model K Machine must be at least $800 per year. When the substitution of the new machines for the old ones has been completed, this saving will aggregate over $2,000,000 per year.

For an extended technical explanation of the commercial superiority of the Model K Machine see pages 2259–68 of Vol. 2 of the record. On January 1, 1914, 1,024 of the Model K Machines were being used (R. Vol. 1, p. 863, lines 3–4).

It is obvious that the industry would not have had this important machine with all these striking advantages if the Plant patents had not been acquired by the United Company. In no other way could it have been possible for shoe manufacturers to have a machine which embodied, first, the broad invention of the United Company's Winkley patent for holding the welt, which it had not made commercially successful; second, the valuable Plant inventions comprising the first practical mechanisms ever devised for holding, measuring, and cutting off the welt, and the combined stop motion and loop cast-off (all broadly claimed in four Plant patents) (R. Vol. 2, pp. 2262, 2263, 2266, 2267); and, third, the important improvements upon those Plant inventions made by the United Company's inventors, on which many applications for patents have been made (R. Vol. 1, p. 812, lines 42–44; Vol. 2, p. 2117).

Stitcher.

One of the two extremely valuable improvements in the Plant stitcher, the mechanism for automatically lifting the presser-foot to free the shoe from the machine when the machine stopped, infringed two of the United Company's patents and five allowed claims of an application filed in 1906 on which has been granted

patent No. 1,087,602, February 17, 1914, Nash (R. Vol. 2, pp. 2836 (67), 2836 (68); Defs.' Ex. 273, R. Vol. 5, p. 741).

On the other hand, the United Company had never had in its stitcher—even its new Model K Stitcher adopted in May, 1910 (R. Vol. 2, p. 2290),—any mechanism for automatically stopping the machine and lifting the presser-foot, or any mechanism for stopping the machine in proper position to permit the shoe to be removed and a new shoe put into the machine,—Plant's notable improvements (*supra*, p. 502).

Immediately after the acquisition of the Plant patents the United Company put to work five different inventors upon the problem of embodying these Plant inventions in satisfactory mechanical form and adapting them for the United Company's new Model K Stitcher (R. Vol. 2, p. 2297). That machine, after it was reorganized to embody these improvements, was named the Model M, and was first put into commercial use in June, 1911 (R. Vol. 2, p. 2836 (42)). On January 1, 1914, 1,158 Model M Stitchers, incorporating these Plant improvements, were in use (R. Vol. 1, p. 863, lines 5–6).

Mr. Howard's detailed statement of the advantages of the new machine as compared with the United Company's old machine (R. Vol. 2, pp. 2296–8) is strongly confirmed by the testimony of shoe manufacturers and machine operators.

For example, Eaton, a manufacturer, testified:—

> "Our stitcher will show an advance by comparison with the same operator under the same conditions a fifteen to twenty per cent. increased capacity over the old, because it is a higher speed machine and it takes less operations to work it" (R. Vol. 1, p. 753, lines 16–19).

Hazzard testified that on the Model M Stitcher, as compared with the old machine, there was

> "an increase in the average wage of about 24 per cent., while the piece price on the old model was 40 per cent. more than we are paying on the Model M" (R. Vol. 1, p. 647, lines 12–14).

He also said that this was not a fair showing because they had been educating nearly all of their operators, and that a compari-

son of the best operators on the old stitcher and on the new showed an increase in wages on the new machine of 45 per cent., with a piece price 40 per cent. less than that on the old stitcher (R. Vol. 1, p. 647, lines 21–23).

Ryan, a stitcher operator who had worked on the successive models of the United Company's stitcher and also on the Plant stitcher, explained in detail the difficulties in operating the old United Company machine and the advantages of the Model M Stitcher from the operator's standpoint (R. Vol. 1, p. 705, lines 1–38). He said that his average day's work on the Model M Stitcher was fifty pairs per day more than the average on the old machine, and further:—

> "The work on the Model M stitcher is a great deal easier. I earn more money. I will average fifty to seventy-five cents a day more on the Model M stitcher than on the old stitcher; and that is in less hours than I worked on the old stitcher" (R. Vol. 1, p. 706, lines 4–8).

McGaffee testified that

> "the operator could make a great deal more money on the United stitcher than he could on the Wonder Worker" (R. Vol. 1, p. 777, lines 29–31).

This great advance in the industry was made possible by the purchase of Plant's patents by the United Company. In a word, this is the story of the Model M Stitcher. Those valuable Plant improvements, embodied by him in a stitcher which was like the United Company's 1899 machine and, like that machine, operated at a speed of only 375 revolutions per minute (R. Vol. 1, p. 787, lines 31–32; p. 818, lines 15–16); which was not organized to sew shoes with extension edges, which nearly all welt shoes have, because such an organization would infringe patents of the United Company (R. Vol. 1, p. 775, lines 32–34; p. 780, lines 1–7; p. 818, lines 17–18, 20–23; R. Vol. 2, pp. 2283, 2762); and which was defective and frequently breaking (R. Vol. 1, p. 790, lines 30–31, 36–38; p. 815, line 14), "the weakest machine we had," "the one that caused the greatest trouble" (McGaffee, R. Vol. 1, p. 773, lines 37–38; p. 777, line 29), were incorporated by the United Company in its much superior stitcher, which operated at a speed of 540 to 550 stitches per minute (R. Vol. 2,

p. 2293), and in greatly improved mechanical constructions (R. Vol. 2, pp. 2836 (44), 2836 (45); R. Vol. 1, p. 798, lines 22–23).

That is, through common ownership of the United Company's patents which Plant infringed, Plant's patents on his improvements, and the United Company's patents and applications on the further improvements which it in turn made on Plant's inventions, the industry has been provided with the Model M Stitcher, in which all of these inventions and improvements are combined, and which is greatly superior both to Plant's machine and to any machine which the United Company had before (R. Vol. 1, p. 799, lines 1–3).

This welter and stitcher situation was thus summarized by Mr. Warren, from the standpoint of the practical expert:—

> "Assuming that each party had its patents on its respective inventions and devices, neither party could have accomplished the development of the machine which we have now developed, either as a stitcher or a welter, without the aid of the other; nor could either party have developed so satisfactory a machine" (R. Vol. 1, p. 799, lines 4–9).

And it will be remembered that in accordance with the United Company's invariable practice the new welters and stitchers, containing all these valuable improvements, were substituted for the older models without any charge whatever and without any increase in royalty, although the Model G Welter, previously the United Company's standard welter, had been put out only since October, 1908, and the Model K Stitcher, formerly its standard Stitcher, had been put out only since May, 1910 (R. Vol. 2, pp. 2254, 2290).

The Other Plant Inventions.

In addition to the Plant welter and stitcher improvements the United Company, as already stated, has adopted seventeen of the Plant machines and thirteen of his devices and improvements, with the result that the inventions of forty-three of Plant's patents are incorporated in twenty-six of the United Company's machines (R. Vol. 1, p. 799, lines 13, 14; Defs.' Ex. 342, R. Vol. 5, p. 949). The Plant purchase has made possible the use of these machines and devices by shoe manufacturers without in-

fringement of the United Company's patents and has also cleared the way for the reconstruction of some of the machines and the changes in others which were found to be necessary to make the machines commercially successful (*supra*, pp. 503–504).

B. Chaotic conditions in the shoe industry have been averted by common ownership of the patents of the United Company and the Plant patents.

As was found by the District Court,—

> "And between Plant, or concerns wherewith he was identified, and the United Company there were pending interferences, claims of infringement on both sides, and pending infringement suits, raising questions relating to his or its patents so numerous, complicated and important as to threaten interminable controversy" (Dodge, J., R. Vol. 1, p. 1145).

(1) Infringement of the United Company's Patents by Plant.

Plant had patterned his machines after the United Company's machines. The welter and stitcher were substantially the same as the machines which the United Company had been putting out in 1899, with the addition of Plant's improvements, fifteen other Plant machines were "practically duplicates" of the United Company's machines, and nearly all "had a family resemblance to the United Company's machines" (R. Vol. 1, p. 485, lines 29–31; p. 668, lines 42–45; p. 669, line 1; p. 789, lines 13–16; p. 814, lines 22–23; p. 818, lines 15–16, 24–26; Vol. 2, p. 2266).

> "He had taken our machines, whether he had a right to or not, and had made certain improvements on them" (Howe, R. Vol. 1, p. 669, lines 17–18).

With this situation extensive infringement of the United Company's patents was to be expected.

Defendants' patent expert Howard testified that in his opinion 37 of Plant's machines, including practically all of his important machines, infringed claims in 99 patents and three pending applications owned by the United Company, amounting in the aggregate to 546 claims; and that many claims were infringed

by more than one machine, with the result that there were 708 distinct cases of infringement of United Company's patents by Plant machines (R. Vol. 1, p. 799, lines 31–44; p. 800, lines 1–6; p. 801, lines 26–39; Defs.' Ex. 273, R. Vol. 5, p. 750). Defendants' Exhibit 273 (R. Vol. 5, p. 733), Mr. Howard's detailed statement of these infringements, shows their serious character.

During the trial counsel for petitioner repeatedly stated that it was their intention to introduce testimony to contradict this evidence (R. Vol. 1, p. 394, lines 26–29; p. 800, lines 23–30; p. 803, lines 26–27, 38–40), and they secured an opportunity to do so by the order of February 10, 1914 (R. Vol. 1, pp. 984, 985).

All of the Plant machines were placed at the disposal of petitioner's counsel and its patent expert, and, assisted by Mr. Warren, they made an extended investigation of the machines (R. Vol. 1, p. 984, lines 24–39; Vol. 2, p. 2836 (156–159)); but no attempt to controvert this testimony was made by petitioner. It is submitted, therefore, that for the purposes of this suit defendants have proved these infringements. In fact, Mr. Gregg said during the trial—

> "If we don't contest it then the case rests . . . that there was an infringement by Plant" (R. Vol. 1, p. 394, lines 40, 43).

Eight infringement suits against Plant and ten suits against the Plant Shoe Company had already been begun, and bills of complaint had been prepared and signed in suits on six more patents (R. Vol. 1, p. 802, lines 7–11; Defs.' Ex. 270, R. Vol. 5, p. 723). For many months nearly all of Mr. Howard's time and a large part of the time of his associates had been spent on these infringements, and the United Company was "ready to go ahead" with a large number of suits (R. Vol. 1, p. 801, lines 5–7; p. 822, lines 3–7). Mr. Winslow testified:—

> "It was our intention to bring suits to protect our rights and undoubtedly we should have done so" (R. Vol. 1, p. 566, lines 38–39).

There was also a suit pending against the Plant Shoe Company and Plant for the purpose of enforcing the contracts which the Shoe Company had made with the United Company and which it had violated by substituting Plant's machines (R. Vol. 1, p. 688, lines 1–8; P.'s Ex. 162, a physical exhibit).

During the negotiations between Mr. Plant and Mr. Winslow, Plant expressed great concern over these suits and repeatedly stated that his refusal to allow an examination of his machines by the United Company's experts was due to his fear that additional infringement suits would be brought as a result of such an examination, and he stated that his counsel refused to sanction the examination for that reason (R. Vol. 1, p. 480, lines 15–22, 44–45; p. 481, lines 1–2, 45–46; p. 482, lines 6–8; p. 577, lines 29–33; p. 609, lines 38–42; p. 611, lines 38–45).

> "He seemed to be quite fearful that the experts would be of great assistance in the patent suits that were being brought and that were likely to be brought" (Endicott, R. Vol. 1, p. 580, lines 24–26).

So great was Plant's concern over these infringements that he made it a condition of the purchase that the United Company should release and discharge him from "claims of infringement of Letters Patent by said Plant" (P.'s Ex. 132, R. Vol. 4, pp. 932, 934; P.'s Ex. 139, R. Vol. 4, p. 1039).

(2) Infringement of Plant's Patents by the United Company.

Mr. Howard testified that in his opinion fifteen of the United Company's machines infringed twenty Plant patents. Defendants' Exhibit 274 (R. Vol. 5, p. 750) is his detailed statement of these infringements.

These infringements were due to the fact that for several years Plant's inventive work and that of the United Company's inventors had been going on simultaneously with the result that in a number of instances the United Company had embodied inventions in its machines which were later found to infringe Plant's patents (Winslow, R. Vol. 1, p. 870, lines 43–44; p. 871, lines 1–9; Howe, R. Vol. 1, p. 877, lines 12–26). In this embarrassing situation were involved some of the United Company's most important machines, such as its new Model K Outsole Stitcher, its No. 5 Lasting Machine, its new Model B Heel Attaching Machine, its American Lightning Nailing Machine, its new Model E Rounding and Channeling Machine. The serious character of these infringements is shown by testimony of Mr. Browne, Mr. Warren, and Mr. Howard (R. Vol. 2, pp. 2836 (125) (130–135) (154–156); Defs.' Ex. 274, pp. 751–754).

Ample opportunity was afforded petitioner's counsel and its patent expert, Mr. Chapman, to examine these fifteen infringing United Company machines, and Mr. Chapman did examine them (R. Vol. 2, pp. 2836 (156–159)), but he took issue with Mr. Howard as to only six. Mr. Chapman's testimony was completely answered by the noted patent expert Arthur S. Browne, who agreed with Mr. Howard's views as to infringement in every instance (R. Vol. 2, pp. 2836 (123–153)). It is submitted that Mr. Browne's testimony, supporting the testimony of defendants' expert in all respects and disagreeing with all the opinions expressed by petitioner's expert, establishes a preponderance of evidence which entitles defendants to claim that for the purposes of this case it has been proved that those six United Company machines, as well as the other nine, infringed Plant's patents. At the end of this discussion (*infra*, pp. 536-538) attention will be called to many misstatements as to facts made by Mr. Chapman in his testimony.

(3) Interferences.

There had been declared by the United States Patent Office 23 interferences between patent applications owned by Plant and applications owned by the United Company (R. Vol. 1, p. 819, lines 23–31; p. 846, lines 14–17; Defs.' Ex. 272, R. Vol. 5, p. 730).

Intolerable Conditions would have Resulted if the Plant Purchase had not been Made.

It cannot be doubted that if Plant had kept on he would have enforced his rights under his patents and would have brought suits on account of the infringements by the United Company's machines; indeed, his intention to bring suits was asserted over his signature in Plaintiff's Exhibit 137, a release signed by Plant on September 30, 1910:—

> "I . . . have planned to bring certain suits against said United Shoe Machinery Company" (P.'s Ex. 137, R. Vol. 4, p. 1037).

Mr. Winslow and Mr. Howe fully expected that Plant would bring suits against these infringing machines (R. Vol. 1, p. 862, lines 25–26; p. 877, lines 27–30; p. 878, lines 1–2).

The inconvenience and embarrassment to which the United Company and its customers would have been put if Plant had succeeded in litigation against these machines would have been intolerable. It might well have involved replacing thousands of machines or very likely discarding them altogether,—in any event endless experimental work in developing organizations which would avoid infringement, at an expense, to say nothing of the cost of the litigation, which would have mounted to a staggering sum. No wonder the United Company took pains to obtain from Plant a release from

> "all manner of actions and causes of action . . . and demands of every name and nature in law or equity" (P.'s Ex. 137, R. Vol. 4, p. 1037).

On the other hand, it is difficult to imagine the chaotic condition which would have resulted if Plant had put his machines in a number of shoe factories. Mr. Winslow declared:—

> "It was our intention to bring suits to protect our rights, and undoubtedly we should have done so" (R. Vol. 1, p. 566, lines 38–39).

The record shows that this intention was being aggressively carried out. Many suits had already been brought, a considerable number of bills of complaint had been prepared and were ready for filing, counsel had been engaged for months in work on these infringements and were "ready to go ahead" on nearly all of them before the date of the purchase (R. Vol. 1, p. 800, lines 36–44; p. 801, lines 1–11; p. 821, lines 20–34; p. 822, lines 1–7; p. 877, lines 5–12, 31–33).

As to these patent controversies the District Court held:—

> "The evidence shows also, without serious contradiction, that one result of the bargain made with Plant was to relieve the United Company from an amount of litigation, then pending or in prospect, which would otherwise have burdened and hindered it to an extent far greater than it had ever had reason to apprehend from any litigation with which it had before been concerned.
>
> "A suit by it to restrain the Plant Company from breaking the leases of its machines, displaced in order to instal the Plant machines as above, had been pending since May, 1910. And between Plant or concerns wherewith he was

identified and the United Company there were pending interferences, claims of infringement on both sides, and pending infringement suits, raising questions relating to his or its patents, so numerous, complicated, and important as to threaten interminable controversy" (Dodge, J., R. Vol. 1, p. 1145).

The evidence which we have just reviewed proves that the expectations of the United Company in purchasing Plant's patents were fully realized. These great benefits were anticipated and were the reasons for the purchase, as we shall now show.

6. THE UNITED COMPANY ACQUIRED THE PLANT PATENTS BECAUSE ITS OFFICERS BELIEVED THAT THE ACQUISITION WOULD BE OF GREAT BENEFIT TO THE SHOE MANUFACTURING INDUSTRY.

A. The controlling consideration was the value to the shoe industry which the valuable Plant inventions would have if incorporated in the United Company's superior machines.

Typical of numerous statements in Mr. Winslow's testimony is the following:—

> "My entire and only interest was whether those patents could be made of benefit to our customers and the trade. If they could be of benefit, if they were of large benefit, and the trade ought to have them, I should be very glad to buy them and embody them in our machines for what I thought they were worth, irrespective of what they had cost him,—but I would not pay a cent more for them" (R. Vol. 1, p. 482, lines 26–32).

Mr. Howe testified:—

> "After we examined it, Mr. Winslow and I . . . agreed that Plant had some very valuable improvements that if we could get the ownership of at the right price could be introduced into our machinery in conjunction with our own experiments in the way of improvements that had then been under way for several years, and that by utilizing them in that way Plant's inventions could be made very valuable" (R. Vol. 1, p. 670, lines 29–37).

Mr. Endicott testified that Mr. Winslow told Mr. Plant that

> "he could not consider the proposition at all until he knew the value, and he stated then that he meant the value to the advancing of the art of shoemaking" (R. Vol. 1, p. 577, lines 12–14),

and that at a later interview Mr. Winslow said that he

> "would only purchase it if it was of value—if it was a good, fair offer at the price and was of value to the shoe trade and to the United Company" (R. Vol. 1, p. 582, lines 14–16).

Mr. Winslow's attitude is further shown by his refusal to consider the purchase at all

> "without seeing the machines, having them fully examined by our experts, and a full report made to me by them as to the advantages that there might be in those machines.
>
> "I always declined to have anything to do not only with buying it but considering his propositions without a full and complete right to examine his machinery, determine the value of the inventions—the patents that he had" (R. Vol. 1, p. 482, lines 20–24; p. 484, lines 16–19).

Mr. Howe confirms this:—

> "At these conferences and all along Mr. Winslow always took the position of declining to discuss prices or a price for the machinery and inventions until he had convinced himself by experts, in whom he had confidence, as to the value of these inventions to the United Shoe Machinery Company and to its lessees, . . . declined to have anything to do with any proposition unless he could have the machines examined by our experts and demonstrate that they would be of value to the United Company and its lessees" (R. Vol. 1, p. 670, lines 18–22; p. 687, lines 20–23).

Mr. Herrick testified that at a conference which he attended Mr. Winslow took the position

> "that there would be no consideration of that machinery without a careful examination by men who were competent to value what Mr. Plant had, and that there would have to be time enough for that, and that there would have to be a thorough examination,"

and that Mr. Winslow said to Mr. Plant:—

> "'If we see it has got value, we are perfectly ready to negotiate on the basis of whatever actual value it has got,

and there will be no hurry about it, and we will not deal at all without seeing it, and then we will only deal after the examination, and if we can't have the examination we won't deal at all'" (R. Vol. 1, p. 604, lines 17–21, 41–44; p. 605, lines 1–2).

Mr. Endicott and Plant's intermediary, Smith, testified to the same effect (R. Vol. 1, p. 577, lines 12–14; p. 772, lines 33–35).

As to the instructions given by Mr. Winslow to the experts, when Plant, after repeated refusals, had finally decided to permit the examination, Mr. Warren testified that he

> "was told to go with the rest of the gentlemen that were there to the Plant factory and look at any or all of the machines in that factory, and examine them to see what features there might be, if any, about the machines that would be valuable if added to our machines, or if they would be any addition in any way to the manufacture of shoes" (R. Vol. 1, p. 785, lines 27–32).
>
> "My orders were to look at the machines and tell Mr. Winslow, or report, what I could see in the machines that would be of value or that would improve our machines, to improve the art of making shoes" (R. Vol. 1, p. 814, lines 38–41).

The District Court found:—

> "The agreement to take the patents and inventions was not made until after a careful examination and report as to their merits. The belief thereon founded that, used as above, they would be worth acquiring upon the terms proposed, is shown to have been justified by the result, and the acquisition cannot be criticised so far as it was occasioned by that belief. As developed and added to its own machines by the United Company, some of the inventions acquired have proved to be of a value such as fairly justifies their claim that the patents acquired were the controlling feature of the purchase" (Dodge, J., R. Vol. 1, p. 1145).

B. Another consideration was the avoidance of endless litigation and intolerable conditions in the industry which would have resulted from the hopelessly complicated patent situation.

We have already shown (*supra*, pp. 514–519) that there was uncontradicted testimony that there were 708 distinct cases of infringement of the United Company's patents by thirty-seven

Plant machines; that the evidence shows that fifteen of the United Company's machines infringed twenty Plant patents,—evidence contradicted by petitioner as to only six machines, and as to those amply corroborated; that twenty-three interferences had been declared by the United States Patent Office between patent applications owned by Plant and applications owned by the United Company. We have explained that many suits had been brought against Plant for infringement by his machines, and that the United Company was prepared and intended to bring a large number of additional suits.

Before the Plant purchase all these patent complications were the subject of extended discussion by Mr. Howe, Mr. Howard, and other counsel with Mr. Winslow (R. Vol. 1, p. 821, lines 20–34; p. 862, lines 11–21; p. 877, lines 31–33).

Mr. Winslow testified (R. Vol. 1, p. 862, lines 24–31):—

> "The confusion and conflict in the patent situation of my own company and of Mr. Plant, the chaos which might result from conflicting claims and constant litigation, was a substantial consideration in my mind, affecting my negotiations or willingness to negotiate with Mr. Plant, and when Mr. Plant offered to me the patents at a price which to my mind was less than their value to the art of shoe manufacturing when combined with our machines, it might be said to be a controlling factor."

Mr. Howe testified:—

> "There would have been a large amount of litigation both by the owners of the Plant patents against the United Company, and by the United Company against Plant machines. . . . This chaotic condition which might result from the patent situation had considerable weight in my mind. Of course, the controlling consideration for the purchase of the Plant patents, was the value, the great value, it seemed to me, of his inventions, especially when combined with and merged in our machines. Then another consideration for the purchase was this avoidance of litigation either by ourselves against him, which would have cost a great deal of money and would have annoyed the trade very much, the shoe manufacturers, and also the cost and annoyance of having to be sued by Plant" (R. Vol. 1, p. 877, lines 28–31, 36–44; p. 878, lines 1–2).

It was held by the District Court (Dodge, J., R. Vol. 1, p. 1145):—

> "It was part of the bargain with Plant, or followed from it as a result, that the above controversies were settled or avoided. That the prospect of accomplishing this result was a further normal, natural, and powerful inducement to the agreement made with him cannot be reasonably doubted. In so far as the agreement was thus intended, no criticism of it can be valid."

7. THE PLANT PATENTS WERE WORTH MORE THAN THE PRICE PAID FOR THEM.

For the Plant inventions and patents and for 60 per cent. of the stock of the Thomas G. Plant Company, the shoe manufacturing concern, the United Company paid Plant $6,000,000, and of this amount Mr. Winslow considered that $2,500,000 ($1,250,000 in United Company stock at twice par) was paid for the Plant patents and inventions (R. Vol. 1, p. 490, lines 35–39; p. 569, lines 17–22; P.'s Ex. 132, R. Vol. 4, p. 935).

The stock of the Shoe Company was purchased because Plant refused to sell the inventions unless that stock were also purchased. He wanted to get out of business and retire (R. Vol. 1, p. 486, lines 2–7; p. 487, lines 11–16; p. 580, lines 36–39; p. 603, lines 26–30; P.'s Ex. 132, R. Vol. 4, p. 932). Mr. Winslow testified (R. Vol. 1, p. 568, lines 14–16):—

> "I did not want the shoe manufacturing stock, but at the price it was offered I thought it was a good bargain."

Mr. Winslow valued the shoe company stock purchased at $3,500,000 (R. Vol. 1, p. 490, lines 35–36). This seems a conservative estimate as the company was extremely prosperous. Its earnings for the past four years had averaged $738,000 annually and for the year preceding the use of Plant's own machinery had amounted to $1,122,196.28. These figures are taken from a sworn statement by a public accountant (P.'s Ex. 132, R. Vol. 4, pp. 1013–15). Mr. Winslow required Plant to guarantee the accuracy of that statement (R. Vol. 1, p. 496, lines 21–27; P.'s Ex. 132, R. Vol. 4, p. 936).

Plant owned and sold 60 per cent. interest in the stock of the company. Sixty per cent. of the average earnings for the past four years amounted to $442,800 annually. Capitalized at 10 per cent. this would show a value for the Shoe Company's stock which was purchased of $4,428,000.

The District Court held (Dodge, J., R. Vol. 1, pp. 1144–5):—

> "That it was of great value is shown beyond question by the dividends then and afterwards paid on the stock acquired by the United Company. These, and the ultimate disposition of the stock itself, afford every reason to believe its actual value when acquired sufficiently great to reduce the actual cost of the patented improvements also acquired to a comparatively small proportion of the total payment made to Plant."

Assuming, however, that the Shoe Company's stock was worth no more than $3,500,000, this would leave $2,500,000 to represent the patents. They are undoubtedly worth more than this to the United Company.

Mr. Winslow testified that to his mind this price was "less than their value to the art of shoe manufacturing when combined with our machines," that he would have considered them a very cheap purchase at a sum "much in excess of that price," that he would be "very glad to buy the same value next week," and that

> "if my judgment hadn't been that they were worth more than we paid for them, we never should have bought them" (R. Vol. 1, p. 490, lines 28–34; p. 569, lines 22–23; p. 862, lines 29–30).

Mr. Warren testified that it was his opinion and that soon after the purchase he told Mr. Winslow that the improvements on the *welter and stitcher alone* were worth all Mr. Winslow gave for the entire property (R. Vol. 1, p. 788, lines 8–10; p. 813, lines 6–9).

The District Court held (Dodge, J., R. Vol. 1, p. 1145):—

> "Taking the transaction as a whole, if the total amount paid by the United Company was large, the total value of all that was received in exchange also appears, not as matter of opinion merely, but by actual results shown, quite suffi-

cient to negative any claim that the defendants paid an exorbitant price for what they got.

"The evidence that among these patented improvements obtained from Plant there were enough of sufficient value in the defendants' hands and used as they only could have used them in further developing and perfecting the machines they were then producing or trying to produce, to make this part of the total acquisition extremely profitable to the United Company was not met by any sufficient proof to the contrary."

8. THAT THE UNITED COMPANY PURCHASED THE PLANT PATENTS BECAUSE IT WAS BELIEVED THAT THE PURCHASE WOULD BE A GREAT BENEFIT TO THE SHOE INDUSTRY, AND FOR NO OTHER REASON, IS FURTHER SHOWN BY THE HISTORY OF THE NEGOTIATIONS.

The United Company never approached Plant in any way directly or indirectly with reference to acquiring either his patents or his stock in the Plant Shoe Company. There is no evidence that before Plant made his overtures the United Company had ever considered acquiring his patents.

Negotiations were Opened by Plant.

Plant asked Henry B. Endicott, a shoe manufacturer, to help him make a sale of his patents to the United Company, and he offered Mr. Endicott a commission of $250,000 if he would effect the sale. He later increased that offer to $500,000 (Endicott, R. Vol. 1, p. 576, lines 33–43; p. 580, lines 16–18).

Accordingly Endicott invited Winslow to meet Plant at Endicott's house. That meeting was held in June, 1910 (Winslow, R. Vol. 1, p. 479, lines 27–40; Endicott, p. 577, lines 1–3).

At this first meeting, after explaining the merits of his machines, claiming that they were wonderful and very valuable, Plant offered to sell his patents for $6,000,000 and said that at the end of the week the price would go up $500,000 (Winslow, R. Vol. 1, p. 479, lines 41–45; p. 480, lines 1, 29–32; Endicott, p. 577, lines 6–10).

From the Start Winslow Insisted that He would not Purchase Plant's Patents until Their Value had been Determined by an Expert Examination, and then only if They would be of Value to the Shoe Industry.

Winslow told Plant that he could form no opinion regarding the value of Plant's inventions until his experts had examined Plant's machines. He said to Plant that

> "it was the value of the patents to our customers and the trade, the art of making shoes, that I was interested in, and when I could know what he had, why, then I could know what I thought they were worth to me" (R. Vol. 1, p. 480, lines 4–6, 34–38).

Endicott testified that at this interview Winslow told Plant that

> "he could not consider the proposition at all until he knew the value, and he stated then that he meant the value to the advancing of the art of shoemaking" (R. Vol. 1, p. 577, lines 12–14).

At this interview Plant questioned whether the United Company's mechanical experts ought to see his machines, fearing that infringement suits might be brought as a result of such an examination. The interview was adjourned with the understanding that Plant would consult his attorneys in New York as to an examination by experts (Winslow, R. Vol. 1, p. 480, lines 6–9, 15–22).

Winslow Continues to Insist that He would not Purchase without an Examination and not unless Plant had Improvements that would be of Value to the Industry.

When the discussion was resumed on June 23, 1910, at a meeting arranged by Mr. Endicott, Plant said that he could not consent to the United Company's experts seeing his machines; that his New York attorneys did not agree to it. He threatened that if Winslow did not trade with him without seeing his machines he would publish advertisements which would attack the United Company and its methods of doing business and also

would publish letters from attorneys. At both interviews nothing but Plant's inventions and patents was discussed. The Shoe Company stock was not mentioned (Winslow, R. Vol. 1, p. 481, lines 4–46; Endicott, p. 577, lines 15–28; p. 586, lines 43–45; p. 587, lines 1–4). This interview was concluded by this statement to Plant by Winslow:—

> "I said that of course I could not consider trading with him without seeing his machines and I was not interested in what he had unless he had improvements that would be of value to our customers. I was very sorry, but I could not do any business" (R. Vol. 1, p. 481, lines 41–44).

The Interview on June 27.

At the next interview, arranged by Endicott, on June 27 Plant said that his price was now $6,500,000 and that it would be $7,000,000 the next week. Plant again indicated that he desired very much to sell his patents and inventions, but was very reluctant to have the United Company see his machines. He made a proposition that the United Company should give him a million dollars and two of its officers could then examine his machines. Of this proposition Winslow said:—

> "If we did not buy, the million dollars was to be forfeited to Mr. Plant, so that a look at his machines would have cost us a million dollars.
>
> "I did not accept that proposition."

Winslow repeated that he would not even consider Plant's offers without a thorough examination to determine the value of the inventions (Winslow, R. Vol. 1, p. 482, lines 1–32; Endicott, p. 587, lines 4–9).

Endicott then suggested that Messrs. Keith and Hanan, both shoe manufacturers and directors of the United Company, should examine the machines and decide whether it would be right for Winslow to pay a million dollars for the option in order to get an opportunity for his mechanical experts to examine the machines; but Keith and Hanan refused to accept this responsibility (Winslow, R. Vol. 1, p. 482, lines 33–45; p. 483, lines 1–2; Endicott, p. 577, lines 29–45; p. 578, lines 1–9).

Winslow again Breaks off Negotiations.

Winslow then notified Endicott that

> "in view of the fact that Mr. Plant would not allow us to have our experts examine his machines we should drop all negotiations" (Winslow, R. Vol. 1, p. 483, lines 11–12).

Endicott confirms this (Endicott, R. Vol. 1, p. 578, lines 10–15).

This ended Endicott's connection with the negotiations as Plant's representative. The next day he called upon Winslow, told him he believed the United Company ought to have Plant's patents for the benefit of the industry, stated that if he had been a director he would have been willing to take the responsibility which Keith and Hanan refused to take, and suggested that if the United Company wished to elect him a director he would be willing to share that responsibility and examine the machines with Keith and Hanan. He told Winslow that he was so strongly convinced that the United Company ought to have the Plant inventions for the benefit of its customers that he wanted to do everything he could to bring that about. This statement was based on the report of Endicott's experts, who had examined Plant's machines, that there were many things in them which when combined with the United Company's machines would make them more valuable (Winslow, R. Vol. 1, p. 483, lines 15–35; Endicott, R. Vol. 1, p. 578, lines 19–31; p. 585, lines 24–28).

In accordance with Mr. Endicott's suggestion he was elected a director of the United Company and he thereupon notified Plant that he could no longer act in Plant's interest and that Plant's agreement to pay him a commission was terminated (Winslow, R. Vol. 1, p. 479, lines 29–32; p. 483, lines 26–43; Endicott, p. 579, lines 3–13).

Endicott, Keith, and Hanan, with Endicott's practical men, then examined the Plant machines on July 5 and they reported that evening at a meeting of the officers and counsel of the United Company. Endicott was in favor of putting up the million dollars, and Keith and Hanan were against it (Winslow, R. Vol. 1, p. 483, lines 44–45; p. 484, lines 1–15; Endicott, p. 579, lines 28–32).

Winslow once more Breaks off Negotiations.

Winslow testified:—

> "What was decided then was to decline to purchase, without seeing the machines, having them fully examined by our experts, and a full report made to me by them as to the advantages that there might be in those machines."

That decision was communicated to Plant (Winslow, R. Vol. 1, p. 484, lines 16–21).

Plant Employs Smith to Effect a Sale.

Harry A. Smith, of Worcester, Mass., testified that he had frequently argued with Plant that his patents and the United Company's patents ought to be put together so that the trade could get their value and that he had offered his services as an intermediary in effecting a sale to the United Company (R. Vol. 1, p. 769, lines 1–8, 19–25; p. 770, lines 14–20; p. 771, lines 26–29).

On July 21, 1910, Plant telephoned Smith from New York and asked him to come to New York to see him. Smith went to New York and Plant told him that he had been negotiating with the United Company and that the negotiations had been broken off. Plant then suggested to Smith for the first time selling his interest in the shoe factory as well as his patents. Plant asked Smith to get him in touch with Mr. Barbour, vice-president of the United Company, and Mr. Herrick, one of its counsel (R. Vol. 1, p. 769, lines 26–45; p. 770, lines 1–13, 34–40).

Smith Gets Plant in Touch with Barbour, Vice-President of the United Company.

Accordingly Smith first arranged an interview with Barbour, and Plant spent six hours talking to Barbour about the value of his inventions. Smith testified that they also saw Barbour the next day and that Barbour then decided to come to Boston to take the matter up with the directors of the United Company (R. Vol. 1, p. 770, lines 21–33; p. 771, lines 1–4).

Smith Gets Plant in Touch with Herrick, Counsel for the United Company.

Smith went to Mr. Herrick's summer home and also to his office in Boston and asked him to meet Plant. Herrick told him he would meet Plant if Plant's counsel approved, and Smith arranged for a meeting between Plant and Herrick in the latter part of July. Plant told Herrick that he wished to sell what he had to the United Company. Plant still objected to an examination of his machines through fear of infringement suits (Herrick, R. Vol. 1, p. 602, lines 17–40; Smith, p. 771, lines 5–6).

Shortly after Plant asked Herrick to go out to his shoe factory and took Herrick over the factory. Plant was still unwilling to have an examination. Herrick testified:—

> "I told him that there could be no negotiations excepting on the most careful examination and that there could be no agreements whatever as to bringing any suits."

At this interview Plant said that "he was anxious to get out of business" and that he would like to sell his interest in the shoe business as well as his patents and inventions. He said that he would like to retire from business and

> "that he had always planned to so arrange himself that he would be free to sell out to the United Shoe Machinery Company" (Herrick, R. Vol. 1, p. 603, lines 1–13, 20–34).

Smith Sees Winslow.

Smith saw Winslow on the 6th or 8th of August. Winslow told him that if Plant's patents had value he would look at them for his company, but that he would never buy them until he had looked at them (Smith, R. Vol. 1, p. 771, lines 6–7; p. 772, lines 29–35).

Plant Asks Endicott to Arrange Another Meeting with Winslow.

Early in September Plant saw Endicott and told him that he would make one more throw of the dice if Endicott was willing to arrange a meeting for him with Winslow. Plant told Endicott that his price was $6,500,000, but that he would give

Endicott all that he got for it over $6,000,000. Endicott of course told him that he could not accept any commission. Plant did not say anything about selling his shoe company stock (Endicott, R. Vol. 1, p. 580, lines 3–19, 31–33).

The Meeting on September 13.

At Plant's request Endicott arranged a meeting on September 13. Plant, Winslow, Endicott, and Herrick were present. At that interview Winslow again told Plant that he would not consider any proposition or carry on any negotiations unless Plant would permit the United Company's experts to examine his machinery and ascertain the value of his inventions to the art of shoemaking, and that that was all he was interested in (Winslow, R. Vol. 1, p. 484, lines 26–35; Endicott, p. 580, lines 20–30). Herrick testified that Winslow told Plant

> "that there would be no consideration of that machinery without a careful examination by men who were competent to value what Mr. Plant had, and that there would have to be time enough for that, and that there would have to be a thorough examination,"

and that the United Company was ready to negotiate on the basis of the actual value of Plant's inventions, but only after an examination, and that if they couldn't have the examination they wouldn't deal at all (Herrick, R. Vol. 1, p. 604, lines 10–21, 41–44; p. 605, lines 1–2).

After a final statement by Winslow that he would have no further negotiations without an examination of Plant's machines, Plant consented to the examination on the understanding that no more suits for infringement of the United Company's patents should be filed for two weeks (Winslow, R. Vol. 1, p. 484, lines 35–45; p. 485, lines 1–6).

The Examination of Plant's Machines.

On September 14 and 15 Messrs. Winslow and Howe, with a committee of machinery experts and patent experts, went to the Plant shoe factory and examined the machines embodying Plant's

inventions. The experts continued their examination on the 16th. They reported to Mr. Winslow each night (Winslow, R. Vol. 1, p. 485, lines 4–14; p. 559, lines 34–36).

The Meeting on September 16.

Plant, Endicott, and Winslow met on September 16 after the examination by the experts. Plant then said that he wanted to get out of business altogether and offered to sell his patents and his stock in the Plant Shoe Company, 60 per cent. of its total capital stock, for $8,000,000 or $8,500,000. Winslow told him that that was an impossible figure and that that price didn't interest him. That ended that interview (Winslow, R. Vol. 1, p. 486, lines 1–44; Endicott, p. 580, lines 34–45; p. 581, lines 1–13).

The Meeting on September 20.

Plant asked Endicott to arrange another interview with Winslow. Endicott arranged one on September 20 at which Plant, Winslow, Herrick, and Plant's attorney Carr were present (Winslow, R. Vol. 1, p. 487, lines 1–10; Endicott, p. 581, lines 30–39; Herrick, p. 605, lines 34–37).

At this meeting Plant said again that "he wanted to get out of business entirely" and that "he did not want to embark in the shoe machinery business." He said to Herrick:—

> "I am sick of all this waiting. Everybody advises me to sell. I have talked with Mr. Whipple, he advises me to sell. I have talked with Mr. Brandeis, he advises me to sell. And everybody advises me to sell. I could keep on and make a lot of money, but I prefer to get out of the business and pay my debts and retire on my cash."

Plant finally offered to sell his patents and inventions and his stock in the Plant Shoe Company for $3,000,000 in cash and $1,500,000 in stock of the United Company at par. This offer was accepted by Winslow subject to approval by his executive committee (Winslow, R. Vol. 1, p. 487, lines 11–42; Herrick, p. 606, lines 7–33).

The Purchase is Made.

On the morning of September 22 a check for $500,000 on account was delivered to Plant's attorney. The agreements were then prepared and were signed during the night of that day (Winslow, R. Vol. 1, p. 488, lines 1–5; Herrick, p. 607, lines 21–39).

Throughout the Negotiations Mr. Winslow never Made any Offer to Plant.

Throughout these extended negotiations, begun by Plant and renewed by him several times after Winslow had definitely broken them off, Winslow never made any offer to Plant. He testified on cross-examination:—

> "I didn't make any proposition at any time, from the time I first met him until the time that we parted, of any sort, name, or description" (R. Vol. 1, p. 559, lines 16–18).

Mr. Herrick testified:—

> "There never was any offer made to Mr. Plant at any time during all the negotiations" (R. Vol. 1, p. 606, lines 36–37).

Finding of the District Court as to the Negotiations.

The District Court said of these negotiations (Dodge, J., R. Vol. 1, pp. 1142–3):—

> "There is uncontradicted evidence of declarations by Plant in 1909, that his intention was to equip these two other factories and his own with his new machines and then sell out to the United Company. That the effecting of such a sale, and not any actual competition in the market with machines then in use, was his real purpose is hardly left doubtful by the history of his subsequent negotiations with the defendants. These, set on foot by him and at first stopped by the defendants' unqualified rejection of his proposals, he persisted in renewing, through various intermediaries, until they resulted in the purchase above described. It appears without contradiction that Plant was for a time under agreement to pay an influential shoe manufacturer, whose assist-

ance he procured, $250,000 if he succeeded in bringing about the desired sale; also that he later offered, and ultimately had to pay a commission of five per cent. on the price obtained to another intermediary who undertook to put the transaction through for him.

"The evidence regarding Plant's negotiations with the defendants sufficiently proves that they were never sought by the defendants and that there was never any attempt on their part to get Plant to sell them his inventions or machines or anything else; but that on the contrary all the efforts towards such a purchase were made by him. The first overtures toward it came from him; he began them soon after he had put his machines into the Plant factory; they led to interviews, all of which he sought and at which his proposals were declined without encouragement to renew them. Nowhere in the evidence is any indication found that before Plant's overtures were thus made any purchase whatever from him had been suggested to or considered by the defendants."

Allegations in the Petition that Certain Shoe Manufacturers were Endeavoring to Acquire Plant's Patents and that Defendants Made the Purchase on that Account.

The petition alleges that on September 22, 1910, certain shoe manufacturers were in conference with Plant with a view to either purchasing an interest in his inventions or making some arrangement which would enable them to obtain machines for use in their factories; that defendants were advised of the purpose and intent of said manufacturers, knew that if they made an arrangement with Plant defendants' machines would be removed from their factories and competition would thus be created; and made the agreement for the Plant purchase in order to prevent such competition.

The evidence shows that on September 22, 1910, a number of shoe manufacturers, members of the Shoe Manufacturers' Alliance, were in Boston, having come to confer with Plant (R. Vol. 1, pp. 114–5).

There is absolutely no proof whatever in this record that these manufacturers were endeavoring to make any arrangements to obtain machines for use in their factories.

What these manufacturers really thought Plant had to sell is shown by the testimony of petitioner's witness McElroy, who

testified regarding the inspection of the Plant machines which he made for them in 1910:—

> "The object of that inspection was looking to buying or acquiring *the Plant Patents*. There were some Western manufacturers that contemplated this, and I was sent as an expert to look over the machinery and make a report" (italics ours) (R. Vol. 1, p. 189, lines 8–12).

Prior to this time Plant had been negotiating with the United Company for several months; he had agreed on September 13th that the United Company's experts might examine his machines and on September 20th had practically concluded the sale to the United Company. There is absolutely no evidence that the United Company knew of any negotiations with these shoe manufacturers until the sale to the United Company was practically concluded on September 20th.

Mr. Howe first heard the Western manufacturers were in Boston on the morning of September 23d. The United Company had paid $500,000 before that (R. Vol. 1, p. 688, lines 16–21).

On the evening of September 20th Plant told Winslow he should put up to the Western manufacturers a proposition which they could not accept (R. Vol. 1, p. 488, lines 18–21).

And he did (R. Vol. 1, p. 115, lines 17–21).

There is not the slightest evidence, therefore, that possible negotiations with these shoe manufacturers were known to the United Company prior to the practical consummation of the purchase, or in any way affected the United Company's action. Furthermore, the evidence shows that Plant desired to sell not only his patents but also his interest in the Plant Shoe Company and retire from business. The evidence shows that no such purchase was contemplated by the shoe manufacturers, nor does it appear that they were in a position to carry such transaction through. It is quite evident that Plant preferred and desired to sell to the United Company if such transaction could be consummated.

The District Court said with reference to these allegations (Dodge, J., R. Vol. 1, p. 1144):—

> "But the evidence fails to support these allegations. It does not charge the defendants with any knowledge, at the time they came to terms with Plant, of any negotiations

between him and the manufacturers referred to. No reference appears to have been made to them or their doings during the defendants' negotiations with Plant, and no reason is found to believe that apprehension lest he might conclude some arrangement with them induced in any degree the defendants' final agreement with him. Were it important, it might be added that so far as the evidence can be said to show anything regarding Plant's intentions toward them, it shows that he never really meant to enter into any arrangement with others if he could get the defendants to take off his hands everything which he desired to sell; and no purchase so extensive as this appears to have been at any time contemplated by the manufacturers mentioned in the petition."

9. MISSTATEMENTS AS TO FACTS IN MR. CHAPMAN'S DEPOSITION REGARDING INFRINGEMENT OF PLANT PATENTS BY UNITED COMPANY MACHINES.

In Mr. Chapman's deposition (R.Vol. 2, pp. 2836 (91–119)) controverting Mr. Howard's testimony that fifteen United Company machines infringed twenty of Plant's patents, in which Mr. Chapman took issue as to six only of those fifteen machines, Mr. Chapman misstated the facts as to the construction of the infringing mechanism of three of the six machines.

As to Loading and Attaching Machine—Model B: McKay Automatic Heel, Mr. Chapman admitted ignorance of the matters inquired about in Cross-Ints. 41 and 42 (R. Vol 2, p. 2836 (98)), which interrogatories were directed to the essence of the infringement set forth in Defendants' Exhibit 274, R. Vol. 5, p. 751. Compare his answer to Int. 20 (R. Vol. 2, p. 2836 (92)), as to which Mr. Browne comments, "Mr. Chapman is wrong as to the facts" (R. Vol. 2, p. 2836 (130), Int. 6).

Again, attention is called to a portion of his testimony regarding Indenting and Burnishing Machine: Goodyear Welt:—

> "*Cross-Int.* 96. Did it also comprise worm and worm wheel connections geared to and to rotate said table in any of its positions?
>
> "*Ans.* No.
>
> "*Cross-Int.* 97. What mechanism referred to in my last question did it lack?
>
> "*Ans.* All the mechanism stated by the question."

"*Cross-Int.* 100. And you feel as positive in this matter as you do with regard to your other statements which you have made as to machines which you examined?

"*Ans.* Yes" (R. Vol. 2, p. 2836 (109)).

Mr. Browne testified that the machine had the mechanism referred to in Cross-Int. 96, above quoted, "which Mr. Chapman evidently overlooked in his examination of this machine" (R. Vol. 2, p. 2836 (127)).

In his testimony in regard to Pulling-over Machine—Model B: Rex, Mr. Chapman was handed a copy of patent to Ashton, No. 1,030,763, June 25, 1912 (Defs.' Ex. 351, a physical exhibit), and was asked:—

"*Cross-Int.* 136. . . . whether or not it illustrates in the drawings and describes in the specification any features of the pulling-over machine examined by you and in regard to which you testified in your direct examination?

". . . (Objection not quoted.)

"*Ans.* I do not recognize in the patent anything of the construction of the machine which I examined as stated by me in my direct examination" (R. Vol. 2, pp. 2836 (117, 118)).

Mr. Browne testified that this Ashton patent showed in one of its figures substantially the infringing construction of the machine in question, and that "Mr. Chapman when he testified evidently had forgotten the construction of the Model B Rex machine" (R. Vol. 2, p. 2836 (124), Int. 4). Mr. Chapman also testified that he found a gauging device in that machine

"consisting of a pivoted, bent lever, having in one end an aperture through which had been thrust a nail" (R. Vol. 2, p. 2836 (117), Int. 134).

Mr. Browne stated,—

"This is not true of the Model B Rex machine" (R. Vol. 2, p. 2836 (124), Int. 4).

Thus the record shows that, although he was afforded "ample opportunity for the examination of all the machines" about which Mr. Howard testified (Stipulation, R. Vol. 2, p. 2836 (158)), Mr. Chapman did not, when he testified, remember the construction of the infringing parts of the machines, but nevertheless had no hesitation in making positive statements about them. It is

submitted that this evidence as to his superficial work casts a cloud upon all his testimony in this suit.

10. FINDING OF THE DISTRICT COURT AS TO THE REASONS FOR THE PLANT PURCHASE.

The record completely supports the conclusions which were reached by the District Court, after summarizing the evidence which we have reviewed:—

> "The above reasons, none of them open to any charge of illegality, seem to me to have been the really operative reasons which must have induced the defendants to enter into the Plant bargain upon the terms which he finally offered them. They appear so adequate as legitimate business reasons for doing this as in my opinion to leave no reasonable ground for holding, against the defendants' denial, that it was really a purchase to suppress competition. No such competition or prospect of competition at the time is proved as would justify such a conclusion. . . . The property acquired being proved to have been worth the amount paid, the argument that the defendants were so anxious to hold a monopoly as to be willing to pay $6,000,000, or any other large sum, in order to get rid of a competitor, or that this was done in pursuance of a general plan conceived in 1899, fails completely" (Dodge, J., R. Vol. 1, pp. 1145, 1146).

11. THE PRACTICAL IMPOSSIBILITY OF SEGREGATING THE PLANT INVENTIONS IS IN ITSELF STRONG EVIDENCE THAT THE PLANT PURCHASE WAS A NORMAL AND LAWFUL TRANSACTION.

We have seen (*supra*, pp. 503, 504, 507, 508, 511–514) that the Plant inventions have been assimilated into the United Company's machines and that the United Company has made improvements upon those inventions which are built upon and around them, interwoven with them. To take those inventions out of the United Company's machines would leave unworkable, worthless skeletons; there are no machines to take their places, for the machines which they superseded have been junked; and the United Company would have to develop new machines and build tens of thousands of them to take the places of the stripped machines. This ruthless surgery would set back the development of the industry a full decade.

It is respectfully submitted that this extraordinary situation

is in itself the strongest evidence that the Plant purchase was a normal and lawful step in the normal development of the business of a concern which is engaged in inventing, manufacturing, and putting out patented machines.

12. CONCLUSION AS TO THE PLANT PURCHASE.

It is established by the record and the findings of the District Court that Plant was not in competition with the United Company; that he did not desire or intend to go into the shoe machinery business; that his sole purpose was to sell his patents to the United Company so that their purchase was a mere purchase of inventions made for the express purpose of being so purchased and combined with the United Company's patents; that the machines which he had constructed and installed in his own shoe factory were crude, really only experimental, constantly breaking down, and making shoes by obsolete and very expensive methods; but that in those commercially unsuccessful machines Plant had incorporated some very valuable inventions which were capable of use in the United Company's superior machines to the great benefit of the industry; that both the machines of Plant and those of the United Company infringed a large number of patents owned by the other so that there would have been a great amount of litigation which would have resulted in chaotic and intolerable conditions; that the great benefit to the industry which would result from incorporating Plant's valuable inventions in the superior machines of the United Company and from the avoidance of the great amount of threatened litigation was the sole reason for the purchase of Plant's patents by the United Company; and that the Plant patents were worth more than the United Company paid for them.

The lawfulness of the Plant purchase can hardly be questioned. The purpose of the purchase was to enable the United Company to perfect its machines and avoid chaotic litigation. The transaction was, therefore, not unlawful because of the intent with which it was done. And obviously it was not inherently unlawful. Indeed, the evident advantages to the shoe machinery industry, and, consequently, to the shoe manufacturers, of combining the Plant patents with the United Company's patents,

were so obviously beneficial to the public generally and so normal and natural a transaction that, like the formation of the United Company considered in *United States* v. *Winslow*, supra, it was not only not inherently unlawful, but no intent could make it unlawful.

As we have stated, the Sherman Act is directed only against restraints which prejudice the public interests.

In *Nash* v. *United States*, 229 U. S. 373, the court said (p. 376):—

> "... only such contracts and combinations are within the act as, by reason of intent or the inherent nature of the contemplated acts, prejudice the public interests by unduly restricting competition or unduly obstructing the course of trade."

In *Wilder Mfg. Co.* v. *Corn Products Co.*, 236 U. S. 165, the court said (p. 174):—

> "In other words, founded upon broad conceptions of public policy, the prohibitions of the statute were enacted to prevent not the mere injury to an individual which would arise from the doing of the prohibited acts, but the harm to the general public which would be occasioned by the evils which it was contemplated would be prevented."

In the present case, as we have clearly shown, had the Plant purchase not been made, the public would have been deprived of those machines which combined the latest and best improvements known to the art of shoe machinery, and shoe manufacturers would have been obliged to use far less efficient machines. A transaction which necessarily resulted in so great benefit to the industry, a result which could not otherwise have been accomplished, can clearly not be said to "prejudice the public interests" or produce "harm to the general public." On the contrary, such a transaction is one which public policy must necessarily favor from its self-evident advantage to the public, whatever the motive or intent which induced it. As such a transaction cannot result in "harm to the general public" or "prejudice the public interests," it is inherently lawful and cannot fall within the prohibitions of the Sherman Act.

If—which we deny—it could be contended that the transaction was not so beneficial to the public as to be necessarily

lawful, but that it was a transaction which unlawful purpose might bring within the prohibition of the statute, the record clearly shows that no unlawful purpose existed. Being entered into for the purpose of enabling the United Company to produce more efficient machines and to avoid chaotic patent litigation, which would not only have been very annoying and expensive, but would have resulted in preventing its putting out even as efficient machines as it was then manufacturing, the transaction was clearly a "normal" contract entered into for the purpose of "reasonably forwarding personal interest and developing trade." (*Standard Oil Co.* v. *United States*, supra.)

Can it possibly be contended that the purchase was not made for the direct purpose of acquiring and using the Plant patents and ending the existing and threatened patent litigation? We do not understand that the United States denies that these purposes existed. While the United States has attempted to minimize the value of the patents, it must admit that they were of great value and that they were bought to be used by the United Company and that they have been so used. The contention of the United States apparently is that the United Company feared that Plant might become a competitor, and that this was an additional inducement to make the purchase. The record clearly refutes this contention, showing that the officials of the United Company purchased at Plant's solicitation, that they would not purchase until after a thorough examination had convinced them that the patents would be of great value in increasing the efficiency of the United Company's machines, and that they realized the chaotic patent situation which existed and the intolerable conditions which would result. If it can be doubted that these were the sole purposes which actuated the transaction, it certainly cannot be questioned that Plant's patents were of great value, that the United Company desired to use them, and the most that can be contended is that possible competition by Plant was an added motive for the purchase. But if possible competition by Plant influenced the United Company, which we deny, this can only have been because the United Company believed Plant's patents to be so valuable that he would be able to offer machines attractive to customers which the United Company by reason of Plant's patent monopolies could not make. Plant had no established shoe machinery

business or good-will. He had no better or greater opportunity to compete with the United Company than any other one of thousands of American business men except in one respect, namely, his patents. If he could enter the shoe machinery business successfully, it would be solely because his patents enabled him to offer machines which the United Company was legally restrained from making. In other words, if the United Company feared competition, it was a competition which consisted in offering machines which the United Company could not manufacture, and, therefore, a competition which it could not meet on equal terms and which neither public policy nor the Sherman Act would prohibit it from meeting by the acquisition of the patents. In attempting to meet such competition, the United Company would be under a legal restraint, the restraint imposed by the lawful patent monopolies held by Plant. The Sherman Act was intended to prevent unnatural, abnormal restraint imposed on "the free flow of commerce." The removal of a restraint imposed by patent monopolies through the purchase of such monopolies cannot constitute the imposition of a restraint on the free flow of commerce such as the Sherman Act was designed to prohibit.

For a further discussion of the right to acquire patents see *supra*, pages 462–465.

VII.

THE CHARGE THAT THE UNITED COMPANY COMMITTED VARIOUS UNFAIR, OPPRESSIVE AND MONOPOLISTIC ACTS IS UNFOUNDED.

In Section VI of the petition (R. Vol. 1, p. 999) defendants are charged with having made various threats or committed various unfair and oppressive acts. No specific instances are set out in the petition, but a bill of particulars, setting forth the specific instances charged, was filed during the course of the trial (R. Vol. 1, p. 1075). The bill of particulars sets forth over fifty different alleged acts or threats. **As to at least thirty no evidence whatever was offered by the United States. This fact illustrates the unfounded character of the charges.**

Some instances consisted merely of requests by the United Company to lessees that they conform to the terms of their leases. In a few cases the United Company undertook to enforce such terms. In several instances these leases had been put out by the constituent companies prior to the formation of the United Company. In every such instance if there is criticism it must be with the terms of the lease and not with the request to observe or the enforcement of these terms.

Some instances consisted of alleged threatening statements of officers of the company made to other shoe machinery manufacturers as to what it would do. In no case was the alleged threatened action taken. These alleged threats are all disputed by the company and involve the credibility of witnesses and the truth or probability of their statements.

Practically all of the evidence introduced by the United States with respect to these alleged threats or acts comes from patent owners or competitors who have sought unsuccessfully to sell out their property to the United Company, or from lessees with whom the company has had a disagreement.

The number of instances referred to by the United States is surprisingly small, considering that the entire business life of the company has been examined and extraordinary efforts made to put in evidence all acts or remarks of the officials or agents of the company occurring over this extended period of time, as

to which any contention of unfairness or dissatisfaction could be made. The company has over 1,000 lessees with whom it is constantly in touch through its service men and with whom it is constantly dealing, making leases for new machines, taking back old machines, checking up royalties and furnishing service and new parts. Owing to the great variety of machines, of findings, and of supplies used in the shoe machinery business the United Company is constantly being asked to acquire new patents and businesses. For example, 493 different ideas, suggestions, and inventions have been submitted to the company by persons not employed by it as inventors, and have been declined (Defs.' Ex. 222, R. Vol. 5, p. 370). Over 75 different concerns have been offered for sale to the United Company and their purchase declined (Defs.' Ex. 233, R. Vol. 5, p. 527).

The District Court, after considering the facts in respect to such of these transactions as were relied on by the United States in argument, concluded as follows (R. Vol. 1, pp. 1152–3):—

> "The history of the proceedings in this case indicates that efforts which may fairly be described as extraordinary have been made to bring before the court, so far as possible, all sayings or doings of any of the numerous defendants or their representatives, during the period beginning with 1899 and ending with 1911, which might afford ground for charging them with oppressive, coercive, or like unfair conduct toward competitors of the United Company or the public. In view of the long period and wide fields thus searched, the numerous abandoned attempts to prove something of the kind above indicated, and the insignificant result of the evidence actually offered and finally relied on, the conclusion seems fully justified that the policy and methods pursued by the defendants and by the United Company have been, in general, above reproach in any of these respects."

In view of the District Court's finding and the complete failure of the United States to substantiate these charges, it hardly seems necessary to consider the evidence relating to them in detail; however, a detailed statement of the evidence is given in the Appendix (see Appendix, pp. 88–131) and the following summary inserted in the brief:—

1. The United States charged that the United Company removed its machines from Peter Tessier & Company's factory where competing machines were used.

The evidence shows that Tessier leased seven machines from the United Company. He obtained other machines to do his work and discontinued entirely the use of the United Company's machines except that he used the auxiliaries without paying anything for such use. The United Company therefore removed its machines which were not being used at all or were being used without payment (see Appendix, p. 88).

2. The United States charged that the United Company removed its machines from Bottomley's factory where competitors' machines were used.

The evidence showed that Bottomley had removed the United Company's machines from his factory and notified it that he would pay no further royalties on them. The United Company therefore merely removed machines which the lessee no longer desired to use or pay for (see Appendix, p. 90).

3. The United States charged that the United Company threatened to take back its machines from T. D. Barry Company in order to force the removal of competing machines.

The evidence showed that the T. D. Barry Company gave up the use of its Goodyear Welters, but continued to use Goodyear auxiliary machines without paying any royalty for them. The United Company, therefore, brought a replevin suit to take back its machines. The dispute was adjusted, and Barry retained the United Company's machines (see Appendix, p. 92).

4. The United States charged that the United Company threatened Curtis & Jones and caused them to remove from their factory other machinery.

The evidence shows that Curtis & Jones in 1897 had agreed with the old Goodyear Company to use its turn machines exclusively in consideration of a 50% reduction in royalties. They broke this agreement and their attention was called to it and they gave up the use of the other machines. The superintendent of the factory testified he made up his mind that the Goodyear machines were better and cheaper to operate and that the United Company's service was preferable (see Appendix, p. 94).

5. The United States charged that Hilliard & Tabor installed a Haverhill Turn Sewing Machine and the United Company threatened to make the terms of its lease covering its turn machines more onerous if the lessee used the Haverhill machine.

The evidence shows that Hilliard & Tabor had a Goodyear Turn

Machine and then installed a Haverhill machine, continuing to use the Goodyear auxiliaries without payment of royalty. After some months Mr. Hilliard happened to be at the United Company's office and his attention was called to the situation, and he was offered the initial payment form of lease if he wished to continue using the Haverhill machine (see Appendix, p. 97).

6. The United States charged that the Harsh & Edmonds Shoe Company desired to take a clicking machine from a competitor and was warned and threatened not to, and therefore took the United Company's machine.

It appears that the Harsh & Edmonds Shoe Company obtained a clicking machine from the Richardson Company. Mr. Harsh objected to the United Company's lease covering clicking machines. He testified that Mr. Willson, of the United Company, told him, or, as appeared on cross-examination, he thought intimated to him, that it would be better for him to cease his activity against the United Company and take things as they were. Mr. Willson pointed out to him that he already had another lease of the same character. Mr. Willson was dead at the time of the trial. Mr. Harsh took the United Company's machine, which he admitted was the only commercial machine in the market. He also admitted that Willson's advice was sound (see Appendix, p. 99).

7. The United States charged that a threat of like character was made to George A. Learned.

Mr. Learned testified he had Goodyear machines. He later obtained a Haverhill machine and claimed that Mr. Winslow told him he must pay on all the shoes he made or be driven out of business, and the least the United Company would do would be to take out its machines. This evidence was absolutely contradicted by Mr. Winslow and by Mr. Brown, who was present at the interview. Mr. Endicott testified that Learned later admitted he had been mistaken. No action was taken by the United Company, and Learned is still using the Haverhill machine (see Appendix, p. 101).

8. The United States charged that William Barbour, one of the directors of the United Company, made threatening statements to James N. Darrah, of the Standard Shoe Machinery Company, a competitor of the United Company.

Mr. Darrah testified Mr. Barbour told him he was making a

big mistake not to sell; that if the United Company could not buy out its competitors it crushed them; that he could not get any money to compete, as the United Company's influence was too great with the banks both in Boston and New York. Mr. Barbour absolutely denied making any such statements. Mr. Darrah was shown to be without financial responsibility or settled business (see Appendix, p. 103).

9. The United States charged that E. P. Hurd, of the United Company, threatened H. E. Cilley.

Mr. Cilley testified that he interviewed Mr. Hurd as to the sale of a leveling machine which Cilley had invented, and that Mr. Hurd said, "Cilley, you are thick; if you were offered $15,000 or $20,000 you ought to be well satisfied," and further told him that he could not do business except on the United Company's sufferance. It did not appear that Cilley was interfered with in any way. Cilley had been in litigation with the United Company since 1903 (see Appendix, p. 106).

10. The United States charged that Mr. Winslow threatened Charles H. Morse, who was endeavoring to market the Frechette Pegging Machine and a slugging machine.

Mr. Morse testified he called on Mr. Winslow about a purchase of his business. Mr. Winslow said, "You don't suppose we are going to let you put them on the market" (meaning Mr. Morse's machines). Mr. Winslow denied making such a statement. It further appeared probable that Mr. Morse had not seen Mr. Winslow since the United Company was formed, and that the conversation referred to, if it took place at all, occurred before the United Company was formed. It did not appear that Mr. Morse was interfered with in any way (see Appendix, p. 107).

11. The United States claimed that Mr. Winslow made threats to Messrs. Merrick and Luitweiler, who were engaged in manufacturing a lockstitch machine. The charge was not included in the bill of particulars. Messrs. Merrick and Luitweiler testified that they had a conversation with Mr. Winslow at his hotel in 1905, at which he stated in effect that he would not allow them to make a dollar, and that eventually their business would come around to him and he would take it. Mr. Winslow denied making any such statements to either of them. As bearing on the credibility of their evidence it should be noted

that Merrick and Luitweiler claimed that Mr. Sampson, of the United Company, solicited the conference. They admitted that they invited Sampson off for a sail and lunch on Merrick's yacht, and during the trip broached the subject of a sale of their patents and machines to the United Company. Mr. Sampson's testimony contradicted theirs and showed that they solicited the conference. Nothing ever came of the matter, nor is it contended that Mr. Winslow's threats, if made, were carried out (see Appendix, p. 108).

12. The United States charged that E. P. Hurd, of the United Company, threatened G. H. Clark and refused to let him have one of the United Company's machines to experiment with.

Mr. Clark testified he had invented a method for moulding or lasting shoes and put one of his machines in the Richardson factory; that he called on Mr. Hurd to get a lockstitch machine to put in the same factory and Mr. Hurd told him the United Company must protect its interests and not put one of its machines into a factory for Clark to experiment with (see Appendix, p. 110).

13. The United States charged that Kimball & Hadley, who manufactured needles and awls, were threatened by the United Company, and that in consequence they sold their business to the United Company.

Hadley testified that Bayley, an agent of the United Company, told him that he could not manufacture needles as cheap as the United Company, which could give them away if necessary. Mr. Bayley was in a sanitarium and could not testify. Mr. Hadley also testified that certain manufacturers had stated that the use of his needles and awls was in violation of the leases of the United Company. This testimony was absolutely denied by the manufacturers, and no lease of the United Company does contain such a provision. Hadley had been unsuccessful in litigation with the United Company and had been enjoined by the court (see Appendix, p. 111).

14. The United States charged that three operatives of the Plant factory were employed by Willson, general manager of the United Company, to organize a union of the employees at the factory and start a strike.

These three men testified they called on Mr. Willson, who agreed to pay them $2,000 apiece and their expenses if they

would organize the employees of the Plant factory and start a strike. They testified they spent $1,500 in entertaining the employees and giving them a good time. They testified their wages averaged about $15 a week, and this sum represented the savings of eleven or twelve years. They had no papers, receipts, or written evidence of any kind to support their story, claiming they had destroyed all their papers and the list of operatives' names. Their story was flatly contradicted by nine operatives in the Plant factory, who testified that they worked in the same room with the men who claimed they were so employed, and knew them well, and they had no knowledge of any union being organized or of any strike being attempted, and that no money was spent among the employees as testified to.

The testimony of these witnesses is incredible (see Appendix, p. 119). The District Court said of it (R. Vol. 1, p. 1152):—

> "Not only does the evidence of these three witnesses appear unworthy of belief in view of its improbability, its lack of corroboration, and the evidence tending to discredit it, but it is difficult to understand how the petitioner could seriously have expected the court to accept such testimony, or have considered itself justified in offering it."

15. The United States charged that in 1910 the agents of the United Company induced a former employee of the Plant Company to demonstrate one of the Plant machines.

This was not denied, but was a harmless performance (see Appendix, p. 119).

16. The United States charged that Mr. Winslow threatened C. S. Johnson and duplicated his machine.

Mr. Johnson testified that he was connected with a company which put out a leveling machine, that he agreed with Mr. Winslow upon a sale to the United Company of the machine, but the contract for purchase when prepared was not satisfactory to him and he declined to sign it. Mr. Winslow suggested he had better sign it because he was going to have the business anyway, or words to that effect, and that shortly afterwards the United Company put a similar machine on the market. Johnson admitted he had a grievance against the United Company and was hostile to it (Appendix, p. 123). Winslow denied any such conversation, and testified that the United Company had never interfered with Johnson's business.

17. The United States charged that Mr. Winslow threatened Frank L. Harmon, an inventor, and treated him unfairly in various ways.

Mr. Harmon testified he was developing some machine, and, having no business experience, he came to Mr. Winslow for information, who advised him that he was foolish to go into the machinery business with the small amount of capital he had. This conversation took place about twenty-five years before, and long previous to the formation of the United Company (see Appendix, p. 124).

18. The United States charged that Carlton & Hunt were using machines of the Haverhill Shoe Machinery Company and desired to obtain welt machines of the defendants, and were informed they would have to discontinue the use of the Haverhill machine or pay a prohibitive installation charge on their new machines.

The only evidence in support of this charge was the hearsay statement made by Harriman, an agent of the Haverhill Company, to the effect that Mr. Hunt had told him he could not get United Company's welt machines unless he discontinued using the Haverhill Turn Machine (see Appendix, p. 130).

19. The United States charged that one Webster was operating two Pettingill nailing machines, and because of this fact could not get pulling-over machines from the United Company without paying excessive installation charges, and he therefore removed the Pettingill machines.

Webster testified that the United Company offered him pulling-over machines without restrictions if he paid an initial payment or, as an alternative, offered him a restricted lease without the initial payment. The initial payment, he said, would cost him more than it would if he used the United Company's entire machinery (see Appendix, p. 131).

Charges as to Rebates.

The United States charged that the United Company granted rebates to manufacturers to effect an exclusive use of its machinery, (1) by making distribution of its stock to users of its Goodyear machines, and (2) by cancelling the royalty on the Gem Insole Machines to users of its other machinery.

1. On June 10, 1910, the United Company sent a circular letter to its lessees in which it stated that beginning January 1, 1910, it would create a fund by investing each year for three years in the common stock of the United Company a percentage increasing each year of the amounts received from lessees for the use of Goodyear Welting, Stitching, and Turn Sewing Machines in the United States. At the end of three years it agreed to distribute the entire amount of stock held in the fund among those lessees who used the Goodyear Welting, Stitching and Turn Sewing Machines, and who should have faithfully observed the covenants of their leases, each lessee to receive a share of the fund proportionate to the amounts paid by him for the use of such machines. It agreed that not less than 15% of the amount received from welting and stitching machines and 10% of the amount received from turn machines would be so invested (P.'s Ex. 146, R. Vol. 4, p. 1067).

This offer did not require an exclusive use of the United Company's machines, but merely proposed to return a portion of the royalties received from lessees who used Goodyear welting, stitching, or turn machinery if they observed the covenants of their leases which, of course, they were morally and legally required to do. It amounted merely to a reduction in the price charged for this machinery, such reduction to be represented by stock of the United Company. This was not unlawful.

Wilder v. *Corn Products Co.*, supra.

The Attorney-General was notified during the pendency of this suit that the United Company proposed to carry out this plan, and he offered no objection to it (R. Vol. 1, p. 979, and Defs.' Ex. 344, R. Vol. 5, p. 953).

2. On January 29, 1900, the executive committee of the United Company voted that a rebate be granted to exclusive users of the company's machines, such rebate to be made by quarterly payments of amounts equal to the sums paid by them respectively as royalty on the Gem Insole Machines during the quarter for which the rebate was made (R. Vol. 1, p. 351, line 39–p. 352, line 6).

The United Company after it was formed acquired the Gem Insole Machines, which had been put out previously for a royalty charge of one-half cent per pair (R. Vol. 1, p. 430, lines 11–13). This machine was used in the manufacture of Goodyear Welt

shoes. It was practically made, upon its acquisition, an auxiliary of the Welt Set. A number of these machines were already out on leases, and the machine was therefore put out by the United Company on a separate lease, but the royalty was repaid or credited to manufacturers who used the Goodyear Set of machines. It was necessary to have a general vote to apply to machines already out on lease as well as those which might be put out, and that was the purpose of the general vote (R. Vol. 1, p. 852, lines 33–41; p. 664, lines 31–36).

VIII.

THE UNITED COMPANY HAS NOT MADE EXORBITANT PROFITS AS CHARGED IN THE PETITION.

The petition charges that the United Company has made enormous and unreasonable profits (R. Vol. 1, p. 1026). This charge is without foundation.

The only purpose of this allegation is to support the charge that one object of the defendants' conspiracy or project was to "enhance the cost of said machines to users thereof" (R. Vol. 1, p. 997). As the record shows that the United Company has very materially reduced the cost to shoe manufacturers of their machines by removing initial payments, reducing, in certain cases, royalties and giving shoe manufacturers enormously improved machines, this charge of intent to enhance the cost of shoe machinery to shoe manufacturers is proved to be absolutely unfounded. If the economies and improvements introduced by the United Company have enabled it not only to reduce the cost to shoe manufacturers of their machines, but also to make large profits itself, this shows no illegal or unlawful purpose.

But the charge that the United Company has made unreasonable profits is without foundation.

The United States in support of this charge called Richard N. Morton, auditor of the United Company and of the United Shoe Machinery Corporation. His testimony showed that the earnings based on the net assets of the United Company and the United Corporation for the period from March 1, 1905, to March 1, 1911 (the period chosen by the United States), were 14.01% and the average rate per cent. of cash dividends to net assets was 7.10% (R. Vol. 1, pp. 359–360) (Defs.' Ex. 95, R. Vol. 5, p. 24).

Mr. Morton showed that the allegations in the petition that the United Company had made $45,314,261 in the period from March 1, 1905, to March 1, 1911, was due to erroneously combining the earnings of United Shoe Machinery Corporation and its subsidiary, the United Company, thus including a large part

of its earnings twice (R. Vol. 1, p. 360). The charge in the petition that these earnings were made on $20,000,000 of invested capital was not true (R. Vol. 1, p. 360). The net assets at all times during this period exceeded this amount and in 1910 amounted to $40,771,821.

In Mr. Morton's figures practically no value is placed on the patents owned by the United Company. The company has carried its patents during this period at only $400,000. The patents on the 150 new machines developed by the United Company, including the valuable patents on the pulling-over machine, which cost the United Company nearly $1,000,000 to develop, the clicking machine patents and numerous other valuable patents, including patents on thirty-nine machines which perform work previously done by hand, which have been invented and acquired by the United Company since its organization, have not been capitalized. If these patents were included in the assets at a fair valuation the percentage of profits would be greatly reduced.

The District Court found as follows with respect to this charge (R. Vol. 1, p. 1135):—

> "No support is found in the evidence, for the charge in the petition (Par. X) that 'enormous and unreasonable profits' had been made. . . . Nothing shown by the evidence warrants the conclusion that profits unreasonably out of proportion to the extremely large cost at which the business has been developed and is maintained, the great investment of capital it has required, and the enterprise, inventive skill, and business ability devoted to it, have been realized. Nor has it been made to appear that the charges made for the privilege of using the machines are exorbitant or unreasonable; especially in view of the great benefit to manufacturers using them, in lessening their cost of production."

IX.

FORMATION OF THE UNITED SHOE MACHINERY CORPORATION.

The petition charges (par. Ninth, R. Vol. 1, p. 1024) that the United Shoe Machinery Corporation was organized in 1905 and acquired practically all the stock of the United Company in order to provide means for distributing a portion of the accumulated surplus of the United Company and to secure better means for destroying competition and monopolizing commerce.

The United Shoe Machinery Corporation issued its preferred stock, share for share, for preferred stock of the United Company and issued 1½ shares of its common stock for each 1 share of the common stock of United Company (R. Vol. 1, p. 358, line 27 ff.).

The petition admits that the business of the United Shoe Machinery Corporation has been confined to holding the stock of the United Company (R. Vol. 1, p. 1025). No other evidence was introduced relating to the United Shoe Machinery Corporation. The charge that it was formed to restrain trade or monopolize more effectively is therefore shown to be without foundation.

X.

THE UNITED COMPANY HAS NO UNLAWFUL MONOPOLY OF SHOE MACHINERY. THIS FACT NECESSARILY DISPOSES OF THE PRESENT SUIT.

1. Introductory Statement.

The petition charges that the defendants in or prior to 1899 "determined to acquire a complete monopoly of the manufacture, sale and lease of shoe machinery" and that the various acts described in the petition were steps in carrying out this unlawful project (R. Vol. 1, p. 994). After setting forth the various acts charged it alleges that the defendants have thereby acquired a monopoly in shoe machinery (R. Vol. 1, p. 1027).

It is essential to the case of the United States that it prove the existence of this monopoly.

In the first place, there is no evidence of the unlawful plan or project charged in the petition or of any unlawful purpose unless it can be inferred from the acts of the defendants as proved in the record. If these acts during a period of nearly twelve years have not resulted in an illegal monopoly, it is obvious that they are not of a character to cause such result, and, therefore, cannot well give rise to any inference of an unlawful plan to obtain an illegal monopoly. An unlawful plan to accomplish an illegal result cannot be shown by proof of acts which are either not adapted to or cannot accomplish the result.

In the second place, the purpose of this suit is primarily (1) to have the United Company dissolved because it is an unlawful monopoly, and (2) to have the leases declared unlawful because they have created or aided in creating this unlawful monopoly. If the United Company is not an unlawful monopoly, it cannot be dissolved. If no unlawful monopoly exists, it is evident that the leases have had no unlawful effect, *i.e.*, they have not created or aided in the creation of an unlawful monopoly, and they, therefore, cannot be held unlawful on the ground that they have done so.

2. The United Company has not obtained a Monopoly of all Shoe Machinery as Charged in the Petition.

The District Court said with reference to this charge (R. Vol. 1, p. 1127):—

> "The restraint or monopoly alleged in the petition is restraint or monopoly of interstate commerce in 'any and all kinds of shoe machinery,' *i.e.*, in shoe machinery generally.
> "But it appeared early in the trial that no such charge could be proved, because neither the business of the component companies in 1899 nor that of the United Shoe Company from its beginning until the bill was filed related to 'all kinds of shoe machinery.' Both were always limited to certain kinds only. This was finally conceded. . . ."

There is a large field of shoe machinery not manufactured by the United Company at all, such as all the different machines for sewing the uppers of shoes (machines exceedingly important in the manufacture of a shoe), and many others.

For many years the United Company did not deal at all in the McKay Sewing Machine, which attaches the soles of 50% of all shoes made, and such machines were dealt in and supplied by many machinery men and can be made by any one, and even now the United Company manufactures only a special, improved McKay Sewing Machine, and McKay Sewing Machines are both sold and leased by it.

In addition there are manufacturers who, in competition with the United Company, furnish every kind of a machine needed in the manufacture of shoes. Of course such competitors do not manufacture machines exactly like the machines of the United Company, because these machines are made under patents and the United Company has a lawful monopoly of their manufacture.

The failure to prove the charge of monopoly in all shoe machinery is illustrated by the following facts:—

R. P. Hazzard, a shoe manufacturer, making Goodyear Welt shoes, with an output of 5,000 pairs a day (R. Vol. 1, p. 641, line 10), testified that he used in the Bottoming Department all the machines that the United Company produces and he could get (R. Vol. 1, p. 641, lines 26–28; p. 651, lines 10–13).

A complete list of the machines in his factory appears in Defendants' Exhibit 262 (R. Vol. 5, p. 707). It shows that Mr. Hazzard had a total of 746 machines in his factory, of which only 327, or less than 44%, were obtained from the United Company. Counting as United Company machines only those which cannot be bought (that is, excluding General Department machines, which can be bought outright or bought elsewhere), this list shows that Mr. Hazzard had only 296 United Company machines out of a total of 746 machines; in other words, that less than 40% were United Company machines. This list further shows that Mr. Hazzard had 258 machines in his stitching-rooms of which only 8 were obtained from the United Company.

Jonathan Brown & Sons manufacture McKay shoes, the class of shoes most largely made in the United States. Mr. Brown stated that he wished every machine in his factory was under the control of the United Company on account of its service (R. Vol. 1, p. 731, lines 3–12). He, therefore, took as many United Company machines as he could use. A list of the machines in his factory is given in Plaintiff's Exhibit 269 (R. Vol. 4, p. 1441). This list shows that out of a total of 424 machines only 128, or 30%, were obtained from the United Company. Excluding from the list of United Company machines General Department machines, which could be bought outright from the United Company, or bought elsewhere, the list shows that only 64 machines, or 15%, were United Company machines (R. Vol. 4, p. 1446). This list further shows that out of 191 machines in the stitching-rooms only 6 were obtained from the United Company.

Charles H. Jones was a member of the Shoe Manufacturers' Alliance, a witness for the United States, and a violent opponent of the United Company. His company, the Commonwealth Shoe and Leather Company, had an output of between 6,000 and 7,000 pairs a day, mainly men's welt shoes with a few pegged and Standard Screw shoes (R. Vol. 1, p. 105). A list of the machinery in the factory of this company is given in Plaintiff's Exhibit 279 (R. Vol. 4, p. 1557). This list shows a total of 1,311 machines, of which only 584, or 44%, were obtained from the United Company. Mr. Winslow showed, however, that Mr. Jones had included in this list as obtained from the United Company 73 hand tackers, which are not machines at all, but merely hand tools without power and similar to a hammer, and 41 attachments

placed on other machines (R. Vol. 1, p. 976). Deducting these 114 tools and attachments leaves only 470 machines obtained from the United Company out of a total of 1,197, or less than 40%. Deducting the 119 General Department machines which could be bought outright (R. Vol. 1, p. 976, lines 37–40), leaves only 351 machines obtained from the United Company, or less than 30%. This list further shows that out of 465 machines in the fitting-room only 8 were obtained from the United Company.

The International Shoe Co., one of the largest in the world, did not take more than 50% of its machines of the United Company (R. Vol. 1, p. 183, lines 37–42).

The machines manufactured by the constituent companies, as we have said, occupied a comparatively small portion of the entire shoe machinery field. As to the comparative size of this field, Mr. Winslow testified:—

> "The ratio of the machines of the constituent companies to all shoe machines in 1899 was 26 to 138; that is, in round numbers there were 26,000 of United Company machines and 112,000 of machines of other companies, a total of 138,000 in 1899" (R. Vol. 1, p. 452, lines 11–15.)

The machines of the Goodyear Company were used wholly for making welt and turn shoes. The manufacture of welt shoes increased enormously after 1899, namely, from 22,700,000 pairs out of a total of 172,786,000 pairs to 86,231,000 pairs out of a total of 278,916,000 pairs (Defs.' Ex. 215, R. Vol. 1, p. 424). The number of auxiliary machines also greatly increased. In 1899 only about 50% of the shoes made were lasted by machines, while to-day practically all shoes are so lasted. In spite of this, the percentage of machines of the kind previously put out by the constituent companies as compared with other machines increased very slightly. Mr. Winslow testified:—

> "On the nearest date to the beginning of this suit for which I was able to make a compilation there were 41,602 machines of the Goodyear, heeling, lasting, and metallic departments, compared with 181,000 of all kinds of machines, a ratio of 41 to 181. In this comparison I did not include lasting or metallic auxiliaries, because they are more devices than machines.
>
> "In round numbers the United Company's machines in 1899 were about one in every five and a quarter, and in

1910 about one in every four and a half" (R. Vol. 1, p. 452, lines 16–24).

Defendants' Exhibit 235 (R. Vol. 5, pp. 531–671) sets out each consecutive operation in the manufacture of eight different kinds of shoes most commonly made, viz.: Men's McKay sewed shoes, women's McKay sewed shoes, men's welt shoes, women's welt shoes, women's turn shoes, men's loose-nailed shoes, surface standard screwed shoes, and channel standard screwed shoes. It gives under the heading of each operation the name of the machine furnished by the United Company, where it furnishes the machine for performing the operation, and also the names of other concerns furnishing machines for performing the same operation. An examination of this list will show that for practically every operation performed by machines for which work the United Company furnishes a machine there is a competitor, and in most cases there are numerous competitors prepared to furnish machines for performing the same work. This list further shows that in the manufacture of a man's Goodyear Welt button shoe in a factory where the counters are made by the manufacturer, there are 157 different operations of which 44 are performed by hand leaving 113 different operations performed by machine. The United Company furnishes no machines for 35 of these operations. When the shoes have no buttons and the counters are not prepared by the manufacturer there are 94 machine operations, and the United Company furnishes no machines for 22 of these operations. The United Company has no machines for 35 operations which may be performed by machines in the manufacture of a woman's McKay button shoe.

Defendants' Exhibit 336 (R. Vol. 5, pp. 849–905) is a list of shoe machinery manufacturers or dealers setting out the machines they offer for sale taken from Defendants' Physical Exhibits 311 to 321, which consist of catalogues, letters, and advertisements of such manufacturers and dealers. It shows over 125 different manufacturers and dealers offering every kind of machine, a number of them offering complete lines of machines.

3. The United States of Record Limited its Charge to a Monopoly of Machines for Preparing and Attaching the Bottoms to the Uppers of Shoes, Eyeletting Machines and Clicking Machines.

The evidence having utterly failed to support the charge of a monopoly of all shoe machinery, the United States, as stated above (*supra*, pp. 11–13), admitted during the course of the trial that the United Company did not have a monopoly of all shoe machinery. It conceded of record that it limited its charge to a monopoly of

> "machines for preparing and attaching the bottoms to the uppers of boots and shoes, the eyeletting machines and the clicking machines" (R. Vol. 1, p. 839, lines 13–22).

This admission eliminates at once a large portion of the field of shoe machinery and practically restricts the charge made by the United States to a monopoly of machines of the kind manufactured by the constituent companies, namely, welt and turn machines, lasting machines, heeling machines, metallic fastening machines, and pegging machines, and, in addition, the following machines developed by the United Company after its formation, namely, clicking machines, eyeletting machines, and pulling-over machines, and a few of its General Department machines.

In considering the charge of a monopoly in this limited field we submit that the record shows:—

1. That the United Company has not an actual monopoly of these machines, but, on the contrary, that there are active competitors ready to furnish machines for performing any and all of the operations for which these machines furnished by the United Company are adapted;

2. That whatever portion of the field of shoe machinery the United Company enjoys is due, among other things, to the excellence of its machines, which are patented and cannot be manufactured by others,—in other words, to its lawful patent monopolies; to the excellence of its service rendered with its machines, which no other company renders to any satisfactory extent; to its satisfactory business methods and the reasonable terms it offers which have appealed to shoe manufacturers

(as Charles H. Jones, a witness for the United States said, "The terms which the Machinery Company have recently offered their patrons on certain lines of machinery are so liberal that the outsiders cannot compete" (P.'s Ex. 147, Vol. 4, p. 1074)); to the fact that the United Company has specialized in certain lines of machines, notably those for making Goodyear shoes, has instructed, encouraged, and assisted manufacturers in their manufacture and so has created almost entirely the market which they supply.

The constituent companies, due to the patents held by them, had more of the field of shoe machinery at the time of the formation of the United Company than the United Company now has. The United Company has therefore not acquired any monopoly of the machines which were manufactured by the constituent companies, but has merely continued the monopoly already lawfully acquired and held by the constituent companies under their patents.

4. Machines for Preparing and Attaching the Bottoms to the Uppers of Shoes, Eyeletting Machines and Clicking Machines can be obtained of Numerous Competitors of the United Company.

The record shows that shoe manufacturers do not take the United Company's machines of the classes enumerated above as to which the United States charges a monopoly because they cannot obtain machines for performing the same work elsewhere. There are competitors ready to furnish these machines to any manufacturer desiring them.

Mr. Winslow testified:—

> "Some of the companies which I have named, like the Hamel Company, Haverhill Shoe Machinery Company, and the R. H. Long Company, are larger than any shoe machinery companies doing business in the United States or anywhere else in 1898, except the three companies which came into the United Company; and they are better fitted to build machines and do build to-day a larger number of different kinds of machines than any concern in existence in 1899, including the three companies that went into the United Company. It is generally true of shoe machinery

manufacturers doing business just prior to the bringing of this suit, as compared with the outside manufacturers doing business in 1899, that they are larger and are capable of furnishing a more complete equipment to factories" (R. Vol. 1, p. 859, lines 22–34).

"The manufacture of shoe machinery does not require any particular kind of machine tools. The standard machine tools used in manufacturing all ordinary machines are the tools that are used in every factory making shoe machinery" (R. Vol. 1, p. 858, lines 25–29).

One of the most important machines used in the bottoming of shoes is the McKay Sewing Machine. This machine was used to attach the sole to the upper of nearly 40 % of the shoes made in 1910 (Defs.' Ex. 215, R. Vol. 1, p. 424). The United Company did not even manufacture this machine for a number of years after its formation nor until 1908. Shoe manufacturers have always been able to obtain it from any one of a large number of dealers in machinery. A list of seventeen American dealers and ten foreign dealers furnishing this machine is set out at R. Vol. 1, pp. 858–9.

Mr. Brown testified that there was no difficulty in buying all the McKay machines he wanted at any time (R. Vol. 1, p. 730, lines 18–22). He had thirteen of these machines, only three of which he had obtained from the United Company (R. Vol. 1, p. 730, lines 23–25). The United Company never in any way interfered with his buying McKay Sewing Machines elsewhere (R. Vol. 1, p. 730, lines 26–30).

In 1909 there were in the principal shoe manufacturing districts 1,488 McKay Sewing Machines, of which 308 were supplied by the United Company and 1,180 by others. In the Lynn District there were 59 McKay machines supplied by the United Company and 367 supplied by others (R. Vol. 1, p. 977, lines 16–31).

John Bulmer, witness for the United States, testified: "McKay Sewing Machines are to be had from about all the shoe manufacturers. They pass through our hands more or less frequently and we rebuild or repair them and furnish them to others. We have no difficulty in getting them at any time" (R. Vol. 1, p. 908, lines 38–41).

This is the case of the bottoming machine used to attach the sole on the type of shoes made in the largest quantities. It is

clear that there are a very large number of manufacturers and dealers ready to furnish the machine and the United Company has furnished only a small percentage of the total machines outstanding.

In respect to other machines of the type of which monopoly is charged, namely, machines for preparing and attaching the bottoms to the uppers of shoes, eyeletting machines, and clicking machines, Defendants' Exhibit 337 (R. Vol. 5, p. 906), compiled from the catalogues, letters, and advertisements of various shoe manufacturers, gives a list of manufacturers and dealers prepared to furnish these machines. Each machine is listed separately and the names of the concerns offering it are given.

Defendants' Exhibit 331 (R. Vol. 5, p. 838) gives a list of concerns putting out welt and turn machines and outsole stitching machines from 1899 to 1911.

Defendants' Exhibit 332 (R. Vol. 5, p. 843) gives a list of Goodyear auxiliary machines and machines which other machinery manufacturers offered for doing the same work.

These lists are too long to copy in full upon the brief. They show the very large number of shoe machinery manufacturers making these kinds of machines and the considerable number of competitors prepared to furnish each kind of machine. Some of these shoe manufacturers are prepared to furnish complete lines of shoe machinery.

C. A. Hamel, who took over the Duplessis Company in 1909, and the Duplessis Company from 1903 to 1909, have done a considerable business in shoe machinery. Hamel testified: "We have a complete set of machines for making turn shoes and a complete set of machines for making welt shoes" (R. Vol. 1, p. 327, lines 15–16). A list of the number of machines put out by the Duplessis Company and Hamel, as its successor, is given at R. Vol. 1, page 326. It shows that they have put out 148 welt and turn machines (86 in this country and 62 abroad); 61 rapid outsole stitchers (41 in this country and 20 abroad); 90 insole channelers (70 in this country and 20 abroad); 55 loose nailers (24 in this country and 31 abroad); and 35 sluggers (22 in this country and 13 abroad).

R. H. Long, through the R. H. Long Machinery Company, is prepared to furnish a complete line of machines (see Physical Exhibits, R. H. Long Machinery Company catalogues, Defs.' Ex.

72, Defs.' Ex. 73). J. J. Doidge, manager of the company, testified that the company was ready to supply a full line of machinery for welt or turn shoes (R. Vol. 1, p. 345, lines 43–44). The company has practically completed and is ready to furnish the trade with 450 outsole stitching machines, 30 welters, 25 lasting machines, and 4 or 5 heeling machines (R. Vol. 1, p. 345, lines 39–42). It can also supply metallic fastening machines (R. Vol. 1, p. 346, line 1).

The Haverhill Shoe Machinery Company offers a full line of machines.

Edwin A. Webster, a director of the company, testified —

> "We [the Haverhill Company] undertake to fill the requirements of a manufacturer whatever they are. We advertise that we furnish any manufacturer a full line of all kinds of shoe machinery, whether it is for welts or McKays, or turns or pegs or anything else. We are prepared to make good if our people that manufacture machines don't go back on us" (R. Vol. 1, p. 301, lines 4–9).

The Haverhill Company has put out about 25 heel nailing machines (R. Vol. 1, p. 291, lines 10–11); about 60 or 65 turn channeling machines (R. Vol. 1, p. 291, lines 35–36); and about 65 turn and welt machines of which 13 are in the company's own factories (R. Vol. 1, p. 292, lines 7–9), and various other machines (R. Vol. 1, pp. 291–2). The company has machines with 58 shoe manufacturers of whom 38 also use the United Company's machines (R. Vol. 1, p. 299, lines 4–7). It has five agents who solicit orders and keep the machines in repair (R. Vol. 1, p. 292, lines 40–42).

In addition there are several foreign firms prepared to furnish complete lines of machines. John Cavanaugh, a salesman of shoe machinery connected with the Boylston Manufacturing Company, and a witness for the United States, testified that the Standard Rotary Machine Company of England and Johnson of Paris are good-sized concerns and manufacture complete lines of machines. The Standard Engineering Company is ready to do business in the United States and he should say the other companies would do so (R. Vol. 1, p. 957, lines 31–40). The Atlas Company of Leipsic manufactures a complete line of machines for welt, turn, and McKay shoes (R. Vol. 1, p. 342, lines 8–9).

That shoe factories can be equipped without using United Company machines is admitted.

The Framingham Shoe Company, owned by R. H. Long, uses no United Company machines, nor does the Buffalo Shoe Company (R. Vol. 1, p. 30, lines 31–38).

Henry P. Guptill, a witness for the United States, whose factory has a capacity of 2,500 to 3,000 pairs of turn shoes a day, and is therefore a large factory, testified he used no United Company machines (R. Vol. 1, p. 290, lines 11–15, 24–25). Mr. Long testified that the Taylor Shoe Company of Lynn used no United Company machines (R. Vol. 1, p. 232, lines 29–31). Mr. Webster, of the Haverhill Shoe Machinery Company, testified he had machines with 58 shoe manufacturers, of whom only 38 also used United Company machines (R. Vol. 1, p. 299, lines 4–7), thus showing 20 shoe manufacturers not using United Company machines.

The Non-Royalty Shoe Company was organized by the Shoe Manufacturers' Alliance, which was opposed to the United Company, for the purpose of operating a factory without the use of United Company machines. Warren F. McElroy, a member of the Shoe Manufacturers' Alliance, equipped the factory. He obtained no machinery from the United Company, except one General Department creasing machine which he bought. A few machines he obtained from abroad. The factory was equipped to make welt shoes. According to Mr. McElroy's testimony, the Non-Royalty factory made a welt shoe which he considered a better shoe than the Goodyear Welt (R. Vol. 1, p. 194, lines 16–17). The factory was equipped to make 600 to 1,000 pairs a day (R. Vol. 1, p. 194, lines 21–22). The factory closed down in 1913 because of a fire (R. Vol. 1, p. 194, lines 17–18). At that time the machinery was offered for sale though the sale was postponed. A list of the machinery advertised for sale appears in Defs.' Ex. 42 (R. Vol. 5, p. 48).

It did not appear definitely how many shoe manufacturers there are in the United States. The United Company had 1,033 lessees who were shoe manufacturers during the year 1911 (R. Vol. 1, p. 26, lines 38–40). Mr. Donham testified that he did not know how many shoe manufacturers there were in the United States at that time, but should say there were somewhere between 1,300 and 1,500. The census for 1910 showed

somewhere in the neighborhood of 1,300 (R. Vol. 1, pp. 26–27), and the petition alleges there were in 1911 about 1,300 (R. Vol. 1, p. 991).

The District Court found that the defendants were not monopolists, saying (R. Vol. 1, p. 1135):—

> "There is no question that the above described development of the United Company's business has resulted in a very great commercial success. Its machines, as was the case with those produced by the component companies in 1899, have ever since been those which shoe manufacturers in general can use to the best advantage and therefore prefer. The increase in the number of its machines in the hands of users has been very large. Nor is there any question that of all the machines, of the kinds to which this case relates, in use when the petition was filed, those of the United Company constituted all but a very small proportion.
>
> "It is nevertheless true that, considering the whole field of machinery for stitching together the bottoms and uppers of shoes, there has all the time been free competition. The use of other machinery to accomplish the purpose has always been open to shoe manufacturers. **In that part of the field of trade in shoe machinery to which the case is now limited as above, the defendants have been not monopolists but competitors. Their only means for holding the field have been legitimate means,—better machines. Their specialization in machines for bottoming shoes, and not a monopoly of such machines, has been the cause of their success**" (BLACK LETTERS OURS).

5. The United Company Lawfully Occupies the Field it enjoys Under its Patents.

It is of the utmost importance to bear in mind that the United Company's machines are and always have been patented. The United Company, therefore, has a lawful monopoly of these machines. No one else can manufacture machines of this type, and there is a natural presumption that if they are generally or exclusively used this is due to their superiority over other types of machines if such exist and not to any illegal restraint of trade. As said of these machines, by this court, in *United States* v. *Winslow*, 227 U. S. 202, 217,—

> "The machines are patented, making them is a monopoly in any case, the exclusion of competitors from the use of

them is of the very essence of the right conferred by the patents, *Paper Bag Patent Case*, 210 U. S. 405, 429, and it may be assumed that the success of the several groups was due to their patents having been the best."

There is a vital difference between an industry concerned with the manufacture of unpatented goods or machines and an industry in which the product is dominated by patents. In a business free from patents, such as the tobacco or oil business, and the manufacture of cotton or woolen goods, the business is open to any one. It would be surprising to find a single manufacturer refining all the oil, making practically all the cigars, or cigarettes, or all the cotton or woolen goods used in the country. Instantly there would arise a suspicion, if not a presumption, of employment of illegal methods to obtain such a monopoly. Such presumption would be strengthened if it were found that such monopoly were obtained by combining a large number of concerns previously competing which could have continued to manufacture goods if left to operate independently. The same would be true in the case of an industry in which, though the product was patented, the patents covered minor parts or methods and had no important or dominating influence, so that a manufacturer could enter the business and compete without the use of patented inventions.

In an industry like the shoe machinery industry, however, in which patents dominate the entire situation the inference is quite different. It would be difficult to sell machinery of so old a type that the patents on it have expired. Such machinery would express the stage of development which machines had reached seventeen to twenty years previously, and as the art is comparatively young and has been constantly advancing such machines would be so far inferior to the latest patented machines that there would be little market for them. The manufacturer who can hope to engage in this industry successfully is one who has patents either better or as good as those of the manufacturer or manufacturers already in the field. Furthermore, even if a manufacturer holds such patents and is therefore able to enter the industry, he must maintain his position by the acquisition or development of new patented inventions, or his machines will rapidly become antiquated and will not be taken by shoe manufacturers. The rapid development of the industry,

the remarkable increase in efficiency every few years of improved machines makes this essential.

In such an industry dominated by patents either the inventions originally made completely control the industry and no other inventions are made, except improvements or additions to the original inventions, which are of value only in connection with the original inventions, and, therefore, the original inventors or their successors are the only persons who manufacture the patented product, or one manufacturer's patents are almost inevitably better than the patents held by any other manufacturer and his machines are therefore used almost exclusively. In such an industry, then, it is almost inevitable that one manufacturer will dominate the industry lawfully by reason of his patents until such time as the industry has developed to a point where the important inventions have all been made and the patents thereon have expired, and inventors must confine themselves to minor improvements and refinements which are not of vital importance. When that point is reached the industry will be open to all; prior to that time it is for practical purposes open only to those having the best patents. So long as it is dominated by patents the fact that the manufacturer who has the best patents produces the larger share of the product does not give rise to any presumption of illegal methods, but is natural and to be expected.

The United States points to the large proportion of the trade in shoe machinery held by the United Company and the fact that shoe manufacturers must turn to it if they wish the best machines as evidence of an unlawful monopoly. This is entirely unjustified. The right of an owner of patents to exclude all others from making use of his inventions and to draw to himself all trade in the patented articles and, as a consequence, to acquire a commanding position in the industry if no other patented articles are equally good is undoubted. This court in *United States* v. *Bell Telephone Company*, 167 U. S. 224, p. 250, said:—

> "Counsel seem to argue that one who has made an invention and thereupon applies for a patent therefor, occupies, as it were, the position of a quasi trustee for the public; that he is under a sort of moral obligation to see that the public acquires the right to the free use of that invention as soon as is conveniently possible. We dis-

> sent entirely from the thought thus urged. The inventor is one who has discovered something of value. It is his absolute property. He may withhold the knowledge of it from the public, and he may insist upon all the advantages and benefits which the statute promises to him who discloses to the public his invention. He does not make the law. He does not determine the measure of his rights. . . . As the law-making power has prescribed what the public will give, specified the terms and conditions of purchase, indicated the time and methods of determining the right of compensation, he on his part has an absolute legal right to avail himself of all the provisions thus made."

No case presenting facts in any way similar to the present has ever before been decided by this court under the Sherman Act, except the case of *United States* v. *Winslow*, supra, in which the formation of the United Company and its acquisition of the constituent companies holding patents which gave them a practical monopoly of the business was before this court and was held lawful. In no other case heretofore decided has the product which the defendant has been accused of monopolizing been protected by dominating patents which restricted competitors to the marketing of machines of a different and inferior type. In practically every case in which the monopoly of an industry has been charged such monopoly has been created by a combination of competing concerns, the combination of which was not necessary to enable the defendant to produce a satisfactory product. In the present case the United Company was a combination of non-competing concerns and its subsequent acquisitions have been mainly of small non-competing concerns of minor importance having little or no influence in the trade, acquired in order to enable the company to give its customers a broader line, or to acquire patents required to improve its own machines or to settle litigation. In all cases where such acquisitions were made there were left outstanding competitors (R. Vol. 1, p. 465, lines 20–23).

The presumptions and inferences applicable in other cases are inapplicable in the present case. The combination of non-competing concerns is lawful, no intent can make it unlawful, and it, therefore, can give rise to no unlawful inference (*United States* v. *Winslow*, supra). The defendants' patented machines are presumed to be the best of their kind (*United States* v. *Winslow*,

supra), and the fact that the United Company has a large portion of the business of furnishing shoe machinery is therefore natural and gives rise to no inference of unlawful methods.

The District Court said (R. Vol. 1, p. 1136):—

> "The business which the defendants have developed and established is not, and has never been, one in which everybody might freely engage. No one else could lawfully make or use machines containing improvements covered by the defendants' patents. Nor can it be said that the demand for such machines which they have supplied existed independently of the defendants; on the contrary, they have created it by the new methods of shoe manufacture which their improvements have educated and enabled manufacturers to follow. It cannot justly be said that the case is one in which a field of commerce normally belonging to all has been captured by a single concern. The principles applying in such cases cannot justly be applied here."

6. The Constituent Companies had Lawful Patent Monopolies of the Machines They manufactured. The United Company has not acquired Any New Monopoly in These Machines.

If previously to the formation of the United Company the constituent companies had supplied only a small portion of the machines of the kind they manufactured, and there had been competitors furnishing similar machines to a large portion of the shoe manufacturers, and if, after the formation of the United Company, such competitors had disappeared and the United Company had thus acquired all or the greater part of the trade, there might be a presumption or inference that such result was caused by illegal methods which would call for a careful scrutiny of the causes. Such, however, is not the fact. The constituent companies, at the time of the formation of the United Company, had as large, or a larger, portion of the trade in the machines they manufactured as the United Company now holds and this was due to the fact that these machines were the best and were protected by patents which prevented others from manufacturing them. The shoe machinery industry was new and the constituent companies, which held the only practical patents, had

created the industry, and, therefore, naturally had the greater part of the business.

The petition admits and alleges that the constituent companies had a lawful monopoly of the machines they manufactured. It sets out that the principal essential machines used in the manufacture of shoes are lasting machines, welt sewing and outsole stitching machines, heeling machines, and metallic fastening machines (R. Vol. 1, p. 991). It alleges that the principal concerns engaged in the business were the constituent companies (R. Vol. 1, p. 992). It alleges that the constituent companies were "manufacturing their machines and parts thereof under Letters Patent of the United States and of other countries" (R. Vol. 1, p. 993). It then alleges that the defendants, "not being satisfied with the benefit of lawful monopolies and rights belonging to them under Letters Patent of the United States and of other countries," formed an unlawful project to unlawfully expand their monopolies and rights (R. Vol. 1, p. 994). Finally it alleges that the United Company, by the acquisition of the constituent companies, "acquired control of the greater portion of the manufacture of, and trade and commerce in, the machines included in each and all of the groups of machines" mentioned (R. Vol. 1, p. 996).

In other words, the petition admits that the constituent companies had patents which gave them lawfully the greater part of the trade in lasting, welt sewing, and outsole stitching, metallic fastening, and heeling machines. This same fact is shown by the record.

As Charles A. Eaton testified:—

> "I haven't been looking about for other sources to go to to obtain my machines. I don't know of any other system of shoe machinery. This is the only system that is strong enough to commend itself at all. This system is the only one I ever had in mind; it is good enough for me" (R. Vol. 1, p. 755, lines 38–42).

There were other concerns putting out machines, but the constituent companies' machines were the best (R. Vol. 1, p. 532, lines 16–18, 29–32). The constituent companies' machines were doing about all the welting, outsole stitching, lasting, and metallic fastening that was being done in the United States (R. Vol. 1, p. 537, lines 32–37). No other company had put

out heeling machines for several years prior to 1899 and the McKay Company was putting out all of the heeling machines that were being made in the United States (R. Vol. 1, p. 851, lines 27–30).

The reason is obvious. The shoe machinery industry was of very recent origin. Previous to 1850 or 1860 all shoes were made almost entirely by hand (R. Vol. 1, p. 521, lines 15–16). Shoe machinery had only been gradually developed since that date, and, as we have shown, many important machines had not been invented in 1899. In respect to the machines put out by the constituent companies, their invention was new, and important improvements were constantly being made in them. The constituent companies held the patents under which they had originally been constructed; they were the ones most interested in developing and improving the machines and they, therefore, developed the machines, and held the patents on the new improvements. The constituent companies, therefore, had practically all the business as a result of these lawful patent monopolies.

To illustrate: The Goodyear machines were designed to make a welt shoe by machinery. Welt shoes had been made for many years previously, but always by hand. The system ran back to 1870 or 1868 (R. Vol. 1, p. 625, line 20). The Goodyear Company, however, revolutionized its machines about 1890 by the use of new inventions (R. Vol. 1, p. 678, lines 6–9). The auxiliary machines needed to make the system a practical success were only gradually developed and were still in process of development in 1899. The Goodyear Company in 1899 was still endeavoring to introduce its machines into general use. In 1899, after the formation of the United Company, only 22,700,000 pairs of welt shoes were made out of a total production of 172,786,000 shoes (R. Vol. 1, p. 424). The Goodyear shoe was in competition with the McKay shoe. In other words, the industry of making welt machinery had been created by the Goodyear Company; no one else had invented machines comparable to the Goodyear machines, so that inevitably the Goodyear Company, by reason of its patents, had practically all of this new field which it had created.

The lasting machine industry was more recent still. In 1890 very few shoes were lasted by machines except heavy brogans, which were, of course, limited in number and which were lasted

on the McKay & Copeland machine (R. Vol. 1, p. 401, lines 14–16). Shoe manufacturers at that time were sceptical as to the possibility of developing a lasting machine at all (R. Vol. 1, p. 401, lines 24–26). The industry dates from that period only nine years previous to the formation of the United Company. Even when the machines had become commercially useful the difficulty of introducing them, due to the opposition of operatives, the necessity of instructing operatives in the use of the machines, and the scepticism of shoe manufacturers was enormous (R. Vol. 1, pp. 401–3). In 1899 not more than 50% of the shoes made were lasted by machines (R. Vol. 1, p. 402, lines 14–18). Here again we find the lasting machine industry a new industry created by the Consolidated Company and only partially developed after some years of labor and inventions, and protected by patents. The fact that the Consolidated Company put out practically all of the lasting machines was no more remarkable than that the Bell Telephone Company, after the invention of the telephone, was the only concern engaged in making telephone instruments.

7. The Other Machines not manufactured by the Constituent Companies as to which Monopoly is charged were New Inventions developed by the United Company and protected by Lawful Patent Monopolies. Any Monopoly Acquired by the United Company in these Machines was due to the Fact the United Company created them and the Fact that they were Lawful Patent Monopolies.

The pulling-over machines were invented by the United Company and first put out in 1902. The pulling-over operation was previously done by hand exclusively (R. Vol. 1, p. 425, lines 33–34). Various auxiliary machines were developed later (R. Vol. 1, p. 12, lines 1–8). The first lease including auxiliaries was put out in 1905 (R. Vol. 1, p. 12, line 9). The pulling-over machine is a remarkable invention and an entirely new creation. Its development cost the United Company nearly $1,000,000 (R. Vol. 2, p. 2552). It had been in existence at the date the petition was filed only nine years (R. Vol. 2, p. 2542). It is protected by 19 patents (R. Vol. 2, p. 2573), and the auxiliary machines are protected by over 28 different patents (R. Vol.

2, pp. 2523–5, 2572–4. See pulling over system lease, P's. Ex. 39, R. Vol. 3, pp. 363, 364). The fact that no one else had developed or invented a different type of machine which was as satisfactory to shoe manufacturers and in general use is therefore not remarkable; on the contrary, it would be surprising if any one had done so.

The clicking machine was another remarkable invention developed by the Experimental Department of the United Company, which probably saves more money for the shoe manufacturer than any machine ever produced (R. Vol. 1, pp. 425–6). It was first made commercial in 1908 or 1909 and was then first leased (R. Vol. 1, p. 14, lines 30–33). The machine cuts out the uppers of shoes in such a way as to effect an enormous saving of leather; previously to its invention the shoe manufacturer generally cut the upper by a hand knife, resulting in a considerable loss of stock (R. Vol. 1, p. 426, lines 2–24).

Mr. Winslow testified:—

> "The clicking machine was another machine which was developed by the Experimental Department of our company and perhaps saves more money for the manufacturer than any other machine which has been produced" (R. Vol. 1, pp. 425–6, lines 43–44, 1–2).
>
> "Since my knowledge of the shoe art no machine has accomplished so much for the art as the clicking machine" (R. Vol. 1, p. 426, lines 19–20).

This machine had been put out less than three years before the present petition was brought. It is protected by 13 patents (R. Vol. 2, p. 2598). George Harsh, witness for the United States, testified that the United Company's clicking machine was the only commercial machine in the market (R. Vol. 1, p. 198, lines 30–32). It is obvious that the success it had was due to its merit and that the large trade in this machine which the United Company had was due to the lawful patent monopoly which prevented its manufacture by others.

The United Company's eyeletting machines were likewise patented machines developed by it (R. Vol. 1, p. 14, lines 21–23). The Duplex machine, which is the standard machine for regular work, was first put out in 1902 (R. Vol. 2, p. 2617). It is protected by twelve patents (R. Vol. 2, p. 2617). It is the only machine ever produced which inserts eyelets on both sides of the

shoe at once (R. Vol. 2, p. 2618). The Universal machine is another type likewise adopted in 1902 and it is now protected by five patents and one patent application (R. Vol. 2, p. 2636).

The above list includes all the machines as to which monopoly is charged by the United States, except in so far as such General Department machines may be included, which may come within the description of machines for preparing or attaching the sole to the upper. Some of these machines are used in preparing the bottoms of shoes. The United States, however, specified no General Department machines which it contended were included in its charge of monopoly. The United States introduced no evidence with respect to the comparative amount of business in General Department machines done by the United Company and other concerns, and no evidence was introduced showing that the United Company had any actual monopoly of such machines. There is absolutely no basis, therefore, in the record for charging any monopoly of them. General Department machines are sold outright. If, which does not appear, the United Company furnishes a considerable portion of any of these machines, it is presumably due to the excellence of the machines or the patents covering them.

Such General Department machines are manufactured by a large number of competitors of the United Company. A compilation from the testimony of machinery makers manufacturing and selling such machines will be found in the Appendix, pp. 132–156.

From the foregoing it appears that the constituent companies of the United Company, at the time of the formation of the United Company, furnished practically all the welt and turn machines, lasting machines, metallic fastening machines and heeling machines used in the country. The trade in these machines had only recently been created by inventions which made the machines possible, and the constituent companies held the best of the patents covering these inventions. Such monopoly as they had lawfully resulted from the patents. The United Company, therefore, did not acquire any new monopoly in these machines; it merely continued the lawful monopoly, if it can be called such, held by the constituent companies. The charge of the United States that the United Company acquired a monopoly is absolutely unfounded. The only possible con-

tention the United States could make is that the United Company maintained this monopoly by unlawful methods.

In respect to the pulling-over machines, clicking machines, and the eyeletting machines, it appears that they were developed by the United Company, that the United Company had a lawful and inevitable monopoly in these machines when first put out, because the United Company held strong patents covering them and no one else had invented any other machines to do the same work. Here again the original acquisition of the business by the United Company was unquestionably lawful, and the only possible contention that the United States can make is that these lawful patent monopolies have in some way been illegally maintained.

8. The United Company has Maintained the Business in Shoe Machinery which it Acquired, not by Unlawful Methods, but by Reason of the Excellence of its Patented Machines and the Service it Renders with Them.

We have shown above that the United Company lawfully acquired its business in the machines as to which a monopoly is charged. We submit the record shows that this business has been maintained by lawful methods.

The business was acquired by reason of the patented inventions held by the United Company and its constituent companies. The development of the machines since that date has been constant; the United Company has spent enormous sums in invention and development of machines and to-day the United Company has as strong if not stronger patents on its machines than it had in 1899 or has had at any time since. There is absolutely no evidence that other persons have invented better machines or equally good machines. If the United Company's patents in 1899 gave it most of the business in the machines which it manufactured, there is every reason that its patents should have enabled it to retain this business.

In addition, however, the United Company has developed a service in connection with its machines at enormous cost to itself, which has proved of the utmost importance to shoe manufacturers, which is given by no other shoe machinery company and which shoe manufacturers testified was vital. It has in no

instance increased its charges for machines; on the contrary, it has in certain instances reduced its royalties and it has removed the initial premiums charged in 1899. It has furnished new machines as they have been invented, free of charge, taking back the old machines, and it has added many important auxiliary machines without additional charge.

By these various means it has added enormously to the efficiency and usefulness of its machines. If owing to their excellence they were used almost entirely by shoe manufacturers in 1899, there is still more reason they should be so used to-day.

We submit that the United States has wholly failed to show that the United Company's continuance of the success of the constituent companies has been due to unlawful acts, or any unlawful plan on the part of the defendants to monopolize. Whatever view may be taken of the acts in evidence in this suit, whether any of them considered individually are deemed lawful or unlawful, the fact is clear from the record that the excellence of its patented machines which gave the constituent companies their success, coupled with the great improvement in the machines effected by the United Company, and the service it renders with them, is the cause of the success of the United Company to-day. The District Court so found, saying:—

> (R. Vol. 1, p. 1135.) "There is no question that the above described development of the United Company's business has resulted in a very great commercial success. Its machines, as was the case with those produced by the component companies in 1899, have ever since been those which shoe manufacturers in general can use to the best advantage and therefore prefer. The increase in the number of its machines in the hands of users has been very large. Nor is there any question that of all the machines, of the kinds to which this case relates, in use when the petition was filed, those of the United Company constituted all but a very small proportion."
>
> . . . . . .
>
> "If there is any sense in which the result attained as above can be called a 'monopoly,' it does not follow, in view of the circumstances shown, that the defendants have either restrained trade or been guilty of monopolizing, or attempting to monopolize, within the meaning of the act. Nor can I regard the case as one in which any presumption arises, from the fact that so large a proportion of the users of these machines use the defendants'—that the defendants

have committed any of the above forbidden acts in accomplishing the above result. The proof is too complete that it has been in fact reached by the use of methods entirely lawful, the leading features whereof are below indicated."

. . . . . .

(R. Vol. 1, p. 1137.) "That the degree of success attained and the preponderance in number of users supplied which the United Company has secured are fully accounted for by the superior efficiency it has developed in its patented machines for work in combination with each other, together with the superior facilities it affords as above for their most efficient use, must be regarded as shown beyond question. It is not disputed that, when the petition was filed, its machines represented, in number and amount, the highest development ever reached in the art to which they belong; or that they are most in demand by manufacturers of the higher grades of shoes for that reason."

. . . . . .

(R. Vol. 1, p. 1187.) "It is impossible to believe that the defendants' equipment is in so many shoe factories for any other substantial reason than the merits of what they have had to offer. To say that this is due, in any substantial degree, to the fact that its leases run beyond the terms of patents, or because of the exclusive use, prohibitive or cancellation clauses, rests largely, if not entirely, upon assumption. But that the business of these defendants rests upon the lease provisions objected to in such a substantial amount as to constitute any factor of independent force in securing or maintaining a monopoly does not appear."

XI.

RELIEF ASKED FOR BY THE UNITED STATES.

The Impossibility of Granting the Relief asked for by the United States without Irreparable Damage to the Public proves the Lawfulness of the United Company's Business.

The petition prays:—

1. That the United Company and the United Shoe Machinery Corporation "be dissolved and separated into such parts that no one of them will constitute a monopoly" (R. Vol. 1, pp. 1030–1); and

2. That the leases of the United Company containing like or similar provisions to those complained of be declared illegal and void and the defendants be enjoined from enforcing such provisions (R. Vol. 1, pp. 1029–30).

The petition prays for other incidental relief, but the foregoing is the primary and material relief requested.

1. A Separation of the United Company's Business would Irreparably Damage Shoe Manufacturers and the Public.

A division of the United Company's business could be attempted in only one of two different ways, *i.e.*, either (1) by dividing the business among two or more non-competing concerns or (2) by attempting to divide it among two or more competing concerns.

If the business were divided into its original component parts, that is, if the Goodyear business were set apart in one company, the lasting machine business in another company, the heeling and metallic machines in another company, and the new machines, such as the pulling-over machines, clicking machines, eyeletting machines, and General Department machines acquired since the formation of the United Company were set apart in still another company, we should have four non-competing companies. These companies could, unless enjoined, consolidate again, because it would be entirely lawful to do so as held in *United States* v. *Winslow*, supra.. No competition would be

created by such a division and no good would be accomplished; on the contrary, the public would lose the benefit of the increased efficiency which results from the consolidation in one company of these different machines, such as better service to shoe manufacturers, the maintenance of a large Experimental Department, wholesale prices, and reduction of expenses.

If an attempt were made to divide the business of the United Company into competing concerns, this could be attempted only by taking each machine separately and transferring to one concern a portion of the patents covering the machine and to another concern the remainder of the patents covering it. The United Company has not two or more machines of each type protected by distinct patents and capable of competing with each other if transferred to separate companies. It has a single machine of each type. In certain cases it has a new improved model and one or more old models, but in such cases the new model is not only superior to the old model, but it almost invariably embodies patents also embodied in the old models.

A division of the patents covering a machine between two concerns would, of course, make it impossible for either to manufacture the machine. Suppose, for example, the court should order that one-half the patents on the welter or pulling-over machine should be sold or disposed of. Neither the United Company, which retained half the patents, nor the vendee of the other half could make the welter or pulling-over machine as it is now manufactured and put out.

Nor would the result be better if the court should order that the acquisitions which the United States contends are improper should be disposed of. Take, for example, the Ideal machine and the Eppler machine. Both are now obsolete. Nobody wishes to use these machines to-day. A concern holding the patents on these machines would not manufacture them even if they could do so without infringing the United Company's patents. Take the Plant acquisition. A sale by the United Company of these patents would prevent its manufacturing the improved Model K Welter which is enormously more efficient than either the former Plant welter or the former United Company welter. The loss to the shoe manufacturer would amount to hundreds of dollars a year on each new machine. Such sale of the Plant patents would also mean that patents on twenty-six

machines now put out by the United Company would be transferred and either the United Company would have to give up the manufacture of these machines or it would have to remodel them materially to avoid infringement of the transferred patents, and thus make them far less efficient. On the other hand, it is extremely doubtful if the grantee of the patents would attempt to manufacture under them. If he did, he would, as we have shown, be unable to manufacture efficient machines which he could market, or he would necessarily infringe patents of the United Company which it is necessary should be combined with the Plant patents to make efficient machines.

The fact that the United Company's business cannot be separated without such consequences proves conclusively that its creation was inherently lawful and for the purpose of greater efficiency and to enable it to furnish more efficient machines.

The Sherman Act, as we have shown, is intended to prevent "not the mere injury to an individual which would arise from the doing of the prohibited acts, but the harm to the general public which would be occasioned by the evils which it was contemplated would be prevented."

> *Wilder Mfg. Co.* v. *Corn Products Co.*, 236 U. S. 165, 174.

It may possibly be true that if the United Company's patents should be distributed among two concerns, neither of which held all the patents on one machine, and neither of which was therefore able to make the latest improved machines, competitors of the United Company would be benefited. Shoe manufacturers and the public generally, however, would be disastrously affected. The Sherman Act was never intended to produce such a result.

In *United States* v. *St. Louis Terminal*, 236 U. S. 194, the decree of the lower court in a suit under the Sherman Act enjoined the defendant company from doing a transportation business which originated and terminated on its own lines. This court held that the decree should be qualified so as to recognize the defendants' right to do such business (p. 205):—

> "Because not to so decide would lead inevitably to the conclusion that the decision of this court contemplated safeguarding one public interest by destroying another and in

effect proposed making the movement of transportation freer in some channels by absolutely obstructing all possibility of its flow in others."

2. To hold the Leases void would disastrously affect Shoe Manufacturers and the Public.

The United Company owns the leased machines. If the leases were held void, lessees would have no further right to use the leased machines held by them until they made a new agreement with the United Company permitting them to do so.

We have shown above that the provisions complained of are necessary to enable the United Company to furnish its machines on the present favorable terms. If the leases were held void the United Company would therefore be obliged to sell its machines outright or to lease them on far less favorable terms than at present. If it were willing to enter into new lease agreements with shoe manufacturers in respect to the machines they now hold, and it were enjoined from inserting in its leases provisions similar to those now used, it would inevitably be obliged to require a large initial payment in order to insure itself a fair return on the machines. The result, therefore, of declaring the leases void would be to compel shoe manufacturers to raise the capital necessary to obtain their machines and to make them take the machines on less favorable terms. Many shoe manufacturers who have entered business because they were able to get their equipment without initial expense might be unable to raise the capital necessary to retain their machines. The Sherman Act was not intended to produce such a result; it was enacted only to prevent such acts as prejudice the public interests.

3. The Leases cannot be declared Unlawful or the United Company enjoined from enforcing them, as the Lessees are not Parties to the Suit.

The lessees are as vitally interested in the legality of the leases as the United Company itself. Under these leases they hold a valuable equipment without capital expenditure on their part, paying a wholesale rate for a wholesale use as a series, and paying only as they use the machines and to the extent that

they use them. They are necessary parties to a suit which seeks to declare these leases void.

Minnesota v. *Northern Securities Co.*, 184 U. S. 199.
Gregory v. *Stetson*, 133 U. S. 579.
Shields v. *Barrow*, 17 How. 130.

In *Minnesota* v. *Northern Securities Co.*, supra, the court said (p. 235):—

> "The general rule in equity is that all persons materially interested, either legally or beneficially, in the subject-matter of a suit, are to be made parties to it, so that there may be a complete decree, which shall bind them all. By this means the court is enabled to make a complete decree between the parties, to prevent future litigation, by taking away the necessity of a multiplicity of suits, and to make it perfectly certain that no injustice is done, either to the parties before it, or to others who are interested in the subject-matter, by a decree which might otherwise be granted upon a partial view only of the real merits. When all the parties are before the court, the whole case may be seen; but it may not, where all the conflicting interests are not brought out upon the pleadings by the original parties thereto (Story's Eq. Plds. sec. 72).
>
> "The established practice of courts of equity to dismiss the plaintiff's bill if it appears that to grant the relief prayed for would injuriously affect persons materially interested in the subject-matter who are not made parties to the suit, is founded upon clear reasons, and may be enforced by the court, *sua sponte*, though not raised by the pleadings or suggested by the counsel. *Shields* v. *Barrow*, 17 How. 130. *Hipp* v. *Babin*, 19 How. 271, 278; *Parker* v. *Winnipiseogee Lake Cotton and Woolen Co.*, 2 Black, 545."

If it is impractical to make all the lessees parties, at least certain of the lessees should be made parties as representatives of the class.

Nor can the provisions of the leases be held illegal and the United Company be enjoined from enforcing them unless the lessees are parties. The provisions in the leases go to the essence of the contract; the leases would obviously not have been made on these terms if these provisions had not been employed. A decision that these provisions are void is therefore necessarily a decision that the leases themselves are void. Such a decision would therefore affect lessees to the same extent as a decision holding the leases themselves void.

XII.

CONCLUSION.

We submit:—

1. That the United States has wholly failed to prove any part of the charge made in the petition, namely, that the defendants, finding that the patents of the constituent companies under which they did the greater part of the business of the country in the principal essential shoe machines were about to expire, planned to extend their patent monopolies unlawfully by—

(*A*) Combining and acquiring all concerns engaged in the shoe machinery business, and then

(*B*) Refusing to sell or lease any of said so-called essential machines to a shoe manufacturer except on condition that he take from them practically all other machinery which he required, and that

(*C*) They thereby acquired an unlawful monopoly of all shoe machinery.

There is no evidence of any such plan, and the record shows conclusively that the defendants never did anything to carry out such a plan, for as the District Court found—

(*A*) They did not acquire all concerns engaged in the shoe business or attempt so to do.

(*B*) They did not refuse to lease the alleged essential machines except on condition that the shoe manufacturer take all other machines required by him from them. As the District Court found, this charge was wholly unfounded.

(*C*) They did not acquire an unlawful monopoly of all shoe machinery as the United States itself conceded during the course of the trial.

2. The United States attempted during the course of the trial to limit its charge to a charge that the defendants planned to extend their patent monopolies unlawfully by

(*A*) Combining and acquiring all concerns engaged in the business of manufacturing machines for preparing and attaching the bottoms to the uppers of shoes, eyeletting machines and clicking machines, and

(*B*) Refusing to sell or lease any of the so-called essential machines to a shoe manufacturer except on condition that he take from them practically all other machines of the above named classes, and that

(*C*) The defendants carried out such plan and thereby acquired an unlawful monopoly of said classes of machinery.

There is equally no evidence of any such modified plan or of any monopoly obtained in pursuance of any such modified plan, for as the District Court found—

(*A*) The defendants did not acquire or attempt to acquire all concerns engaged in manufacturing shoe machinery of the above mentioned classes. On the contrary they expressly declined to purchase their largest competitors making such machines.

(*B*) They did not refuse to lease the so-called essential machines except on condition that the shoe manufacturer take all other machines from them. On the contrary the record shows that the United Company never required a shoe manufacturer leasing its so-called essential machines to take or use any other machines, and that the only clause employed in its leases at the time the petition was filed requiring any use whatsoever of its machines was the Full Capacity Clause which required only a use of the particular machines leased. It further shows that the United Company's so-called restricted leases not only did not require the lessee to agree to use other machines, but that they did not compel such a use in order to obtain the leased machines, since the lessee was offered alternative forms of leases without restrictions on terms as favorable, and in many cases more favorable than were offered him prior to the formation of the United Company.

(*C*) The record further shows, as the District Court found, that the defendants did not have an unlawful monopoly of machines of the above mentioned classes. On the

contrary it shows not only that there were a number of competitors, but that the business the defendants had in such machines was due to the fact that the United Company and its constituent companies had created such business by reason of their patented inventions; that their machines had always been the best in the market, and that their success was due to the excellence of the machines, the constant improvements made in them, the remarkable service rendered with them and the favorable terms offered lessees.

3. We further submit that the record utterly fails to justify any other charge of unlawful conduct or monopoly, even if such a charge had been made in the petition and it were therefore open to the United States.

The history of the development of the United Company and of its constituent companies is a remarkable history of the creation of a new industry. By constant efforts and intelligent experimentation conducted at great expense, it has produced what are unquestionably the best machines, and these machines are lawfully protected by patents so that others cannot manufacture them. Most of these machines when first put on the market were new creations doing work previously done by hand. Nearly all of the United Company's machines to-day are new machines or new models so improved as to constitute practically new machines, or are machines invented within a few years to do work previously done by hand. The United Company's success in furnishing these machines is as natural and lawful as was the success of the Bell Telephone Company as owner of the Bell patent in the telephone field.

In addition the United Company is furnishing its machines under a lease system whereby the lessee can obtain his machines with practically no initial cost, paying for them only as he has use for them, and under which he is permitted to share in the economies resulting from the combined use of the principal machines which are adapted for use together, and the United Company furnishes at great expense to itself and without charge to its lessees a service with its machines which shoe manufacturers testified was vital to the proper conduct of their business.

During a period in which the cost of nearly all supplies and

machinery has increased, the United Company has never increased its prices, but on the contrary has in numerous instances reduced them, and, in addition, for such prices it has furnished, not the machines put out in 1899, but greatly improved machines, and many additional auxiliary machines which save the shoe manufacturer more than the entire amount paid the United Company in royalties.

As the District Court found:—

> "That the degree of success attained and the preponderance in number of users supplied which the United Company has secured are fully accounted for by the superior efficiency it has developed in its patented machines for work in combination with each other, together with the superior facilities it affords as above for their most efficient use, must be regarded as shown beyond question. It is not disputed that, when the petition was filed, its machines represented, in number and amount, the highest development ever reached in the art to which they belong; or that they are most in demand by manufacturers of the higher grades of shoes for that reason" (R. Vol. 1, p. 1137).

The attempt of the United States to prove that the success of the United Company was not due to the above causes but to various unlawful means adopted in pursuance of a plan to monopolize failed utterly. The charges of the United States were made recklessly and without investigation. The petition is replete with allegations made without any foundation of fact whatsoever on which even to base a contention. Thus, for example, the allegation that the United Company discontinued the sale of machines; the allegation that the patents of the constituent companies were about to expire; the allegation that the leases required the lessee to covenant to use United Company's machines of the kind leased and all other kinds exclusively; the allegation that the United Company acquired various patents and held them without making any use of them, thus depriving the manufacturer and the public of the benefits arising therefrom; the allegation that exorbitant prices were charged for repair parts; and the allegation that the constituent companies were taken over for values far in excess of real worth, and numerous other allegations, were shown to have no foundation whatsoever, although the true facts would have been disclosed upon the

slightest investigation. The specifications of the United States with respect to the unfair acts alleged by it were shown to be equally unfounded. As to most of them, no evidence whatsoever was introduced, and as to the remainder the evidence showed an utter lack of foundation for the charges.

The District Court heard the witnesses in open court and thoroughly investigated the entire business history of the United Company. The facts on which its opinions are based are fully sustained by the record, and completely dispose of the contentions of the United States.

We respectfully submit that the decree of the District Court dismissing the bill should be affirmed.

THE "ACQUISITIONS."

Detailed Statements of the Facts.

(NOTE.—The companies are discussed in the same order as in the petition except the Boot & Shoe Sole Laying Company, a majority of the stock of which was acquired by the United Company in June, 1899, while the date of the acquisition stated in the petition is May 25, 1901; and except The T. A. Norris Machine Company, which was acquired July 1, 1902, not in March, 1903, as stated in the petition. The statements as to those companies will be found in their proper places in chronological order. The Plant purchase is not discussed here as the facts regarding that transaction have been set forth in our brief.)

Goddu Sons Metal Fastening Company.

This transaction took place March 1, 1899. (Pltff.'s Exh. 60, R. Vol. 3, p. 514.) The Goddu Sons Metal Fastening Company "had constructed a loose nailing machine, a slugging machine, a tacking machine, and a standard screw machine." Each of these machines was "in a state of development" and none of them was "in a condition to be placed in the hands of manufacturers for continuous operation." (Howard, R. Vol. 1, p. 41, lines 38–40; Winslow, R. Vol. 1, p. 436, lines 28–31.) The Goddu Sons Company had no machines whatever in the hands of customers and accordingly was not engaged in interstate or foreign trade or commerce. These four machines, which were all patented, were all metallic fastening machines. The Goddu Sons Company had no factory and the experimental work had been done in a small machine shop with a few tools in it adjoining the house of Louis Goddu, the father of the "Goddu Sons." (R. Vol. 1, p. 103, lines 35–45; p. 104, lines 1–7; p. 436, lines 2–3, 27–28, 34–36.)

Louis Goddu had been for a long time employed by the McKay Shoe Machinery Company and its predecessors, and his inventive work "had been very meritorious. It was the base of the McKay metallic machinery business." (Winslow, R. Vol. 1, p. 436, lines 15–19; Defts.' Exh. 101, R. Vol. 5, pp. 166, 168.) All of his sons had also been employed by the McKay Company and several years prior to the organization of the United Company had all left the employ of the McKay Company. (R. Vol. 1, p. 104, lines 8–10, 12–13.)

The negotiations for this transaction were opened by the Goddus.

> "Mr. Goddu, senior, came to me and wanted the transfer, . . . to have the United Company take this property, . . . wanted to relieve himself of the position that he was in." (Winslow, R. Vol. 1, p. 436, lines 4, 5, 10.)

Both Goddu, senior, and Van Wagenen had talked to Mr. Winslow about the situation before the United Company was organized. (R. Vol. 1, p. 436, lines 20–23.)

The United Company did not acquire anything whatever from the Goddu Sons Company. It acquired from Louis Goddu and his sons a majority of the stock of the Goddu Sons Company and a number of patents and applications for patents. (R. Vol. 1, p. 41, lines 31–34; p. 534, lines 27–28.) There were two reasons for this acquisition:

(1) It was claimed by officials of the McKay Shoe Machinery Company "that the inventions embodied in the machines of the Goddu Sons Company had been made by Louis Goddu, the father," who had agreed to assign his inventions to the McKay Metallic Fastening Association, a predecessor of the McKay Company, by his employment contracts which were still in force and under which he had been paid continuously, and was still being paid, for his exclusive services. Suit had been brought on those contracts "to compel the transfer of these inventions" which were in the Goddu Company's machines to the McKay Company. (Winslow, R. Vol. 1, p. 436, lines 42–44; Howard, R. Vol. 2, p. 2071, Ints. 1578, 1579; Defts.' Exh. 104, R. Vol. 5, pp. 245–252.)

The bill of complaint in that suit, which is Defendants' Exhibit 104 (R. Vol. 5, p. 243), reviewed the history of Louis Goddu's relations with the McKay Company, including his declaration that he would assign no more inventions (pp. 245–252), set forth that none of the sons had made any inventions while in the employ of the McKay Company (p. 253) and charged that Louis Goddu, his sons and Albert Van Wagenen, also formerly employed by the McKay Company, conspired to have Louis Goddu invent metallic machines, communicate such inventions to his sons and permit them to apply for patents upon the machines and transfer such patents to the Goddu Company (pp. 253–262).

Counsel of the highest standing, Mr. Louis D. Brandeis, appeared for the McKay Company in this suit (R. Vol. 5, p. 264).

The endless trouble which the McKay Company had had with Louis Goddu and threats that he had made are further set forth in the affidavit of James W. Brooks (Defts.' Exh. 101, R. Vol. 5, p. 161), prepared for use in the proposed infringement suits. Among illuminating facts developed by the evidence in the

pending suit which are recited in this affidavit, it appears that Louis Goddu, the father, had contributed $40,000 to the Goddu Sons' enterprise (p. 187) and that he had been working with his sons continuously for several years (pp. 183, 184).

Mr. Winslow testified:

> "I knew Mr. Goddu, senior, quite well and believed personally that the patents then standing in his and his sons' names, and those that had been transferred to the Goddu Company, belonged in reality to the McKay Company." (R. Vol. 1, p. 435, lines 43–45; p. 436, lines 1–2; Defts.' Exh. 231, R. Vol. 5, p. 447.)

That is, by this acquisition Mr. Winslow was securing control for the United Company of inventions and patents and applications for patents which he believed already belonged to the United Company, as successor of the McKay Company.

(2) There was very serious litigation existing and threatened between the parties. The pending suit which had been brought on the Louis Goddu contracts had been running for some time before the formation of the United Company, had been "very vigorously contested" and "a very large amount" of testimony had been taken, and the claims of the McKay Company had been developed and substantiated before the acquisition. (R. Vol. 1, p. 104, lines 14–24; R. Vol. 2, p. 2082, Cr. Ints. 1618–1620; Defts.' Exh. 275, R. Vol. 5, p. 755.)

In addition to this pending suit the McKay Company had—

> "caused to be prepared bills of complaint and affidavits to accompany motions for preliminary injunctions in suits for infringements of its patents by all of the machines of the Goddu Sons Metal Fastening Company." (Howard, R. Vol. 2, pp. 2077, 2078, Ints. 1609–1611; Defts.' Exh. 275, R. Vol. 5, p. 755.)

A number of affidavits, including one by Joseph P. Livermore, and a bill of complaint had been printed prior to the formation of the United Company and printed copies constitute Defendants' Exhibit 101. According to Mr. Livermore's affidavit, the Goddu Sons' loose nailer infringed six of the McKay Company's patents; its screw machine infringed two of the McKay Company's patents; its slugging machine infringed two of the McKay Company's patents, and its string nailer infringed three of the

McKay Company's patents. (Defts.' Exh. 275, R. Vol. 5, p. 756.)

Mr. Winslow testified:

> "I very much desired to start the United Company free from all serious litigation. I was aware of the fact that there was serious litigation existing between the McKay Company and the Goddus."
>
> "I was very glad to get rid of the situation which meant I didn't know how much litigation and how much time it would require from me, and to get that whole matter cleaned up and clear the litigation."
>
> "I had had considerable experience in that sort of litigation."
>
> "*Q.* Did you acquire the Goddu Sons Company for the sake of getting rid of any competition?
>
> "*A.* I did not." (R. Vol. 1, p. 435, lines 40–43; p. 436, lines 10–14; p. 437, lines 6–10.)

The practical reasons why the Goddu machines could not be manufactured and put out without *entire reconstruction* were set forth by defendants' expert Howard with detailed explanations. In July, 1898, Mr. Howard spent a week in examining the Goddu Sons' machines, making drawings and notes. (R. Vol. 2, p. 2070, Int. 1577; pp. 2088, 2089, Cr. Int. 1660; p. 2099, Cr. Int. 1666.)

Moreover, even if the machines had been practical, "the United Company couldn't have developed those machines if they wanted to" because "they were stopped by the action of the minority stockholders of the Goddu Company." (Winslow, R. Vol. 1, p. 534, lines 20–26.)

It should also be noted that after the acquisition all but one of the Goddu Company's machines infringed patents of the United Company acquired from the Goddu Sons individually, which did not expire until 1915 and 1917. (Defts.' Exh. 275, R. Vol. 5, pp. 756, 757.)

As to this transaction it was held by the District Court:

> "the metallic fastening machines acquired by purchase of a controlling interest in the company were none of them in the hands of users; their then state of development does not appear to have been such as made them capable of commercial use, whatever the merit of the inventive ideas they sought to embody; nor is the evidence sufficient for a belief

that without reconstruction, radical in character, anyone could have used them as competing machines." (Dodge, J., R. Vol. 1, p. 1140.)

Pearson & Bennion, Ltd.

This transaction took place June 8, 1899. (Ptlff.'s Exh. 61, R. Vol. 3, p. 525.) The reason for this purchase and the disposition of the acquired business after the purchase were summarized by Mr. Winslow as follows (R. Vol. 1, p. 420, lines 21–33):

> "Our agent in England for the Lasting Machine Company was Pearson & Bennion. They made or manufactured no machines that were made or manufactured by either of the companies which came together to form the United Shoe Machinery Company. They did make a few general department machines in England. Their principal business, probably eighty per cent of it, was the business they did as the agent for our lasting machine. We took their business, put our business with it and formed the British United Company. They entered our employ, and Mr. Bennion was made the general manager of that business. That was the reason; it was just putting in corporate form what had previously existed, only he was made the manager of all the business of these three companies."

As stated by Mr. Winslow: "The agreement of 1899 with Pearson & Bennion was in reality a consolidation of the foreign business of the United Company in England with Pearson and Bennion's business, and not a purchase." (Defts.' Exh. 231, R. Vol. 5, p. 450.) Among the assets acquired was a new factory. (R. Vol. 3, p. 530.)

From Mr. Winslow's testimony, above quoted, that the few machines which Pearson & Bennion made were of the general department type, it is clear that Pearson & Bennion were in no way competing with the United Company since the United Company had no general department machines at that time. While the record does not name the Pearson & Bennion machines, they were presumably of the types used by English manufacturers, somewhat different from those used in this country. They were being manufactured under patents. (R. Vol. 1, p. 53, lines 3–5; R. Vol. 2, pp. 2787, 2788, Cr. Ints. 432, 433; R. Vol. 3, p. 527.)

Boot & Shoe Sole Laying Company.

This acquisition is not referred to in its proper chronological order in the petition. The date alleged, May 25, 1901, is the date of the bill of sale formally transferring the company's property. (Pltff.'s Exh. 90, R. Vol. 3, p. 366.) A majority of the stock of this company was acquired by the United Company in June, 1899. (R. Vol. 1, p. 457, lines 30–31; Defts.' Exh. 275, R. Vol. 5, p. 763.) Accordingly this acquisition will be discussed here in its proper chronological relation to other acquisitions.

The Boot & Shoe Sole Laying Company was manufacturing and putting out a patented sole-laying machine known as the Boston sole layer. It was doing a very small business. It owned no real estate and contracted with outside parties for such machines as it had built. (R. Vol. 1, p. 54, lines 5–7; p. 99, lines 41, 43–45; R. Vol. 2, p. 2054, Ints. 1489, 1490; Defts.' Exh. 231, R. Vol. 5, p. 450.)

The United Company did not have a satisfactory sole-laying machine. They "had an inferior machine of different type," the rotary sole layer, "which was only adapted for large factories" and "which was very unsatisfactory because it was continually breaking down, particularly on men's shoes." (R. Vol. 1, p. 54, lines 20–21; Defts.' Exhs. 231, R. Vol. 5, p. 450, and 275, R. Vol. 5, p. 763.)

A further reason for this acquisition was that the United Company had "produced and desired to use the pressing form for sole laying machines shown and described in its patent 694,367 Mar. 4, 1902, Gifford (application filed Apr. 20, 1900)," but this form infringed a patent owned by the Boot & Shoe Sole Laying Company. (Howard, Defts.' Exh. 275, R. Vol. 5, p. 763; R. Vol. 1, p. 665, lines 1–3.) After this acquisition—

> "the United Company discarded the Rotary Sole Layer and adopted as its standard commercial machine the sole layer of the Boot and Shoe Laying Machine Company, using on that machine the pressing form of Gifford patent No. 694,367. This machine, combining the best features of the rotary machine and the machine of the Boot and Shoe Sole Laying Company, has been much improved by a number of inventions made from time to time, and in the various stages of its development it has ever since been and is

today the standard sole laying machine of the United Company." (Howard, Defts.' Exh. 275, R. Vol. 5, p. 763; R. Vol. 2, p. 2050, Ints. 1467, 1468.)

The Corrugated Wire Fastening Company.

This transaction took place June 30, 1899. (Pltff.'s Exh. 62, R. Vol. 3, p. 530.) With regard to the Corrugated Wire Fastening Company, Mr. Howard testified that at the time of the purchase it—

> "had one machine, a tacking machine, and was doing a very small business in supplying wire for that machine. I believe that they had not put out any of the machines for some years because it was completely out of date. It was a very old machine." (Howard, R. Vol. 1, p. 42, lines 12–17.)
>
> "The only business that was left when the Corrugated Company was acquired was the supplying of wire and spare parts for the machine. They had not done any business in the way of supplying machines for some time, and there was no longer any demand for the machines, so that no business was done and no business could be done with that machine." (Howard, R. Vol. 1, p. 42, lines 28–33.)

This company "was purchased in 1899 for $12,750 at the earnest solicitation of the owners, their business having become unprofitable. At the price we paid we thought we could get out of it with a small profit." (Winslow, R. Vol. 1, p. 464, lines 20–23.)

The Corrugated Wire Fastening Company—

> "Owned no real estate. Leased a small room on South Street, Boston, where it employed two or three men." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 475.)

After the purchase—

> "The United Company continued to supply wire and parts for those machines. They have parts in stock today." (Howard, R. Vol. 1, p. 42, lines 33–35.)

The business of the Corrugated Company was characterized by the District Court as "making wire and spare parts for use

in an obsolete metallic-fastening machine." (Dodge, J., R. Vol. 1, p. 1138.)

Breach Manufacturing Company.

This transaction took place July 31, 1899. (Pltff.'s Exh. 63, R. Vol. 3, p. 531.) All that the United Company acquired from the Breach Manufacturing Company was an exclusive license under certain patents on a machine—

> "which was intended for cutting soles out of a side or strip of leather by a reciprocating knife which moved up and down through the stock as it went around." (Howard, R. Vol. 1, p. 42, lines 44–45; p. 43, line 1; R. Vol. 2, p. 2067, Int. 1559.)

At that time the United Company had no machine for cutting out soles. (R. Vol. 1, p. 43, lines 13–16, 22–24.)

The United Company paid the Breach Company $10,000 for an exclusive license under the Breach patents in the hope that a successful machine to cut the uppers of shoes (*i.e.*, to do the work done by the clicking machine invented some eight years later) would be developed under those patents. (Defts.' Exh. 231, R. Vol. 5, p. 467.)

Mr. Howard testified:

> "The United Company took Breach into its employ and for several years made strenuous efforts to develop something practical out of that machine. Breach worked on the machine during that period and spent a great deal of money, but finally came to a point where he could apparently do nothing more, and at that stage the machine was an entire failure as a commercial machine." (R. Vol. 1, p. 43, lines 16–22.)

Also—

> "The United Company built experimental machines and put them out on trial but could not interest manufacturers to use them." (R. Vol. 2, p. 2068, Int. 1562.)

"Every possible assistance" was given to Breach by the United Company in the endeavor to make commercial the ideas embodied in his inventions, and that work was continued for some two years. (R. Vol. 2, p. 2084, Cr. Ints. 1635, 1636.)

> "In this endeavor the United Company expended about $30,000 and then gave up the attempt." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 467; Howard, R. Vol. 2, p. 2100, Int. 1668.)

An important reason for the commercial failure of the Breach inventions was stated by Mr. Howard to be that—

> "Shortly before the time of the acquisition of the Breach patents, sole-rounding machines of the so-called Stanley and Julian type were introduced, which used a wooden pattern instead of a metal pattern such as had been previously used in sole-rounding machines, and as was used in the Breach machine. That pattern cost but a small fraction of the cost of the metal pattern, and was a very great improvement because it obviated the necessity of lubricating the edge of the pattern, which had always presented a serious difficulty." (R. Vol. 2, p. 2085, Cr. Int. 1641.)

Mr. Howard also said "the United Company offered to turn back the patents to the Breach Company, and I believe it did so." (R. Vol. 1, p. 43, lines 9–10.)

It should be noted that by this transaction the United Company acquired only an exclusive license under certain patents; it acquired no tangible property of any description. (R. Vol. 3, p. 531.)

Peter A. Coupal and William Gordon.

This transaction took place August 1, 1899. (Pltff.'s Exhs. 64–66, R. Vol. 3, pp. 535, 537, 538.) Coupal and Gordon were running a machine shop and doing a general machine shop business, "not particularly relating to shoe machinery." They had one or two unimportant machines and an experimental "Basting Machine" which infringed a patent of the United Company. (Howard, R. Vol. 1, p. 43, lines 27–35; p. 103, lines 25–26; Defts.' Exh. 275, R. Vol. 5, p. 757.)

> "The United Company was not engaged in putting out or manufacturing such machines as Coupal and Gordon were making and putting out, or machines for performing the same work or similar." (Howard, R. Vol. 1, p. 43, lines 36–39.)

The United Company acquired certain patents from Coupal and Gordon, but this transaction was primarily an employment contract. Coupal and Gordon were both "very skilled mechanics" and "were in the employ of the Goodyear Company prior to, and at the time of, the organization of the United Company and the United Company desired to obtain all their time free from outside matters." Gordon agreed to enter the employ of the company in a managerial capacity and remained in the company's service until his death in 1912. Coupal agreed to enter the employ of the company, but "only remained in the company's service a few months." (R. Vol. 1, p. 103, lines 22–24, 28–29; Pltff.'s Exhs. 64, 65, R. Vol. 3, pp. 535, 537; Defts.' Exh. 231, R. Vol. 5, p. 472.)

The size of their business and relative importance of their machines is indicated by the consideration of this transaction, which was $10,799.25,—the value of their inventory quoted in Plaintiff's Exhibit 66, pp. 539–563. No real estate was acquired. (Defts.' Exh. 231, R. Vol. 5, p. 472.)

> "Soon after the purchase the machinery was removed to one of the United Company's factories and the business was continued in conjunction with the other business of the company." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 472.)

Timothy A. Breshanan; Boston Shoe Tool Company.

This transaction took place August 16, 1899. (Pltff.'s Exh. 67, R. Vol. 3, p. 563.) The Boston Shoe Tool Company, which was Bresnahan's Company,—

> "was manufacturing and selling a patented edge trimming machine and a rotary edge setter, and was also making and selling forepart and shank cutters for use on the edge trimming machine, and edge setting irons for use on the rotary edge setter. The rotary edge setter was adapted only for the cheapest kind of work and never used on any other work. It could not be used with profit on any other kind of work. . . . Every edge trimming machine has a forepart cutter for trimming the sole around the forepart and a shank cutter for trimming the sole in the shank. . . . The finish or shine that the edge has when the shoe is new is given to it by the edge setting operation, and the tool which operates upon the shoe in this operation is known as an edge setting

iron. . . . At the time of this acquisition the United Company had no machines for doing the work of either of the two machines acquired from the Boston Shoe Tool Company and it was not manufacturing any edge cutters or any edge setting irons." (Howard, R. Vol. 1, p. 43, lines 40–45; p. 44, lines 1–23.)

The United Company acquired the Boston Shoe Tool Company's factory and the patents on its cutter and its edge trimming machine. (R. Vol. 1, p. 103, lines 19–21; Defts.' Exh. 231, R. Vol. 5, p. 460.)

> "The business was continued at the same plant for a considerable period of time. Subsequently, for convenience and economy of manufacture, the business was transferred to the Beverly Factory, where the United Company has ever since continued and increased the business." (Winslow Defts.' Exh. 231, R. Vol. 5, p. 460.)

In regard to the covenant quoted in the petition (R. Vol. 1, p. 1003) Mr. Howe testified as to the reasons why the covenant was in this particular form. (R. Vol. 1, p. 692, lines 34–44; p. 693, lines 1–6.)

Edwin T. Freeman.

This transaction took place October 9, 1899. (Pltff.'s Exh. 68, R. Vol. 3, p. 569.) Edwin T. Freeman had constructed an experimental slugging machine (R. Vol. 1, p. 44, lines 24–29; Defts.' Exh. 275, R. Vol. 5, p. 757; operation explained R. Vol. 2, p. 2464) which was patented. (R. Vol. 1, p. 103, lines 15–18.) He had no factory and was doing no business. He "had not put out any machines at all" (R. Vol. 1, p. 849, line 15; Defts.' Exh. 231, R. Vol. 5, p. 467); accordingly he was not engaged in interstate or foreign trade or commerce.

At the time of this acquisition the United Company was developing an improved standard screw machine, which later became Screw Machine, Model B, Rapid Standard, which infringed one of Freeman's patents. There was an interference in the

Patent Office between an application for reissue of that Freeman patent and the application on this standard screw machine which the United Company was developing. (Defts.' Exh. 275, R. Vol. 5, p. 758.)

On the other hand, the Freeman machine infringed one of the United Company's patents and after January 21, 1902, would have infringed another patent granted on that date. These infringements could not have been avoided without entirely reconstructing the Freeman machine to omit from it valuable inventions, on account of which the United Company purchased the Freeman patents. Furthermore, an important mechanism, without which Freeman's machine could not have been a commercial success, had been necessarily omitted from the Freeman machine because it was broadly covered by two of the United Company's patents. (Defts.' Exh. 275, R. Vol. 5, pp. 757, 758.)

This acquisition cleared up these serious patent complications and enabled the United Company to improve its slugging machine and to avoid infringement of the Freeman patents. (Defts.' Exh. 231, R. Vol. 5, p. 467.)

Since the purchase, inventions claimed in the patents assigned by Freeman have been embodied in three different types of machines which the United Company has built and put out; namely, Nailing Machine, No. 2 Loose; Slugging Machine, No. 5; Screw Machine, Model B, Rapid Standard. (R. Vol. 2, pp. 2066, 2067, Ints. 1554, 1557; pp. 2090, 2091, Int. 1662.)

George W. Freeman.

This transaction took place October 10, 1899. (Pltff.'s Exh. 69. R. Vol. 3, p. 573.) George W. Freeman is the son of Edwin T. Freeman, from whom certain patents were purchased in 1899, as above explained. "Nothing was acquired by the United Company from George W. Freeman." (R. Vol. 1, p. 44, lines 42–43.) Consequently the statement in the petition (R. Vol. 1, p. 1003) that the United Company acquired the interests of George W. Freeman relating to shoe machinery is absolutely erroneous. He had been engaged with his father in work upon his father's experimental machine and the acquisition of his father's patents left him without a job.

"As this transaction left the son, George W., without a job, his father asked the company to take the son into its employ for at least one year at a compensation of $800."

"Freeman has remained continuously in the employ of the company as a roadman and now receives $1200 per year. He has never made or assigned any inventions to the company." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 472.)

Mr. Winslow explained this employment contract as follows:

"It was undoubtedly in view of the fact that he had been associated with his father in experimental work, and on account of the possibility of his setting up some claim to the inventions assigned by his father, that the covenants in regard to competition and future inventions were made a part of the contract for employment of George W. Freeman." (Defts.' Exh. 231, R. Vol. 5, pp. 472, 473.)

Mr. Winslow's explanation is supplemented by Mr. Howard's testimony:

"The agreement was made with him at that time simply because he was his father's son and had been engaged with his father in work upon his father's machine. It not infrequently happens that a son may be responsible for some of the inventing in a case like that. It was a matter of precaution." (R. Vol. 1, p. 44, line 45; p. 45, lines 1–4.)

Albert G. Brewer.

This transaction took place October 11, 1899. (Pltff.'s Exh. 70, R. Vol. 3, p. 575.) Brewer had built one experimental heel breasting machine of the automatic type, which was covered by a pending patent application. A heel breasting machine is used to trim the front end of a heel. At that time the United Company was not putting out any heel breasting machine but was experimenting on a machine in which the knife was driven through the heel by power. (R. Vol. 1, p. 45, lines 7–29; p. 103, lines 12–14.)

"Prior to February, 1899, all heel breasting was done by foot power machines . . . all the power required for forcing the knife through the successive layers of stock in the heel being applied by the operator through the treadle." (Howard, R. Vol. 2, pp. 2472, 2473.)

Owing to the fact that "all heels vary in height, even the heels of shoes which are intended to be substantially alike," no power operated machine had yet been produced—

> "which could deal successfully with the problem of cutting just enough to sever completely the surplus stock and, at the same time, not cut far enough to deface the shank of the sole." (Howard, R. Vol. 2, p. 2473.)

Mr. Howard further testified (R. Vol. 1, p. 45, lines 34–37):

> "The Brewer patent covered a better, a more sensitive, mechanism than we had for stopping the knife properly when it reached the shank, to prevent cutting into and possibly cutting through the shank."

The United Company's experimental machine did not become a commercial success until "after the invention which we acquired from Brewer had been embodied in our machine." (Howard, R. Vol. 1, p. 45, lines 14–16.)

On the other hand, the Brewer experimental machine infringed fourteen claims of the United Company's broad Heys patent on mechanism for automatically stopping the knife. (R. Vol. 1, p. 45, lines 27–28; Defts.' Exh. 275, R. Vol. 5, p. 758.) As stated by Mr. Howard: "in my opinion Brewer could not have built a power heel-breasting machine without infringing that patent." (Defts.' Exh. 275, R. Vol. 5, p. 758.) After the purchase "approximately 700" machines incorporating the Brewer inventions were put out by the United Company (R. Vol. 2, p. 2066), and "That machine, with some modifications, is still being manufactured and put out by the United Company." (Howard, R. Vol. 2, p. 2065, Int. 1548; p. 2090, Int. 1662.)

The one experimental machine which Brewer had constructed was turned over by him to the United Company with his patent application. (Pltff.'s Exh. 70, R. Vol. 3, p. 576.) It follows, therefore, that Brewer was not engaged in interstate or foreign trade or commerce. No manufacturing plant of any kind was acquired. (Defts.' Exh. 231, R. Vol. 5, p. 467.)

Globe Shoe Tool Company.

This transaction took place October 24, 1899. (Pltff.'s Exhs. 71–73, R. Vol. 3, pp. 577, 580, 583.) The Globe Shoe Tool Company was a co-partnership, H. M. Loomer being one of the partners. It was engaged in the business of manufacturing and selling forepart cutters and edge irons, which are tools, not machines. It was acquired at the earnest solicitation of the partners and because the United Company desired to obtain the services of Mr. Loomer as the head of its department for manufacturing such tools. (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 460.)

The agreement between Loomer and the United Company (Pltff.'s Exh. 72, R. Vol. 3, p. 581) provides for the employment of Loomer by the United Company and recites that that had been agreed upon "as an inducement to the United Company to take over said business and to purchase the property and assets of said partnership."

On the other hand, the Globe Shoe Tool Company was infringing two patents of the United Company. (Defts.' Exh. 275, R. Vol. 5, p. 759.)

The Globe Company owned no real estate but leased floor space:

> "Soon after its acquisition the business was transferred to the factory of the Boston Shoe Tool Company in South Boston." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 460.)

After the Boston Shoe Tool Company and the Globe Shoe Tool Company acquisitions, very large reductions were made in the prices of the tools acquired, as follows:

> "The price of the heel cutter with blades in January, 1899, was $3.25; we reduced the price on March 1, 1900, to $2.25. In January, 1899, the price of the blades alone was $2; on March 1, 1900, we reduced the price for the blades alone to $1. The price of forepart and shank cutters in January, 1899, was thirty-five cents each, in small quantities, and twenty-five cents each in quantities of 100; on March 1, 1900, we reduced the price to twenty-five cents each in any quantity. The price of edge irons in January, 1899, was fifty cents; on March 1, 1900, we reduced the price to twenty-five cents." (Winslow, R. Vol. 1, p. 479, lines 10–19.)

John Ritchie Company and John Ritchie.

This transaction took place November 2, 1899. "The John Ritchie Company was a concern manufacturing shoes," located at Quebec, Canada. (R. Vol. 1, p. 46, lines 19–20; Pltff.'s Exh. 74, R. Vol. 3, p. 585.) This transaction was explained by Mr. Howard as follows:

> "They had manufactured, prior to the date in question, one old standard screw machine, so called, that being the type of machine which preceded the rapid standard screw machine, the greatly improved machine then in use for that kind of work. I think that machine was not being used by the John Ritchie Company, but had been sold by them. They had not built, and so far as I know did not contemplate building, any more machines, but they were making wire for use on standard screw machines. They were selling that wire to lessees of the United Company, who were obligated by their leases to buy wire from the United Company.
>
> "It has sometimes happened that the United Company will find that a dishonest lessee, who has agreed to buy wire from the United Company, in payment of royalty for the use of a metallic machine, or, to be more specific, a standard screw machine, will buy wire from another concern at a lower price and use it on the United Company's standard screw machine. That was exactly what was happening in Canada. The John Ritchie Company were making and selling standard screw wire to lessees of the United Company, which, of course, was not getting any return whatever for the use of its machines during the period that the Ritchie wire was being used in them. The purpose of this transaction was to eliminate that dishonest situation in Canada." (R. Vol. 1, p. 46, lines 20–42.)

Mr. Winslow stated that—

> "The reason for this contract and purchase was to prevent manufacturers who held Metallic Machinery under lease from the United Company . . . , violating their leases and contracts by purchasing material from Ritchie." (Defts.' Exh. 231, R. Vol. 5, p. 474.)

Mr. Winslow further stated:

> "No existing competition, or business, was interfered with by this contract. . . . No real estate acquired; only help

employed two or three boys." (Defts.' Exh. 231, R. Vol. 5, p. 476.)

The United Company agreed to pay the Ritchie Company $750 per annum with the right to cancel this annual payment at any time by paying $15,000. (Defts.' Exh. 231, R. Vol. 5, p. 476.)

Seaver Process Lasting Company.

This transaction took place January 13, 1900. (Pltff.'s Exh. 75, R. Vol. 3, p. 591.) The most important reason for this purchase was that the Seaver Company had patents which stood in the way of the development of the United Company's pulling-over machine. The experimental pulling-over machine of the Seaver Company, which "could be used for pulling over uppers, but it was slower than hand work," and the experimental pulling-over machine of the United Company each embodied a mechanism believed to be indispensable to a successful pulling-over machine. If the Seaver Company obtained a patent on this mechanism the United Company would be prevented from putting out commercially its pulling-over machine upon which already there had been an expenditure of hundreds of thousands of dollars. Both the experimental pulling-over machine of the Seaver Company and its lasting machine were patented. On the other hand, there were pending suits for infringement of two of the United Company's patents by the Seaver lasting machine. (R. Vol. 1, p. 47, lines 9–11; p. 103, lines 5–10; p. 456, lines 34–37; p. 849, lines 24–29; R. Vol. 2, pp. 2086, 2087; Defts.' Exhs. 231, R. Vol. 5, p. 447, and 275, pp. 759, 760.)

The Seaver Company was in debt to E. B. Seaver, a majority stockholder, for more than the amount paid by the United Company. (Pltff.'s Exh. 75, R. Vol. 3, p. 591.) The Seaver Company was insolvent and unable to pay its debts; it had only six employees and its business had fallen to pieces, and it is obvious that the company could have offered no competition either then or later that would have been more than negligible. The purchase was made at the earnest solicitation of Mr. Seaver, to remove the patent complications which stood in the way of the development of the United Company's pulling-over machine and to settle the existing litigation. (R. Vol. 1, p. 456, lines 28–39; p. 849, lines

24–29; Defts.' Exhs. 231, R. Vol. 5, pp. 447, 448, and 275, pp. 759, 760.)

The pulling-over machine inventions acquired from the Seaver Company have been embodied in all pulling-over machines put out by the United Company "and the mechanism embodying those features is of the utmost importance in that machine." (Howard, R. Vol. 2, p. 2086, Cr. Ints. 1650, 1653.) It was a combination of the Seaver inventions and those upon which the United Company inventors were working that resulted in the present commercial pulling-over machine, in the development of which nearly a million dollars was spent. (R. Vol. 2, pp. 2086, 2087, 2552.)

The lasting machine inventions did not prove as useful as was expected. In all respects the United Company's lasting machines were superior and there was no demand for the Seaver lasting machine. (R. Vol. 2, p. 2087, Cr. Ints. 1654, 1655.)

No real estate was acquired from the Seaver Company; it did its business in a leased room. (Defts.' Exh. 231, R. Vol. 5, p. 447.) Plaintiff's Exhibit 75 (R. Vol. 3, p. 591) recites that "the said Seaver Company is insolvent and is unable to continue its business or to pay its debts."

Erastus E. Winkley and Benjamin Phillips.

This transaction took place March 16, 1900. (Pltff.'s Exh. 77, R. Vol. 3, p. 615.) By the agreement with Winkley and Phillips, the United Company simply—

> "exercised the option which had previously existed between the Goodyear Company and Winkley and Phillips to take the exclusive right to the use of certain patents which had been transferred by Winkley and Phillips in 1898 to the Goodyear Company"

and under which they had reserved certain rights which were the subject-matter of this transaction. (Defts.' Exh. 231, R. Vol. 5, p. 467.)

Winkley and Phillips were not engaged in manufacturing anything. "No manufacturing plant of any kind was acquired." (Defts.' Exh. 231, R. Vol. 5, p. 468.) Mr. Winkley is an inventor and Mr. Phillips is a patent lawyer. (R. Vol. 1, p. 102, lines 38–39.)

> "They did not have any going machine. Winkley and Phillips were associated with the United Company, and this was a friendly arrangement by which the United Company acquired the right to use the inventions of their patents in its machine." (Howard, R. Vol. 1, p. 48, lines 5–9.)

These patents were named by Mr. Howard. (R. Vol. 1, p. 48, lines 5–9; R. Vol. 2, p. 2062, Int. 1532.) No machinery was acquired from Winkley and Phillips. (R. Vol. 1, p. 48, lines 3–5.)

The patented inventions acquired from Winkley and Phillips were embodied by the United Company in the Atlas Leveling Machine which is adapted peculiarly for use on McKay shoes. (R. Vol. 2, p. 2584.)

The United Company had no machine which could be used for leveling McKay shoes, while, on the other hand, the Atlas Leveling Machine cannot be used for leveling welt or turn shoes. The practical reasons why these different kinds of shoes require entirely different types of machines were pointed out in detail by Mr. Howard. (R. Vol. 1, p. 102, lines 14–34; R. Vol. 2, pp. 2576–2579, Int. 106.) The importance of the inventions of the Winkley and Phillips patents was fully explained by Mr. Howard in his discussion of "Leveling Machine: Atlas." (R. Vol. 2, p. 2584 *et seq.*)

Since this acquisition—

> "the inventions acquired from Winkley and Phillips were experimented upon and developed, with the addition of other inventions, into a machine which was suitable for commercial use, and was put out for commercial use." (Howard, R. Vol. 2, p. 2062, Int. 1530.)

The United Company has since continuously supplied this machine to the trade and has put out about 500 machines. (R. Vol. 2, p. 2084, Cr. Ints. 1631–1634.)

Stanley Manufacturing Company.

By this transaction, which took place March 19, 1900, the United Company acquired simply certain machines, parts and supplies which the Stanley Company had on hand at Frankfurt, Germany. This appears plainly from the agreement (Pltff.'s Exh. 78, R. Vol. 3, p. 620), which provides:—

> "That the said United Company shall purchase from the said Stanley Company, the stock of machines, parts and supplies which it now has on hand at Frankfurt, Germany, and in transit to Frankfurt, and all accounts and bills owing to said Stanley Manufacturing Company in Germany."

For these parts the United Company paid cost prices with certain deductions. (R. Vol. 3, p. 620.)

The Stanley Company was putting out miscellaneous general department machines, the most important of which was a McKay sewing machine. "The United Company was then putting out no machine for doing the work of any one of those machines." (Howard, R. Vol. 1, p. 48, lines 19–21, 26–27; Winslow, Defts.' Exh. 231, R. Vol. 5, p. 451.)

As stated by Mr. Winslow (Defts.' Exh. 231, R. Vol. 5, p. 451):

> "The store in Germany acted as the agent for the McKay Shoe Machinery Company in handling its McKay Heeling and Metallic Machines and parts, and this purchase amounted only to the acquirement of the selling agency for the goods manufactured by the Stanley Company in the United States."
>
> "The reason for the purchase was that the United Company was establishing its own German Company and the local manager for the Stanley Company's business in Germany was sick, or had just died, and the Stanley Company desired to have the United Company take over its store and stock of goods and act as agents for the Stanley Company, if the United Company was going to do its own business in Germany.
>
> "The contract, therefore, amounted simply to an agency contract, and that in itself necessitated the purchasing of the stock that the Stanley Company had in Frankfurt."

The agreement contained a covenant—

> "that the said United Company shall use its best endeavors to sell in foreign countries, machines made by the said Stanley Company . . ."

and provided that in case the United Company should discontinue the purchase from the Stanley Company and sale—

> "of any of the machines, parts or supplies made by the said Stanley Company . . . the said Stanley Company may then and thereafter sell such machines, parts or supplies thus discontinued to any and all persons without respect to the country to which they are to be sent.

"That the said Stanley Company may advertise and create and maintain in all proper business ways a demand for its machines in any and all countries in the world." (Pltff.'s Exh. 78, R. Vol. 3, pp. 621, 622.)

Lincoln Sewing Machine Company.

Contrary to the statement in the petition, the United Company by its agreement with the Lincoln Company, April 6, 1900 (Pltff.'s Exh. 80, R. Vol. 3, p. 628), did not acquire the business of the Lincoln Company, nor did it acquire anything new whatsoever. (R. Vol. 1, p. 49, lines 36–37.) As is clear from the plain terms of the agreement, it was entered into simply for the purpose of canceling an obligation arising from a previous contract made in 1897 (Pltff.'s Exh. 79, R. Vol. 3, p. 623) between the Lincoln Company and the Goodyear Shoe Machinery Company, whereby the Goodyear Company was to pay a sum of money to the Lincoln Company each year for forty-nine years. Mr. Winslow testified to this effect. (R. Vol. 1, p. 464, lines 9–13; see also Howard, R. Vol. 1, p. 49, lines 22–35.) The reason for canceling the original obligation was "to avoid the necessity for maintaining the Goodyear Company as a separate organization and to transfer the Goodyear Company's property to the United Company." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 471.)

The original agreement between the Lincoln Company and the Goodyear Company (Pltff.'s Exh. 79, R. Vol. 3, p. 623) effected the transfer of patent rights. (R. Vol. 2, pp. 2063, 2064, Ints. 1537–1539.)

Boston Fast Color Eyelet Company.

This transaction took place June 30, 1900. (Pltff.'s Exh. 81, R. Vol. 3, p. 630.) As stated in the petition, this company was engaged in the manufacture and sale of "eyelets covered with celluloid." These eyelets are known as "fast color eyelets" and the Boston Company had a registered trademark, "Fast Color." The Boston Company owned patents on the eyelet, the dies for making the eyelet, and the method of covering the eyelet. The celluloid covering makes the eyelet expensive so that it has never been used except on the better grades of shoes and never at any

time on more than ten per cent. of the shoes made. Its advantage is that it never wears down to the metal. (R. Vol. 1, p. 50, lines 40–45; p. 51, lines 1–5; p. 98, lines 26–27; R. Vol. 2, p. 2053, Int. 1487.)

Prior to this acquisition neither the United Company nor any of its associate companies was engaged in the manufacture of eyelets or of machinery for making them (R. Vol. 1, p. 50, lines 10–13), and—

> "The United Company could not extend its field to include the manufacturing and marketing of fast color eyelets without acquiring the broad patents owned by the Boston Fast Color Eyelet Company which dominated that field." (Defts.' Exh. 275, R. Vol. 5, p. 760.)

The business of the Boston Fast Color Eyelet Company was continued by the United Fast Color Eyelet Company, thus preserving the name "Fast Color." "That name was a very valuable asset" which "had designated this type of eyelet since it was invented." Since the acquisition, the fast color eyelet has been improved in ways that have made it possible to reduce its price and many new sizes have been made. (Howard, R. Vol. 1, p. 50, lines 17–18; p. 99, lines 31–32, 36–37.)

The Boston Fast Color Eyelet Company owned no real estate and did no manufacturing; their eyelets were manufactured by other parties under contract. (Defts.' Exh. 231, R. Vol. 5, p. 461.)

Enamel Eyelet Company.

This transaction took place June 30, 1900. (Pltff.'s Exh. 83, R. Vol. 3, p. 645.) The Enamel Eyelet Company was owned by the same people who owned the Boston Fast Color Eyelet Company, and this acquisition was "a part of the same transaction by which the stock of the Boston Fast Color Eyelet Company was acquired." The Enamel Company was attempting unsuccessfully to manufacture the type of eyelet known as the "enamel eyelet." "There was no competition whatever between the Boston Company and the Enamel Company." The differences in the constructions of the enamel eyelet and the fast color eyelet and in their fields are pointed out by Mr. Howard. (Howard,

R. Vol. 1, p. 51, lines 28–29; p. 98, lines 28–45; p. 99, lines 1–10, 13–18; Defts.' Exh. 275, R. Vol. 5, p. 760; Winslow, R. Vol. 1, p. 462, lines 13–14.)

At the time of this acquisition neither the United Company nor any of its associate companies was engaged in the manufacture of eyelets (R. Vol. 1, p. 50, lines 10–12), and—

> "had it not acquired control of the Enamel Company the United Company could not have entered the enamel eyelet field without subjecting itself to the liability of suit under the Enamel Company's design patent 24,867, November 12, 1895, Kempshall. The Enamel Company had brought and vigorously prosecuted suit on that patent against John C. Rhodes." (Howard, Defts.' Exh. 275, R. Vol. 5, p. 760.)

By this acquisition the United Company made substantial progress in clearing up the patent situation in the enamel eyelet field. It proved, however, that the United Company had otherwise made no progress in the way of entering the enamel eyelet field; for although these people "knew well how to make fast color eyelets they did not know how to make enamel eyelets and were not producing a satisfactory enamel eyelet. We had to junk a large supply we had on hand which we couldn't get rid of." But the United Company continued to supply the Enamel Company's eyelets so far as there was any demand, and "if manufacturers would buy them, we should be glad to sell them." (Howard, R. Vol. 1, p. 99, lines 13–18, 25–30.)

The division of the preferred stock issued in payment for the Boston Fast Color Eyelet Company and the Enamel Eyelet Company, as stated in the petition, was purely arbitrary, and at the request of the common owners of the two companies.

No real estate was acquired in this transaction. The Enamel Company did no manufacturing but had their eyelets made by others. (Defts.' Exh. 231, R. Vol. 5, p. 461.)

Ross-Moyer Manufacturing Company.

This transaction took place September 20, 1900. (Pltff.'s Exh. 87, R. Vol. 3, p. 658.) The Ross-Moyer Company had stores in Chicago and Cincinnati. It leased floor space in Cincinnati and employed thirty-five men. It had been in business for many years, and was putting out nineteen machines of "what are now known as the general department type." The patents

on these machines were named by Mr. Howard. (Howard, R. Vol. 1, p. 52, lines 40–43; p. 100, lines 31–41; p. 101, lines 16–30; Winslow, R. Vol. 1, p. 408, lines 23–24; p. 459, line 7; Defts.' Exh. 231, R. Vol. 5, p. 451.)

With a single exception the United Company had no machines for doing the work of the machines acquired from the Ross-Moyer Company. (R. Vol. 1, p. 101, lines 12–15.)

"The acquisition of these machines was the first step toward the creation of the United Company's general department," and the machines acquired were the foundation of its general department. (Howard, R. Vol. 1, p. 53, lines 3–5; p. 100, lines 42–43.)

Another reason for this acquisition was the desire of the United Company to establish its own agencies in Cincinnati and Chicago, and to do this without taking away from the Ross-Moyer Company the business which it had been carrying on for many years as agent for the McKay Shoe Machinery Company and the Consolidated & McKay Lasting Machine Company (R. Vol. 1, p. 409, lines 2–5, 11–13; p. 418, lines 38–40), and which it was still carrying on for the United Company. The value and nature of the service rendered by the United Company are fully discussed elsewhere, and need not be dwelt upon at this time. The importance of having its service headquarters, supplies of parts, and material for all of its machines in one place in each trade centre and of having the service, supplies of parts, and materials for its machines entirely in its own control is obvious. The disadvantages of duplications of service, supply depots, and corps of "traveling mechanics and instructors" visiting the same factories, traveling to the same places, and carrying parts to the same places under conditions such as existed prior to 1899 are pointed out by Mr. Winslow. (R. Vol. 1, p. 408, lines 7–44; p. 409; p. 410, lines 1–16.) Accordingly—

> "The United Shoe Machinery Company desired to establish its own stores and offices in each one of the shoe manufacturing centres, for the purpose of furnishing a better service in connection with its machines than had heretofore been possible by each of the separate companies, and to carry a proper supply of spare parts and material used in its machines." (Defts.' Exh. 231, R. Vol. 5, p. 452.)

Mr. Ross "at once took up the question with us as to where they would fit into the new company." Of course, when the

concerns which had been agents for the old companies learned of the United Company's intention to establish its own headquarters they were much concerned. "In all of these cases the moving motive in making these arrangements was from Mr. Ross in the Ross-Moyer, and Smith, and representatives of the Krieg estate, who wanted in the rearrangement to make the best arrangements for themselves." (Winslow, R. Vol. 1, p. 418, lines 36–45; p. 419, lines 42–44; p. 420, lines 1–2.)

Mr. Winslow further stated:

> "these concerns would necessarily lose the business which they had done acting as agents for the various companies, and it formed such a large portion of their whole business that they desired to have the United Company take over all their business relating to shoe machinery, or supplies, when the United Company was ready to establish its own offices."
>
> "An additional reason for the purchase of Ross-Moyer was to secure the services of Mr. Samuel Ross, who had long been associated with the McKay Company and was an experienced shoe machinery man and well liked by the trade. The United Company desired to secure his services to represent their interests throughout the middle west." (Defts.' Exh. 231, R. Vol. 5, p. 453.)

This led to "the employment of Mr. Ross as the western agent of the company, in charge of all the western offices." He "was our general agent in the West until two or three weeks ago, when he died." (Winslow, R. Vol. 1, p. 419, lines 5–6, 10–12.) Plaintiff's Exhibit 87 (R. Vol. 3, p. 658) is the employment agreement made with Mr. Ross.

Mr. Winslow testified (R. Vol. 1, p. 419, lines 7–10):

> "There was absolutely nothing more in our doing that than our purpose of doing the square thing by Mr. Ross. They had been connected with the McKay Company and the Lasting Company for years; part of our own family, so to speak."

Since this purchase, the business has been carried on by the Ross-Moyer Manufacturing Company, all the machines of the Ross-Moyer Company being put into the United Company's General Department and sold. The United Company did not raise the prices or limit the sale or manufacture of these machines. "The only thing that happened regarding those machines was that we made them better than the Ross-Moyer. The trade

was benefited in that respect." Also, the Ross-Moyer Company was made a depot for spare parts and the headquarters of the United Company's repair force for the Cincinnati and Chicago districts. (R. Vol. 1, p. 53, lines 8–9; p. 95, lines 28–35; p. 100, lines 42–44; p. 101, lines 1–2, 8–11; Winslow, R. Vol. 1, p. 459, lines 15–24.)

Bay State International Shoe Machinery Company.

This transaction took place January 30, 1901. (Pltff.'s Exh. 86, R. Vol. 3, p. 655.) This company was organized to do foreign business and did not do any business in the United States, its only business being in England. (R. Vol. 1, p. 52, lines 18–20; p. 101, lines 34–35.) It had put out about ten sets of its machines in England. (R. Vol. 2, p. 2059, Int. 1519.) It owned no real estate and did no manufacturing business. Its machines were manufactured in Montreal, Canada; none whatever in this country. Its machines were covered by English and French patents. They were a welter, stitcher and rough rounder, which were distinctly inferior to the United Company's machines and were very different in construction. (R. Vol. 1, p. 52, lines 20–21; p. 101, lines 31–33; R. Vol. 2, p. 2059, Ints. 1517–1518; p. 2085, Cr. Ints. 1642–1644; Defts.' Exh. 231, R. Vol. 5, p. 448.)

Since this company was not organized to do business between Great Britain and the United States, did no such business, and did no business in the United States, obviously this acquisition has absolutely no bearing upon this case.

Machines of the Bay State International Shoe Machinery Company infringed claims of two of the United Company's English patents. The United Company owned continental patents corresponding to those two English patents. (Defts.' Exh. 275, R. Vol. 5, p. 761.)

The purchase was made "at the earnest solicitation of the people who were interested, who were also customers, shoe manufacturers, and customers of the United Company," because it was believed to be "the cheapest way to settle and dispose of the litigation." "This was a purchase of foreign patents," and the consideration was $25,000 in preferred stock of the United Company. (Winslow, R. Vol. 1, p. 457, lines 21–26; Defts.' Exh. 231, R. Vol. 5, p. 448.)

Swain-Fuller Manufacturing Company.

This transaction took place February 2, 1901. (Pltff.'s Exh. 88, R. Vol. 3, p. 660.) The Swain-Fuller Company was doing "a very small business." (R. Vol. 1, p. 53, line 18.) "They owned no real estate; they leased a small amount of floor space in Boston; employed less than ten men." (Winslow, R. Vol. 1, p. 459, lines 25–27.) Its principal business was manufacturing and putting out a machine of the "General Department" type known as the "Star Leveling Machine" for turn shoes, which was patented. (R. Vol. 1, p. 53, line 18; p. 100, lines 22–24; R. Vol. 2, pp. 2054, 2055, Int. 1491.)

> "The Star machine was a very light machine and was adapted and used only for leveling turn shoes, which, owing to the fact that they have but one sole, require and will stand a less degree of pressure than other types of shoes." (Howard, R. Vol. 2, p. 2063, Int. 1533.)

Prior to this acquisition the United Company was not putting out any leveling machine adapted for use on turn shoes. "It would be impossible to use any machine that the United Company then had on turn shoes." On the other hand, "the Star machine could not be used with commercial profit on other work. It was too light and exerted too light a pressure for Goodyear work." (Howard, R. Vol. 1, p. 53, lines 20–24.)

An important reason for this acquisition was the desire of the United Company to obtain a leveling machine adapted for leveling turn shoes, which it had not had before. (Defts.' Exh. 275, R. Vol. 5, p. 761.)

Another important reason for this acquisition was that the United Company had produced and desired to use a sole pressing form for sole laying machines, shown and described in Gifford patent No. 694,367, which infringed a patent owned by the Swain-Fuller Company. (Defts.' Exh. 275, R. Vol. 5, p. 761.)

Mr. Winslow stated: "This property was acquired at the solicitation of Mr. Fuller, who was the principal owner and desired to go out of shoe machinery business." (Defts.' Exh. 231, R. Vol. 5, p. 454.) Mr. Winslow also testified: "We did not seek the Swain Fuller Company; they sought us." (R. Vol. 1, p. 459, line 34.) The importance of the transaction is indicated by the amount paid,—$13,201.92. (Defts.' Exh. 231, R. Vol. 5, p. 455.)

After the purchase, the Star Leveling Machine was manufactured and put out by the United Company and was its standard machine for leveling turn shoes. (R. Vol. 2, p. 2055, Ints. 1493, 1494; Defts.' Exh. 275, R. Vol. 5, p. 761.) Also the United Company used on its commercial sole-laying machine, the one which it had previously acquired from the Boot & Shoe Sole Laying Company, the pressing form of the Gifford patent, which, as above explained, had infringed a patent owned by the Swain-Fuller Company. (Defts.' Exh. 275, R. Vol. 5, p. 763.)

Globe Sewing Machine Company.

This transaction took place February 15, 1901. (Pltff.'s Exh. 89, R. Vol. 3, p. 662.) The Globe Sewing Machine Company—

> "were attempting to use the same machine for sewing the welt to the upper and insole and for stitching the outsole to the welt. They had a lockstitch machine for both operations, and used some attachments for one operation and other attachments for the other."

It was not successful. They also had an experimental rough rounder. All of these machines were patented. (Howard, R. Vol. 1, p. 109, lines 5–21; p. 104, lines 33–37; p. 528, lines 7–8; R. Vol. 2, p. 2002, Int. 1234.) Mr. Winslow testified:

> "The purchase was not one that the United Company sought, but was made at the earnest solicitation of Mr. Mellen Bray, to whom the Globe Company owed a very large sum of money. He wanted to get rid of having anything to do with the company, and came to me personally and besought me to acquire his interest. They owned no real estate and did no manufacturing. Such as they had done they had contracted outside." (Winslow, R. Vol. 1, p. 457, lines 5–12.)

The Globe Company owed Bray $86,984. (R. Vol. 3, p. 665.) The United Company paid $20,000 in its preferred stock for a majority of the stock of the Globe Company. (Defts.' Exh. 231, R. Vol. 5, p. 448; R. Vol. 1, p. 457, lines 13–18.)

As explained by Mr. Howard in full detail, many of the patented features of the Globe lockstitch welter gave that machine marked superiority over the lockstitch welter which the United

Company had just begun to put out. (R. Vol. 2, pp. 2004, 2005, Ints. 1241, 1242.)

On the other hand, all the Globe Company's machines infringed patents owned by the United Company. There were pending one infringement suit brought by the United Company against the Globe Company and five suits against users of the Globe Company's machines. (Defts.' Exh. 275, R. Vol. 5, p. 762.)

By this acquisition the United Company acquired control of the patents of the Globe Company which stood in the way of development by the United Company of its lockstitch welter, settled the existing patent litigation and avoided further patent litigation.

In explaining why the inventions of the Globe Company's patents were not adopted by the United Company, Mr. Howard testified:

> "These two features of superiority, together with others of less striking importance, would undoubtedly have been adopted in the United Company's lockstitch welting machine had it not been for the fact that shortly after the acquisition of the Globe Company's patents shoe manufacturers decided that they did not desire to sew the inseam by a lockstitch, and they refused to use lockstitch welters. In the year ending March 1, 1902, we put out only nine lockstitch welters, and six were returned; in the year ending March 1, 1904, we did not put out any machines, and five were returned. By 'any machines' I mean of course lockstitch welting machines." (R. Vol. 2, p. 2005, Int. 1242.)

In Mr. Howard's detailed discussion of the United Company's lockstitch welting machine, known as "Sewing Machine: Goodyear Universal Inseam," he explained that manufacturers "found that it was impossible to secure the tight inseam, which is indispensable in the inseam of a welt shoe." (R. Vol. 2, p. 2251, Int. 11.)

In view of the facts above stated and particularly in view of the large indebtedness of the Globe Company stated in Plaintiff's Exhibit 89 (R. Vol. 3, p. 665), as amounting to $92,075.69, it is perfectly clear that the Globe Company did not offer even potential competition to the United Company and that this transaction is of no importance.

J. C. Rhodes & Company.

This transaction took place June 19, 1901. (Pltff.'s Exh. 91, R. Vol. 3, p. 668.) "This company was an old, established eyelet-making concern" which "owned its own real estate and factory at New Bedford, Mass., employing about one hundred and sixteen men." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 461.) They manufactured "a patented enamel eyelet, which was the one in general use at that time." (Howard, R. Vol. 1, p. 51, lines 41–42; p. 98, lines 16–17.)

Their patent No. 565,091, August 4, 1896, contained—

> "broad claims to an enamel eyelet so constructed as to prevent breaking of the enamel coating by the pressure exerted in the eyelet setting operation."
>
> "Otherwise the flange would bend in the setting operation and the enamel would crack. That feature has never been dispensed with in any enamel eyelet which was commercially satisfactory." (Howard, Defts.' Exh. 275, R. Vol. 5, p. 764; R. Vol. 1, p. 98, lines 42–44.)

The United Company had previously acquired the stock of the Enamel Eyelet Company, but—

> "Both the Rhodes eyelet and the Enamel eyelet were patented, and as a matter of fact each company was infringing the other's patent. The Enamel Company's eyelet was never a commercial success." (Howard, R. Vol. 1, p. 51, lines 43–44; p. 52, lines 1–2.)

A suit had been brought by J. C. Rhodes & Company against "a user of the enamel eyelet put out by the Enamel Eyelet Company." (Howard, R. Vol. 2, p. 2080, Int. 1615.) On the other hand: "The Enamel Eyelet Company had brought and was vigorously prosecuting a suit against John C. Rhodes for infringement of its design patent 24,867, November 12, 1895, Kempshall." (Howard, Defts.' Exh. 275, R. Vol. 5, p. 763.)

By this acquisition the United Company accomplished three important objects: (1) It cleared up a complicated patent situation. If the eyelet of the Enamel Company had been commercially satisfactory, the United Company could not have put it out without infringing the Rhodes patent. (2) The United Company was able to put out a commercially satisfactory enamel eyelet without infringing the broad Rhodes patent. (3) It was

able for the first time to procure satisfactory metal blanks for its fast color eyelets. "Prior to that time those blanks, which had been procured from different sources, had not been satisfactory." (Howard, Defts.' Exh. 275, R. Vol. 5, p. 764; R. Vol. 1, p. 591, lines 31–33.)

With this acquisition the United Company really entered the enamel eyelet field for the first time. As explained in discussing the Enamel Eyelet Company,—

> "they did not know how to make enamel eyelets and were not producing a satisfactory enamel eyelet. We had to junk a large supply we had on hand, which we couldn't get rid of." (Howard, R. Vol. 1, p. 99, lines 15–18.)

The United Company was at that time engaged in the manufacture of fast color eyelets, but the fast color eyelet—

> "was much more expensive than the enamel eyelet and was used only on the highest grade of shoes, never at any time on more than ten per cent of the shoes made."

The celluloid covering on the flange of the fast color eyelet makes it expensive, so that it has never been used except in the better grades of shoes. (Howard, R. Vol. 1, p. 50, lines 41–45; p. 51, lines 1–5.)

The enamel eyelet comprises a metal eyelet having a flange of the contour desired for the finished eyelet, which flange is coated with enamel, while in the fast color eyelet the flange merely serves to anchor the thick celluloid covering. The enamel eyelet is much less expensive and the enamel wears off after a time so that the eyelet has a brassy appearance and accordingly enamel eyelets are used only on the cheaper grades of shoes. There was no competition between fast color eyelets and enamel eyelets. (R. Vol. 1, p. 51, lines 6–13; p. 98, lines 28–45; p. 99, lines 19–21.)

The business of J. C. Rhodes & Company was continued by J. C. Rhodes & Company, Inc. Since the purchase, the factory facilities have been increased by building a large new factory. (Defts.' Exh. 231, R. Vol. 5, p. 461.)

The United Company continued to sell the Rhodes eyelets at the same prices at which they had been sold by the Rhodes Company,—

> "and in addition furnished the eyeletting machines in which the eyelets were used without charge to our cus-

> tomers, with no increase whatever in the prices; but the eyelets were sold to anyone, whether they used our machines or not." (Winslow, R. Vol. 1, p. 463, lines 39–43.)

Also the Rhodes eyelet has been much improved and "many new sizes have been made which were not made in 1901." (Howard, R. Vol. 1, p. 99, lines 36–39.)

Morley Button Manufacturing Company.

This transaction took place on December 14, 1901. (Pltff.'s Exh. 92, R. Vol. 3, p. 675.)

> "The Morley Button Manufacturing Company was primarily a button manufacturing company, manufacturing and selling buttons. In addition to this button business it was engaged in the business of manufacturing and selling a patented enamel eyelet. . . . The United Company acquired only the eyelet business of the Morley Company, and that company is now engaged in the business of manufacturing and selling buttons and similar articles as before." (Howard, R. Vol. 1, p. 54, lines 30–39.)

"The United Company acquired no real estate or manufacturing plant with this purchase . . . the eyelet business was a very small part of its total business." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 462.) The novel patented feature of the Morley eyelet was that the enamel coating did not extend down inside of the barrel.

> "This was different from both the Rhodes and Enamel Company eyelets. It was claimed that it was objectionable to have the enamel inside the barrel. They made the eyelet by a secret process and by a secret formula." (Howard, R. Vol. 1, p. 99, lines 6–10.)

By the process followed in making the Rhodes eyelet the inside of the barrel was covered with enamel.

Although the Rhodes and Morley eyelets were of different types, the Morley eyelet embodied the broadly patented feature of the Rhodes eyelet. (R. Vol. 1, p. 98, lines 40–42; p. 99, line 4.) At the time of this acquisition there were pending two suits brought by J. C. Rhodes & Company, Inc., against the Morley Company on Rhodes patent No. 565,091, August 4, 1896, and Kempshall design patent No. 24,867, November 12, 1895. (R.

Vol. 2, p. 2080, Int. 1615.) One of the considerations stated in the agreement for the sale of the Morley Company's business and patents was a covenant by the United Company that it would cause these two suits to be dismissed without costs and cause J. C. Rhodes & Company, Inc., to release the Morley Company from all claims for damages or profits on account of the infringement of the patents in suit. Another consideration was a further covenant that the Morley Company should be licensed under these two patents to manufacture eyelets in process to fill the orders which it had on hand. (R. Vol. 3, pp. 677, 678; R. Vol. 2, p. 2081.)

Mr. Winslow stated:

> "This purchase was made in 1901 as the best method of settling the litigation . . . and was believed to be a fair and equitable settlement of the existing situation, and by it the Rhodes Company acquired certain patents on eyelets which were valuable to it." (Defts.' Exh. 231, R. Vol. 5, p. 462.)

The price paid was $31,000, for which the United Company obtained one patent and one application for a patent, and machinery, for making the Morley eyelets, etc., inventoried at $17,541.99. (R. Vol. 3, pp. 676, 677, 681.)

The Morley eyelet was used on a cheaper grade of shoes than the Rhodes eyelet, but, after the acquisition, manufacturers demanded the superior Rhodes eyelet for all grades of cheaper shoes and the demand for the inferior Morley eyelet was so small that it was supplied from the stock on hand, but so far as there was any demand for Morley eyelets the United Company has supplied them. (Howard, R. Vol. 1, p. 99, lines 23–24, 28–30.)

Oliver A. Miller.

This transaction took place February 15, 1902. (Pltff.'s Exh. 93–95, R. Vol. 3, pp. 683, 687, 690.) Miller was engaged in the manufacture of treeing machines, and tree legs and tree feet that are used on, and are parts of, treeing machines, which are used in all factories for cleaning and blacking shoes before they are packed. (R. Vol. 1, p. 464, lines 29–34; p. 97, lines 42–45.)

Mr. Winslow testified:

> "We had no such machines. We were not in competition, not in the slightest degree." (R. Vol. 1, p. 464, lines 37–38.)

Mr. Howard testified:

> "This was absolutely a new branch for the United Company. It had nothing of the sort before." (R. Vol. 1, p. 98, lines 3–4.)

The purchase was made by the United Company "entirely for the purpose of extending its business." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 476.) Miller's treeing machines, tree legs and tree feet were patented. (R. Vol. 1, p. 98, lines 5–8.)

Miller had become involved in financial difficulties, needed money and wished to sell; "he came to us and wanted to dispose of the business," negotiations being opened through Frank Hannigan, his manager. (Winslow, R. Vol. 1, p. 464, lines 35–37; Defts.' Exh. 231, R. Vol. 5, p. 476.)

> "The reputation of the Miller machines and the Miller business was high, and we found that we could secure the manager of that business, who had been with Mr. Miller for a great many years, to continue as manager for us, and we finally accepted the company and continued that business." (Winslow, R. Vol. 1, p. 464, lines 38–43.)

The Miller treeing machine business "has been continued by the O. A. Miller Treeing Machine Company, of which Mr. Hannigan, a minority stockholder, is manager" (Howard, R. Vol. 1, p. 55, lines 14–16), in the factory which was acquired from Miller, and which has been largely extended. The business has increased, 125 men are now employed there; Miller employed 65 men. (R. Vol. 1, p. 465, lines 3–7; Defts.' Exh. 231, R. Vol. 5, p. 476.)

Marlboro Awl & Needle Company.

This transaction took place June 30, 1902. (Pltff.'s Exhs. 96–97, R. Vol. 4, pp. 693, 703.) This company owned no real estate, leased floor space in Marlboro and employed twelve men. (Defts.' Exh. 231, R. Vol. 5, p. 462.) It manufactured needles, awls and rawhide mallets. (R. Vol. 1, p. 467, lines 3–7; R. Vol. 5,

p. 476.) The needles were for use in the McKay sewing machine; the awls were chiefly "hand awls, such as cobblers use for shoe repairing"; the mallets were rawhide mallets "used by shoe makers and cobblers." (Howard, R. Vol. 1, p. 97, lines 27–41.) Neither the United Company nor any of its subsidiary companies was manufacturing needles of any kind, hand awls or rawhide mallets. (R. Vol. 1, p. 55, lines 36–39.)

A small company was formed called the United Awl and Needle Company and the Marlboro Company's business has been continued by the United Awl and Needle Company at its factory at West Medway, where it has employed twenty-eight or thirty men. (R. Vol. 1, p. 55, lines 41–43; Defts.' Exh. 231, R. Vol. 5, p. 462.)

The unimportance of this transaction is indicated by the facts above stated and by the amount of the consideration, $16,300 in preferred stock of the United Awl and Needle Company. (Defts.' Exh. 231, R. Vol. 5, p. 462.)

The T. A. Norris Machine Company.

This transaction is not named in its proper chronological order in the petition. (R. Vol. 1, p. 1011.) It took place July 1, 1902 (Pltff.'s Exh. 102, R. Vol. 4, p. 734),—not in March, 1903, as stated in the petition.

The T. A. Norris Machine Company had no real estate, but operated a small machine shop in Brockton, employing about ten men, in which they did general machine shop work. "It was really a repair shop." (Winslow, R. Vol. 1, p. 460, lines 7–10.) Their business was chiefly in second-hand machines, or, as Mr. Gregg puts it, "I think this company was more of a dealer than anything else," but they had manufactured for them six simple, minor machines. (R. Vol. 1, p. 59, lines 19–23, 26–27; p. 93, lines 39–45; p. 460, lines 9–10.)

The United Company had no machines for performing the operations of any of the six machines acquired from the Norris Company or even for doing similar work. (R. Vol. 1, p. 59, lines 28–38; p. 94, lines 1–28.)

The machine shop of the Norris Company was located in a building owned by T. A. Norris personally, in which building the

United Company had its Brockton headquarters and repair shop, which it held under lease from Norris.

Mr. Winslow testified:

> "This purchase was made upon the basis of the inventory, $11,526.78, and at the solicitation of Mr. Norris, who was heavily interested in real estate and wanted to retire from any machinery business." (R. Vol. 1, p. 460, lines 14–17; Defts.' Exh. 231, R. Vol. 5, p. 456.)

As to the reasons for this purchase,—

(1) Mr. Winslow testified: "We wanted to increase our space in his building, and this business arrangement was made." (R. Vol. 1, p. 460, lines 17–18; R. Vol. 5, p. 456.)

(2) The United Company extended its line of machines by adding to it the six "General Department" machines acquired from the Norris Company.

(3) "Lasting machine parts were carried by The T. A. Norris Machine Company." (Winslow, R. Vol. 5, p. 453.) Consistently with its policy of having under its own control the supply of parts and the furnishing of service for its machines, as explained in the Ross-Moyer discussion (*supra*, pp. 26–27), it was important for the United Company to continue this agency itself and in this instance, as in the other similar transactions, a fair adjustment of the situation was to take over the business of its former agent.

Since the purchase the United Company has continued putting out all the machines which it acquired from the Norris Company, and has operated the Norris machine shop as a repair shop. (Defts.' Exh. 231, R. Vol. 5, p. 456.)

American Sole Laying Machine Company.

This transaction took place September 25, 1902. (Pltff.'s Exh. 98, R. Vol. 4, p. 705.) The chief business of the American Sole Laying Machine Company was putting out a two-form laying machine which they were manufacturing under a license from the Tripp Giant Leveler Company under "the famous Cutcheon patent." (Howard, R. Vol. 1, p. 56, lines 15–18; p. 96, lines 33–34.)

> "That machine had right and left forms and operated on a pair of shoes, rights and lefts, at one time, one being under pressure while the operator was putting the other into position to go into the machine." (Howard, R. Vol. 1, p. 96, lines 29–33.)

The American Company also owned patents on their machine which prevented the United Company from adopting a satisfactory pad. (R. Vol. 1, p. 96, lines 43–45; p. 97, lines 20–26.) It "owned no real estate and did no manufacturing. Contracted with outside parties for such machines as it had built." This company was purchased for $5200 at the solicitation of Mr. Fuller, "who was the principal owner and desired to spend his time in the South." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 475.) The agreement sets forth that "Fuller is the owner of a majority of the capital stock" and that "Fuller controls the actions of said company." (Pltff.'s Exh. 98, R. Vol. 4, p. 705.) Mr. Fuller had also been the principal owner and treasurer of the Swain-Fuller Manufacturing Company, which had previously sold out its business to the United Company. (Defts.' Exh. 231, R. Vol. 5, p. 455; Pltff.'s Exh. 88, R. Vol. 3, p. 661.)

> "The standard commercial machine of the United Company at that time was the machine which it had acquired from the Boot and Shoe Sole Laying Company . . . but that was a one-form or single machine." (Howard, Defts.' Exh. 275, R. Vol. 5, p. 765.)

Mr. Howard further testified:

> "We desired to turn this single machine into a double machine and we were able to do that after this transaction, in which we acquired the license which the American Company had under the Cutcheon patent. Counsel advised us that this license was assignable." (R. Vol. 1, p. 56, lines 25–29; p. 96, lines 38–40.)

This license was also needed by the United Company to enable it to develop the Atlas leveling machine. (Defts.' Exh. 231, R. Vol. 5, p. 475.)

The Cutcheon patent had been sustained by the Court of Appeals in the First Circuit (Defts.' Exh. 275, R. Vol. 5, p. 765)

and petitioner's expert, Mr. Chapman, described this patent as a pioneer and basic patent. (R. Vol. 2, pp. 2813, 2814, Int. 15.)

> "After this acquisition we incorporated in the machine which we got from the Boot & Shoe Sole Laying Company, the inventions acquired from the American Company, particularly the two-form construction and the pad invention. In other words, we got the method of sole laying from the Boot & Shoe Sole Laying Company, and we got the double application of that method from the American Company.
>
> "By combining the inventions embodied in two machines we made a better machine than either. The new machine has right and left forms and operates twice as fast as the single machine which we had previously been putting out." (Howard, R. Vol. 1, p. 97, lines 6–16.)

That machine "has been placed with our customers in very large numbers." (Howard, R. Vol. 1, p. 97, lines 18–19.) Also the United Company has "put out fifty sole-laying machines substantially the same as the machines which had been put out by the American Sole Laying Company" and "The United Company continued putting out these machines so long as there was any demand for them from shoe manufacturers." (Howard, R. Vol. 2, p. 2098.)

William J. Young.

That no tangible property was acquired from William J. Young by this transaction is clear from the agreement with him made October 1, 1902 (Pltff.'s Exh. 99, R. Vol. 4, p. 713), and from the record. "No manufacturing plant of any kind was acquired." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 468.) The only property acquired was "Young's English and German patents under which our foreign companies had agencies" and under which they were putting out Young's heel-compressing machine (Howard, R. Vol. 1, p. 57, lines 13–17; p. 95, lines 44–45), and for these patents the United Company paid $14,000. (R. Vol. 4, p. 717.)

> "At this time our foreign companies had been putting out Young's machines for a number of years. They had been agents for his machine." (Howard, R. Vol. 1, p. 57, lines 15–17.)

Neither the United Company nor any of its affiliated companies was putting out in Europe any heel-compressing machine other than Young's, and "The United Company had not shipped a heel-compressing machine to England or Germany, the countries where Young's patents were taken, for a period of over ten years." (Howard, R. Vol. 1, p. 57, lines 17–20; p. 96, lines 18–19.)

> "The machine which we had before this was an old machine, very much inferior to Young's, which was of comparatively recent invention. He preceded us by two or three years in inventing a modern, satisfactory, high-speed heel-compressing machine." (Howard, R. Vol. 1, p. 96, lines 23–27.)

An important reason for this transaction is thus stated by Mr. Howard:

> "Under the requirements of the German patent law it was necessary, in order to maintain Young's German patent, to manufacture his machine in Germany right after this time, and Young had no facilities for manufacturing machines in Germany, while the United Company had a factory." (R. Vol. 1, p. 57, lines 21–25; p. 96, lines 5–9.)

In view of the situation just stated by Mr. Howard, this transaction was mutually advantageous. As agent for Young the United Company had established a business with his machine and it was the only machine which it was putting out in Europe. Failure to maintain the German patent would make this machine public property in Germany. On the other hand, if Young had not sold his German patent and had failed to manufacture under it, the patent would have become worthless.

From the standpoint of the United Company another reason for this transaction was that "as the machines made by Young were not well made, customers had complained regarding their quality." (Defts.' Exh. 231, R. Vol. 5, p. 468.) After acquisition of the patents the United Company could remedy this by making the machines itself.

After acquiring the German patent the United Company began to manufacture in Germany and marketed the machines there. Young continued to put out this machine in the United States and he has put it out ever since in competition with the United

Company. As witness for the petitioner, Young testified that he has put out over 300 of these machines. Young also testified that his business has been growing and names over a dozen different types of machines which his company is putting out, many of which have been put out in large numbers. (R. Vol. 1, p. 96, lines 9–11, 13–17; pp. 942, 943.)

The George A. Smith Machinery Company.

This transaction took place November 20, 1902. (Pltff.'s Exh. 100, R. Vol. 4, p. 721.) The George A. Smith Machinery Company had a store in Philadelphia. It owned no real estate and did no manufacturing. It employed one man repairing second-hand machinery. (Defts.' Exh. 231, R. Vol. 5, p. 451.) The only machine which the Smith Company was putting out was the hand-operated boss spring heel scarfing machine, which was patented. (R. Vol. 1, p. 58, lines 3–5; p. 95, lines 36–39.) This machine was manufactured for the Smith Company in outside machine shops. (Defts.' Exh. 231, R. Vol. 5, p. 451.)

The United Company was not putting out a machine for doing work similar to that of the Smith Company's machine. (R. Vol. 1, p. 58, lines 5–6.) After the acquisition, the United Company sold this machine through its General Department and it is still being supplied to customers. (R. Vol. 1, p. 95, lines 42–43.)

A controlling reason for the acquisition of the Smith Company was the desire of the United Company to establish its own agency in Philadelphia and to do this without injustice to the Smith Company or to Mr. Smith, who was the majority stockholder of the Smith Company, as set forth in Plaintiff's Exhibit 100. (R. Vol. 4, p. 721.)

> "The George A. Smith Machinery Company was agent for the United Company machines, except the Goodyear machines, as it had previously, before the formation of the United Company, been agent for all the predecessors of the United Company except the Goodyear Company. That business was taken over by the United Company." (Howard, R. Vol. 1, p. 57, lines 42–44; p. 58, lines 1–3.)

Like the Ross-Moyer Manufacturing Company, the Smith Company had been the agent in Philadelphia for the McKay

Shoe Machinery Company and the Consolidated & McKay Lasting Machine Company, carrying in stock spare parts for all the machines of those companies and the wire used in the machines of the McKay Company and after the formation of the United Company it had continued in the same relation to the United Company. (Defts.' Exh. 231, R. Vol. 5, pp. 452, 453; Vol. 1, p. 419, lines 13–17.)

Mr. Winslow testified:

> "When Mr. Smith found that we were going to unify this service and bring it all under one head, he wanted we should buy him out, and we did acquire his business." (Winslow, R. Vol. 1, p. 419, lines 17–20; p. 418, lines 36–38.)

The United Company's reasons for desiring to establish an agency in Philadelphia and the importance of so doing were the same as in the case of the Ross-Moyer Company (Defts.' Exh. 231, R. Vol. 5, p. 453), and have already been explained in the discussion of that company (*supra*, pp. 26–27).

The United Company continued the business of The George A. Smith Machinery Company except the cut soles and findings business, which was excepted from the transaction, on the premises which had been occupied by the Smith Company in Philadelphia and established the headquarters of its repair force there and carried there its supplies of machine parts and materials for use on the machines. (R. Vol. 1, p. 95, lines 18–35.) The consideration for this transaction was $38,790.79, the inventory value of the property acquired. (Defts.' Exh. 231, R. Vol. 5, p. 451.)

George W. Emerson & Company.

This transaction took place December 18, 1902. George W. Emerson & Company, a co-partnership (Pltff.'s Exh. 101, R. Vol. 4, p. 725), owned no real estate, leased two floors in a factory building in Lynn, and employed about thirty-five men. (R. Vol. 1, p. 460, lines 3–5.) Their principal business was "manufacturing and supplying lasts and forms for sole leveling machines of the 'Giant' type." They were also putting out a patented power spring heel scarfer, a patented heel-burnishing

machine, and a tip scourer. (Howard, R. Vol. 1, p. 58, lines 24–38, 44–45; p. 94, lines 29–44.)

The United Company had no tip scourer and no power operated spring heel scarfer and it was developing a leveling machine on which lasts and forms are used. (R. Vol. 1, p. 58, lines 22–24; p. 59, lines 3–10; p. 94, lines 29–31; p. 95, line 1.) The patented heel-burnishing machine which the Emerson concern was putting out was of "a different type" and performed its operation in an entirely different way from the United Company's machine, which was also patented. Some manufacturers preferred and insisted upon having one type of machine, while other manufacturers preferred and insisted upon having the other type. (R. Vol. 1, p. 58, lines 39–45; p. 59, lines 1–2; p. 95, lines 4–11.)

There were three important reasons for this acquisition:

(1) The United Company extended its line by adding a tip scourer, a power operated spring heel scarfer, and a new type of heel burnisher which some manufacturers preferred. It also secured a source of supply for the lasts and forms which had to be used upon the leveling machine which it was developing.

(2) "We desired to obtain the services of William R. Sampson, who was the active man with Emerson and who today occupies with our company a very prominent position and has been with us ever since." (Winslow, R. Vol. 1, p. 459, lines 41–44.)

(3) "To compose certain litigation then pending between the Xpedite Company and the Emerson Company for infringement of the Xpedite patents." (Winslow, R. Vol. 1, p. 460, lines 1–3.)

As to (3) the Emerson heel-finishing machine infringed eleven claims of two patents of the United-Xpedite Finishing Company, one of which is "one of the most important patents on that machine." (Defts.' Exh. 275, R. Vol. 5, p. 766.)

Mr. Winslow testified:

> "This property was acquired at the earnest solicitation of George W. Emerson, who was interested in a trout farm on Cape Cod and desired to retire from the shoe machinery business. . . The amount paid was based upon the inventory of the Emerson Company." (R. Vol. 1, p. 459, lines 35–40.)

Since this acquisition the business of the Emerson concern has been continued by the United Company in its several departments and the machines acquired have all been supplied to customers. (R. Vol. 1, p. 59, lines 12–13; p. 94, lines 37–38; p. 95, lines 1–3, 9–11.)

Mr. Sampson was for several years the head of the General Department and was then promoted to the executive offices. (R. Vol. 1, p. 95, lines 12–17.)

W. W. Cross & Company, Incorporated.

This transaction took place February 18, 1903. (Pltff.'s Exh. 103, R. Vol. 4, p. 744.) This corporation was formed to take over the business owned by W. B. Cross, including his real estate and factory. (Defts.' Exh. 231, R. Vol. 5, p. 463.) He did not manufacture shoe machinery, but nails and tacks for use in the manufacture of shoes. (R. Vol. 1, p. 60, lines 1–2.)

The United Company was not engaged in the manufacture of nails and tacks. (R. Vol. 1, p. 60, lines 3–5.) The Consolidated & McKay Lasting Machine Company had obtained from Cross substantially all of its tacks, "many tons every week," these tacks being made particularly for the lasting machines put out by the Consolidated & McKay Company; and the United Company, in continuing to put out those machines, obtained its tacks from the same source. (R. Vol. 1, p. 93, lines 31–38; Defts.' Exh. 231, R. Vol. 5, p. 463.)

Mr. Cross was very closely associated with the United Company, which was the only large customer that he had and which took nearly his entire output. (R. Vol. 1, p. 462, lines 28–34; p. 93, lines 35–36.) The demand for tacks by the customers of the United Company grew to such proportions that it became a problem how to obtain a sufficient supply (R. Vol. 1, p. 672, lines 6–12), since Mr. Cross was not willing, without some assurance as to the future, to put up the capital necessary for such an enlargement of his output for the accommodation of a single customer. (R. Vol. 1, p. 462, lines 30–32.)

> "We simply acquired that business to be able to supply our lasting machine customers with tacks." (Howard, R. Vol. 1, p. 93, lines 36–38.)

The agreement (Pltff.'s Exh. 103, R. Vol. 4, p. 744) was entered into "for the purpose of enabling the Cross Company to extend their business and fix permanently the relations between the company and W. B. Cross." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 463.)

Since the acquisition the United Company has continued to buy its tacks from W. W. Cross & Company, Inc., and the business has so increased that it now employs 317 men; it then employed about forty men. (R. Vol. 1, p. 462, lines 33–34.) However, that company by no means occupies this field exclusively. The Atlas Tack Company, in which the United Company has no interest, "is the largest manufacturer of tacks in this country." (Winslow, R. Vol. 1, p. 472, lines 39–41.)

J. K. Krieg & Company.

This transaction took place May 6, 1903. (Pltff.'s Exh. 104, R. Vol. 4, p. 746.) J. K. Krieg & Company was a copartnership doing business in New York. They owned no real estate and had a small machine shop above their store where they employed four men and one boy, who were engaged principally in rebuilding old machines and repairing machines used in other lines of manufacturing, but who when not so engaged were employed in building the few machines which Krieg put out. (Defts.' Exh. 231, R. Vol. 5, p. 452.)

Krieg had been local agent for the United Company and its predecessors for parts and supplies for all the machines except the Goodyear machines, and the Krieg store was the headquarters for the United Company's men. J. K. Krieg had died and his business was being carried on by his estate. Mr. Winslow testified:

> "We dealt with that situation in this way: We acquired that part of the J. K. Krieg business, which related directly to the business that was done with shoe manufacturers. The younger Krieg retained the business that had to do with retailers." (R. Vol. 1, p. 419, lines 31–42.)

One of the three machines which Krieg put out was a patented heel seat rounding machine especially constructed for rounding heel seats of Goodyear shoes. The only machine the United Com-

pany had for this operation was an edge-trimming machine provided with a larger cutter than was used for edge-trimming. This edge trimming machine effected the trimming operation by chewing up the surplus stock into dust while the Krieg machine cut off the surplus stock so that the scraps cut off could be sold or utilized either for scrap leather or for manufacturing pieced heels, thus effecting a substantial and therefore important economy. (R. Vol. 1, p. 60, lines 28–34; p. 92, lines 31–45; p. 93, lines 1–10; Vol. 2, p. 2045, Ints. 1446–1448.)

Krieg also had manufactured by other parties and was putting out a Louis heel-scarfing machine for cutting from the grain side of the outsole a strip of leather to be bent up over the undercut breast surface of a Louis heel, a wood heel, used in a particular type of woman's shoe. The United Company had no machine capable of performing the operation of that machine. Krieg also had an embossing machine for stamping names or trademarks on upper linings. (R. Vol. 1, p. 60, lines 35–41; p. 93, lines 11–28.)

By this transaction the United Company acquired machines which it did not have before and was thus extending its line.

But the more important reason for this acquisition had to do with the desire of the United Company to establish its own headquarters for its local repair men in the New York district and to take under its own control the carrying and supplying of spare parts for its machines to manufacturers in the New York district just as it had previously done in other parts of the country by the acquisition of the Ross-Moyer Manufacturing Company and The George A. Smith Machinery Company. The importance of this policy, both to the United Company and to the trade, and the general reasons why the United Company in establishing its own agencies acquired the properties of the concerns which had previously been its agents are fully explained in the discussion of the acquisition of the Ross-Moyer Manufacturing Company (*supra*, pp. 26–27).

Mr. Winslow testified:

> "In all of these cases the moving motive in making these arrangements was from Mr. Ross in the Ross-Moyer and Smith, and representatives of the Krieg estate, who wanted in the rearrangement to make the best arrangements for

themselves." (R. Vol. 1, p. 419, lines 42–44; p. 420, lines 1–2.)

The amount paid for this business was $97,056.52 (Defts.' Exh. 231, R. Vol. 5, p. 451), which was the inventory value of the property "less proper deductions therefrom" for depreciation and for unsalable goods. (Pltff.'s Exh. 104, R. Vol. 4, p. 749.)

After this acquisition the United Company used the Krieg store in New York as headquarters of its repair force, furnishing "very much better service," and kept there a complete line of parts and supplies for all its machines. The United Company also continued putting out the new machines which it had acquired from J. K. Krieg & Company. (R. Vol. 1, p. 95, lines 30–35; p. 60, lines 32–34; p. 93, lines 19–21, 29–30.)

Joseph P. Curtis.

By this transaction, which took place Oct. 20, 1903, the United Company acquired certain patent rights and nothing more. Curtis assigned two pending applications to the United Company. Curtis did not transfer his one experimental machine. (Pltff.'s Exh. 106, R. Vol. 4, p. 754; R. Vol. 1, p. 92, lines 21–22.) These patent rights related to a machine for cementing a piece of fabric to an upper. The United Company had no machine for use in performing this operation nor any machine that could be used for this work, "which required a machine of an entirely different type and entirely different organization from any we had."

On the other hand, the Curtis machine could not be used for the same purpose as any machine of the United Company. (R. Vol. 1, p. 61, lines 10–18; p. 92, lines 4–12.)

The consideration in this transaction was "$500 cash and a royalty of $10 on each machine embodying the inventions." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 468.)

The United Company subsequently obtained Letters Patent upon an application filed by Curtis and did all that it could to make the machine a commercial success, putting out in all about forty-five machines constructed according to that patent. The machines, however, did not prove to be a practical success, since the operation performed was not satisfactory. Most of the

machines which were put out were returned. (R. Vol. 1, p. 92, lines 13–20; Vol. 2, p. 2045, Int. 1445.) Moreover, "the Peerless Machine Company, under patents owned by them, were able to produce a better machine and have done the larger part of this business." (Winslow, Defts.' Exh. 231, R. Vol. 5, pp. 468, 469.)

Fred H. Perry.

The agreement with Fred H. Perry, which was merely an employment contract, was made January 1, 1904. (Pltff.'s Exh. 107, R. Vol. 4, p. 758.) No property of any kind was acquired from Mr. Perry. He had entered the employment of the company as a machinist, at wages of thirty-four cents an hour, less than four years before the date of the contract referred to in the petition. He was given the opportunity in 1903 "at his own urgent request" to enter the inventive department of the company and demonstrate whatever inventive ability he might possess, and was paid $30 a week for the first eighteen months of this employment. Mr. Perry developed into a "very successful inventor," and has made some very important inventions for the company. He is still employed by the company and his salary has been materially increased several times, and on January 1, 1911, was raised to $4,000 a year. The important inventions that he has made have been embodied in commercial machines which have been given immediately to the trade and have been put out in large numbers. Among these machines are the present commercial Rounding and Channeling Machine, Model E, Goodyear Universal, and Jointing Machine, Goodyear, the importance and value of which are explained in detail by Mr. Howard. (R. Vol. 1, p. 91, lines 18–40; Vol. 2, pp. 2309 *et seq.*; 2611 *et seq.*; Defts.' Exh. 231, R. Vol. 5, p. 473.)

Joseph W. Leary.

The agreement with Joseph W. Leary made January 1, 1904, was primarily an employment contract. (Pltff.'s Exh. 109, R. Vol. 4, p. 769.) The very small business which he was doing was insignificant. He did no manufacturing of any kind, employed no men, and had no factory. He was engaged principally in

retailing, in a small way, cements and blackings such as are used in the manufacture of shoes and are supplied by "hundreds of dealers." He also dealt in a very small way in second-hand sewing machines for sewing together the parts of an upper before the bottoming room operations, but dealt in no new machines except the Amazeen machine which he sold for the United Company. (R. Vol. 1, p. 62, lines 1–11; p. 91, lines 1–8; Defts.' Exh. 231, R. Vol. 5, p. 473.)

In connection with his small local sale business in Lynn, Leary was an agent for the Amazeen skiving machine which was being put out by the United Company. "He was an extremely capable salesman and mechanic, thoroughly familiar with the Amazeen machine, and unusually successful in selling it." His activities with reference to the machine were, however, in view of the local character of his business, entirely centered in Lynn, and the principal reason for entering into the contract of employment with him was to obtain his services in selling the machine in a much wider field. (Howard, R. Vol. 1, p. 91, lines 9–17; Defts.' Exh. 231, R. Vol. 5, p. 474.)

> "Mr. Leary stated that he would like to enter the employ of the United Company if the company would buy his stock of cement and second-hand machinery, and the company paid him $3052 for the small stock that he had on hand." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 474.)

Leary is still employed by the United Company as an agent for the Amazeen machine. (R. Vol. 1, p. 91, lines 16–17.)

The F. G. Farnham Brush Manufacturing Co.

This transaction took place January 23, 1904. (Pltff.'s Exh. 109, R. Vol. 4, p. 769.) The Farnham Company was a small concern employing only six men. It leased floor space in a small factory in Honesdale, Pa. Almost its entire business was in putting out patented Tampico brushes for the cut glass trade, but it also put out a few patented brushes for the shoe trade and it put out the sleeves, collars, hubs and fillers that are necessary parts of such brushes. Brushes are used in the shoe trade for cleaning and polishing only. (R. Vol. 1, p. 62, lines 30–44; p. 89, lines 42–44; p. 90, lines 1–9, 36–39; R. Vol. 2, p. 2045, Int. 1444; Defts.' Exh. 231, R. Vol. 5, p. 464.)

The United Company was putting out shoe brushes, sleeves, hubs and collars that it obtained from S. A. Felton & Son Company, in which the United Company has a half interest, but the United Company did no business in Tampico brushes. (R. Vol. 1, p. 62, lines 34–36; Defts.' Exh. 231, R. Vol. 5, p. 462.)

The important reason for this purchase was that the Farnham brush was much superior to the Felton brush.

> "The Farnham brush was very superior to our old brush, the Felton brush, with which we had been having great difficulty because the bristles were constantly coming out. For several years we had been having complaints all the time that the bristles would not stay in the brush. In this respect the Farnham brush was much superior to our old brush." (Howard, R. Vol. 1, p. 90, lines 15–20.)

The Farnham Company had patents on its brush, brush section and a combined brush and hub; and the United Company wished to obtain these patents in order to furnish a better brush to the shoe trade. (R. Vol. 1, p. 90, lines 36–39; Defts.' Exh. 231, R. Vol. 5, p. 464.)

The Farnham Company was poorly located geographically for dealing with the shoe trade and desired to sell out; the purchase was made "at the earnest solicitation of the officials of the Farnham Company" for $25,915.32. (R. Vol. 1, p. 90, lines 7–9; Winslow, Defts.' Exh. 231, R. Vol. 5, p. 464.)

After the purchase, the Farnham "business was continued at Honesdale for nearly a year and was then removed to the factory of S. A. Felton & Son Company, where the business has been continued." The business in brushes for the cut glass trade was continued and is still being carried on. The Farnham shoe brushes were supplied in considerable quantities for a time on account of its superiority to the old brush, "but it was more expensive, so that the demand for it has not been as great as it otherwise would have been." (Howard, R. Vol. 1, p. 90, lines 10–22; Defts.' Exh. 231, R. Vol. 5, p. 464.) Mr. Howard testified:

> "After we acquired the Farnham brush we made use of the general idea of the Farnham brush and produced an improved brush of this same general type, with the addition of valuable improvements which completely overcame the difficulties which we had had before. . . . That construction

afforded a complete solution of the difficulty which had been troubling us for several years." (R. Vol. 1, p. 90, lines 23–31.)

This improved brush, which is very satisfactory, is the one the United Company is now principally putting out. (R. Vol. 1, p. 90, lines 39–45.)

American Glue Company.

This transaction was merely a contract entered into May 2, 1904 (Pltff.'s Exh. 110, R. Vol. 4, p. 796) for the exclusive agency for the American Glue Company's sandpaper in the shoe trade:

> "The American Glue Company transaction was merely a contract, terminable on three months' notice, relating to sand-paper in the shoe trade—not in other trades." (Winslow, R. Vol. 1, p. 462, lines 39–41.)
>
> "It is agreed, however, that either party shall have the right to terminate this agreement by a three months' notice in writing delivered to the other of said parties, and in case such notice shall be given, then this agreement shall, at the end of the said three months, terminate." (Pltff.'s Exh. 110, R. Vol. 4, p. 798.)

As stated by Mr. Winslow (R. Vol. 1, p. 472, lines 30–33):

> "The American Glue Company wanted us to take over their molded sandpaper business, which is a part that especially applies to shoe making and does not include their entire business;"

but the United Company took only an agency for the United States and Canada such as it already had abroad, and "The United Company has no interest whatever in the American Glue Company." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 464; Howard, R. Vol. 1, p. 89, lines 35–36.)

> "The United Company made no goods of a similar character, but has marketed a large amount of goods for the American Glue Company under this contract." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 464.)
>
> "Sandpaper is used in the manufacture of shoes for the operations known as scouring and buffing. The general object of each operation is the same—to smooth up the

particular part of the shoe on which the operation takes place.

"Prior to this agreement the United Company was agent for the American Glue Company abroad, and it had bought from the American Glue Company the sandpaper which it furnished to customers in this country. This agreement did not change the trade relations of the parties in the least. After making the agreement the United Company continued to furnish the same sandpaper to customers as liberally as before." (Howard, R. Vol. 1, p. 89, lines 31–41.)

Zachary Taylor French.

This transaction took place January 1, 1904. (Pltff.'s Exh. 111, R. Vol. 4, p. 803.) Zachary Taylor French owned no real estate and no manufacturing plant was acquired. Contrary to the allegation in the petition (R. Vol. 1, p. 1014), "French had no business of his own, but had been for thirty years in the employ of the Goodyear Company, or its predecessors." (Winslow, Defts.' Exh. 231, R. Vol. 5, p. 471.)

This transaction was thus explained by Mr. Howard:

"Mr. French had for a great many years been in the employ of the United Company and its predecessor, the Goodyear Company, as an inventor, and later as superintendent of the Goodyear factory on Albany Street in Boston. His inventions were covered by a number of royalty agreements. He did not wish to move to Beverly when the plant there was opened about this time, and therefore desired to leave the employ of the company. A settlement was made of the royalties which would become due under his various contracts; and the agreement of plaintiff's Exhibit 111 incorporates the settlement which was made at that time." (R. Vol. 1, p. 63, lines 30–40.)
